

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

#### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

#### **About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

AN INTERNATIONAL MAGAZINE.

EDITED BY ALBERT SHAW.

LIBRARY LELARCSTANDER: LINECT

VOLUME XVII.

JANUARY-JUNE, 1898.

THE REVIEW OF REVIEWS COMPANY:

NEW YORK: 13 ASTOR PLACE.

COPYRIGHT, 1898, BY THE REVIEW OF REVIEWS Co.

YMAMMI MOMULOSOMATOMALIII YTISSTOOM

THE GREATEST PULPIT ORATOR OF ENGLAND.

Archdeacon, better known as Canon, Frederick William Farrar is distinguished alike as an orator and as a writer and scholar. He is one of three hundred or more of the most celebrated living men of letters who have made the Charles Dudley Warner Library the most remarkable work of the age.

#### THE WARNER LIBRARY ABOUT COMPLETED.

CHARLES DUDLEY WARNER'S monumental undertaking is almost finished. The great Library is all but done.

Its preparation has been a wonderful task. Think what is here accomplished. The most distinguished scholars, thinkers, and writers of France, England, and America have been brought together to write the fascinating interpretative and explanatory studies which accompany the sections devoted to each of the masters of the world's literature. Every essay has been written by the one man now living most competent to portray the personality and work of the author whom he treats.

These essays, a thousand in number, constitute the most delightful and most instructive presentation of the greater literature of every epoch and of every race.

If you were the possessor of this splendid Library, consider the endless hours of recreation and enjoyment you might gain from its pages in the coming year. What an inspiration and uplift might come from devoting no more than half an hour a day to

following the literature of one great nation after another, from the Roman and the Greek down to the most notable writers of our own time.

Remember that the arrangement with Harper's Weekly Club whereby the Library is now offered at a reduced price and under special terms will soon be ended. When the Library is complete, the opportunity you now have will no longer be open. The introductory work of the Club will be ended, and the regular subscription canvass will begin.

In view of this approaching event, the special price at which the work is now obtainable will be advanced on February 1st. If you wish to place in your home the most perfect library of literature that has ever been made, it is certainly to your interest to act now.

A postal card, addressed to Harper's Weekly Club, 93 Fifth Avenue, New York, will secure full information, both as to the Club arrangement and the Library itself.

For mutual advantage when you write to an advertiser please mention this magazine.

# OUR JANUARY CLUB Limited to 500 Members

Each month it has been growing more and more difficult to supply members of Our History Club. owing to the fact that the publishers have objected to allowing so many sets to be distributed at our low Club price, which naturally interferes with their own subscription sale at more than double the Club figure. For January, indeed, they have actually limited our allotment to 500 sets. These will be quickly claimed, and we have, on request, especially reserved fifty sets for REVIEW OF REVIEWS readers.

Those who apply promptly, mentioning this Magazine, can therefore still secure that great encyclopædia of historic learn-

# Library of Universal History

on our exceptional Club plan-at our low Club price and on our easy Club terms of payment.

WHAT THIS

The three great epochs. Ancient History, Medieval History and Mediera History, naturally claim the principal portion of the Library, but Recent History also receives the attention its importance and interest demand, and the record of events is brought right down to the present year. The History of Civilization and The Philiesephy of the Works of such great artists as Meissonier, De Neuville, and Dore, are numerous and brilliant, marking the turning points of history, and The Historical Maps (there are nearly 100 of them) are more abundant and accurate than in any other work, native or foreign. In every one of those vital features, which constitute a comprehensive, accurate, instructive world, the Library is simply incomparable. It is the Largest, Latest, Best.

TOPICS OF The Library presents the only authentic history of "The Armenian Massacree," "The Alaskan Boundary Dispute," "The Transvan Affair," "The Cuban Revelution," "The Revelt in Crete," together with the late history of every important nation, all illustrated and explained with a large number of new portraits, maps and diagrams.

SEE HOW

Alanka is the subject of special treatment, which includes the history of the gold discoveries in the Klondike and other regions, with a new double-page map in four colors, from the latest U.S. Government and Canadian surveys and reports, showing the different routes to the gold fields, with photographic reproductions of Alaskan scenes.

#### WORDS OF PRAISE FROM THOSE WHO HAVE RECEIVED THE WORK.

President E. Benjamin Andrews, of Brown University, says:

"The educational value of the Library of Universal History is sure to be very great."

Rev. Francis W. Greene, Philadelphia, Pa., writes:

"The binding, paper, type, and illustrations are beautiful. I have never bought anything in my life that I am better pleased with than I am with this set of books."

Ex-President Cleveland writes:

"This history will fill an important place among publications intended to give wider familiarity with historical literature."

W. W. Lewis, Moorland, Mich., writes:

"The history arrived in good condition. I "My set arrived to-day. I am more than am delighted with it. I would not sell it for pleased with it. It should be in every home double the cost if I could not get another set." and public library in the land."

Dr. W. T. Harris, U.S. Commissioner of Education, writes:

"I appreciate highly the importance of stimulating historical study by the distribu-tion of such a valuable work on the subject."

Dr. S. G. A. Brown, Shippensburg, Pa., writes:

#### APPLICATIONS SHOULD BE SENT IN AT ONCE

In order to secure one of these special sets at the low Club price.

. . . . . . . . . . . . . . . .

COURD CLUB

controls, for the benefit of its members exclusively, 800 sets only of this splendid Library, and is enabled to supply the sets (while they last) in three styles of binding at a saving of over 50 per cent. of the regular subscription price, according to the style selected, besides affording easy terms of payment, the superb Library of Universal History, and no tescher, student, member of a historical club or occasional reader should fall to lavostigate our Club offer. As there are only soo sets in all, and as the Club must close when these are gone, it is advisable to write at once for full particulars regarding the work and the Club plan and price. The Club will also send you free an interesting set of specimen pages and illustrations, including full-page portraits of Herodotus, Franklin, and President McKinley and his Cabinet, smaller portraits of six great statesmen, also text-page portraits of normal controls. And a new double-page map of Alaska, photographic reproductions of Alaskan scenes, and a chart of the Klondike River and its tributaries. Address all communications to

McCLURE'S MAGAZINE HISTORY CLUB, 141 E. 25th St., N. Y.

# P YOUR HOME N

#### Cosmopolitan Club's Last Month

A great Reference Library, complete and perfect in every detail—such a work as thousands of homes must have long wished to possess—has at last been made. It has cost one million dollars, and is the newest and the latest. Our Club has secured control of a limited edition, and arranged such terms as to bring this monumental work within the means of every reader of The Review of Reviews. This is the Club's last month and

#### YOUR LAST

The Club plan is so attractive—it effects so large a saving—that nearly all the memberships have been taken, and on February 1st our remarkable **Educational Offer** must be withdrawn. Do not mistake what this may mean to you. If you do not understand our Club plan, see to it that you investigate the splendid opportunity you now have to equip your home—at a small outlay and for all time—with this really marvelous

## "Book of the World's Knowledge."

Encyclopædia

Dictionary

Atlas

Gazetteer

in One.

The latest, greatest, most perfect

## FERENCE LIBRARY

in existence.

Who has not wished for a work of reference so exhaustive, so all-embracing, that it would simply "tell everything"! Exactly such a "compend of human knowledge" is the wonderful mow American Encyclopedic Dictionary, now complete, after a quarter of a century of preparation, in twelve large beautiful volumes, magnificently illustrated and revised to August, 1897. It has no rival, for there is no other work like it in the world. It is the greatest Dictionary in the English language. It is a comprehensive Encyclopedia, a superb Atlas, and a world-embracing Gazetteer, combined in one splendid set of books.

#### IT IS NEW. IT IS ACCURATE. IT IS THE HIGHEST STANDARD.

#### WHAT OUR CLUB DOES FOR YOU.

Publishers' profits must necessarily be much greater upon such costly publications as encyclopesdias than upon ordinary books, because of the huge amount of money involved and the long time required in preparation.

This is the reason why encyclopedias and dictionaries are usually beyond the reach of people of moderate means. But by the purchase of an entire edition the Club has been able to secure this wonderful work for its members at practically the cost of manufacture. By joining the Club now every member receives a full set of this King of Reference Libraries at a saving of a full half over what the work will cost when our present distribution is completed. Further than this, we have made such terms that our members may, if they wish, pay for the work from time to time as their means permit.

When you join the Club, the entire work is delivered to you at once, so that you have the use and enjoyment of them while you are paying for them, a few cents a day, on the Club plan. You have privilege of full examination for one week, and if you do not find the volumes just what you have long wanted and needed, we will retund your payment in full.

Remember, when the last of the sets are taken, the work of the Club is done. For full information regarding the Club plan

#### COSMOPOLITAN CLUB,

WM. K. WEST, Sec.

93 Fifth Avenue, cor. 17th Street, New York.

# GREAT BIBLICAL LIBRARY

Beautiful ART VOLUMES, a complete and magnificently illustrated BIBLICAL LIBRARY, for less than the price of an ordinary family Bible.

#### "INDISPENSABLE

for every Christian Home."

Think of it! This wonderful Library is not only the authorized version of the Bible, in large, clear type, but combines

- A Biblical History,
- A Bible Atlas,
- A Bible Dictionary,

and with its brilliant

#### SELF-INTERPRETING FEATURES,

exhaustive Commentaries, Explanatory Notes, Harmony of the Gospels, Helps to Bible Study, etc., etc., and

# 440 FULL-PAGE . . . ORIGINAL PHOTOGRAPHS,

showing the actual scenes of the great Historical Events of the Scriptural narrative, constitutes the

## Most Wonderful Biblical Production

in existence. Read these three letters, taken from thousands of a similar character:

"I have seen no work that will yield a richer harvest of most desirable knowledge, or a higher inspiration in the direction of virtue and duty, than this great production of the closing years of our 19th century. Every lover of the Bible should secure this work if it is in his power." (Rev.) Chas. E. Lord, Newburyport, Mass.

"It is the finest thing I ever saw. I am enthusiastically delighted with it. It adds an intensi interest to the study of the Bible."—(Rev.) F. M. LAMB, Kennebunkport, Me. "I greatly prize it. It is the most beautiful and most useful Bible I have ever seen or ever expect to see. God will surely bless those who are engaged in putting forth His Word in so attractive a form." — Jas. A. Scott, 710 Third Street, N. E., Washington, D. C.

This great Bible was originally sold at a price far beyond the means of most Bible readers. Realizing this, Our Bible Club secured from the publishers a superb Special Edition, on super paper, and in extra quality of bindings, from the same beautiful plates, and with the same magnificent series of half-tone engravings of Bible scenes. Because the Club took the entire edition, it is able to cut the publisher's price in two. For this reason,

WHILE THEY LAST, all who join our Club secure this splendid Biblical Library at less than the cost of an ordinary family Bible. This exceptional opportunity can last but a short time longer. The edition is almost exhausted, and when all the sets are gone the Club will close. We advise our readers to investigate this remarkable offer at once.

So that readers of Review of Reviews may understand what a truly wonderful work this is, the Club will send, postage paid, to any one mentioning Review of Reviews, a beautiful art portfolio of copyrighted photographic views, selected from the remarkable series of 440 full-page plates which so beautifully illustrate the new Self-for framing and home decoration. These were secured for this work at an expense of \$85,000 by a special expedition sent to Palestine and the East for the sole purpose, and constitute the most remarkable collection of Biblical photographs the world

YOUR BOOKSELLER WILL SHOW YOU ANY OF THESE BOOKS IF YOU ASK TO SEE THEM.

#### SCRIBNERS' NEWEST BOOKS

#### AUDUBON AND HIS JOUR-NALS.

By Maria R. Audubon, with notes by Elliott Coues. With many portraits and other illustrations, including three hitherto unpublished bird-drawings. 2 volumes, 8vo, 37.30. These very important volumes contain the first really accurate biography of our greatest ornithologist. Miss Audubon spent twelve years in collecting the materials for the work, finding one long-lost portion of the Missouri River journal, "for which two generations have searched," as late as the summer of 1896, beneath the drawer of the old secretairs on which Audubon used to write. The entire publication is virtually new, since even the European journals are here much amplified, while the Missouri and Labrador journals are practically unpublished, and the "Episodes" have never before appeared collectively except in a French translation. The work is one of the widest interest, and must at once take its place as the authoritative biography of Audubon, as well as the first adequate presentation of his journals, which in their now complete form give "the man instead of the death mask."

CONTENTS: —Biography — The European Journals, 1836-39 — The Labrador Journal, 1888—The Missouri Journals, 1848—The Episodes.

#### THE DECORATION OF HOUSES.

By Edith Wharton and Ogden Codman, Jr., with 56 full-page illustrations. Large 8vo, \$4.00. There are few subjects the literature of which is more deficient than is the case with house decoration, and the present volume will appeal to all who are confronted by the many problems that arise in the architectural arrangement and decoration of the home. The suggestive descriptions are reinforced by a series of photographic illustrations showing what the best taste of various periods has already devised.

CONTENTS:—The Historical Tradition—Rooms in General—Walls—
Doors—Windows—Fireplaces—Cellings and Floors—Entrance and
Vestibule—Hall and Stairs—The Drawing-room, Boudeir, and
Morning-room—Gala Rooms: Ball-room, Salcon, Music-room, Gallery—The Library, Smoking-room, and [Don—The Dining-room—
Bedrooms—The School-room and Nurserice—Bries-Brae.

#### THE WORKERS.

The East. By Walter A. Wyckoff. With illustrations. 12mo, \$1.2g.

This most unusual book tells the experience of a college-bred man who for two years earned his living as an unskilled laborer in order to find out for himself the actual conditions of the American workingman. Mr. Wyckoff's pages are full of interest to the student of social problems, for he describes with graphic effect his life as a day laborer, a hotel porter, a farm hand, and a lumberman. Mr. Samuel Gompers, President of the American Federation of Labor, says: "It has already aroused a great deal of interest, which is likely to increase. The experiment in itself is a most wholesome one, and one the narrative of which is likely to do considerable good." The Evangelist says: "The problems treated are those which are absorbing thinking men and women everywhere, and the unusual method which Mr. Wyckoff has taken to gain practical light upon them gives great weight to what he has to say. Bishop Potter, himself an authority in these matters, who has been called upon to arbitrate in labor troubles, speaks in most unqualified terms of the good this book will accomplish."

#### THIS COUNTRY OF OURS.

By Benjamin Harrison, ex-President of the United States. 12mo, \$1.50.

"The most lucid and entertaining exposition yet put in print of a subject of which we will venture the opinion, three-tourths of the people in this country have only an indefinite understanding."—Phila. Evening Bulletin.

"General Harrison has in an eminent degree the so-called French faculty of lucidity of exposition. His style is clear and vigorous, his mind is logical, and his knowledge of history, of constitutional principles, and of practical politics is comprehensive and accurate. In every essential particular the ex-President has made an exceedingly interesting and valuable book."

-The Critic.

#### SOCIAL LIFE IN OLD VIRGINIA.

By Thomas Nelson Page. With Illustrations by the Misses Cowles. 12mo, \$1.50.

Nearly all of Mr. Page's stories contain allusions to the life of the Virginia gentlefolk before the war, but in this volume he sets out to portray carefully and with his inimitable charm the exact social conditions which then existed. One gains a new sense of intimacy with the characters of the author's own stories after this glimpse of their inmost lives, and the fascinating picture he draws is well supplemented by the very artistic illustrations.

CHARLES SCRIBNER'S SONS, 153-157 Fifth Ave., N.Y.

#### THE WORKS OF

The plan of adding a department for the publication of books selected and edited upon the same lines which have brought success to McCLURE'S MAGAZINE has developed much more rapidly

than we deemed possible.

The publications of the fall with few exceptions went into second and third editions, and the number of direct orders received by mail from the Magazine's readers has been a revelation. We wish to still further interest our subscribers in the new books, and will gladly send any volume on approval, to be returned, if desired, for any reason whatever. Some important works will be issued by the Doubleday & McClure Co. this year, and among the first will be

#### HENRY GEORGE'S LAST BOOK.

For six years Mr. George labored upon what he proposed should be the crowning work of his life. His purpose was to appeal to the same large audience which was so greatly affected and interested by "Progress and Poverty," and as the end of the work drew near he became convinced that the new book would eclipse in power and im-portance even the extraordinary success of his first great work. He strove throughout the whole to state the principles of political economy so simply that any reader can understand and follow with-out previous knowledge whatever of political science. In the introduction he calls it:

"The science which treats of the nature of wealth and the laws of its production and distribution; that is to say, of matters which absorb the larger part of the thought and effort of the vast majority of us-the getting of a living.

#### THE SCIENCE OF POLITICAL ECONOMY

will be issued, at once, exactly as he left it. All the vital parts of the work were completed and revised for the press. There will be an introduction by Henry George, Jr. Published in one octavo volume of nearly 600 pages, with photogravure portrait taken just before Mr. George's death. Price, \$2.50.

#### DOUBLEDAY & McCLURE CO.

tages which we offer to the readers of McClure's Magazine, for which this set osition we will give a year's subscription to McClure's Magazine free.

#### THE PROPOSITION TO "REVIEW" READERS.

We will send the full set of eighteen volumes, containing in all about 9,000 pages, to any reader, with privilege of examination and return. We ask for no advance payment unless you choose to make it. These are the terms, the books delivered free; if they are satisfactory send us

\$1.00 a month for eight months if ordered in cloth binding. " full leather binding. 10 per cent. off for cash payment. 44 \$2.00

Including a year's subscription to McClure's Magazine free. If unsatisfactory, to be returned.

This offer has been so widely accepted by our subscribers that we have sent sets all over the United States and proved beyond question that there is still unsupplied the need of a good Shakespeare to read and to study. The chief difficulty has been to make the books fast enough.

#### WHAT SOME BUYERS SAY:

- "I think the set charming."-E. J. HARE, Brockton, Mass.
- "The books are what I have wanted for years."-G. Cunningham, Mexico City.
- "Very satisfactory."-M. R. GOODYEAR, Hastings, Mich.
- "A marvel of cheapness, considering the workmanship."-W. J. PATTON, Marinette, Wis.
- "O. K. and satisfactory."-R. S. Allison, Houston, Texas.

#### 141-155 EAST TWENTY-FIFTH ST., NEW YORK. HENRY GEORGE.

#### A MEMORIAL EDITION OF THE COMPLETE WORKS OF HENRY GEORGE.

The friends of Mr. George have felt that the best monument that could be raised to his memory would be a superb set of books which should preserve his writings in a fitting and lasting form. The edition is published in co-operation with Mrs. George, and is to include, besides the new book just issued, a hitherto uncollated volume of his writings and a full and adequate biography, in one volume, by Henry George, Jr. The plans for this set are now well advanced, and particulars may be obtained by addressing the publishers. The number of copies to be printed will be limited, and early application is advised.

By arrangement with Mrs. Henry George, the owner of the copyrights of all books by Henry George, the Doubleday & McClure Co. have taken over the entire stock of books on hand and will publish them exclusively hereafter.

#### BOOKS BY HENRY GEORGE.

# The January Ladies' Home Journal

will be

## A Midwinter Fiction Number

The first short story ever written by Clara Morris, the distinguished emotional actress. There will be a delightful story—"A Shy Man's Wooing"; a love story of the railroad—"The Hundred-Dollar Shortage," by Francis Lynde, and the first chapters of Hamlin Garland's novelette, "The Doctor."

#### Entertainments

Entertaining on a Small Income Masquerade Parties for Children Novelties in Home Parties Light Refreshments for Evening Parties—Mrs. Rorer

#### Lilian Bell

Reaches Paris in her "letter" in the January JOURNAL, and no American girl has ever written of the holiday city of Europe and the French people as she does in this letter. There is a dash in the letter which makes it, by far, the very best in the series, and gives a better idea what there is in store for those who follow Miss Bell's delightfully-unconventional letters of travel.

# For 25 cents we will send The Ladies' Home Journal on trial for three months

ALSO, a handsome illustrated booklet containing our Prospectus for 1898, with portraits of famous writers and small reproductions of some of the illustrations that are to appear in the Journal in future numbers.

The Curtis Publishing Company, Philadelphia

THE COSMOPOLITAN Magazine during both 1896 and 1897 has had the largest clientele of intelligent, thoughtful readers reached by any periodical—daily, weekly or monthly—in the world. The year 1898 will be marked by more new features than any in the ten years record of the magazine.

Perhaps the most important series of papers that will appear in The Cosmopolitan during 1898 will be one on the choice of a business or profession, intended for young men and women. The most distinguished men of the various professions and in business will contribute papers showing the advantages and disadvantages of each of the professions and other vocations, so that the young man or woman having read this series will be able to act with knowledge and the superior judgment resulting from full information in that most important of all matters, the choice of the field of his or her life-work.

After the great success achieved last year by "Theron Ware," the public naturally turns to Harold Frederic with strong curiosity as to what will next come from his pen. Frederic is perhaps better equipped by experience to write or real life—of the actual social, political and business worlds—than almost any other English or American writer. The expectations regarding his next novel will be high. The opening chapters are given in this issue of The Cosmopolitan. The illustrations are by Clinedinst.

THE

AGE

1898

1844

WORLD'S GREATEST INTELLECTS

ARE REPRESENTED IN ITS PAGES.

THE LIVING AGE, Reproduces without abridgment the ablest articles from the Leading British reviews, magazines and weekly literary and political journals in every department of Literature; also TRANSLATIONS from the French, German, Russian, Spanish, Italian and other Continental Sources.

ENLARGED by the addition of a Monthly Literary Supplement, containing Readings from American Magazines, Readings from New Books, a List of Books of the Month.

#### "AN EPOCH-MAKING STORY."

"WITH ALL HER HEART." From the French of M. Rene Bazin.

Arrangements have been made for the SERIAL PUBLICATION of a TRANSLATION, made expressly for THE LIVING AGE, of this famous movel. The first instalment appears in the number of Nov. 6, and it will be continued weekly for several months until completed.

This novel, in its recent presentation in the REVUE DES DEUX MONDES, aroused the greatest interest, attracting the attention of litterateurs both in France and England. A vivid portrayal of life in a French industrial town, it is interesting alike as a social study, and as a realistic, yet delicate story of modern life.

Its literary and ethical qualities are so unusual that Les Annales LITTER-AIRES ET POLITIQUES described it as "An Epoch-Making Story."

THE LONDON ATHENÆUM characterizes it "a work of fine and searching analysis, full of charm, and redolent of a perfume which is exquisite and possesses no disquieting element."

DURING THE YEAR other translations from the best writers will appear from time to time, with serial or short stories by the Leading British Authors.

Free "WITH ALL HER HEART."
To all New Subscribers to The Living Age for 1898, will be sent Pres the eight numbers of 1897 containing the first instalments of "WITH ALL HER HEART."

J. A. GARFIELD.

"The enterprise and patriotfem exhibited in THE IRISH WORLD are worthy of the highest commendation." — President GAMFIELD.

#### The Largest Edition Ever Printed.

"This certifies, that I have printed one million six hundred and fifty thousand copies (1,650,000 espies) of the last great edition of THE IRISH WORLD. This is the biggest run of any edition of any newspaper I ever printed, and I believe it to be the largest single edition of any paper since the invention of printing."

JOHN SCOTT.

NEW YORK, August, 1891.

SAM J. RANDALL

"THE IRISH WORLD is one of the ablest and best conducted rapers in the country, and deserves well the success that has attended it."—The late Ex-Speaker Hon, S. J. RANDALI. of Pennsylvania.

THE LARGEST, MOST INFLUENTIAL AND WIDELY CIRCULATED IRISH JOURNAL PUBLISHED.

#### PATRICK FORD,

- - - Editor, Publisher and Proprietor, 17 BARCLAY STREET, NEW YORK.

"THE IRISH WORLD'S influence is phenomenal—there is not a village or hamlet, from Long Island to the State of Washington, where it is not the accepted guide and oracle of the leading spirits among Irish-Americans."—Brooklyn Daily Times.

JAMES G. BLAINE.

"Patrick Ford of The Inish Word. is a man of the most unserfish devotion to any cause he rspouses—possessing a great faculty for organizing, with marked ability and untiring energy."—Nov. 15, 1884.

"I read very attentively THE IRISH WORLD and have for years. I honor its fidelity, independence and liberalty, and value highly the fresh and varied information I find in its columns. It is doing loyal service to the Republic."—WENDELL PHILLIPS, July 26, 1876.

"We ought to consider very deeply the element of the Irish living in America. And who is the most potent representative of a particular way of thought in America? It is Mr. Patrick Ford of The Irish World. Judging him by the severest of all tests, the amount of money he has continued to collect, he is not only the most powerful newspaper editor in America, but of all time."—Ilon. Geo. O. Trevelyan, Chief Secretary for Ireland, in the House of Commons.

GLADSTONE.

"But for the work THE IRISE WORLD is doing, and the money it is sending across the ocean, there would be no agitation in Irelans."—Premier GLADSTONE 1a the House of Commons, April 18, 182a.

#### THE UNIVERSITY OF CHICAGO JOURNALS

The Biblical World Edited by President W.R. Harper. Monthly; about 80 pages, with special numbers in June and December. A popular monthly magazine; illustrated; devoted exclusively to biblical study. Contributions from leading botanists. \$4.00 a year: foreign, \$4.50; single copies, 40 cents.

The Journal of Geology Edited by T. C. Chamberlin. Semi-quarterly; about 120 pages. Devoted to the interests of geology and the allied sciences, and contains articles covering a wide range of subjects. Adapted to young geologists, advanced students and teachers. \$3.00 a year; foreign, \$3.50; single copies, 50 cents.

The Astrophysical Journal An International Review of Spectroscopy and Astronomical Physics. Edited by George E. Hale and James E. Keeler. Monthly, except in July and September; illustrated; about 80 pages. Invaluable to all who are interested in astronomy and astrophysics.

84.00 a year; foreign, 84.50; single copies, 50 cents.

The Journal of Political Economy Edited by J. Laurence Laughlin. Quartion promotes the scientific treatment of problems in practical economics and also contains contributions on topics of theoretical and speculative interest. \$3.00 a year; single copies, 75 cents.

The American Journal of Theology Edited by the Divinity Faculty of the University of Chicago. The only journal in the world so catholic in its scope as to cover the entire field of modern investigation and research in all the different lines of theological thought represented by special fields and particular schools. \$2.00 a year; foreign, \$2.35; single copies, 75 cents.

The American Journal of Sociology Edited by Albion W. Small. Bimonthly. This journal is the result of the increased popular interest in social questions. It presents to its readers, issue by issue, the latest developments in sociological thought and in social endeavor.

\$2.00 a year; foreign, \$2.50; single copies, 35 cents.

The American Journal of Semitic Languages and Literatures Edited by President W. R. Harper. Quarterly; about 80 pages. This journal is a continuation of the well-known "Hebraica," which came into wide notice among scholars and students interested in Semitic languages and literatures.

\$3.00 a year; foreign, \$3.25; single copies, 75 cents.

The University Record Published weekly. It contains articles on literary and educational topics, the Convocation Addresses, and the Quarterly Statements of the President. An official weekly report is given of the affairs of the University of Chicago. \$1.00 a year; foreign, \$1.50; single copies, 5 cents.

THE UNIVERSITY OF CHICAGO, The University Press Division, CHICAGO, ILL.

NO magazine is more worthy of preservation than the Review of Reviews. Each of the departments has its special value for reference uses. They give what encyclopedias cannot supply, and what the busy professional man often finds it the hardest to obtain—glimpses of the living men and the political and social movements that are making history to-day. Each volume is complete in itself and furnishes a storehouse of contemporary thought. As a history of current events, a guide to current literature, or a portrait gallery of notable men and women of the hour, it is unique. Full details in regard to binding are given on the next page.

# The American Monthly Review of Reviews Completion of Volume XVI.

THE December number of 1897 rounds out the sixteenth volume of the American Monthly Review of Reviews. Bound volumes will be ready for exchange December 20. All subscribers on our mailing list will be furnished our exhaustive sixteenth semi-annual index with the January number. To all others it will be sent on request.

#### Bind the Semi-Annual Volumes.

Complete unbound volumes delivered to us, postage or express prepaid, and in good condition, with covers on, will be exchanged for bound volumes and returned, charges prepaid by us, for 75 cents a volume. Back numbers for filling out volumes can be supplied as far back as April, 1892, for 20 cents each.

Those who desire to have binding done in their own localities will be furnished with binding cases for each volume at 50 cents each, postpaid.

Numbers can be mailed to us for 4 cents per pound (no limit as to size of package; page 889, January, 1897, Postal Guide). This will be found cheaper than express in most cases.

Frances E. Willard, President World's W. C. T. U.—"The brightest outlook window in Christendom for busy people who want to see what is going on in the world."

Chauncey M. Depew, President New York Central R. R.—"The Review of Reviews is the best medium through which a busy man can keep abreast with magazine and review literature, which has now become so voluminous that unless digested no one can follow it."

Francis E. Clark, D.D., President Un. Soc. of Christian Endeavor.—" It is the most valuable magazine published. It is such a happy combination of timely articles and articles of lasting interest that it is becoming quite a necessity to me, and I am sure I am speaking for thousands of other professional men."

Who are particular as to the class of reading matter that goes into their homes, and realize the importance of admitting only such publications as maintain a high standard and elevated tone, are invited to try for 1898 the three publications which, in a city where commercial and material affairs have long held sway, are working in the interests of higher intelligence and culture, and have won a position in their respective fields second to none in America. These papers are:

#### The Chicago Evening Post.

"THE CHICAGO EVENING POST bears the same relation to the Chicago press that The New York Evening Post bears to the press of that city-that is to say, it is a daily paper of the highest class, and appeals for its constituency to the best classes of people, and is therefore free from sensationalism and from any pandering to ignorance, prejudice or vice."-The Interior, Chicago.

#### The Chap-Book.

"Chicago's handsome Chap-Book . . . has established itself as the most amusing, the most readable, of American literary periodicals. . . . THE CHAP-BOOK is to be congratulated on the intelligence, the freedom from prejudice, which marks its literary judgments, and on the fact that it can hold itself uninfluenced even before the greatest names in fiction."-Kansas City Star.

#### The Dial.

"THE DIAL is the best and ablest literary paper in the country."-John G. Whittier.

"From every point of view, THE DIAL is unsurpassed by any other literary journal in England or America."

-Sir Walter Besant.

To put these three papers within the reach of all who appreciate the desirability of seeing them regularly, the publishers have arranged

#### Two Unapproachable Club Offers for 1898 OFFER No. 1.

Evening Post, Saturday edition, \$1.25
The Chap-Book, semi-monthly, 2.00
to any address through 1898

JOHNSON BRIGHAM, Editor and Publisher.

J. H. PURCELL, Advertising Manager.

#### DES MOINES, IOWA.

#### THE MIDDLE WEST IN LITERATURE.

ASTERN PEOPLE whose sympathies and interests are national, not sectional, are finding in THE MIDLAND MONTHLY'S stories, sketches, poetry, description, papers on literary, social, and economic themes, editorial opinions, etc., a quality thoroughly suggestive of the free, rich, outdoor life of the Middle West and the Far West, with its comedies and tragedies, its humor and its high aspiration.

A popular feature of this magazine is its "GRANT'S LIFE IN THE WEST," by Col. John W. Emerson, of Missouri, a friend of Gen. Grant and of his surviving family. Part III., relating the story of Grant's Western Campaigns as they were actually fought (not as they have been described by imaginative writers), will begin with the new year, 1898.

Its quarterly competitions for (three) cash prizes interest all amateur writers; and its Twenty Questions, with ten prizes a month, interest and instruct the young.

#### The Midland Monthly is handsomoly printed and profusely illustrated.

Send \$1.50 for this magazine from and including November, 1897, to January, 1899.

# This Book

Is made for a specific purpose—viz., to facilitate good newspaper advertising. Its title is the AMERICAN NEWSPAPER ANNUAL. Since its first publication, eighteen years ago, it has steadily stuck to this one purpose, and steadily grown in value, in use, and in influence.

The newspaper advertiser's ability to answer questions is the measure of his success. What can be ascertained of each newspaper in the country (not a few of the larger ones only), its character, age, size, circulation, price, publisher, political creed, or trade connection is given in this book. What is of interest concerning the places where newspapers are published—the location, population, physical features, agricultural products, manufacturers, leading industries, political complexion, means of communication, banking, express, and telegraph facilities are stated also.

Where the book is silent, our experience of twenty-eight years in newspaper advertising can generally furnish a satisfactory answer, but, with us or without us, there is no newspaper advertiser in the country but can save money if he will do as others do—"go by the Annual."

The 18th edition is now ready—for 1898. Price \$5.00, carriage paid. We ask for the book only the test of practical use.

Newspaper Advertising. Magazine Advertising.

N. W. AYER & SON, Publishers, Philadelphia, Pa.

If you are about to make a trip for pleasure or business, we will, without charge, have sent to you the necessary information concerning the most reliable railroads, steamers, hotels or boarding houses. We are in a position to furnish thorough information on tourist lines and resorts, and we can perhaps save you some mistakes and much inconvenience.

#### Klondike Tansportation Plans.

It is more a hurricane than a trade wind of travel that has set Alaska-ward of late. All the terrors of ice and snow, hardships and privation, have seemed as nothing in the face of the gold fever which has made the Yukon, Dawson City, the Chilkoot Pass, Dyea, Skaguay, and other names practically unknown two years ago to the country at large household words all over the civilized world. An immediate and natural result of this widespread and intense interest has been a truly remarkable crop of schemes for transportation to and communication with this frozen Eldorado. Yankee ingenuity and enterprise never showed up to better advantage than in the promptness with which these problems have been attacked and apparently solved, for the list of construction projects scheduled for next year or already under way is decidedly formidable. The Canadian Pacific Telegraph Company is to have a line in operaation; the Sunset Telephone Company proposes to connect Sheep Camp and Skaguay with Lake Bennett; there are probably half a dozen new lines of steamers scheduled to begin operations when the clutch of winter somewhat loosens; and there are various promises of lines of railway, dog sledge, and reindeer teams.

But the most picturesque and decidedly not the least feasible of these schemes is one recently launched by the "Chilkoot Pass Transportation Company,"which bids fåir to supply a method of evading the terrors of this famous defile. The difficulty at

present, as has been widely exploited through the newspapers, lies not so much in getting one's self across the Chilkoot as in conveying one's outfit to the navigable head waters of the Yukon. There is practically only one route along the Chilkoot Trail, and through this narrow and dangerous cleft there poured last summer such a horde of emigrants to the Land of Gold that the route was positively blocked, and progress was at a snail's pace. The distance from Dyea on the coast to Lake Lindemann (where boat may be taken for the rest of the journey down stream) is only twenty-two miles, yet the difficulties of getting across have been overwhelming even in summer. It was necessary all last season to pack one's tools and supplies and transport them on the backs of Indians or on pack mules-a method which made the trip occupy thirty or forty days, and often resulted in losing a large part of the goods by theft or accident. Moreover, even these poor facilities were available only for a few months of the year, and the cost for the twentyodd miles was from thirty to sixty cents a pound-representing an expenditure of several hundred dollars to cover this most insignificant portion of the distance.

Such are the conditions the promoters of the present plan are to revolutionize, and the way in which they propose to do it is very interesting. The steamers will tie up alongside of their dock at Dyea; all freight to be moved in this manner will be hoisted out of the hold directly into the company's bucket-cars, and, by an overhead cable road, be conveyed in eight hours across to Lake Lindemann, at a uniform rate of charges which will be probably not a third as high as the minimum charged under the old plan of packing. Boats in which to continue the journey from there on can be shipped in the same manner, not only saving the time now employed in constructing them on the lake shores, but insuring so much safer carriage that it is believed the remainder of the trip will present no difficulties, now that the channel is better known.

It is announced that this road, which is to be in working order

## GOING TO ALASKA?

#### Looking for Grand Scenery? Want to Get Rich? Yes?

Then write to the Pacific Coast Steamship Company, San Francisco, for "How to Reach the Gold Fields of Alaska;" "Answers to Every-day Queries;" "Map of Alaska;" "Alaska Excursions," and other publications, all free. Total postage, 10 cents.

Remember that this company operates over 20 steamships—has been running to Alaska the year round for over 20 years—is the U. S. Mail and Alaska express carrier—has steamers especially built for the Alaska route—has the experienced pilots and officers who are familiar with the intricate navigation of the inland route—runs steamers to all principal Pacific coast ports from Mexico to Alaska, inclusive. Travelers who regard their time and their safety as of value will see to it that their tickets read over the Pacific Coast Steamship Company's line.

GOODALL, PERKINS & CO., GEN. AGTS. SAN FRANCISCO, CAL.

FOR THE WINTER GO TO

## BERMUDA.

48 HOURS From NEW YORK by elegant steamship weekly.

FROST UNKNOWN. MALARIA IMPOSSIBLE.

Bermuda scenery is semi-tropical and most picturesque. The roads are generally level, with easy grades over the hills, and are constructed entirely of lime and sandstone, free from dust and mud, and perfect for CYCLING. Temperature about 62° in February and March.

FOR WINTER CRUISES GO TO

## **West Indies**

PRETORIA, 8800 tons, February 1.

MADIANA, 8080 tons, February 16.

by the first of next May, will enable prospectors to get from Seattle to Stewart River, in the heart of the gold region, in about fifteen days, thus giving two or three months of the "open" season in which to look about, get to work, and prepare for the winter; whereas the all-water route by way of St. Michael's is so long that the chances are against reaching prospecting ground before the snow cuts off all chance of doing anything that year.

The method of transportation is exceedingly simple, and one that has been extensively applied to the conveyance of ores and in quarries throughout the country. It consists of a series of tower-like supports crowned by a crossleam on either side of which are two cables, one stationary, along which the car runs on a pulley, the other supplying the motive power. In this way loads of a ton can be transported at a speed of three or four miles an hour, and it is perfectly practicable to move eighty or a hundred tons in an hour. These roads are rarely affected by any of the casualties common to surface roads; fire and flood alike generally fail to damage them and stoppages from snow are entirely avoided. Repairs are infrequent, cost of operation low, and the material to be carried can be delivered exactly at its final destination, thus cutting out at one stroke the labor and expense switching, unloading, and rehandling, which are such prominent features of all surface railways.

A feature which distinguishes the wire-rope tramways from almost every other form of transportation is its absolute independence in the matter of gradient. It is just as practicable to run a line up or down an angle of 45 degrees, or even perpendicularly, as it is along the level; and this capacity, along with the enormous lengths of span possible, makes it peculiarly applicable to very mountainous country. It is engineering made easy, indeed, when one can merely pick out two points anywhere from a hundred feet to a mile apart, and with any difference of elevation that may occur, and string some sagging wire

BOX 1881.

cables between them to carry the buckets. There is one such line in Idaho which crosses the town of Warden in a twelvehundred-foot span a thousand feet up in the air.

It seems very probable that some gold-seekers will save themselves the trudge across the Pass and journey in company with their belongings. In any case, it is most improbable that next season will witness any such congestion of traffic as was to be seen in the Chilkoot last summer, and with this alteration will also come the cure for the terrible state of affairs which is reported to exist along the Yukon at present: a thousand human beings fleeing toward civilization from the famine which threatens Dawson, with the certainty that fully a half of them must fail to get through unless some of the rather fautastic schemes for their relief shall prove successful. Certainly, if the gold finds continue the northwestern portion of our continent will undergo a remarkable transformation in the next few years.

## The Bemis Eye Sanitarium

#### Original Absorption Treatment.

Established 1889. The largest and most successful institution in America.

THE BEMIS PLACE.

#### **Blindness** revented.

The Absorption Treatment a Success. It is Endorsed by Representative People.

Rev. B. N. Palmer, D. D., of New Orleans, says:-

For example, if there is atrophy of the nerve, or any other of the several afflictions to which the eye is troubled, it is due to the fact that the eye has become sluggish and dormant. The theory is to wake up that sluggish eye and make every part perform the functions which nature assigns to that part. "The treatment is to act directly upon the eye as an organ by various harmless agents applied to stimulate and to vitalize the eye; then the circulation may be restored, the blood will be thrown back on all the parts where it is needed to nourish, so there need be no disease of the eyes which cannot be reached by this treatment, thus avoiding the knife and all risk.

"I consulted Dr. Knapp, of New York, and Dr. Pope, of New Orleans, who diagnosed my case as Atrophy. After one year's treatment they pronounced my case hopeless. In July, 1896, I consulted E. H. Bemis, Eve Specialist, one eye being nearly sightless and the other only available with the aid of a strong magnifying glass. I had nothing to lose and a great deal to gain. After treatment the strong magnifying glass was discarded and glasses used years ago enabled me to read."

An average of over 6,000 treatments given monthly at the Bemis Sanitarium, and hundreds successfully treated at their homes by mail. Pamphlet free, describing treatment.

#### Dersonally-Conducted Tours via Pennsylvania Railroad.

.....Season of...... 1897.

The Personally-Conducted Tourist System of the Pennsylvania Railroad Company is the most complete and elaborate system of pleasure traveling and sight-seeing yet devised. It is the consummation of the ultimate idea in railroad travel, the final evolution of unassilable perfection.

For the season of '88 it has arranged for the following tours:—
California.—Four tours will leave New York. Philadelphia, and Harrisburg January 8, January 27, February 16, and March 19.
With the exception of the first party going and the last returning, all of these parties will travel by the "Golden Gate Special," between New York and California, stopping at interesting points en route.

Florida.—Four tours to Jacksonville will leave New York and Philadelphia January 25, February 8 and 22, and March 8. The first three admit of a stay of two weeks in the "Flowery State." Tickets for the fourth tour will be good to return by regular trains until May 31, 1888.

Old Point Comfort, Richmond, and Washington.—Three six-day tours will leave New York and Philadelphia February 19, March 18, and April 7.

March 16, and April 7.

Old Point Comfort and Washington.—Three four-day tours will leave New York and Philadelphia December 28, January 29, and April 23.

Old Point Comfort.—Six tours will leave New York and Philadelphia December 28, January 29, February 19, March 19, April

and 23.

Seven tours will leave New York and Philadelphia December 28, January 13, February 3, March 8 and 31, April

21, and May 12. Interest to the winesteries of the above tours, giving rates and full information, may be procured of Tourist Agent, 1196 Broadway, New York; 800 Fulton Street, Brooklyn; 789 Broad Street, Newark, N. J.; or Geo. W. Boyd, Assistant General Passenger Agent, Phila.

KING ALFONSO XIII. OF SPAIN AND HIS MOTHER THE QUEEN REGENT.

(From a new photograph by Valentin Gomez, of Madrid.)

## THE AMERICAN MONTHLY

## Review of Reviews.

VOL. XVII.

NEW YORK, JANUARY, 1898.

No. 1.

#### THE PROGRESS OF THE WORLD.

However it may be in Mars and The New Year's other worlds not ours, the year 1897 for Spain. closes upon a vast deal of unfinished business in this particular planet that we inhabit. It had been hoped that the Cuban war might not hold over to vex another year, but the end is not yet in sight. The reports emanating from Madnd of "peace, perfect peace" in the Philippines, as mentioned in these pages last month, werethe most of the news that comes from official Spenish sources—not simply premature, but wholly apocryphal. The insurrection in that part of the world seems to be gradually succumbing under an astute policy of amnesties, gifts, and concessions to the rebellious chiefs; but it is to leinferred that the last chapter in the story of this costly colonial war will not bear an earlier ate than the year 1898. Nor has the domestic political situation in the Spanish home country been relieved of the dark clouds that have enreloped it during the past year. Every one sympathizes with the queen regent, who is a woman of exemplary character and of uncommon good sense, surrounded by political corruptionists and intriguers, and defended by military incom-Petents and weaklings, living in an atmosphere made gloomy by omens of revolution and rumors of treachery. It is well understood that the queen regent and her young son, King Alfonsoa very recent photograph of whom we have reproduced for our frontispiece—and all the other members of the royal family, including the charming young princesses, are prepared at a moment's notice to take their flight to France. Concealed artillery is trained upon the principal streets of Madrid, and everything is as ready as the circumstances will permit for the outbreak that may come at any time. It is felt, therefore, that the year 1898 must be a momentous one for the berian Peninsula.

As respects the policies of the United · Our Legacles of Unfinished States in matters of an international Business. character the year 1897 leaves as a character, the year 1897 leaves as a legacy to the year 1898 (1) the unsettled question of Hawaiian annexation; (2) the question what this country should do about Cuba; (3) the irritating problem of the seals of the North Pacific; (4) the Nicaragua Canal, and (5) the proposed reciprocity treaties. Among matters of home policy, the foremost place still belongs to the question how best to revise and improve our money system. It was believed last year that the immigration question had been settled for a time by the enactment of a restrictive measure, but President Cleveland's veto was interposed, and the question holds over for discussion this year. Another legislative matter of prime importance is that of a national bankruptcy act. It was confidently supposed a year ago that this. would belong to 1897 as a piece of finished business; but it remains for determination in 1898.

In the South the successful Nashville In the South and Exposition has been one of the completed episodes of 1897, while the great questions that will have been passed on to the new year include the suppression of lynching, the further restriction of the ballot, the diversification of agriculture, and the development of manufacturing. In the West the Pacific Railroad sale has been one of the most noteworthy incidents of 1897, and the Trans-Mississippi Exposition at Omaha will be the chief event of the year 1898; while the payment of debts and the revival of farming and of business enterprise, which have been the great characteristics of the year now ending, will, it is to be hoped and believed, have found their fruitage in a genuine return of prosperity in the course of the year The rush to the Klondike, chiefly from

the western part of our country, which acquired so large a volume and momentum in the late summer and early fall of 1897, promises to take the dimensions of a veritable flood when the ice and snow have melted in the coming spring.

Turning to the East, we note the fact that In the the year 1897 has witnessed an expenditure by the State of New York of many millions of dollars for the deepening and widening of the Erie Canal, with the result that the work remains unfinished and will be useless unless almost as much more is secured to continue it to a completion upon the plans as adopted. Further, one must note the enactment of the "Greater New York" charter early in the old year, the great election in November, which restores Tammany to power, and the entrance, with the opening of 1898, upon the most elaborate and difficult experiment in practical municipal administration that has ever been attempted anywhere. If some deplorable tendencies have been shown in our political life in the year 1897, there has also been evident a strong and growing spirit of antagonism to those tendencies; while it is to be noted that throughout our Eastern States, apart from politics, there has been many a cheering indication of progress in the arts and achievements of civilization. Boston, New York, and Philadelphia, not to mention many a smaller city, have much that is worthy to exhibit as a result of their activities in the year now past, and still more in clear prospect for the year to come.

Looking to the northward, we must note Canada's a year of exceptional importance and Outlook. interest in the affairs of our Canadian The Liberal administration of Sir neighbors. Wilfrid Laurier has adopted a distinctively new theory of the position of Canada in the British empire and in the world. His assertion of nationality for his country goes further by a great deal in its ultimate moment than the theory of nationalism upon which the late Sir John Mac-Donald was so long maintained in power. Wilfrid's visit to Washington, although informal in its nature, was in fact a matter of vastly deeper significance than his formal visit to England to participate in the celebration of the queen's sixtieth year on the throne. Canada's real interests

THE AMERICAN AND CANADIAN SEALING COMMISSIONERS.

R. W. Vening. Prof. Thompson. Charles S. Hamtin. Prof. David S. Jordan. James M. Maconn. George A. Clarke. Ex-Secretary J. W. Foster. Sir Wilfrid Laurier. Sir Louis Davies. C. F. F. Adams.

are obviously bound up with those of the United States, her connection with England being relatively strong as a matter of tradition and of generous sentiment. We reproduce a group photograph showing Sir Wilfrid and his colleagues and the Washington officials with whom they were in conference, because the event seems to us the one fraught with more historic importance for Canada than any other of the year 1897. The best interests of all parties concerned require that strictly North American questions should be dealt with and settled by North Americans in North America. So long as we allow them to be settled in London, it is not the Canadians alone who are in the position of mere colonials, but the people of the United States are to some extent in the position that they endeavored to alter in the times of George Washington. Sir Wilfrid Laurier and his associates are ready to leave various questions, in which the United States and Canada have a common interest, to be dealt with by a joint commission. It is to be hoped that something of this kind may belong to the history of the year upon which we are entering.

Turning to the countries lying to the In Mexico and Central southward, we do not find it altogether easy to distinguish important facts and permanent tendencies from the multitude of occurrences that obscure and confuse the main outlines of the situation. As to Mexico, every added year of the personal rule of President Diaz improves the condition of the country. The joint commission engaged upon the delimitation of the boundary between the United States and Mexico has been allowed to take another year, so that its finished work will belong to 1898. The boundary troubles with Guatemala having been settled, Mexico enters upon the year 1898 more free, perhaps, from international disputes and complications than any other country in the world. tral America, the great task of the past year has been the endeavor to federalize the series of small republics so as to constitute the "Greater Republic of Central America." The experiment seems to be in a state of arrested development. In two affairs that concern also the great outside world the Central Americans are just now especially interested. One is the departure from New York of President McKinley's new commission of engineers to make a final report on the Nicaragua Canal, and the other is the recent concession to an English company, under very peculiar circumstances, of railway rights and other important privileges along the route of the canal, in apparent conflict with the concessions held by the American Canal Company. Looking still further south, one finds the Panama Canal enterprise

undergoing reorganization, with some prospect, though not a brilliant one, that the great enterprise may be resumed and pushed to completion.

The republic of Venezuela is to be The Turn of the congratulated upon two things-first, South America. the complete success of the demand made on its behalf by the United States for the arbitration of the boundary dispute on the frontier of British Guiana—a matter that is likely to be brought to the point of a decision within the coming year; and second, upon an increased orderliness in domestic politics, as shown in a peaceful and comparatively honest presidential election. As for Brazil, the influence of the submission of the Venezuela-Guiana boundary dispute to arbitration has had the effect to make it comparatively easy for the great Portuguese-

PRESIDENT ANDRADE, OF VFNEZUELA,

speaking republic to secure the consent of France to a settlement by arbitration of the long-pending and serious dispute touching the boundary line between French Guiana and Brazil. The past year has seen a struggle under exceedingly interesting and novel conditions against a revolution in the interior of Brazil, chiefly in the State of Bahia, which had its origin in the teachings of a fanatical priest named Antonio Maciel. A recent attack upon the life of the president of the republic, with various revolutionary symptoms at Rio Janeiro, led to the consent by Congress that the executive should proclaim military rule for a period of thirty days. President Moraes will probably have restored order by the beginning of

the new year. A presidential election is soon to be held. The Argentine has entered upon a period of financial recuperation; Uruguay has disarmed a rebellion by granting to the rebels all that they asked; Chili is occupied with a trans-Andes railway project and other business undertakings, and was, when we went to press, in the midst of a serious cabinet crisis. Bolivia and Peru carry their chronic anxieties into the new year.

England's Pending Problems. The past year has been made notable in England by the great prominence given to the celebration of the queen's sixtieth year on the throne. In domestic legislation the two principal measures brought to a completion were the Employers' Liability Act, which is in the line of progress, and the measure giving public aid to denominational schools, which is reactionary. As an offset to this school policy

adopted by Parliament is to be mentioned the recent election of a new school board for London in which the clerical party, hitherto in the majority, was completely routed. Various measures promised for the improvement of agriculture, industry, and government in Ireland have not been brought to an issue, and belong to the questions inherited by the new year. A part of the penalty that the England of 1897 had to pay for the trouble with the Transvaal caused by the Jameson raid of a little more than a year previous was the continuance of the long and unprofitable Parliamentary inquiry. Meanwhile the British Colonial Office has had to deal with plenty of other African questions, including the dispute with the French touching respective spheres of influence in ('entral West Africa, the advance upon Khartum of the expedition that will undoubtedly in the year 1898 reconquer the Soudan, and the reorganization of the new British territory called Rhodesia. The railroad from Capetown to Buluwayo, with other lines now building, makes South Africa surely British.

But it is in India that the British im-A Troublous perial authorities have had the most to Year in India. contend with during the past year. At the beginning of 1897 the famine and the plague were making terrible havoc in great regions of dense population, and it is probable that, as the direct or indirect result of these two calamitous visitations, many millions of people have perished. The return of a normal rainfall, with the resulting improvement in crops, has mitigated the severity of the famine, and the measures for the supply of emergency relief have for the most part been discontinued. But the bubonic plague, unhappily, has not ceased its ravages, and is invading fresh districts. In the more recent news from India the famine and the plague have been almost entirely ignored by reason of the superior interest that the outside world has felt in the progress of the campaign against the tribesmen on the north-

"THE KING'S OWN SCOTTISH BORDERERS" SUPPORTING THE GURKHAS.

(The action at Chagu Kotal and Narik Sukh: the First Battalion, Third Gurkhas, storming the Pass-from a sketch by Lieut.-Col. C. Palley, Gurkha Rifles,)

western frontier. It had been considered at first that the so-called punitive expedition would have very little difficulty in putting down the rebellious highlanders who had interfered with British roadbuilding and the planting of military stations on the route to Chitral. But the campaign has grown to the proportions of one of the most serious minor wars that England has waged in many The winters are often extremely severe in those regions of high altitude near the peak of "the roof of the world," and it is to be feared that as much harm may befall the British and Indian troops by reason of the difficulty of transporting supplies through the snow-bound passes as from the bullets of the repeating rifles with which the tribesmen seem to be so well armed.

The most striking event of the year Germany's 1897, in the struggle of the European powers for outlying possessions, will probably turn out to have been the action of Germany in landing troops on the coast of China late in the month of November. The event sur-At first it seemed to be prised the whole world. nothing more than it pretended to be-namely, a prompt measure for the collection of an indemnity on account of the murder of two German But it quickly transpired that the missionaries. missionaries formed merely a convenient excuse. The German Government had come to the conclusion that the French advance by way of Tonquin and the Russian advance by way of Manchuria must indicate that the partition of China was not to be long delayed; and if Germany was to participate in the grand spoliation she must have a starting-point and a foothold. The game has been played boldly, brilliantly, and with complete success. China has already conceded to Germany the permanent occupation of the port of Kaio Chau, including the fortifications, with land immediately surrounding to the extent of about four hundred square miles.

In matters of home discussion and policy, Other two great parliamentary questions that Questions. have agitated the Germans during the yest year have been the reform of procedure in military trials, and the emperor's urgent appeal for money with which to increase the navy. The Parliament refused to sanction a measure giving the police the right to suppress public gatherings. Other questions constantly under discussion have had to do with the sugar bounties and with the tariff regulations that place increased duties on Russian and other foreign breadstuffs. measures help the landowners, but increase the cost of living to artisans. In the past year the German emperor has been extremely active in

A CHINESE VERSION OF "MARY STUART."

LORD BURLEIGH (to the German Leicester): "My lord, these missionaries have been killed very conveniently for you."—From Der Floh (Vienna).

the international affairs of the continent, and has done a great deal of traveling, having made notable visits to the Czar in Russia, and to the Emperor Francis Joseph in Hungary, while also meeting and entertaining the King of Italy. Besides his constant efforts to maintain and strengthen the Triple Alliance, it is believed that the Emperor William has reached some kind of an understanding with the Sultan of Turkey for the rendering of mutual military aid, if needed, against Russia. Prince Hohenlohe has continued as Chancellor of the German empire, although there has been constant talk of a cabinet reorganization which would include the retirement of that statesman.

The republic of France, with Félix How It Fares with Faure as president, Félix Jules Meline France. as prime minister, and Gabriel Hanotaux as minister of foreign affairs, has given an unusual exhibition of governmental stability during 1897. The average life of a French cabinet is about six months; but the one now in office assumed responsibility on April 30, 1896. The visit of the President to Russia and the plain avowal of the alliance was the great event of the year. In domestic affairs, the preparation for the exposition of the year 1900 has been a leading topic; but it has been overshadowed by the extraordinary agitation raised late in the year over the question whether or not Capt. Alfred Dreyfus, who was convicted in 1894, by a military tribunal, on the charge of

M. Réné Lecomte. Commandant Binger. Colonel Everett. M. Gosselin.

OF THE "LAGOS HINTERLAND" IN WEST AFRICA.—(Graphic, London.)

selling plans and information to a foreign government, was really guilty or was the innocent victim of a dastardly conspiracy. The astute Hanotaux has greatly strengthened the position

of France in North Africa, and has virtually obtained British consent to operations in Tunis that will soon have turned a somewhat shadowy protectorate into a firm French annexation. Hanotaux's shrewdest scheme of the year seems destined, however, to prove a failure. It was apparently the deliberate design of the French to occupy and hold a district claimed by the British, lying west of Abyssinia and east of the French Congo, including the upper stretches of the Nile and its chief tributaries. The English Government is asserting itself very strongly on the point that it is necessary, in the interests of Egypt, that there should be a unitary control of the Nile from the Delta to the sources. The British contention is the sound one. Nevertheless, in spite of this failure the French have made posi-

tive progress in the field of colonial empire, and they are preparing, it would seem, in the year now coming, to extend their Asiatic dominion by further encroachments upon Siam and China.

ANGLO-FRENCH BOUNDARY COMMISSIONERS IN THE HEART OF WEST AFRICA.

(These officers have nearly marked the line between French Dahomey and British Lagos.)

Austria's

passed a more serene and undisturbed year as respects its foreign relations than the Austro-Hungarian empire. But certainly no important country in the world has had so fearfully vexed a year in its strictly domestic politics as the dual realm of Francis Joseph. Elsewhere in this number we publish an article by a well-informed contributor, who presents the Austrian situation in detail. Count Badini has been driven from the prime ministership by his total inability to secure any working support from the Reichsrath, and he has been succeeded by the Baron Gautsch von Frankenthurm. Count Goluchowski maintains his position as foreign minister, and has come to the front as one of the really powerful personages in the international councils of the European concert. It is believed that he has brought about a satisfactory understanding with Russia as to the plans and ambitions of the two empires in the Balkan peninsula. Thus, with external relations sufficiently assured to remove all serious anxiety, the Emperor Francis Joseph now enters upon the year in which he is to celebrate the fiftieth anniversary of his accession to the throne, with a realm so entirely at odds with itself that it bids fair to fly asunder. The outlook for 1898 is at best a very gloomy one for the Austro-Hungarians.

No European country, perhaps, has

In the middle of December the govern-Breece and ment at Athens reluctantly signed the Crate. final draft of the treaty of peace with Thus 1897 has seen the full rounding out of one particular episode in the history of the never-ending Eastern question. Greece loses very little actual territory, but has to accept a frontier line revised in the military interest of Turkey, and must also pay a large indemnity. Her fiscal affairs will now be practically in the lands of a European board of commissioners acting as trustees or receivers until the Turkish inlemnity as well as the earlier foreign debt has een paid off. This war, it will be remembered, was on account of Crete. If the great powers had been willing to allow the Greeks to annex and administer the island there would have been no further trouble. One firm, vigorous word from Lord Salisbury at the right moment would have settled everything; and not only would the Greek solution have been wise and right as regards Crete, but British prestige would have been accordingly enhanced. But Lord Salisbury played disgracefully and weakly into the hands of England's worst enemies. Meanwhile, what has the boasted concert of Europe done with its attempted reorganization of Crete? Practically nothing at all. A number of months ago it was

reported that a prominent Swiss statesman, M. Droz, had been agreed upon by the representatives of the great powers to be the governor of Crete; but this selection was unsatisfactory to the Sultan, and was not insisted upon by the powers. At length there seemed to be an entire agreement upon Colonel Schaefer, an officer originally from Luxemburg, who had served in various capacities in the Turkish empire, and was conspicuously qualified for the task of reorganizing and

COLONEL SCHAEFER, THE REJECTED CANDIDATE.

administering Crete. But after Colonel Schaefer's selection was thought to have been settled the Sultan made objections, and Russia took the new ground that the Cretan governor must be a member of the Greek orthodox church. Meanwhile the Cretans are declaring that they will select a governor for themselves if the powers do not hasten to make a choice.

The President The first regular session of the Fiftyfifth Congress convened on December 6. The President's Message was Question. a document notable for the moderate character of the views it expressed and the suggestions it embodied; and it was also distinguished by the lu cidity of its phrasing. Its longest passages were devoted to the question of monetary reform and to the Cuban situation. Respecting the currency question, the President's argument for some

action at the present session was admirably framed, and seems to us unanswerable. recommends that even if nothing should be done in the direction of the more elaborate programme set forth in the report of Secretary Gage, or in the measure to be offered by the business men of the country, acting through the commission that has been at work in consequence of the Indianapolis convention, Congress should at least make two or three simple provisions. One of these is that when United States notes are presented for redemption in gold, and are so redeemed, those same notes should not be paid out again except He advised further that in exchange for gold. national banks be allowed to issue notes to the full face value of the bonds which they have deposited to secure their circulation, and that the tax on their circulating notes should be reduced. Further, he recommends that in the smaller villages of the country the amount of capital needed to start a national bank should be reduced as low as twenty-five thousand dellars, and finally that bank-notes should not be issued in denominations smaller than ten-dollar bills.

We will not at this point proceed with a The Real comparison of similarities and differences in the several pending plans for currency and banking reform, but will refer our readers to the excellent article written for this number of the Review by Mr. Charles C. Conant, of Washington. Our contributor is an expert student and writer in the field of finance (see also his article on the new tariff in our August number) whose grasp upon the subject has been strengthened by the fact that he has served as a secretary of the commission which has just completed its sessions at Washington under the chairmanship of ex-Senator George F. Edmunds. Mr. Conant's article discusses President McKinley's suggestions, explains Secretary Gage's plan, and in particular elucidates the main positions upon which the Monetary Commission has come to an This subject ought to occupy the agreement. attention of Congress before all else during the coming winter. The prosperity of the country is to no small degree bound up in the remedy that Congress may vouchsafe to provide for the defects of our monetary system.

The Dingley It is a fortunate thing for the country Tariff and that we are to be spared the misery of Revenues. a tariff discussion this winter. The country cannot forget, however, that the express reason for convening the new Congress in extra session a few days after the inauguration of President McKinley last spring was to provide the Government with a sufficient revenue. It was

claimed by the Republicans that the enormous yearly deficits under the Wilson act were more responsible than anything else for the general disturbance of the country's finances, private as well as public. The one thing, therefore, above all others, that ought to have been made certain in the new fiscal measure which bears Mr. Dingley's name was that it should provide an abundant in-While the Dingley bill was pending, as our readers are well aware, a large part of the commercial shipping of the world was busy in bringing sugar and various other commodities to this country in anticipation of the higher duties that were proposed. It was perceived, therefore, that the public revenue for a few months under the Dingley tariff would be considerably less than it otherwise would have been, because of the haste which had been made to land a large supply of wares before the increased duties became oper-It was very decidedly the opinion of many Republicans, both in Congress and outside of it. that the bill as passed was seriously defective as a revenue-producing measure. As a protective measure it was certainly as robust as the stanchest advocates of protectionism could ask for. But we have reached a stage in our manufacturing development in this country when the home market would in any case be principally held by American producers, even with low tariffs. When under such circumstances the tariff rates are high, there results—instead of an abundant revenue to the Government—so greatly increased an exclusion of foreign goods that the customs receipts tend to disappear.

There ought, therefore, to have been The Proper Remedy. added to the protective features of the Dingley bill some purely revenue-producing items. It was originally proposed that a temporary tax be levied upon tea, and perhaps also upon coffee (at a low specific rate of perhaps ten cents a pound for the one and five cents a pound for the other), to supply the needed revenue factor; and an increase of from fifty cents to a dollar per barrel in the internal revenue tax upon beer was advocated, as certain to yield large returns to the Government without affecting the retail price to consumers. It seems a serious mistake that these excellent suggestions were not embodied in the Dingley scheme. There is no possible reason why our Government should not have a revenue equal to its ordinary needs. Thus far, the monthly deficiencies under the Dingley act have been heavy. The official sponsors of the measure are in danger of adopting precisely the same unfortunate course that Secretary Carlisle pursued under similar circumstances. They seem inclined to disguise the real facts. Let them beware of

trying to arrange the figures in such a way as to obscure the simple truth that the current receipts are much less than the current expenditures. The present law may, as its friends declare that it will, produce revenue enough in the fiscal year But it was not for that purpose that Congress was called together in special session early in the year 1897. The purpose then avowed was to provide means to put the Government immediately into the possession of an ample income. The best way to deal with a mistake is to admit it and rectify it. Mr. Dingley's committee ought at once to bring forward a simple measure of two or three brief clauses increasing the tax on beer, and perhaps also placing a small specific tax for a year or two upon tea and coffee.

The President's Message discusses the The President Cuban question at very considerable Situation. length; but the whole burden of his advice may be summed up in one word: "Wait." He quotes President Grant's arguments against the recognition of Cuban belligerency in the former rebellion, and adopts them as applicable to the immediate case. His reflections upon the Weyler administration in Cuba are as severe as those that the American newspapers have been accustomed to make. But he professes a remarkable optimism respecting the totally changed outlook under the administration of Blanco. At least he considers that it would be highly inappropriate for us to intervene at this moment, when Spain is endeavoring to secure reconciliation with Cuba on the basis of the pending home-rule proposals. Meanwhile, he remarks that "the near future will demonstrate" whether or not this new policy is likely to produce the desired results; and he declares that if such results are not attained it will become the duty of the United States to take action "in the line of indisputable right and duty." All this means simply that we are gaining a little more time in order to see whether we cannot avoid the disagreeable responsibility of mixing ourselves up in the Cuban scrimmage. Decisive and bold action on our part long ago would probably have stopped the contest without our firing a gun. But we have delayed so long that it is now extremely hard to screw our courage up to the sticking-point.

The President may have some very Failure of the Blanco - Sagasta Policy. superior sources of information, but the non-official world has not yet been able to discover that the autonomy proposals are viewed with any seriousness whatever by the Cuban people. They are the mere offhand suggestion of a cabinet likely to be overthrown at any moment; and they certainly can have no validity until they have been acted upon by Spain's law-making body, the Cortes. The state of destitution in Cuba is appalling, and the pretense on the part of the Blanco administration that it is dealing out rations to the impoverished pacificos is to be viewed in the light of the fact that the Spanish army itself has been in a very serious predicament from the insufficiency of its food We have repeatedly shown in these. supplies. pages why it would seem to the impartial observer that the situation in Cuba is practically deadlocked, and that the insurgents, if they so desire, can keep up the rebellion for many years to come, without having power to drive the Spaniards out of the seaports. Not only has the new policy made little progress in Cuba, but there

SPANISH SOLDIERS SHOOTING DOWN SUSPECTS NEAR HAVANA--A TYPICAL CUBAN SCENE. (From a very recent photograph by the English correspondent of Black and White, London.)

is much reason to think that public opinion in Spain is upon the point of repudiating it utterly. General Weyler is its most bitter enemy, and the military element in general seems to be strongly opposed to the autonomy scheme. Through the month of December the opposition to the Sagasta government was rapidly growing more formidable every day. Inasmuch as President Mc-Kinley's discussion of the Cuban question maintained firmly the right of the United States to intervene if peace were not speedily restored, there has resulted from the moderate tone of the President's Message no real improvement of feeling in Spain toward the United States.

Another question with which the (1) The Ethical Question.

President's Message deals is the annexation of Hamilians. nexation of Hawaii. The treaty has been duly ratified by the Hawaiian authorities, and it was supposed until a few weeks ago that it would readily enough secure the necessary twothirds vote in the Senate of the United States. President McKinley strongly urges such ratification, but does not attempt to make an exhaustive argument on the subject. The discussion has been taken up by the press of the country in a very animated fashion, and has followed various lines, which may perhaps be summed up under five heads-namely, ethical, constitutional, political, strategical, and economic. The opponents of annexation on ethical grounds hold that the present government of Hawaii, in seeking annexation, does not truly represent the wishes of the Hawaiian population; and that under the circumstances our acceptance of the proposal would appear highly objectionable in a court of morals. The friends of annexation reply that, on the contrary, the intelligent and ruling public opinion of Hawaii is enthusiastic for annexation, and that the whole world knows very well that no other fate could be so fortunate for the group as union with the United States. Very few, after all, of the opponents of annexation are really basing their opposition on the ground that we should do Hawaii an injury and a wrong by consenting to her request that our "starry banner of freedom" should float over the islands. The very suggestion is so absurd that it can hardly be entertained by any one who has the slightest sense of humor.

The constitutional questions involved are taken far more seriously. The annexation of Hawaii must be followed by some plan for the government of the islands, either identical with the normal system now employed by us in the government of our Territories and States, or else some wholly different system, invented for an excep-

tional occasion. Our Territorial form of organization seems to imply admission to full statehood at the earliest practicable moment. thoughtful persons in the United States do not like to contemplate the admission of Hawaii as a There would seem to be no reason, however, in the necessities of the case, why a special organization should not be provided for Hawaii. Important transactions usually involve some difficulties; and the drafting of a scheme for the government of such an outlying possession would require very careful thought and consideration. But it would certainly be very unfortunate for a nation as young and vigorous as ours to be so bound hand and foot by an inelastic constitutional system that it could not invent a way to administer annexed territory.

The political and strategical bear-(3) The Strategic ings of the annexation question may be mentioned together. Government has believed for along while that we ought to have a naval and coaling station in the Pacific; and Pearl Harbor, which has been granted to us by Hawaii, is by far the best available location. If, now, we should reject the Hawaiian overtures for annexation, there is no reason why the Hawaiian Government should not look to England. And there is every reason why the acquisition of Hawaii would be highly gratifying to the energetic statesmen who are losing no opportunity to link together more firmly those imperial possessions upon which the sun never The Hawaiian Islands lie in the line of desired cable communication between Vancouver and Australia, and in the line of transit between Hong Kong and the anticipated waterway across the American isthmus. If England should acquire Hawaii upon our refusal to do so, there would seem to be no possible reason why we should insist upon the retention of Pearl Harbor; and England would unquestionably proceed to make Hawaii the best fortified naval station in On our part, if we annexed the islthe world. ands, we should not need to be in any haste about fortifications. The American policy is so notably a pacific one that our ownership of Hawaii would be universally acquiesced in. It is almost inconceivable that we should ever have to fight to retain a control once assumed. Furthermore, the American control of Hawaii is in some sense a duty that this country owes to Japan and China. Those ancient Oriental states are seriously menaced by the aggressive attitude of the land-grabbing European powers; and if England or Germany should obtain Hawaii, the sort of peaceful development of the Oriental nations which is most to be desired by us would be further endangered. Again, from the political and strategic point of view, the position of Hawaii ought to be regarded by us as closely related to other policies overwhelmingly favored by the people of the United States. We refer to the American control of the Nicaragua Canal, and to the acquisition of one or more satisfactory naval stations in the West Indies.

All of these strategic considerations 4) The Economic are so plainly important that there Assexation. would have been no serious opposition to the ratification of the treaty but for the sudden development of a powerful American opposition on economic grounds. This opposition seems to us unpatriotic in its spirit and methods. The Dingley tariff bill, which increases the duty on sugar, has stimulated experiments all over the country in the cultivation of the sugar beet. Certain organizations, agricultural and otherwise, that have strongly committed themselves to the advocacy of the culture of the sugar beet in the United States have now placed themselves in the forefront of the opposition to the annexation of This is done upon the ground that they wish to exclude cane sugar from the United States morder the more rapidly to develop the new beet industry. It need not be remarked that this magazine has always given most cordial support wall reasonable plans for the promotion of the American culture of sugar. But there would seem to be a limit to the methods that are reasonable and proper for the promotion of that desired So furiously zealous have the excellent gentlemen who are at the head of the American sugar-growers' propaganda become, that we are expecting almost any day to discover that they have decided to attempt to drive the State of Louisiana out of the Union in order to change the geographical course of the tariff wall and thus to protect the infant industry of beet sugar from the dangerous competition of the cane sugar of our Gulf districts.

The plans of these beet-sugar propa-The Cause of Beet Sugar gandists extend not only to the de-Everything. feat of Hawaiian annexation, but also, of course, to the abrogation of the existing reciprocity treaty under which, for many years past, Hawaiian sugar has been admitted free of duty. Under the existing measure of protection, which brings the two cane-sugar districts of Louisiana and Hawaii inside of our tariff lines, there would appear to be sufficient opportunity for the beet sugar men to nurture their infant industry. After it has attained a certain development, it will be able to compete on fair and equal terms with these two cane-sugar districts.

The annexation of Hawaii, instead of introducing a new factor of competition, simply preserves the existing status. There is more than one county in Texas that has a considerably larger area than all of the islands of the Hawaiian group put together; and there are a number of such counties in California. It seems to us altogether petty and shortsighted to exclude Hawaii from the American Union, and to turn that strategic possession over to some great naval and military power, in order to gain a merely incidental point in the programme of the enthusiastic friends of American beet sugar. The natural laws of industry will, in the course of a few years in any case, determine whether diminutive Hawaii shall keep on producing sugar or use her soil for other crops. It is not a dignified thing for the United States to allow the question of annexation to hinge upon the sugar tariff, yet it seems altogether too likely that this is precisely what will happen. It may be added, furthermore, that it seems to us a long way below the highest mark of American dignity and patriotism that this same sugar question should also be made to do service on the side of the Spaniards in the Cuban trouble. zealous beet-sugar propagandists have become afraid that an active policy on the part of the United States to save Cuba from utter devastation might lead in the end to the annexation of that island, or else to a commercial union which would bring down a full-grown avalanche of Cuban sugar upon our beet-fed infant industry. If we are to intervene at all in Cuban affairs, it should be for the sake of humanity, and for those large considerations that are summed up in the Monroe Doctrine as interpreted from time to time by our Government. The sugar question should be kept in its proper place.

The balance in favor of the United America's Approaching Supremacy in the States in the trade of the past year with Europe has been of stupendous World's dimensions. This is due chiefly to the foreign demand for our breadstuffs and other food supplies. In view of the strengthened tariff barrier which makes it more difficult than ever for Europe to send her manufactures to us in payment for bread and meat, cotton and petroleum, there is much uneasiness in trade circles abroad, and not a little open and blustering talk of a combination of the whole continent of Europe for the economic suppression of the Among responsible statesmen, United States. Count Golochowski, the Foreign Minister of Austria, has been the most conspicuously identi-The puzzling thing is to fied with such threats. invent a mode of retaliation that will not hurt the European peoples themselves very much

worse than they can possibly hurt the United England, of course, has for a long time been reconciled to the idea of importing the larger part of her food supply. But since the United States has begun to compete so formidably in manufactures there has arisen no little consternation in the British mind. Many signs point to the passing of the scepter of industrial supremacy from Great Britain to the United States. The year 1897 has witnessed the easy triumph of the American makers of steel rails over English and all other competitors in every part of the world. American contractors are fitting out electric street railways in England, and various American manufactures of iron and steel are underselling British products, not only in neutral markets, but also in the United King-Recent reports of the rapid exhaustion of England's coal supply have added to the prevail-The advantage which American ing alarm. manufacturers have gained is due not merely to the superiority of our natural resources as respects the deposits of iron ore and coal, but also to the vast scale upon which our industries are organized, and the superiority of their appliances.

The Disastrous
Strike of the
English
Mackinists.

It is in the very face of such conditions as this new and powerful American rivalry, and the ever-increasing intensity of German competition, that the proprietors of iron and steel-working establishments in England have had to meet one of the most stubborn strikes ever known in any trade. The

struggle of the engineers, or machinists, as we should say, began about six months ago. It was undertaken nominally for the purpose of securing the eight-hour day. A great strike in 1870 won the ninehour day for the machinists and the allied trades, who had formerly worked ten hours. The real struggle of the past year, however, has had to do not so much with the eighthour day as with questions involving the principle whether the details of shop management are to be controlled by the proprietors or by the trades unions. English manufacturers believe that with the greater extension of the piecework plan, and greater freedom to manage the working of their own machinery, they could

obtain far better results than the present system It is notably true that the output per man is very much larger in American than in English shops. The great strike has paralyzed leading departments of English industry at the very time when good will between masters and men and united effort against foreign competition were most to be desired. Late in November, through the mediation of the Rt. Hon. T. C. Ritchie, President of the Board of Trade and one of the most prominent members of Lord Salisbury's cabinet, a conference was brought about, with fourteen members on each side. Colonel Dyer, of Newcastle, acted as chairman for the employers, while Mr. Alfred Sellicks and Mr. Barnes, secretary of the Amalgamated Society of Engineers, were the leaders on the side of the men. After about ten days of discussion the conference adjourned without having come to an agreement. The representatives of the workingmen, however, consented to submit to the members of their unions certain proposals made by the employers. On December 13 the returns came in, and it was found that out of 40,000 votes only 150 were in favor of accepting the proposals. The prospect, therefore, for an immediate settlement of the trouble The conference was subseis not encouraging. quently resumed, but not hopefully. while, in Germany the factories are running on long hours, and masters and men are straining every nerve to force German wares into markets where England once held the monopoly.

ENGLISH CAPITALIST: "I cannot contend with cheap labor abroad."

THE GREAT ENGLISH ENGINEERING STRIKE: PRELIMINARY CONFERENCE OF REPRESENTATIVES OF MASTERS AND MEN
AT THE WESTMINSTER PALACE HOTEL.

From the \*!Bustrated London News.

It is not alone in iron and steel New Factors in the Cetten Industry. manufacturing that England's preeminence is seriously threatened. The managers of the great cotton mills of Manchester and vicinity have informed their operatives that it will be absolutely necessary to reduce wages all along the line or else stop the engines and lock the doors. They have offered to submit the question of reducing wages to arbitration; but a difficulty has been encountered in arranging the preliminaries, and the operatives have refused to arbitrate on the basis of average prices since As a consequence, the mill owners have proceeded to post notices of wage reduction, and it is greatly to be feared that there may follow a strike of even more serious character than that of the engineers. The business of spinning and weaving cotton has been greatly affected by new elements of competition. Great mills, equipped with the best modern machinery, have been established in Japan and China, and especially in India. In those countries labor is employed at a few cents a day, and the hours of work are long. It is true that the average efficiency of Oriental labor is not so high as that of the Manchester district. Nevertheless, the Oriental operatives are constantly improving in skill and in ability to run their machines rapidly; so that they now produce a much larger output for a given amount of wages than the English workmen are able to turn out. The Oriental mills

have the further advantage of being near the fields which produce the raw cotton, and also on the very threshold of great markets which have been accustomed to draw large supplies from Manchester. Furthermore, the English cotton trade, as respects many special lines, has begun to feel more heavily than ever the competition of the great mills of the United States, where the highest skill and the best methods ever attained are to be found. The total American output is increasing at a great rate by reason of the development of cotton mills in the South, where all the conditions of cheap manufacture exist to an exceptional degree. Thus the closing years of the present century and the opening years of the twentieth are to witness a most interesting series of developments in the production and distribution of the world's great staples of industry; and no other country occupies a position nearly so favorable as that of the United States.

Industrial Arbitration Again.

To add to the list of industrial disturbances in England, there is serious danger of a great railroad strike. Under all these circumstances it is not strange that there has been a good deal of discussion touching the feasibility of compulsory arbitration in industrial disputes. Much interest has been awakened by the experience of New Zealand, where a compulsory arbitration law has been in operation for more than three years, with results

that are said to have abundantly fulfilled all that its friends had expected. It is not likely, of course, that England will go so far; but on the other hand, it is probable that greater efforts will be made than ever before, both by governmental and unofficial means, to mitigate the disasters that accrue to the whole country from these protracted industrial deadlocks.

The British Parliament will not be in ses-**Politics** sion until February. Meanwhile, political discussion has been raging for several weeks past. The House of Commons having nearly seven hundred members, vacancies are occurring from time to time. The by-elections to fill these vacancies caused by death or resignation have of late been running strongly in favor of the Liberals. Furthermore, in so far as na-. tional party lines were drawn in the general municipal elections held throughout England early in November, the Liberals made very decisive gains. They have been particularly bold and effective in their criticisms upon the present government for the unfortunate war still raging on the northwest frontier of India. It must be remembered that the Liberal cabinet under Lord Rosebery's

MR. CHAMBERLAIN AS LORD RECTOR OF GLASGOW UNIVERSITY.

UITLANDER (regretfully): "He seems to have forgot us entirely."—From Fun (London).

premiership had unanimously decided against the continued occupation of Chitral, and had made all preparation for evacuating that post, which lies far beyond the actual boundary line of British India. When the Tories came in, however, and Lord George Hamilton succeeded Sir Henry Fowler as Secretary for India, the Liberal policy was reversed, and it was decided to keep open the route to Chitral with a line of fortified stations. It is maintained by the Liberals that this was done in plain violation of pledges which had been given to the tribesmen of the hills, and that in the present war the tribesmen have justice on their side. The Tory government makes no pretense of intending to annex the regions whereso much blood is now being shed, and it is hard to arouse the matter-of-fact English people to much enthusiasm over what is variously stigmatized as the policy of "butchery and bolt," or "slaughter and scoot." Moreover, the British conscience is not quite reconciled to the manner in which Mr. Chamberlain and the Tory government have whitewashed the principal parties in the conspiracy against the Transvaal. Nor is Lord Salisbury any the more popular for his neglect of the Armenians and his sacrifice of the Greeks-while his surrender of British commercial interests to the French in Tunis and Madagascar adds another count to the general indictment against his administration. Sir William Harcourt, Lord Rosebery, Mr. Bryce, Sir H. Fowler, and other leading Liberals have been waging a splendid campaign of oratory throughout the country against the existing government. Mr. Chamberlain, meanwhile, has been invested with the honorary office of Lord Rector of the University of Glasgow, and has abated nothing of his incessant administrative and political activitv. Whether right or wrong in his utterances and policies, he is a man of marvelous force and energy, and always interesting.

Nothing more melodramatic has been Activities on witnessed in our times than the solemnities at Kiel, in the middle of December, on the occasion of the departure of the Emperor William's only brother, Prince Henry of Prussia, for the scene of Germany's new activities on the Chinese coast. The performance between the emperor and his brother, in the presence of the great German officers of state and the chief men of the army and navy, had, of course, all been carefully rehearsed in advance. It is hard to believe that so highly educated a nation as the Germans could be impressed by ceremonies of adulation which amount virtually to the worship of the erratic Emperor William as a deity. Prince Henry's naval command was

anything but formidable, and his trip promises to be nothing more, so far as he is personally concerned, than a pleasant voyage. One is therefore somewhat bewildered by the emperor's constant reiteration of the great sacrifice he had made in sending his only brother to China. Melodrama aside, however, the Germans have taken a very bold and enterprising step. Our accompanying map will show the central position the port of Kaio Chau occupies with reference to other important and strategic points. It will be remembered that Japan had taken possession of Port Arthur at the conclusion of the war with China, and had hoped to retain it permanently as a Japanese Gibraltar; but Russia, backed by France and Germany, compelled Japan to with-It was rumored late in December that the Russians had suddenly taken possession of Port Arthur. It is certain that their fleet is now

MAP OF THE CHINESE COAST.

there, and wholly probable that they intend sooner or later to assume permanent control of that chief fortress of the whole coast of China. The Germans, if undisturbed in their new acquisition, will probably manage to make so pro-

THE CHINESE PUZZLE.
From the Inter-Ocean (Chicago).

ductive and well-inhabited a region pay good revenues to its captors. Japan is much disconcerted, and has been endeavoring to secure the coöperation of other important powers in protesting against Germany's high-handed seizure of Chinese territory. With such a state of affairs so much nearer home, the Japanese will feel very slight inclination to antagonize the interests of the United States in Hawaii. Meanwhile the English from their Hong Kong rendezvous will be ready to take their share of the Chinese mainland.

It seems almost impossible to follow the parliamentary crisis in Austria through all its riotous record of disorder. such scenes as those that have disgraced the Reichsrath have ever been witnessed in any other parliamentary body. The root of all this discord is to be found in the confusion of tongues and races. The elaborate article which we publish elsewhere on the political situation in Austria and the future outlook is contributed by an Austrian of American experience who has been witnessing the exciting scenes in Vienna, and whose account will be found exceedingly instructive. A new premier, with a reorganized cabinet has come into power within the past month to succeed the much-buffeted Badeni. Baron Gautsch von Frankenthurm. the new prime minister, is a pious schoolmaster of very reactionary tendencies. His father was a police commissary in Vienna. Paul, the son, began active life as a tutor in a charity school for the sons of impoverished nobles, and in due

time became prominent in the political circles of the Clerical party. He is not yet forty-seven years of age, although more than twelve years ago he held in the ministry of Count Taaffe the same portfono-namely, that of minister of public instruction, which he held in the recent cabinet Since his earlier term of service as a of Badeni. cabinet minister, he has been made president of the school where he was once tutor, has been raised to the rank of a noble, and has acquired a life seat in the upper house of the Austrian Parliament. As minister of public instruction some important reforms stand to his credit. But it is not likely that he can long keep the saddle as prime minister in times so turbulent as these. The probability is that the great anti-Semitic

leader of Vienna, Dr. Lueger, so many times elected mayor, will eventually take the first executive position in the distracted Austrian empire.

That the ferment A Curious in Austria is due Ferment in France. to permanent conditions of a nature so serious that the integrity of the empire is threatened can be readily enough believed when one has read the article which we print elsewhere. But it would seem altogether beyond one's powers of credulity

CAPTAIN DREYFUS.

have been seriously shaken within the past two months by an issue so incidental as the question whether or not a certain army officer - Captain Drevfus who was found guilty in 1894 of selling military scerets, had been convicted upon sufficient evi-The unhappy Dreyfus is said to be confined in an iron cage in distant Cayenne.

a Jew, and his energetic wife and rich connections

have never ceased to work for his release. The renewed agitation has been due to the fact that the vice-president of the Senate, M. Scheurer-Kestner a Protestant and a man whose reputation for honesty and good sense is not surpassed in France -has declared himself convinced by evidence that has come into his possession that Captain Dreyfus is the innocent victim of a conspiracy. It is now charged by the friends of Dreyfus that

the real culprit is a certain Colonel Esterhazy, an adventurer of evil character, who has served in the French army.

COLONEL ESTERHAZY.

of the French

republic could

though not a Frenchman. The great question at issue has been whether or not the secret trial which resulted in the conviction of Dreyfus on evidence the nature of which was not made known to the accused or the public, should now be reviewed openly, with an opportunity to present fresh evidence.

M. SCHEUKER-KESTNER.

The New Voting

The new Constitution of South South Carolina. Carolina, adopted two or three years ago,

read the Constitution of the State, or understand and explain any article of it if read to After January 1, 1898, this "understanding clause" was to be no longer in opera-There are a great many more negroes than white people in South Carolina, but as a consequence of this registration system the electorate of the State now consists of about ninety thousand white voters, and only ten or twelve thousand colored voters. Those persons now on the rolls will be entitled to vote as long as they The great mass of illiterate colored voters

is thus completely disfranchised. From the be-

provided for the registration of voters who could

ginning of 1898 no man can be enrolled unless he is assessed upon three hundred dollars' worth of property, or is able to read and write. understanding clause has so worked as to place most of the white voters on the rolls regardless of illiteracy, while the black illiterates are nearly Henceforth, however, the blacks all excluded. and whites will have to meet the same tests. Many well-informed friends of the colored race are firmly of the opinion that the new South Carolina arrangements are to be welcomed rather than condemned. The coming generation will value citizenship the more highly because the exercise of full political rights can only be gained by resolute effort to advance in the scale of intelligence and prosperity.

The South Carolina and Mississippi *Hiteracy* provisions which discriminate against immigration. illiteracy have something in common with the pending immigration bill that Senator Lodge advocates so strongly, which applies the reading and writing test to new arrivals from other countries. There is undoubtedly a great deal to be said in favor of such a measure; but there is not less to be said in favor of a new federal naturalization law greatly extending the prolationary period. The Austrian empire is going to pieces through the clash of races and the conision of tongues. The cement that holds together our great nation is the widely diffused knowledge of the English language. There would be no hardship whatever in requiring that no naturalized citizen should be allowed to vote until he was able to speak, read, and write the English language, and could pass a creditable examination in the American system of government. The proposed immigration measure simply requires the reading test, and gives no preference to the English language over any other. But the subsequent tests for full citizenship should be made far more severe.

As Embargo A bill was carried through both houses of Congress last month which—in Seel Shins. pursuance of the agreement between the United States, Russia, and Japan at the recent conference in Washington-prohibits the citizens of the United States from taking the fur seals in the open sea. It is the opinion of our Government that we shall be more likely to persuade the Canadian and British governments to stop pelagic sealing on the part of their citizens if we nave already made it an offense for American citizens to continue this barbarous and destructive practice. A special clause attached to the measure prohibits the importation of seal skins into the United States. Now it happens that this country has been the great market for articles made of dressed seal skins; and much the larger part of the catch of the Canadian sealers has found its ultimate market in the United States after having passed through the hands of the fur-dressers of London. Since our Government is making a supreme effort to save the seal herd from utter destruction, there can be no reasonable criticism urged against the policy of prohibiting the importation of seal skins. This step in the long controversy is unexpected, but entirely commendable from every point of view.

A piece of emergency legislation that Relief for the Klondike was hurried through Congress on the Sufferers. urgent advice of the Secretary of War before the Christmas recess was the appropriation of \$200,000 to pay for the purchase and dispatch of provisions to relieve distress in the Klondike region. Very alarming rumors have come from Dawson City to the effect that a scarcity of food has already brought on a disastrous famine, and that several thousand men have been in danger of perishing in the snow on their arduous retreat to the seacoast or to places where provisions might be found. Precisely what plans will be used to transport the supplies to Dawson City will be better known next month. It is now certain that as soon as the spring opens there will be an unprecedented rush to the gold fields of Alaska and the Klondike, some authorities estimating the number of new gold-seekers as high as 200,000, and no one placing it lower than 50,. 000. It will all depend upon means of transport.

Our excellent minister at Constanti-Why We Need nople, Dr. Angell, has made renewed demands upon the Sultan's government for the payment of the indemnity long due on account of the destruction of American educational property in Asia Minor. Austria within a few weeks has shown how the presence of a warship or two, and a twenty-four-hour ultimatum, will stimulate the Sultan to meet his obli-Our Government ought by all means to send a squadron straight to Smyrna. Miserable little Hayti several weeks ago was frightened into paying an indemnity to Germany by the appearance in the harbor of Port au Prince of a couple of German schoolships, manned by a lot of naval Hayti had somehow supposed that the United States would intervene; but it is tardily remembered that the present regime in that republic had rather disagreeably cut off the negotiations for the sale to the United States of the Mole St. Nicholas for a coaling station. would probably be a good time to revive the subject. Hayti would be far better off, in matters

domestic as well as foreign, with a few United States warships making their rendezvous in a There are, in fact, conditions Haytian harbor. in various parts of the world, besides the Eastern Mediterranean and the West Indies, where it would be advantageous for the United States to be represented by creditable specimens of our It is to be hoped that if Congress new navy. must be economical this year it will apply the pruning-knife in some other direction rather than to the navy estimates. We publish elsewhere in this number a very useful article from the pen of Lord Brassey, the great British naval authority, showing the present position of the English navy, and making some comparisons with the seapower of other countries. We have submitted the proofs of Lord Brassey's article to the Hon. Theodore Roosevelt, Assistant Secretary of the Navy of the United States, whose characteristic letter we also publish, together with an extended synopsis of the new annual report of our Secretary of the Navy. The rapid growth of our foreign trade is likely to stimulate American shipbuilding, and the further development of the navy can but have a very favorable bearing upon the progress both of our foreign commerce and of our merchant-marine.

The regular annual appropriation The Exag-gerated Pension bill for soldiers' pensions has this year evoked a far more serious opposition than usual. It is asserted by the critics of our pension policy that the number of pensioners of the civil war now carried on the rolls is considerably greater, in point of fact, than the entire number of bona fide Union survivors. Nevertheless, there are pending something like two hundred thousand more applications. publication of the pension rolls is demanded in many quarters, on the ground that if the names of all those now receiving bounty, as well as of those applying, were arranged according to the localities where they live, and given to the press for publication, all cases of palpable fraud would be readily pointed out. The Government should be generous to all who really deserve and need pensions; but it is extremely hard to believe that there are now surviving more than five Yet the pension hundred thousand such cases. rolls contain nearly a million names, and the country has paid out for pensions about \$2,000,-000,000 since 1865.

The selection by President McKinley of Attorney-General McKenna
to fill the vacancy on the Supreme
Bench caused by the retirement of Justice Field
was not unexpected. Some very serious pro-

tests have come from the Pacific Coast, directed, not against Mr. McKenna's personal character, but against his professional qualifications for membership of the most distinguished judicial body in the whole world. It must be remembered that President Harrison, who had served in Congress with Mr. McKenna and knew him well, appointed him to the United States Circuit bench. President Harrison's judicial appointments were generally of a very high order. We have no means of judging of Mr. McKenna's ability as a lawyer; but promotion to the United States Supreme Court by way of a United States Circuit Judgeship and a United States Attorney-Generalship would seem to have a certain quality of fitness about it. It has been reported upon good authority that Governor Griggs, of New Jersey, whose reputation at home is that of an excellent lawyer, is to become Mr. McKenna's successor as the Attorney-General. The important international developments on the coast of China make it particularly desirable that American interests should be well guarded in that part of the world. Minister Denby has represented us there for twelve years. month we published a portrait of Mr. Charles Page Bryan, of Illinois, nominated by President McKinley to be Mr. Denby's successor. Mr. Bryan is a young man, but he seems to be well vouched for, and he has had an exceptionally varied training of a kind to qualify him for the diplomatic service. Our Government would do well, however, if possible, to retain Mr. Denby in some capacity—perhaps that of a special counselor-d propos of the pending partition of the Celestial Empire.

With the opening of the new year A New Epoch the old New York becomes merged in the greater city; and the practical experiment of administration by a Tammany mayor under the new charter begins. We have commissioned Dr. W. H. Tolman, who has served with zeal on the Mayor's Advisory Committee on Public Baths, to prepare an article summing up various phases of practical progress made by the city of New York in the three years' period of Mayor Strong's incumbency. It will be found printed elsewhere in this number. The Hon. William L. Strong has been one of the best mayors that ever served any large American city. He has given constant attention to the work of his office, and has served the interests of the city devotedly and unselfishly, to the very best of his ability. And, in our judgment, he has shown ability of a very high order. He deserves hearty congratulations upon the efficiency of his administration, and we have thought it a better

tribute to him to present the facts contained in Dr. Tolman's article than to indulge in any extended personal eulogies. As for his successor, we shall not prejudge him harshly, and shall be only too glad to give him credit for all the good he may accomplish in an office which presents almost unlimited opportunities for usefulness or for mischief. But a Tammany mayor is heavily handicapped.

The fate of historic buildings is always a matter of strong human interest; and it is therefore worth while to note the recent destruction of the Tombs in New York, the most famous prison building in the United States. Its grim Egyptian portal was a notable

THE "TOMBS" PRISON, RECENTLY DESTROYED.

perce of architecture. The massive Egyptian lines of the old reservoir at the corner of Forty-second Street and Fifth Avenue will soon disappear, to make way for the splendid new public library which is to occupy that location. In contrast with the disappearance of these monuments of the Leo-Egyptian period in New York, it is at once agreeable and amusing to print a little illustration that shows the front of the Parthenon on the

DESTROYING BUILDINGS AT GIBRALTAR TO MAKE WAY FOR NEW DOCKS.

THE PARTHENON AT ATHENS, UNDERGOING REPAIRS.

Acropolis at Athens, quite covered by a network of scaffolding which has been erected in the course of recent efforts that have remedied certain structural weaknesses that were threatening the building. Another small illustration shows the demolition of a well-known tower that travelers will remember as one of the familiar landmarks at Gibraltar. The site is to be occupied by docks.

London Fires in the heart of London, which ocAnniversaries. Curred November 21, destroyed about thirty million dollars' worth of property. Curiously enough, the city of Melbourne in Australia on the same day was damaged to the extent of about five million dollars by a conflagration relatively more serious than the one in London. Fortunately, the London fire area did not include any of the most important central buildings or institutions. This great fire coincided almost exactly with the celebration of the two hundredth anniversary of the completion of the present Cathedral of St.

THE "OLD ST. PAUL'S," DESTROYED IN 1606. (On site of present cathedral, opened in 1697.)

(The corner diagram shows extent of recent London fire, and main diagram locates the fire district in the general neighborhood.)

Paul, the largest and most imposing Protestant The old St. Paul's, which church in the world. was destroyed in the great London fire of 1666, and which stood upon the same spot as that now occupied by Sir Christopher Wren's great creation, was nearly six hundred years old. It was an enormous edifice, 690 feet long, with a spire 520 feet high. The great Smithfield Market-which also luckily escaped the recent fire, and which has for so long a time been the center of the immense metropolitan meat trade—was the scene a hundred years ago of the establishment of the annual cattle show of the Smithfield Club; and that club has just now, in December, held a very successful centennial cattle show.

Our obituary list for the past month includes the name of the mother of President McKinley, a woman of strong traits and most exemplary character, who had preserved her full powers of mind and body almost to the very end of a long life. We also publish an article very briefly summing up the careers and services of three veteran servants of the cause of higher education in this country—namely, the late Professor Tyler, of Amherst

College; Professor Drisler, of Columbia University, and Mr. Charles Butler, president of the Board of Trustees of the New York University and of the Union Theological Seminary. American lawyers will join with their English brethren in deep regret at the death of so distinguished a member of the bar as Sir Frank Lockwood, who was Solicitor-General in the last Liberal cabinet. and who accompanied Lord Russell a year or two ago on a visit to this country, and appeared at the meeting of the American Bar Association. The name of Baron Pollock, an eminent English judge, is in our obituary list, and so also is that of the distinguished English admiral, Sir American Augustus Phillimore. The admiral, Joseph F. Green, died on December 9 at the advanced age of eighty-six. December 16 the French novelist and dramatist, Alphonse Daudet, died suddenly. Probably no other contemporary French author has given so much entertainment and pleasure to American and English readers as Daudet. We shall find occasion in a subsequent number of this Review to revert in more detail to his literary career. In our obituary list will be found the names of a number of other persons of deserved distinction.

#### RECORD OF CURRENT EVENTS.

(From November 21 to December 20, 1897.)

#### PROCEEDINGS IN CONGRESS.

December 6.—The regular session of the Fifty-fifth Congress is opened; President McKinley's Message is read in both branches, and adjournment is taken in respect to the memory of Senator George and Representative Wright.

December 7.—In the Senate Mr. Money (Dem., Miss.) is sworn in.... In the House an attack is made on the civil-service law by Representative Grosvenor (Rep., O.).

December 8.—Bills to prohibit pelagic sealing are introduced in both branches. In the Senate Mr. Allen (Pop., Neb.) criticises President McKinley's Cuban policy....In the House the pension appropriation bill is introduced.

December 9.—The Senate adopts a resolution requesting President McKinley to order a postponement of the sale of the Kansas Pacific Railroad....The House debates the pension appropriation bill.

December 10.—The House of Representatives only in session; the pension appropriation bill is passed.

December 13.—The Senate reaches an agreement to take a vote on the immigration bill January 17....In the

HON. BLANCHE K. BRUCE, OF MISSISSIPPI. (Appointed Register of the U. S. Treasury.)

ATTORNEY-GENERAL M'KENNA, OF CALIFORNIA. (Nominated for U. S. Supreme Court.)

House the legislative, executive, and judicial appropriation bill is reported.

December 15.—The Senate passes the bill prohibiting pelagic sealing by American citizens....The House debates the legislative appropriation bill.

December 16.—The House, by a vote of 148 to 78, passes the Senate bill to prohibit pelagic sealing....An appropriation of \$175,000 for relief of suffering in the Klondike region is voted.

December 18.—The Senate and House agree to the conference report on the Klondike relief resolution, appropriating \$200,000....Both branches adjourn for the holiday recess.

NOMINATIONS AND APPOINTMENTS BY THE PRESIDENT.

December 2.—Blanche K. Bruce, of Mississippi, Register of the Treasury.

December 16.—Attorney-General McKenna, of California, Associate Justice of the Supreme Court; Charles G. Dawes, of Illinois, Comptroller of the Currency.

December 17.—William W. Thomas, Jr., of Maine, Minister to Sweden and Norway; Hamilton King, of Michigan, Minister to Siam; Nathan B. Scott, of West Virginia, Commissioner of Internal Revenue. December 18.—William Penn Nixon, of Illinois, Collector of Customs, Chicago.

#### POLITICS AND GOVERNMENT-AMERICAN.

November 29.—The aldermen of Brooklyn, N. Y., vote grants of valuable street-railway franchises.... Boston Republicans nominate Edwin Upton Curtis for mayor.

BARON VON HOLLEBEN. (New German Ambassador at Washington.)

November 30.—Boston Democrats renominate Mayor Josiah Quincy, and adopt a platform favoring city ownership of gas plants and street railways.

December 6.—All the members of the Louisiana Board of Health holding office by virtue of the governor's appointment tender their resignation on account of friction resulting from the enforcement of the yellowfever regulations.

December 7.—Elections are held in a number of Massachusetts cities.

December 13.—Chicago aldermen pass an ordinance raising their salaries from \$3 a week to \$1,500 a year.

December 14.—Democratic members of the House of Representatives resolve to oppose all efforts to retire the greenbacks or to extend the privileges of the national banks.

December 15.—A call is issued for a conference of the two wings of the Populist party at St. Louis, January 12, 1898.

December 16.—The National Civil Service Reform League meets in Cincinnati.

#### POLITICS AND GOVERNMENT-FOREIGN.

November 22.—The Greek ministry is defeated in the Boule on the question of appointing a committee of inquiry relative to the war with Turkey.

November 23.—The Spanish Cabinet approves the entire scheme of Cuban autonomy, including the tariff clause.

November 24.—The Austrian Reichsrath closes a riotous session.

November 25.—The disorder in the lower house of the Austrian Reichsrath is resumed.

November 26.—Spanish royal decrees extend to Cuba the suffrage law of 1890.

November 28.—The Austrian ministry resigns office; Baron Gautsch von Frankenthurm is directed to form a new ministry.

November 30.—In his speech opening the German Reichstag, Emperor William emphasizes the importance of increasing Germany's naval strength....The members of the new Austrian Cabinet, with Baron Gautsch von Frankenthurm as Prime Minister and Minister of the Interior, are announced.

December 1.—The city of Montevideo is placed under martial law, and several prominent citizens are exiled by decree of Señor Cuestas, President ad interim of Uruguay....M. Darlan, Minister of Justice in the French Cabinet, resigns office....Because of continued rioting the city of Prague is declared under martial law.

December 2.—M. Milliard, Senator for the Department of Eure, is appointed Minister of Justice in the French Cabinet to succeed M. Darlan....The Italian Chamber of Deputies appoints a commission to investigate the charges against ex-Premier Crispi in connection with

BARON GAUTSCH VON FRANKENTHURM.
(The new Austrian Premier.)

the Bank of Naples and the alleged illegal traffic in decorations.

December 4.—The French Chamber of Deputies confirms the authority of the judgment rendered in the Dreyfus case....The Italian Cabinet resigns.

December 6.—The German Reichstag begins debate of the naval bill....King Humbert intrusts the forming of a new Italian ministry to the Marquis di Rudini.

December 10.—The budget is submitted in the German Reichstag.

December 12.—The entire Haytian Ministry resigns.

December 14.—The Chilian Cabinet resigns.

December 15.—The Ministry of Holland is defeated in the Chamber of Deputies on a motion to authorize the building of new warships.

December 17.—The French Chamber of Deputies fixes ten hours as a day's work for railroad employees.

December 18.—Trial of French Deputies for complicity in Panama Canal scandals is begun.

#### INTERNATIONAL RELATIONS.

November 22.—The United States consents to suspend sealing on the Pribilof Islands for one year, as a condition to secure the suspension of pelagic sealing for that length of time.

November 23.—A party of English tourists, including Robert Barr, the novelist, is seized by Turkish soldiers at a small port of Asiatic Turkey near Antioch, imprisoned, and grossly maltreated. Great Britain remonstrates with Turkey.

November 26.—The Brazilian Chamber of Deputies approves the treaty for arbitration of the boundary dispute with France.

November 27.—Canada replies to the proposition for the suspension of pelagic sealing that such action can be taken only by the British Parliament.

November 29.—Baron von Holleben, the new German Ambassador to the United States, presents his credentials to President McKinley.

December 1.—Minister Angell renews the demand of the United States for indemnity from Turkey for the pillaging of American missions in Armenia.

December 2.—Negotiations for a treaty of reciprocity between the United States and Peru are begun.

December 3.—Two hundred German marines take possession of the Chinese city of Kiao Chau.

December 4.—The final treaty of peace between Turkey and Greece is signed at Constantinople.

DR. CAMPOS SALLES.
(Leading candidate for Presidency of Brazil.)

COUNT GOLUCHOWSKI,
Austrian Minister for Foreign Affairs.

December 6.—Two German cruisers at Port au Prince present the ultimatum of their government allowing Hayti eight hours in which to pay the Lueders indemnity; Hayti complies with the demand.

December 8.—It is announced that France and Great Britain have reached an agreement as to the Upper Nile territory in Africa.

December 9.—It is announced that China complies with Germany's demands and that the latter will receive as a coaling station the Lam-Lah Inlet, opposite the island of Formosa.

December 16.—The treaty of peace between Turkey and Greece is ratified by the Sultan and by the King of Greece.

December 18.—A Russian squadron enters Port Arthur with the consent of China.

### INDUSTRIAL, COMMERCIAL, AND FINANCIAL DOINGS.

November 23.—The Buffalo City Gas Company is incorporated, with a capital stock of \$7,000,000.

November 24.—In London a conference is begun between representatives of the striking engineers and their employers....The stock of the United Traction Company of Pittsburg, amounting to \$20,000,000, is sold to a syndicate of capitalists.

November 26.—The wage-scale of the Missouri Pacific system of railroads is restored to what it was before the reductions of 1893.

November 28.—Two steamers bring to Seattle from Alaska about \$130,000 in drafts and gold-dust.

November 30.—Worsted manufacturers in and about Olneyville, R. I., restore the wage-scale of 1893 in their mills, thus granting an increase of 20 per cent. in the pay of about 25,000 operatives.

December 1.—The New England Gas and Coke Company signs an agreement with the Dominion Coal Company for the delivery of 800,000 tons of Nova Scotia coal annually in Boston.

December 3.—A company with a capital of \$3,000,000 is formed in Buffalo, N. Y., to make and sell illuminating gas.

December 7.—A company is organized in Chicago to maintain a permanent exhibition of the products of Western States and Territories.

December 8.—The cotton manufacturers of Fall River vote to reduce the wages of about 25,000 employees, on account of the depressed state of the market....Claus Spreckels announces the purchase of 12,000 acres of land in Monterey County, Cal., much of which will be devoted to the growing of sugar beets.

December 9.—The price of December wheat is forced up to \$1.09 on the Chicago market....A thousand cottonmill operatives strike at Atlanta, Ga.

December 13.—The ballot taken by the Amalgamated Society of Engineers of Great Britain is practically unanimous against accepting the propositions made by the employers.

December 14.—The National Board of Trade meets in Washington, D. C.

December 17.—The conference between the striking engineers and their employers, in London, reaches a provisional agreement....The Monetary Commission in session at Washington closes its deliberations.

December 18.—Western woolen goods manufacturers form an association to fix the price of raw wool.

NEW STATUE OF MILLET, THE FRENCH PAINTER, AT GREVILLE.

THE LATE MRS. NANCY ALLISON M'KINLEY.

#### OTHER OCCURRENCES OF THE MONTH

November 22.—Fire destroys property in the ware house district of Melbourne, Australia, to the value of \$7,500,000.

December 1.—An explosion of fire-damp in a mine in Rhenish Bavaria kills 30 miners and seriously injures 40 others.

December 3.—Yale wins the intercollegiate debate with Harvard.

December 6.—Two soldiers make an unsuccessful attempt on the life of the Sultan of Turkey.

December 16.—A. C. Harmsworth presents his ship, the *Windward*, to Lieut. R. E. Peary for use in arctic exploration.

December 17.—The Appellate Division of the New York Supreme Court approves the tunnel plan of rapid transit, but requires a bond of \$15,000,000 from the contractor.

December 18.—Pardee Hall, at Lafayette College, Easton, Pa., is nearly destroyed by fire.

#### OBITUARY.

November 21.—Charles Edward (Baron) Pollock, a judge of her majesty's High Court of Justice, 74.... Gen. Albert Ordway, in command of the National Guard of the District of Columbia, 55.

November 22.-Mrs. John Boyle O'Reilly, 46.

November 23.—Mrs. Barnabas Brough, the English novelist, 95....Gen. Sir Arthur James Herbert, 77.

November 25.—Dr. Miner Raymond, one of the founders of Northwestern University, Evanston, Ill., 70....Admiral Sir Augustus Phillimore, K.C.B., retired, 75.

THE LATE SIR HENRY DOULTON.
(Famous English potter.)

THE LATE BARON POLLOCK.
(Eminent British jurist.)

THE LATE ALPHONSE DAUDET. (Distinguished French author.)

November 27.—Herr Bernhard Pollini (Pohl), operatic director, 59.

November 29.—Prof. James Legge, English missionary to the Chinese, 82... Gen. Forgemol de Bostquenard, of the French Army, retired, 76.

November 30.—Prof. Henry Drisler, of Columbia University (see page 53), 79.... Dr. Von Marquardson, jurist and professor at Erlangen, Germany.

December 1.—Col. W. D. Chipley, a well-known rail-road man and politician of Florida, 60.

December 2.—Prof. Alonzo S. Kimball, of the Worcester (Mass.) Polytechnic Institute, 54.

Prember 5.—Mrs. Alice Wellington Rollins, poet, elist, and critic, 50....Admiral Baron von Sternect, camander-in-chief of the Austro-Hungarian Navy.

December 6.—Marie F. O. B. de Fourtou, former French Minister of the Interior, 62.

December 8.—Chief Justice Asbury B. Conaway, of the Wyoming Supreme Court.

December 9.—Rear Admiral Joseph F. Green, U.S.N., retired, 86....George Julian Harney, English Chartist leader, 81.

December 10.-John Loughborough Pearson, English

architect and member of the Royal Academy....Asa W. Tenney, United States District Judge of the Eastern District of New York, 64.

December 11.—Gardiner G. Hubbard, director in the Bell Telephone Company, 75....Daniel William Powers, banker and prominent citizen of Rochester, N. Y., 79.

December 12.—Nancy Allison McKinley, mother of the President, 88.

December 13.—Charles Butler, New York philanthropist (see page 54), 96....Mrs. Janet Carlyle Hanning, sister of Thomas Carlyle, 85.

December 14.—Alexander McDonald, of Virginia, former United States Minister to Persia, 70.... Prof. Arthur Palmer, of Trinity College, Dublin, 56.

December 15.—Gen. Sir Henry Lynedoch Gardiner, of the British Army, 77.

December 16.—Alphonse Daudet, French novelist and dramatist, 57....William Terriss (Lewin), a favorite English actor, 46.

December 18.—Washington Hesing, proprietor of the *Illinois Staats Zeitung*, 48.

December 19.—Sir Frank Lockwood, Liberal member of the British Parliament, 51.

the new Spanish policy as he has al-

lowed the world to suppose.

GROSVENOR'S FLORAL OFFERINGS ON THE OPENING DAY OF CONGRESS.—From the Journal (New York).

It is the custom on the opening day of Congress for admiring friends to pile the desks of Senators and Representatives high with floral tributes. The practice is altogether innocent and praiseworthy. This year the

"GRACIOUS, DINGLEY! THE PROTECTION IS ALL RIGHT, BUT WHERE IS THE REVENUE?"—From the Herald (New York).

From the Journal (New York).

Hon. Mr. Grosvenor, of Ohio, was surprised to find on his desk the effigy of a large and very woolly lamb. Mr. Grosvenor is a mighty advocate of the tariff on wool, and doubtless the lamb was intended to remind him that the American Wool Growers' Association is appreciative of his services. Mr. Grosvenor's devotion to certain features of the protective-tariff system seems to us more to his credit than his recent opposition to civil-service reform. He ought to follow President McKinley on that subject.

The cartoonists have felt themselves justified in twitting the Hon. Mr. Dingley, Chairman of the Ways and Means Committee, on the feebleness of his great tariff act as a revenue producer. The two cartoons on this page, one by Mr. Davenport, and one by Mr. Nelan, are at least very cleverly conceived and drawn. Mr. Dingley still insists that if we will only be patient with his enactment for a very few months longer, and if Congress will only appropriate money on principles of the strictest economy, the discrepancy between current expenses and current receipts will have disappeared. This may be entirely true, but on the other hand it may be a mistaken prediction. It would seem safer to proceed at once to give Uncle Sam a larger income. One of Nelan's cartoons on the following page represents Uncle Sam as aghast at the annual pension bill of more than \$140,000,000, and won-

dering what would be the subsequent effect on the pension lists of a war with Spain.

ANOTHER HOLD-UP AND THE MONROE DOCTRINE SLEEPS ON.—From the Tribune (Minneapolis).

Uncle Sam: "If I have another war I'll be broke."-From the Herald (New York).

that Italy has certain claims against Hayti

CARTOONIST CORY'S PICTORIAL ANSWERS TO THE POLITICIANS' QUESTION—"WHERE IS MR. CROKER?"

From the Journal (New York).

Since Tammany's great success in the November election the cartoonists have been privileged to work their will upon the successful Mr. Richard Croker. That gentleman's undisputed command of the situation has made him very tolerant and good-natured. We present four Croker cartoons from as many different artists, all of them representing him as the man in exercise of authority. The newspapers have followed his daily movements as if he were our Emperor William or our Prince of Wales; and when for a day he has disappeared from the public gaze the conjectures as to his whereabouts have been as varied as Mr. Cory's answers in the cartoon at the top of the page. Mr. Bush in the

World represents him as teaching his protègé, Mayor Van Wyck, how to make up his slate of municipal appointments. Mr. Van Wyck's lesson has been simply to write the name "Croker" on the slate, which means that the mere detail of selecting heads of departments can be left to the man who created Van Wyck. Mr. Swinnerton, a new cartoonist who has come to the Journal from San Francisco, represents Mr. Croker at

in the hands of the pirates, with Croker at the wheel and with the black flag flying in the breeze, upon which is inscribed the motto "To Hell With Reform."

Mayor Strong signalized his last weeks in office by a sturdy attempt to prevent the street railway companies, by the aid of the moribund Board of Aldermen, from grabbing valuable street franchises, which, under the terms of the charter about to go into force, could not be alienated. Mr. Nelan, in the Herald, represents the mayor as attacking such a steal with his veto axe. In Brooklyn the courts have come to the rescue of the public with injunctions against outrageous grants of perpetual street franchises by the retiring Board of Aldermen. Punch's curious cartoon in which the famous London "city turtle" takes the superior tone to the Tammany terrapin, is characteristic-and, we must admit, its reproof is not without justice.

EWAIN ST

THE TAMMANY TERRAPIN AND THE LONDON TURTLE.

TAMMANY TURTLE: "Wa-al, Brother Turtle, we're in together. We'll make a good thing of it for ourselves—and friends, eh?"

LONDON TURTLE: "Speak for yourself, Brother Terrapin.
Over here we've an old-world prejudice in favor of honesty."
From Punch (London).

## THE FUTURE OF AUSTRIA-HUNGARY.

BY AN AUSTRIAN.

Theer's a-'ow der yer pronarnce it?—sort o' Horstring Pawliment.

-Tompkins on the Reichsrath, London Daily Chronicle, November 27, 1897.

captain in Czech. The captain, not conversant with the language of Palacky and Svatopluk Czech, questioned him in German, but could get no other answer but "Nerozumim" (I do not understand). While the captain was giving orders to a lieutenant to go reconnoitering with a dozen men, a second patrol—this time five hussars led by a corporal—arrived. The excited leader spoke very rapidly and sonorously in Mag-Every question of the captain, as to what he had to report, if he had seen anything of the enemy, etc., was answered monotonously with "Nemtudom" (I do not understand). captain, sure of something worth knowing going on somewhere, mounted, and ordered the battery "ready!" While the men were tightening their saddle-girths and arranging their paraphernalia, a half-dozen Uhlans came ventre d terre toward the battery from the right. A panting sergeant; covered with the dust and perspiration of a hard ride, gabbled most furiously in Polish, and to the captain's eager query, "Can you not speak German?" he had but one answer: "Neznam" (I do not understand). Then there was some shouting, bugle-calls from the right, a bugle-call from our cavalry escort, the thundering "Hurrah!" of a long galloping line of the enemy's cavalry, the shrill command of the captain: "Cavalry to the right! Dismount! Eight hundred paces! Grapeshot charge! Fire!" But it was too late. three squadrons of the enemy's hussars were in the battery before a shot could be fired; the eight guns and the squadron of dragoons had to surrender—had it been war instead of sham battle few would have remained to tell the tale. Furthermore, the enemy unmasked a mounted battery of eight guns that opened fire on the battalion of sharpshooters, and they also had to surrender. The enemy was in possession of the commanding hill on our right flank.

His Majesty Emperor Francis Joseph, who had watched the whole affair through his field-glass from afar, frowned; the general in command got

DAVID BITTER VON ABRAHAMOVICZ, President of the Reichsrath.

very wroth; the brigadier was furious; the colonel used extremely strong language; the captain was severely reprimanded, and a few months afterward pensioned. But was it really his fault, or not rather the fault of the "nerozumim," "nemtudom," and "neznam"?

### AN ARMY WITH ELEVEN TONGUES.

This reminiscence would not be worth telling were it not characteristic of the conditions of the Austro-Hungarian army, very characteristic of the political situation of the empire, and eminently characteristic of the crisis that is culminating there at present. The army, although her official language and the words of command are German, is not any more a homogeneous unity, but has become a loosely jointed set of polyglot brigades. The Hungarian "Honved" (second reserve) is drilled and commanded in Magyar; her non-commissioned and even many commissioned officers do not understand German at all. "field regiments," with the exception of those recruited from the German provinces, few noncommissioned officers can speak, scarcely any can write or even read, the army language, and the percentage of reserve officers who are able to write and speak German fluently is growing smalle every year. Although there are many officers who speak two or three of the different langua; es of Austria, there can naturally be but few who are able to understand all the tongues: Magvar Polish, Czech, Routhenian, Roumanian, Slavonic, Croat, Slovak, Servian, Bosnian, and Italian. The "1-do-not-understand" in eleven

different languages is met with in the daily army routine more and more frequently, and this fact must lead, in case of war, to the most disastrous consequences.

### THE MODERN TOWER OF BABEL.

Parliament likewise presents a modern "tower of Babel." The Austrian House of Commons has a few dozen members who cannot speak German, some who even do not understand it, and speeches are delivered in half a dozen tongues not understood by the majority of the members. Similar conditions are prevalent in all branches of government. Thousands of lawsuits, the majority of the cases before the courts of provinces of mixed language, must be carried on in two or three tongues; briefs, pleadings, sentences, have to be translated and retranslated, time and money are wasted for interpreters, and the jury system has become a farce and sham on account of nationalistic prejudices and by reason of the inability of many jurors to understand any other language but their own. The postal, telegraph, and railroad service, the collection of taxes, the execution of law, business, commerce, industry, and last, not least, the education of the people, suffer enormously under this polyglot from the lack of a state language. The intercourse of the peoples, their exchange of ideas, the approximation of opposing views, the compromise between differences, intermarriage, assimilation, amalgamation—in short, all and everything that ought to constitute a State or make a homogeneous unity "I do not understand" is characare wanting.

DR. KAREL KRAMARZ, First Vice-President of the Reichsrath.

teristic also of the feelings, the aims, and ends of the people; the nations of Austria-Hungary do not understand each other any longer. This is the crisis in Austria.

### REAL NATURE OF THE STRUGGLE.

One of the symptoms of this crisis, but only one of many, is the struggle waging in the Austrian Parliament since last spring. The majority of the newspapers and magazines of the world treat this very important affair as if it were merely caused by party differences, as if it aimed solely at the retention or change of the ministry, and as if it would be ended, sooner or later, like all parliamentary disputes. These erroneous

DR. KARL LUEGER, Mayor of Vienna.

riews are chiefly due to the fact that the Austrian press is not permitted by the censors to write trankly about prevalent conditions, and consequently the world at large is not informed of the real issues. Austrian politics, furthermore, are so complicated, so difficult to understand from the outside, that most foreigners grope in the dark. This article aims at showing the situation in its true light, based upon the best information, supported by careful observation and cleared by impartiality. To facilitate a clear understanding, let us throw just a glance upon the Constitution of Austria.

### THE CONSTITUTION OF AUSTRIA-HUNGARY.

The "Austro-Hungarian Monarchy"—thus reads the official name—consists, according to the fundamental state law of December 21, 1867, of Cisleithania, or the empire of Austria [provinces:

Lower Austria, Upper Austria, Salzburg, Styria, Carinthia, Carniola, Coast Districts (Görz, Gradisca, Trieste, and Istria), the Tyrol and Vorarlberg, Bohemia; Moravia, Silesia, Galicia, Bukowina, and Dalmatia], and Transleithania, or the Kingdom of Hungary [provinces: Hungary, Transylvania, Fiume, Croatia, and Slavonia]. provinces of Bosnia and Herzegovina, occupied after the Treaty of Berlin in 1878, are administered by the Austro-Hungarian monarchy, but do not belong to it legally. Each province has a "Landtag" (Diet) that legislates in home affairs and fixes the provincial taxes, but has no power to alter state laws. The legislature is centered in a "Reichsrath" (Parliament) in Vienna and one in Budapest, consisting each of a "Herrenhaus" (House of Lords) and an "Abgeordnetenhaus" (House of Commons). The former is composed of princes of the imperial family [20-20], nobles with hereditary privileges [66-286], ecclesiastical representatives [17-51], and life members nominated by the emperor and usually "arranged" by the ministry to create the desired majority [at present 122-102]\*; the latter is formed by members elected partly directly, partly indirectly, by the classes of the "Grossgrundbesitz [large landed proprietors], the towns, the chambers of trade and commerce, and the rural districts, 353 in Austria and 453 in Hungary. The ministers are appointed by the emperor. They may or may not be members of Parliament, and can be retained in office if they should fail to get a majority for their bills, or even if they should receive a "vote of distrust;" they can be removed solely by an impeachment for breach of the Constitution. The common affairs of Cisleithania and Transleithania are managed by a "Minister of Foreign Affairs," a "Minister of Finance," and a "Minister of War," and legislated (subject to approval of both Parliaments) by the "Delegationen," a body of sixty members, elected twenty from each upper and forty from each lower house. These delegations, sitting alternately in Vienna and Budapest, have to vote annually the budget of common affairs. Toward the common expenses—amounting in 1896 to over \$65,000,000—Austria contributes 68.6 per cent. and Hungary 31.4 per cent., according to the "Ausgleich" of 1867.

### THE AUSGLEICH.

This "Ausgleich"—a technical term that could not be exactly translated, but may be explained as an agreement for sharing or dividing the budget—is at present the stumbling-block of the Austrian Government, and forms one of

<sup>\*</sup> The figures in [ ] indicate the number of representatives in Austria and Hungary, respectively.

the causes and, at the same time, consequences of the Austrian crisis. The compact expires on January 1, 1898, and must be renewed before that date if the common affairs of the monarchy are to run smoothly. The negotiations have had so far a negative result, showing merely that both Parliaments were unwilling to renew the agreement under the old stipulations, and the government is now endeavoring to bring about a "Provisorium" for one year in order to come to an understanding about the terms of a new agreement. The Hungarian Parliament has granted this provisional measure; the Austrian House of

ADALBERT GRAF DZIEDUFZWECK,
Leader of the Poles.

Commons has, up to the time this article goes to press, failed to agree to it. The majority of the Cisleithanian population, regardless of nationality and political party, entertain many serious objections to some of the stipulations of the Ausgleich, and particularly a uniform dissatisfaction with the quota of 68.6 per cent. which they have to contribute to the common expenses. Nevertheless, the ministry might find a majority in both houses of the Austrian Parliament to grant the provisorium, because the combination of parties forming the present majority would like to use [or abuse] their power to obtain from the ministry and the crown some favors or privileges by administrative measures, if possible some new laws that would change radically the prevalent conditions and the Constitution. But the minority of the lower house does not permit Parliament to pass the bill granting the provisorium; it prevents even the reading and debating of this so pressing and important bill by a systematic obstruction,

by a legal deadlock of all parliamentary work. This obstruction is carried on not so much out of opposition to the Ausgleich as on account of some administrative measures of Minister Badeni, by which he gained the support of the Czech party, but violated the historical and legal rights of the Germans, and even the Constitution.

### THE QUARREL BETWEEN CZECHS AND GERMANS.

The matter, mostly misunderstood outside Austria, is briefly this: Bohemia, Moravia, and Silesia have a population mixed of Czechs and Germans, the percentage in Bohemia being about 5 to 3, the Czechs living chiefly in the center of the province, the Germans occupying the districts of the northwestern and northeastern frontier. The Czechs wish to bring about the reëstablishment of the former Bohemian kingdom and a position in the empire similar to The Germans in Bohemia desire a detachment of their districts and a separate administration for this territory, because they claim to be oppressed by the Czech majority of the Bohemian Diet in matters of administration and public education. Until lately all officials in Bohemia were obliged to know German, and only those in the Czech districts had to prove a knowledge of Czech. Last spring Count Badeni, the Prime Minister of Austria, passed a decree ordering that lawsuits could be entered in the Czech tongue at any court of Bohemia, even in districts where not 1 per cent. of the population was of Czech nationality, ordering furthermore that no official should be appointed in Bohemia without a full speaking and writing knowledge of Czech, and that all German officials of Bohemia must learn Czech and pass examination within four years. This was obviously done to gain the good will of the radical Czech party and their vote in Parliament for the The Germans of Bohemia claim— Ausgleich. and every impartial judge must agree with them that this was an arbitrary violation of their rights, that it is a restriction of liberty, and unjust to the highest degree from a national and rational point of view to compel their sons and all officials to waste their time by learning a language which is of very little use in their purely German districts, and of no use whatever outside the limits of little Bohemia. They claim, furthermore, that if such measures were really necessary Parliament should pass a law based upon the Constitution and the fundamental state law, and that such law should be valid for the whole of Cisleithania and not for Bohemia alone. finally—and there cannot be the least doubt about it—that the decree of Minister Badeni constitutes a breach of the Constitution, because it was passed without being signed by the emperor, and

not published in the official gazette. They have appealed to Parliament to impeach the ministry as a whole, and Count Badeni particularly, of breach of Constitution, and have declared most emphatically that they will, by all means of legal obstruction, prevent the voting on the Ausgleich and any other bills until this decree is revoked. This they accomplished last spring, and again during the past weeks. At present the Delegations" are in session, and any day may bring the decision in Parliament. What will it be?

### A CONGLOMERATE OF INCOMPATIBLES.

Let us dissect the Austrian House of Commons for the purpose of a correct forecast. jority and minority of the lower house are not, as in other parliaments, of one party or at least of a group of harmonious, homogeneous parties; neither of them represents a principle or embodies an aim. The majority consists merely of a number of heterogeneous groups of various and differing interests and aims, who are joined solely by the greed for power and the desire to gain as much as possible at each voting. most numerous and at present most influential of all parties is the "Club of the Poles," embracing nearly all the members from Galicia, with exception of a few Routhenians and Socialists; they aspire at present to the leadership of the House, with its consequential privileges, aim chiefly at autonomy for Galicia, and ultimately at the reestablishment of the Polish kingdom. Next in number and importance are the "Czechs" from Bohemia and Moravia, desiring the detachment of these provinces and Silesia from Cisleithania, and as soon as possible their own Parliament, army, They are divided into two groups: the feudal-clerical "Old Czechs," who lean more toward reactionary ideas, and the radical "Young Czechs," who are outspoken Panslavists, Russophiles, and Hussites. The real old stock of the majority is formed by the so-called "Conservative Club," composed of the feudalistic nobility and the Roman Catholic clergy, and aiming chiefly at the regaining of the supervision of the schools by the clergy, the retaining of the privileges of the nobility, and the prevention of the introduction of the popular vote. Nearest to them with regard to aims at Church and school, but separated in politico-economical questions, stands the "Catholic People's Party," recruited principally from the agricultural districts of the Alps. They form at present the balance of parliamentary power, but are in great danger of losing their influence and being divided into two powerless groups, because the national feeling is beginning to be aroused among their constituents, the

GEORGE SCHÖNERER,
The leader of the Obstruction.

German peasants of the Alps. Then follows the "Club of the Southern Slavs," composed of the Slavonian members from the coastlands and Dalmatia, who are autonomistic Panslavists and aspire after the establishment of a South Slavonic state, comprising Croatia, Slavonia, Bosnia, Herzegovina, Dalmatia, if possible, with Servia and Montenegro. Finally must be mentioned the small but very energetic and noisy group who call themselves "Christian Socialists," but are, in fact, anti-Semites, pure and simple, consisting of a few members from Vienna and Lower Austria, under the leadership of Vienna's mayor, Dr. Lueger; they are absolutely colorless with regard to nationality, politics, or anything else, their motto being solely: "Down with the Jews!"

The minority shows a very similar picture of small disunited fractions. There is, firstly, the "German Progressive Party," the remnant (very little altered) of the former "Liberal" and "Constitutional" parties, recruited chiefly from the industrial centers of the German provinces, and standing for a liberal, constitutional, centralistic monarchy. Next to them in importance and spirit is the "German People's Party," from the German districts of Bohemia, Moravia, Silesia, and Styria; these are the German Radicals, aiming at the hegemony of German influence, and being driven, through suppression of the Germans by the government on the one hand and by the pressure of their electors on the other, toward the desire for a union with Germany. This union is the outspoken aspiration of the most radical wing of the minority, "the German National Party," created by the famous Scheenerer, the leader of the obstruction. Not attached to the minority by any sympathy or similar aims, but voting with it on most questions, are the small groups of the "Italian Club," from the south of Tyrol and Trieste, a number of "Socialists" and "Democrats" from different provinces, and various of nationality, and some "Wilde," unattached to any particular party.

### THE HUNGARIAN PARLIAMENT.

Similar conditions, although not so pronounced as in Austria, prevail in the Parliament across the Leitha. The majority of both houses is formed, since the last elections, by the "Liberals," who stand by the Ausgleich of 1867, and wish to prolong it under the same conditions, but make—for the sake of patriotic appearances—a show to reduce the unjustly low quota which they contribute toward the common expenses; they are liberal and progressive in matters of Church and school, but use all possible means to Magyarize the Slavs, Germans, and Roumanians of the kingdom. The minority of the House is composed of a clerical Roman Catholic party that wishes the subordination of the school under the clergy; the radical Magyar, or "Independent Party," who aim at a mere "personal union" with Cisleithania, and finally at the entire detachment and independence of Hungary from Austria; the Germans from Transylvania, who wish to preserve their nationality; the members of Roumanian nationality, who would prefer being a part of the kingdom across the frontier; and the forty members, elected by the Croatian Diet, who are most energetic opponents of the reigning Magyar policy, but have no power whatever, because they are not entitled by the Constitution to vote on matters connected with Hungarian laws, educational and home affairs.

### THE RESULTANT DEADLOCK.

This sketch, although incomplete on account of the obligatory brevity, must prove to every objective judge of political and national conditions the dangerous want of cohesion of the Austrian and Hungarian Parliament, their utter inability to accomplish the necessary legislation. The parties and factions fight incessantly for the interests of their respective nationalities and neglect state affairs and sadly needed social reforms entirely. There is haggling, scheming, and intriguing for every school, every railroad station, and every official post in the monarchy, while the great questions of the day are neglected, postponed, or run over without serious consideration. taxes, coming principally from the rich industrial and agricultural districts of Bohemia, Moravia,

DR. JOSEPH HERALD, Leader of the Radical Czechs.

Silesia, Lower Austria, and Styria, are spent largely on the hopelessly bankrupt province of Galicia and for the development of Magyar industries, and wasted on a lot of red-tape and translations necessary to humor the different little nations. But the armament and commissariat of the army are sadly inefficient, the navy is twenty years behind the times, the building of railroads is at a standstill for lack of funds, the consular system is as shamefully neglected as the support of exporting industries, and, worse than all, public education in all branches is sinking from the high standard on which it stood so long.

### WHAT THEY ALL WANT.

The real cause of these conditions—whether they are to be deplored or lauded is a matter of opinion—is the "I do not understand" reigning in Austria-Hungary. Not only the parliamentary representatives of the people, but all the nations of the monarchy, have ceased to "understand" each other. In fact, they do not want to. matter what names the Parliament parties bear on their banners, their real aspirations are outside of an Austro-Hungarian State of whatever form. The Czechs want the reëstablishment of the kingdom of Bohemia, and finally the union with Russia. The Routhenians, oppressed by the Poles and differing in language and religion from them, look longingly forward to an incorporation into the empire of the czar. The Poles proclaim secretly, if not openly, the restoration of the kingdom of Poland. Italia irredenta is ever alive in the

Trentina and Trieste, no matter how hard the Slavs, officials, and gendarmes try to suppress it. The southern Slavs of the coastlands, Dalmatia, Croatia, and Slavonia are clamoring for a unification, and their ultimate aim is the reëstablishment of the old Servian kingdom, embracing also Servia. Bosnia, Herzegovina, and Montenegro. The Roumanians wish their annexation by the co-national young and vigorous kingdom. And lastly, not least, the Germans of Bohemia, Moravia, Silesia, Lower Austria, Styria, and the most advanced and politically educated inhabitants of the Alps, desire a union of the German provinces with Germany in some shape or form.

### THE FORCES OF DISRUPTION.

These undercurrents are very little known outside of Austria, because the press is muzzled and very few foreigners are competent to read in the different languages, and still less to read between the lines. But they exist, nevertheless, and whoever follows the events in the polyglot monarchy cannot help noticing them. The Národní Listy (National Gazette), the leading daily paper of the Young Czechs, let the cat out of the bag a few weeks ago when it advocated that "all Slavs ought to acquire the Russian language, preparatory to an understanding of the Slavish world." And a German member of the Austrian lower house—if I am not mistaken, the duelist Wolf -spoke the minds of millions of his co-nationalists when he frankly declared in Parliament, "Yes, we wish to be united with Germany, and we do not permit anybody to call us traitors if we say so. Austria was for centuries a part of Germany, and even after it had ceased to be so it was from 1806 until 1866 united in some form with the 'German Bund.' Why should not this be again possible? Why should that which was legal before 1866 be now called treason?" Every visitor to Bohemia must notice in the German districts the ostentatious display of the pan-Germanistic banner (black, red, gold) instead of the Austrian colors (black, yellow), and that scarcely a peasant's hut is without the pictures of Emperor William and Bismarck; while, on the other hand, in the Czech districts he will find likenesses of Huss and the czar hanging side by side with a copy of the famous "rescript" of 1871, in which the Emperor Francis Joseph promised his coronation as King of Bohemia—a promise which he never kept.

### POLITICAL TENDENCIES.

But these opposing nationalist currents and tendencies are not the only danger for Austria-Hungary. The two halves of the monarchy are diametrically opposed to each other in their whole

internal and foreign policy. The majority of the Austrian Parliament is Panslavist, autonomist, reactionary; the majority of the Hungarian, Slavophobe, centralist, and liberal. The first is openly opposing the continuation of the Triple Alliance, the latter is a stout adherent to it. No matter how earnestly the rulers of Germany, Austria, and Italy proclaim at every occasion that the Triple Alliance stands as strongly as ever, the hatred of the Austrian Slavs to Germany and the contempt which the Roman Catholic party entertains for Italy make this alliance a mere And even the Emperor Francis piece of paper. Joseph's and Count Goluchowski's (the minister of foreign affairs) recent speeches cannot convince anybody familiar with the situation of Austria that an entente cordiale with Russia could be realized in view of the indelible hatred of the Magyars and Poles for Russia. Austria-Hungary could not enter into any alliance whatever with the consent and good-will of all her peoples.

### FROM DUALISM TO FEDERATION.

These and many other signs, too numerous to be described in this space, indicate clearly that Austria, having ceased to be a centralist State, has entirely lost her basis—yea, the possibility of existence. The step from centralism to dualism was a dangerous experiment—the beginning of the end. Out of dualism grew the desire of other nations and provinces for autonomy, and that means no more than a loose federation. But a federation is vital only if its parts are held together by common interests, united by mutual

JOSEPH FRHE. V. DIPAULI, Leader of the Catholic People's Party.

respect of rights, bound by one aim. And this conditio sine qua non is absolutely missing in the Austro-Hungarian monarchy. The peoples of the two States are imbued with and possessed of the most outspoken centrifugal tendencies. A century, or even thirty years, ago, this could scarcely have happened, and if it had occurred it would not have had such disastrous consequences.

KARL WOLF,
Who fought a duel with Count Badeni.

Napoleon III. set the stone of "unification of nationalities" rolling. The seemingly impossible unions of Italy and Germany were accomplished by the will of the people, the diplomacy of great statesmen, and the power of the sword. England, the United States of America, France, and Russia are shining examples of progressive success through uniting centralism, regardless of the form of government. Turkey, Sweden, Norway, and Austria-Hungary are discouraging object-lessons of federalism and dualism.

It is true the crash will not come immediately, might not come very soon. The Ausgleich and the present fight in the Austrian Parliament are per se not sufficiently important to cause the downfall of this three-hundred-and-seventy-years-old monarchy. The Ausgleich can and will be accomplished by some means. The president of the House of Commons, the Pole Abrahamovicz, might break the obstruction by his utter disregard of the standing orders and the rights of a minority. Count Badeni might buy a majority in both houses with promises of autonomy to pass the provisorium. Or the energetic partisan minister might dissolve the House of Commons and arrange the provisorium during the following

parliamentary interreign by an act of the crown, by the signature of the emperor. But neither measure would solve the problem; it would only postpone the solution and prolong the fight. New elections would never strengthen the government.

### NO DEPENDENCE ON THE ARMY.

Before the reorganization in 1867 the regiments of the Austro-Hungarian army recruited themselves from two or three different districts, thus bringing together members of various nationalities, promoting the knowledge of German, eradicating national differences, and assimilating the population. The success of the German army in 1870 led to the imitation of the Prussian system of recruiting from one centralized district. When the Austro-German Alliance was formed in 1879 Prince Bismarck insisted upon Austria adopting the German method of mobilization and the regiments being garrisoned in their home districts. But—quad licet Jovi, non licet bovi—the

DR. OTTO LECKER,
The man who spoke twelve hours.

principle which is one of the chief factors of the strength of the German army and of her readiness for operations will prove to be one of most dangerous weakness for Austria. Keeping in mind the "I do not understand" of the maneuvers of 1885, it is obvious that an Austro-Hungarian army no longer exists. The monarchy possesses merely German, Czech, Polish, Magyar, etc., regiments. The service regiments are officered chiefly by centralist and German officers, but these would not prove strong enough to stem the tide of national and popular feeling in their men. The commissioned and non-commissioned

officers of the reserve and "Landwehr" (second reserve) belong mostly to the better-educated classes, who, with few exceptions, will set their political and national principles above their army rules, and would lead the willing bulk of the soldiers even against the will of the commanders. Thus, during a revolution in any province it would be very difficult to find regiments who would be willing to shoot down their co-nationalists, and in case of war—be it against Germany, Russia, or Italy—some regiments, either the German, Czech, or Italian, would be found utterly unreliable. The government has sown the wind of national autonomy; it must reap the whirlwind of radical centrifugalism.

### A GREAT POWER NO MORE.

Should Austria-Hungary be drawn into any war during the next few years it will ceaseeven if victorious, although that is scarcely possible—to be a "great power." Not only will the mobilization, organization, armament, and commissariat prove inefficient, and the navy of little value; the first battle must obviously show the defects described in the beginning of this Enemy and ally alike will find that the "I do not understand" makes the army worthless, and neither Germany, Russia, England, nor France, not even Italy or Turkey, would care for such an unreliable ally. The fate of the empire, thrown down from its clay-legged pedestal of a first-class power into the impotency of a federalist conglomeration of antagonistic nations, does not require portrayal. Austria-Hungary must be ground up between the two mighty millstones-Germany and Russia.

### FRANCIS JOSEPH.

But even without any war, revolution, or the continuation of the struggle in Parliament, the monarchy is doomed to destruction. The cement that holds the centrifugal forces loosely together is Emperor Francis Joseph. He is the heir of an illustrious dynasty, the embodiment of the old Austrian Staats-idee, the symbol of a centralistic, constitutional empire. Although neither agenius, nor a man of initiative, nor a ruler of will and energy, he is liked by the people at large because he is a fairly good and decent man, has tried his best to be a constitutional monarch, and does no harm willfully. The conservative—or, to be precise, the conservant—men of all parties would stand by him in an emergency. If he could free himself from bad influences, then the majority of the nobility, the landed proprietors, the industrial, financial, and commercial leaders, the Liberals, and the stock of old parliamentarians from all parties would rally round

ARCHDUKE FRANCIS FERDINAND OF ESTE, The heir-apparent to the throne.

him if the aim was stabilization of conditions, preservation of a centralist empire. But, alas! it is too late for Francis Joseph. He is too deeply involved in federalism, and, furthermore, he is too old. Although only in his sixty-seventh year and in excellent health, he is a brokendown man—broken down by adverse strokes of fate, principally by lost wars and prestige, the tragical end of his unworthy son, Crown Prince Rudolph, and the insanity of the empress. Every one who knows how matters stand would be surprised if the coming jubilee year—the fiftieth anniversary of his accession to the throne—should not be the end of Francis Joseph's reign.

### THE HEIR TO THE THRONE.

And then? The heir-apparent to the throne is the nephew of the emperor, Archduke Francis Ferdinand of Este, a weakling in body and mind, whom nobody knows, for whom nobody cares, who has not one single quality to enable him to grasp the reins of the unruly dual team and lead it safely and successfully on its dangerous road. Most likely Ferdinand will find, at his accession to the throne—like his uncle in 1848—the whole country in uproar and revolt, some wiseacres advising him to drive the state carriage as a German-Magyar-Czech troyka; others clamoring for a Czech-Polish-Magyar-German

four-in-hand, and the majority of his subjects shouting wildly for a "go-as-you-please" steeple-In well-informed court circles it is whispered already that Ferdinand, who is of delicate health and not able to stand the climate of Vienna, will never sit upon the throne of the Hapsburgs, and, even if he should attempt it, would not occupy it long. Since he is a bachelor, the reins would pass to his younger brother, Archduke Otto. Then good-by, Austria! This imperial prince if all be true that is currently reported—despised alike by all the people, regardless of nationality, creed, or party, for his principles, morals, and manners, could not find a score of decent men to unfold his banner. Neither could any other member of the Hapsburg family-most of them afflicted with hereditary predispositions to epilepsy, insanity, or debauchery-concentrate upon himself such popular sympathies as would make his accession to the throne a lasting success.

### THE INEVITABLE PARTITION.

The "I do not understand" of the many different parties of Austria-Hungary, the centrifugal tendencies of the various nations, the lack of any uniting ties, and the absence of a centralist "Staats-idee," must tear the monarchy to pieces. Sooner or later Central Europe must meet the fate indicated in the accompanying map.

Will Russia be strong enough to incorporate Bohemia, Moravia, and Silesia into her dominions. and thus form a thorn in the heart of future Germany? Will it sooner or later also swallow the whole of the Balkan Peninsula? The answer to these questions lies too far off.

But the sooner Europe familiarizes herself with the prospect of a division of the Austro-Hungarian monarchy the better for the peace of the world. The conditions of the doomed country are such that they need only the spark in the powder-barrel. The powder is there.

THE HEAVY BLACK LINES INDICATE A POSSIBLE FUTURE PARTITION OF AUSTRIA-HUNGARY.

## PLANS FOR CURRENCY REFORM.

BY CHARLES A. CONANT.

HE present session of Congress is likely to be devoted in large measure to the discussion of the condition of our paper currency and the need for its reform. There are some members of Congress who express doubt whether anything can be accomplished in the direction of an intelligent reform of the currency system in view of the absence of a majority for the gold standard in the United States Senate. Some of them even doubt the wisdom of considering the There is so subject under existing conditions. strong and influential a demand for action, however, especially among business men, that it hardly seems possible that the subject can be ignored in either house of Congress. Those who have examined the matter believe that conditions are not as hopeless in the Senate as the more pessimistic profess to believe. Whether they are hopeless or not at the present time, it is the desire of currency reformers to put the House upon record in favor of a sound system. They do not regard the assumed attitude of the Senate as an excuse for non-action. The Banking Committee of the House have already proceeded to the consideration of various bills, and will undoubtedly report some measure to the House. It will then lie with the Committee on Rules to decide whether a special order for the consideration of such a bill shall be presented to the House for its adoption.

The subject of currency reform will not be a new one at the present session of Congress. President Cleveland, Secretary Carlisle, and Comptroller Eckels repeatedly urged its importance in 1894 and 1895, and many bills have been introduced in Senate and House. The fact that it was Democratic officials who thus raised the issue in 1894 gave a partisan tone to the discussion, for the moment, which does not belong to President Cleveland only followed in the footsteps of eminent Republican statesmen, who recommended at the close of the civil war that the Government should pay its floating debt and withdraw from the banking business. famous Resumption Act of 1875, whose defense was the pleasure of Republicans in the campaigns of the next few years after its passage, provided that the outstanding legal-tender notes should be reduced by degrees to \$300,000,000. only under the stress of business depression and popular clamor that the act of May 31, 1878, was passed, by the more timid members of both parties, declaring that "when any of said notes

EX-SENATOR GEORGE F. EDMUNDS, Chairman.

may be redeemed, or be received into the Treasury under any law, from any source whatever, and shall belong to the United States, they shall not be retired, canceled, or destroyed, but they shall be reissued and paid out again and kept in circulation."

Three sets of propositions regarding the reform of the currency are before Congress, or will soon be before it, with a certain representative authority, in addition to the bills introduced by individual members. These propositions come from President McKinley, the Secretary of the Treasury, and the Monetary Commission. The latter body has no official character, but speaks in a measure for the business community, as represented by the boards of trade and other commercial organizations. The President, Secretary Gage, and the leaders in the movement for the Monetary Commission have been in frequent con-

sultation, and their differences are over the details of what it is practicable to secure from Congress rather than over essential purposes or principles. All believe that radical changes should be made in the existing currency system, and agreement among them all would not be difficult if they were authorized to frame a measure which could be embodied in legislation.

### THE POSITION OF THE PRESIDENT.

President McKinley, as is usual with the chief executive of the nation, has been cautious in regard to recommending radical changes. He gave

C. STUART PATTERSON, Pennsylvania.

the first place in his annual message to the necessity of currency reform and the means of attaining it, but his specific recommendations were limited to the suggestion that the issue department of the Treasury be separated from the fiscal department, and that minor changes be made in the existing national banking law. He said, regarding the first matter:

"I earnestly recommend, as soon as the receipts of the Government are quite sufficient to pay all expenses of the Government, that when any of the United States notes are presented for redemption in gold and are redeemed in gold such notes shall be kept and set apart, and only paid out in exchange for gold. This is an obvious duty. If the holder of the United States note prefers the gold and gets it from the Government, he should not receive back from the Government a United States note without paying gold in exchange for it."

The President invites careful attention to the more comprehensive plan of Secretary Gage, and expresses concurrence in the recommendations of the Secretary, that national banks be allowed to issue notes to the face value of the bonds which they have deposited to secure circulation, that the tax on circulating notes secured by deposit of the bonds be reduced from 1 per cent. to one-half of 1 per cent. per year, and that authority be given for the establishment of national banks with a minimum capital of \$25,000.

### THE PLAN OF SECRETARY GAGE.

The plan of Secretary Gage is much broader in its scope than those portions which the President recommends. After presenting the proposition in regard to the separation of the issue and fiscal departments of the Treasury, the Secretary recommends that he be given authority to refund the existing national debt maturing in 1904 and 1907 into "refunding loan bonds, payable after ten years at the pleasure of the Government, such bonds to bear interest at the rate of 2½ per cent. per annum, payable, principal and interest, in gold coin." The Secretary desires authority also to issue \$200,000,000 of bonds of a similar class for the purpose of withdrawing the government notes and substituting a banking currency. The Secretary's plan contains the germ of an important change in the banking currency of the United States. change is the adoption of a system of note issues based upon commercial assets rather than upon pledged securities. The Secretary proceeds with abundant caution in the direction of introducing this new currency in limiting the amount to 25 per cent. of the capital of the issuing bank.

The plan of the Monetary Commission will go further, and will meet more completely the views of students of political economy and finance, nearly all of whom believe that a currency based upon commercial assets is the only logical and scientific currency for a commercial country. Before considering these plans in detail, however, it is proper to give a brief sketch of the origin and purposes of the commission.

### ORIGIN OF THE MONETARY COMMISSION.

The conviction that the currency system of the country called aloud for reform led Mr. H. H. Hanna and a few other prominent citizens of Indianapolis, after the election of 1896, to call

CHARLES S. FAIRCHILD, New York.

for a conference of representatives of Western boards of trade for the purpose of considering this subject. The matter was laid before the Board of Governors of the Indianapolis Board of Trade by Mr. Hanna, on November 18, 1896. He referred to the fact that public sentiment had not yet crystallized in favor of any specific plan of currency reform, and expressed the belief that a movement for definite action might best originate in the Central West. His motives and purposes were defined thus:

"No movement could or should succeed that B not based upon the broadest possible justice and intelligence, and in the entire interest of the whole people. Such investigation and framing should only be intrusted to those who are great enough to rise above all party relations and prejudice, to discard all former ideas when confronted with better methods, and fairly and bonestly deal with the great question for the general good and for defense against the instability of values, which has caused such immeasurable losses to the people of this country within the few years just passed. The business man is the victim of all such agitation, and I stand in his name to protest with all possible emphasis against further risk by delay, lest the opportunity slip."

### THE INDIANAPOLIS CONVENTION.

This declaration of Mr. Hanna was the keynote of the movement which led to the appeal

to President McKinley for the appointment of a currency commission. The Indianapolis Board of Trade first invited a conference of representatives from each of the boards of trade of Chicago, St. Louis, Cincinnati, Louisville, Cleveland, Columbus, Toledo, Kansas City, Detroit, Milwaukee, St. Paul, Des Moines, Minneapolis, Grand Rapids, Peoria, and Omaha. This meeting was only for the purpose of deciding upon the basis of a larger convention, which was held on January 12, 1897, in Tomlinson Hall, Indianapolis. The boards of trade, commercial clubs, and similar organizations in all cities of the United States having 8,000 or more inhabitants, according to the census of 1890, were invited to take part, and about 350 delegates responded. Ex-Governor Stanard, of Missouri, was the temporary presiding officer, and the Hon. C. Stuart Patterson, of Philadelphia, was permanent chairman. The subject of currency reform was discussed on the floor and in committees, and it was determined that a currency commission should be created whose recommendations would carry with them the weight of the business sentiment of the country. There was some division of opinion at first as to whether the commission should be appointed by authority of Congress or by direct authority of the convention. Both sides yielded something in this respect, and it was agreed that Congress should first be asked to act upon the subject, and that

STUYVESANT FISH, New York.

in case of failure to act promptly a commission should be named by the executive committee of the convention then in session. The executive committee of fifteen was named by the chairman of the convention, with Mr. Hanna at its head.

This committee took measures at once to reach the newly elected President and to secure his support for the appointment of a commission by authority of Congress. Mr. McKinley gave them assurances of sympathy, which were emphasized by the distinct declaration of his inaugural address that a commission should be appointed for dealing with the subject of currency reform. He did not refer to the subject at the opening of the special session of Congress on March 15, because he and other Republican leaders felt that a change in the tariff should first be made, and that this might be endangered by introducing other subjects of Congressional action. motive restrained the President from sending to Congress at once a special message which he prepared on the subject in the spring. He never wavered, however, in his purpose, and on July 24 the message was received, and a bill on the subject was promptly passed by the House. Leading members of the Senate felt that it was too late to take the subject up in that body, in view of the absence of any power to close debate, and no action was taken beyond the reference of the House bill to the Committee on Finance.

Mr. Hanna called a meeting of the executive committee soon after the adjournment of Congress, and early in September announced the names of the commission of eleven to whom they proposed to intrust the framing of a cur-The committee, in choosing the rency measure. members of the commission, endeavored to adhere to the rule laid down by Mr. Hanna, that the work "should only be intrusted to those who are great enough to rise above all party relations and prejudice, to discard all former ideas when confronted with better methods, and fairly and honestly deal with the great question for the general good." None of the commissioners receive any compensation for their services beyond their expenses, and several have neglected their private business at serious cost in They all appreciated the fact, order to serve. however, that it was a high honor to be asked to serve, and that if they acted wisely their names might go down to history along with those of the authors of the Bullion Report and other great financial papers.

### COMPOSITION OF THE COMMISSION.

It was by the advice of some of the most eminent of Republicans that the executive committee sought the services of ex-Senator George F. Ed-

J. LAURENCE LAUGHLIN, Illinois.

munds, of Vermont, as chairman of the commis-Another member who has a national reputation is Mr. Charles S. Fairchild, who was Secretary of the Treasury under the first administration of Mr. Cleveland, after the retirement of Daniel Manning. It was determined at the outset that the commission should be made up chiefly of practical business men, rather than bankers or professional students of political econ-Prof. J. Laurence Laughlin, the emiomy. nent author of "A History of Bimetallism in the United States," was the one man who was finally chosen as the representative of the professional students. Another member who has made a reputation as a speaker and writer, but is Iso actively engaged in practical finance, is Mr. C. Stuart Patterson, who presided over the Indianapolis convention. With these four members the enumeration of the representatives of Eastern interests and of schools of political economy ends. There is one other member, Mr. Stuyvesant Fish, who retains a nominal residence in New York, but as president of the Illinois Central Railway. with its far Southern connections, his business interests are essentially wrapped up with the prosperity of the Mississippi valley. The South has three other members of the commission, in Mr. T. G. Bush, of the Mobile & Birmingham Railroad; Col. George E. Leighton, of St.

Louis, who is the vice-chairman of the commission; and Mr. J. W. Fries, of North Carolina. Mr. Fries and Mr. W. B. Dean, of St. Paul, Minn., represent the distinctively mercantile side of the commission. Mr. Fries is interested in milling, cotton manufacturing, and other leading Carolina industries. Mr. Dean is a hardware merchant who has occupied a prominent place in the public life of his State. Both these gentlemen might have sat in Congress or held other political positions if they had not repeatedly refused them in favor of their private activities. Judge Robert S. Taylor, of Indiana, has not refused nominations for Congress as a service to his party when he knew there was no chance of winning, but he has given most of his time to the practice of law, and is among the group who stand at the head of the Indiana bar. The eleventh member of the commission is Mr. Louis A. Garnett, who is engaged in business operations in San Francisco which have made him familiar with coinage matters. The commission is essentially non-partisan in character. Six of its members are Republicans and five are Democrats, but there has never been a division on party lines upon any question under consideration.

### METHODS OF WORK.

The commission held their first meeting in Washington on September 20. Several days were spent in general discussion of the currency problem, and three sub-committees were appointed to consider its different branches—the relation of the coinage to a proper currency system, the government demand notes, and the banking A series of questions classified under these three heads was drawn up and sent to prominent financiers for their opinions and recommendations. An illustration of the character of the questions and of the answers is afforded by the following extract from the replies of Mr. William C. Cornwell, the president of the City Bank of Buffalo and the author of "Sound Money Monographs: "

"Q. If bank-note issues be based exclusively on assets of the bank, is the nature and extent of the security such as effectually to protect the note-holder? A. With a guarantee fund contributed by all the banks, yes; but I believe that banks with large capital only should issue notes—say not less than \$500,000 capital.

"Q. In case of notes based on bank assets, what means can you suggest to obtain and preserve a high character of discounts? A. Would take care of itself.

"Q. What plan of examination and inspection would you recommend? A. Present national system, specially perfected.

"Q. What methods would you suggest by which uniformity of note issues based on assets could be secured throughout the country? If by redemption, state where and how. A. Daily redemption by the banks over their own counters, and at central cities all over the United States.

"Q. What, beyond provision for immediate redemption, is needed for securing the elasticity of note issues in periods of normal business? A. Nothing."

These answers are given because they take but little space. Mr. Cornwell, however, and others who answered the questions, discussed many of them at great length, and submitted plans of constructive legislation which were of great value to the commission. These expressions were digested and copied for the use of each of the sub-committees, and the separate opinions expressed upon each point compared, not merely for their value as suggestions, but as an indication of the attitude of financial experts throughout the country. The commission spent many days in the discussion of every aspect of the monetary problem and the study of different propositions from the standpoint of every possible objection and conceivable advantage. A unanimous report upon all essential points has been reached, and will be given to

ROBERT S. TAYLOR, Indiana.

GEORGE E. LEIGHTON, Missouri.

the public within a few days. The report is likely to propose reforms which will startle the conservatism of the country somewhat at first because of their novelty in relation to recent American experience. They will not be novel, however, in the sense that they have not borne alike the tests of the closest abstract reasoning and the widest experience in other countries of the world.

### THE BRANCHES OF MONETARY REFORM.

The principles upon which monetary reform should proceed were laid down by the Indianapolis convention as follows:

"First, that the present gold standard should be maintained. Second, that steps should be taken to insure the ultimate retirement of all classes of United States notes by a gradual and steady process, so as to avoid injurious contraction of the currency or disturbance of the business interests of the country, and that until such retirement provision should be made for a separation of the revenue and note-issue department of the Treasury. Third, that a banking system be provided which should furnish credit facilities to every portion of the country and a safe and elastic circulation, and especially with a view of securing such a distribution of the loanable capital of the country as will tend to equalize the rates of interest in all parts thereof."

These propositions, whether one takes the af-

firmative or negative of them, afford convenient subdivisions of the branches of currency discussion. It is not necessary, however, to discuss at length the question of the metallic standard. The recommendations which the Monetary Commission propose to make regarding the coinage are based upon the assumption that the gold standard is to continue, because that is now the standard of the country; but the recommendations regarding the legal-tender notes and the banking system would be equally applicable if silver, instead of gold, were the nation's measure of value. The two important subjects left for consideration, therefore, are the government legal-tender notes and the banking system.

### TREATMENT OF THE GREENBACKS.

The different views taken by financiers regarding the treatment of the government legal-tender notes may be roughly classified under four heads—(1) the continuance of the existing system; (2) the segregation of the notes into an issue department, separate from the fiscal department, as proposed by the President; (3) their retirement and cancellation by means of the issue of bonds; and (4) their retirement and cancellation out of the surplus revenues of the Government.

Those who believe that the government notes should continue to be issued under present conditions generally believe that the issue of \$262,-000,000 of bonds in 1894, 1895, and 1896, for the avowed purpose of obtaining gold for the redemption of legal-tender notes, was really caused by the deficiency of revenues, and that all trouble regarding the maintenance of the notes at par would end with the balancing of the fiscal accounts of the Treasury, so that receipts should equal expenditures. The only measure of currency reform in respect to the government paper required from this point of view is the grant of authority to the President and Secretary of the Treasury to bridge over temporary deficiencies by the issue of short-term Treasury certificates There is little objection from any quarter to the grant of this authority, whatever differences may exist upon other points of currency reform. Nearly every European government has authority to issue these short-term obligations, and they are regularly sold in the London market by the British Government in anticipation of the collection of the revenues.

The plans of both the President and Secretary of the Treasury contemplate the separation of the issue and fiscal departments of the Government, so that the volume of the circulation shall not be seriously affected by changes in receipts and expenditures, and so that the government paper money shall always be fully protected by the coin

reserve, whether there is a deficiency in the ordinary receipts or not. This plan is often compared with the organization of the Bank of England, where the note-issuing department is separated from the banking department (dealing with loans, discounts, and deposits), and the issue department issues notes only upon deposits of gold, and cancels the notes when deposited for gold. The British system has commended itself to many minds because of its seeming simplicity and security. It is based, however, upon a misconception of credit which treats circulating notes as distinct in essential character from other credits. and has so seriously restricted credit in emergencies that authority has been granted three times by the cabinet to the officials of the bank to disregard the law and to issue notes in excess of the Whatever merits the system of the legal limit. Bank of England may have, moreover, it differs radically from any system which could be devised for the United States Treasury, because, in the language of the President, the responsibility of redemption of notes in gold "is alone borne by the Government, without any of the usual and necessary banking powers to help itself." The Treasury, in other words, is not a bank, and cannot become one without making loans upon commercial paper and receiving deposits.

### SECRETARY GAGE'S PROPOSITION.

The plan of Secretary Gage regarding government paper goes further than the mere provision that greenbacks shall be paid only for gold and gold for greenbacks by making specific provision for a redemption fund. His suggestions on this subject are as follows:

I recommend that proper legislation be enacted which will establish, separate and apart from the ordipary operations of the Treasury as they relate to revenue and expenditures, a department to be designated and known as the Issue and Redemption Division. To this division the sum of \$125,000,000 in gold should be set over from the general fund in the Treasury, to be used only for redemption purposes, and all the silver dollars now held for redemption of silver certificates, and all the silver bullion and dollars coined therefrom, bought under the act of 1890, should be passed to the same account. Further, that the sum of \$200,000,000 in the legal-tender notes of the United States known as greenbacks be collected as hereinafter described, and deposited in the said Issue and Redemption Division, to be disbursed therefrom only upon the receipt in exchange therefor of an equivalent amount of gold coin. Such gold, when so secured, to be held in said division as part of the general redemption fund.

The plan of Secretary Gage takes a still further step for the retirement of the greenbacks by the provision that the banks may deposit legal-tender notes and silver certificates as security for note issues to the amount of \$200,000,000, and

that the Secretary may withdraw these legal-tender notes and silver certificates and substitute refunding bonds bearing interest at  $2\frac{1}{2}$  per cent. The notes thus withdrawn from the bank redemption fund are to be transferred to the Issue and Redemption Division of the Treasury. They are, in other words, locked up in the issue division, and the new bonds are made the basis of a secured bank-note circulation which takes their place. The banks practically become purchasers of the new bonds with the outstanding government notes, and the latter are segregated beyond the reach of the public or of Congress,

J. W. FRIES, North Carolina.

unless the latter body should decide to modify the law and direct the reissue of the notes, as was done by the act of May 31, 1878, in amendment of the Resumption Act.

The project of the complete withdrawal and cancellation of the government notes by the proceeds of a new bond issue is simple, but is not embodied in many bills before Congress, because of its supposed lack of popularity. Representative Fowler, of New Jersey, has introduced a comprehensive banking measure which proposes a considerable issue of bonds, in order to retire the government notes, but proposes the refunding of the existing debt in such a manner that the whole interest charge for the new bonds and the old will be less than the present interest charge upon the outstanding bonded debt. Mr. Fowler believes that his proposition for reducing

the interest on the debt, relieving the Treasury from the current redemption of legal-tender notes, and imposing the supply of gold for export and redemption purposes upon the banks, would strongly commend itself even to those who are not disposed to favor legislation in favor of the banks.

### RETIRING GREENBACKS FROM THE SURPLUS.

The only proposition remaining to be considered is the redemption of the government notes out of the surplus receipts of the Treasury. This will constitute one of the features of the report of the Monetary Commission. They have not thought it necessary nor desirable to offend the strong sentiment which exists in many sections of the country against the creation of a large interest-bearing debt for the purpose of extinguishing what many consider the non-interest-bearing debt of the legal-tender notes. The United States, prior to the fiscal year 1892, collected a large surplus of receipts over expenditures, which was applied by Secretary Manning, Secretary Fairchild, and Secretary Windom to the purchase of the bonded debt at a high premium. Such a surplus could be much more economically applied, if the law permitted it, in the cancellation of legaltender notes, when received in current payments, without any call upon their holders to pre-

LOUIS A. GARNETT, California.

sent them for redemption. It would be a simple and effective process if there was an adequate surplus to justify it. The mere fact that the Government was in the process of retiring its legal-tender paper money would of itself add immensely to the strength and credit of such money, and would probably keep a portion of it outstanding without burden to the Government for many The Government would be relieved, after a time, as the volume of government paper was reduced, almost altogether of the necessity of making gold redemptions. The device usually adopted in such cases to call in paper money which is of unquestioned value is to deprive it of the legal-tender quality after a certain time. The existence of an Issue and Redemption Department during the process of transition, with the provision that notes received into it should be canceled and destroyed, would thus at once relieve the Treasury from strain and pave the way for the complete retirement of the Government from the banking business.

### EXPANSION OF THE BANK-NOTE CIRCULATION.

The withdrawal of government paper money would probably not be permitted by the American people if it meant contraction of the currency. The necessity of putting something in the place of the government notes withdrawn is based not so much upon the absolute volume of currency in the country as upon the necessity for a proper distribution of it. One of the most forcible criticisms against the system of government paper and bank-notes based upon pledged securities is the accumulation of money in the great commercial centers at the expense of the more thinly settled portions of the country. It is this evil which, in the opinion of currency reformers, demands a remedy quite as much as the danger to the Treasury from having affoat a great mass of demand obligations. The mere reduction of the tax on circulation and the expansion of circulation to par of the bonds deposited would not be seriously effective in expanding the circulation at the present time. The bonds thus deposited to secure circulation on November 30. 1897, represented a par value of \$225,359,300, and the increase of circulation permissible under the plan of the President would be \$22,535,930. It might be argued that the increased profit upon the circulation would lead to enlarged bond deposits, and this might be the case to a small extent. The existing scarcity of bonds, however, their value for investment, and the increase of price which would follow any active demand for them by the banks, would probably prevent such an increase of circulation to any material extent.

Secretary Gage proposes that the President's plans shall be adopted, and also that banks which purchase the new refunding bonds to the amount of 50 per cent. of their capital with legal-tender notes and silver certificates shall be permitted to issue notes, not only up to the par value of these bonds, but to the extent of 25 per cent. additional upon their assets, without directly pledged securities. Secretary Gage has made this recommendation in the belief that it is as far as Congress will care to go in the direction of an experiment which has not recently been in operation in this country. He refers to the fact that the national banks located in the Southern States had an aggregate capital on October 6, 1896, of \$68,680,000, and issued only \$18,950,000 in circulating notes. He suggests that "under an act allowing a greater liberality of issue and less burdensome rates of taxation those banks would find it to their interest to issue, instead of \$18,-950,000, the amount which they have at present outstanding, a sum equal to the full amount of their capital, and, in addition, in the season of crop activity, an additional unsecured volume of circulation approximating 25 per cent. of their capital." The Secretary proposes to give security to these notes by the following provisions:

"Extend the guaranty of payment by the Government to all circulating notes of the bank, whether issued against deposited security or against assets.

"To secure the Government against loss, if any, attaching to its guaranty a tax of 2 per cent. per annum on unsecured circulation shall be levied to create a safety fund, which fund shall be invested by the Secretary of the Treasury and the Comptroller of the Currency in government bonds. In addition to such funds the Government shall be further protected by having a first lien upon all assets in case of failure of the issuing bank."

### THE ISSUE OF BANK-NOTES UPON ASSETS.

The Monetary Commission will go further than either the President or Secretary Gage have specifically gone, and will recommend that the national banks be permitted to work out a system of note issues based mainly upon assets up to nearly the full amount of their capital, as fast as they find it profitable to retire from the existing They believe that this is the essential element of their report which will commend it to those sections of the country which have had the greatest reason to complain of the existing system. A currency issued upon business assets, when properly safeguarded, has these great advantages—that it permits profitable banking without deposits and affords a convenient local currency. Down to the beginning of the present

T. G. BUSH, Alabama.

century, the right to issue circulating notes was considered by many a natural right of individuals in England and France as well as under State laws in the United States. The limitation of note issues to a single institution was sought in England by the act of 1844, which is still in force, and in France by the abolition of the departmental banks in 1848. The right to issue notes was left under the control of the States in the United States until 1865, when further issues were practically precluded by the levy of a 10per-cent. tax upon the amount of State bank notes outstanding. It is this tax which the Southern people have been resenting in recent years, because it deprives them of the ability to obtain a local currency.

So galling has been the existing system in limiting the medium of exchange and restricting credit that many Southern members of Congress have proposed the unconditional repeal of the 10-per-cent. tax. There has always been doubt of the constitutional soundness of this legislation. and at the present time there are several propositions before the Legislature of Georgia for testing the issue again before the courts or for evading the tax. One of these propositions looks to the passage of a bill authorizing the issuing of circulating notes by the State banks and carrying a new case to the Supreme Court of the United It was suggested by Mr. Edward Atkinson, of Boston, as long ago as the summer of 1895, that the 10-per-cent. tax applied only to

notes, and not to certificates of deposit, even though such certificates might be printed for even amounts, with the guarantee of the bank, and used for general circulation. Up to the present time, however, except in the emergency caused by the panic of 1893, the 10-per-cent. tax has been treated as precluding the issue of any paper for general circulation without indorsement.

### THE ADVANTAGES OF UNIFORMITY.

The majority of the American people are probably not prepared to surrender the great advantages of the national banking system in respect to security and uniformity. Currency reformers believe that it is possible to retain these advantages without the fetters which the present national system has imposed upon circulation. It is felt in the South that provision for a more ample currency would promote the freedom of exchanges, do away with the dependence of the farmer upon the stores, where he has to take credit in payment for his crops because he cannot get currency, and promote the development of the country by permitting loans at a lower rate of interest. The present system, which concentrates money in New York and other commercial centers, not only hampers actual trade in the South by the lack of a circulating medium, but it hampers all industrial development by the high rates of interest which it compels the banks to charge. The freedom of note issues upon commercial assets would do much to remedy this state of things. This is demonstrated by the history of Scotland and Canada, where an elastic banking system has permitted interest rates nearly as low in the most remote country districts as in the commercial centers. In both of these cases this diffusion of credit upon reasonable terms is promoted also by the power of the banks to establish branches without limitation upon their size or their cash reserves. tem of branch banking has not been familiar to the people of this country since the expiration of the charter of the second Bank of the United States in 1837, but will be authorized to a limited extent by the plan of the Monetary Commission. Their plan will recognize also the essential safeguards of a circulation based upon commercial assets—the first lien of the notes upon the assets, obligatory redemption in coin on demand, the maintenance of a safety fund in the custody of the Government, and the limitation of issues in proportion to paid-up capital.

The members of the commission and their friends believe that their project will grow with popular discussion. This is not an unreasonable assumption, for every point of it has al-

ready been submitted to the searching examination of eleven men, who have given their whole time and thought for many weeks to the work. The plan, in other words, has received just such a threshing out in every detail as such a plan would receive in Congress. The commission, however, have enjoyed two advantages over the usual conditions in Congress: they have been free from the political influences which might have led them to cater to the sentiment of the

WILLIAM B. DEAN, Minnesota.

moment rather than their own ripened convictions; they have been able, also, to give a degree of attention and study to their work which can rarely be given by a member of Congress to the many propositions which come before him for decision. The members of the commission were far from agreement when they met, but they have not yielded their convictions, except perhaps upon minor details, for the sake of unanimity. They have become unanimous by the process of winnowing out in argument the best of all the propositions laid before them. This fact alone gives an immense presumptive strength to their report, which should entitle it to careful consideration.

## THREE PATRIARCHS OF EDUCATION.

In the closing weeks of 1897 there passed away a remarkable trio of aged and honored Americans, whose services to the cause of higher education in this country had extended considerably over half a century, and had contributed distinctly to the enrichment of our higher national life. These three men, each in his own sphere, proclaimed to two generations of their countrymen the value of honest, thoroughgoing

THE LATE PROFESSOR TYLER, OF AMHERST.

Their lives were examples of disinterested devotion to large aims and inspiring ideals. Prof. William S. Tyler, who died November 19, 1897, at the age of eighty-seven, had taught Greek at Amherst College for fifty-seven years prior to his retirement as professor emeritus in 1893, on the occasion of the semi-centennial of his professorship—a record seldom, if ever, exceeded in American academic annals. During this long period Professor Tyler fulfilled the various functions of the old-time professor in the country college, and these included multifold responsibilities for the welfare of the institution in times of stress (which have been many and protracted in Amherst's life from 1836 to the present time). Professor Tyler had fitted himself for the ministry, and it is said that the refusal of a west-bound stage to take his baggage because of the condition of the roads was all that interfered to cause a delay in his plans for homemissionary service which finally resulted in his turning to college work.

Of Professor Tyler's work in the class-room it has been said that he taught the classics as literature, not as exact sciences; all the influences of his instruction were broadening. The mission of the small college, in his view, was first of all the implanting of a genuine love of culture. herst has never sought to be classed among the universities, and no one would have more sturdily resisted such a tendency, had the occasion arisen, than Dr. Tyler. He had come to the college as a student in 1828, only seven years after its founding, and he had enjoyed the personal friendship of every one of Amherst's presidents, except the first. He was the historian of the college—a chronicler in whose mouth Quorum pars magna fui would have been no idle boast, but the precise truth.

In former years Dr. Tyler was the editor of various Greek and Latin texts, and his contributions to periodical literature, chiefly on classical subjects, have always been frequent. He has also written on religious themes, and has published a volume of addresses, but the work best known to Amherst alumni is his history of the college during the administrations of its first five presidents, from 1821 to 1891. Dr. Tyler was active in various educational enterprises, having been president of the board of trustees of Mt. Holyoke College, a trustee of Smith College, and connected with the management of several other important New England institutions.

Another classical scholar and teacher whose influence reached far beyond the walls of his class-room was Prof. Henry Drisler, of Columbia, who died November 30, 1897, within a month of the completion of his seventy-ninth A graduate of Columbia College in the class of 1839, he returned to the institution as a tutor of Greek and Latin in 1843. In 1857 he became professor of Latin, and in 1867 he succeeded Professor Anthon in the chair of Greek, which he held till his retirement from active service in 1894, when, like Professor Tyler, he was made a professor emeritus. During this period Professor Drisler accomplished much important work in classical lexicography, and edited several series of texts. He established a reputation for profound and accurate learning. Before President Low's election Professor Drisler served as acting president, and later as dean of the col-Harvard University, at her two hundred and fiftieth anniversary, honored Professor Drisler with the degree of LL.D. in recognition of his scholarship.

It was said of Professor Drisler in an address presented to him by the Association of Columbia College Alumni at a public reception on the occasion of his retirement, four years ago, that "his thorough scholarship, his gentleness and modesty of character, his integrity and Christian charity, his patience as an instructor, and his kindly interest in all who came under his charge, have secured for him 'honor, love, obedience, troops of friends,' and have endeared him to successive generations of students of Columbia, whose respect, good wishes, and affectionate solicitude accompany him in his honorable retirement."

As a trustee of the New York Public Library, Astor, Lenox, and Tilden foundations, Professor Drisler has recently had an active part in giving shape to what is surely destined to become one of the great educational institutions of the metropolis, and his labors on behalf of this enterprise should be counted as not the least of his notable services to the cause of sound learning and the diffusion of true culture.

The "Grand Old Man" of New York, Charles Butler, who lacked but two months of com-

THE LATE CHARLES BUTLER, OF NEW YORK.

pleting his ninety-sixth year, died December 13, 1897. Mr. Butler had never received a collegiate education, but up to the very last his interest in institutions of higher learning was unflagging, and at the time of his death he was the presiding officer of the governing boards of two such.

THE LATE PROFESSOR DRISLER, OF COLUMBIA.

Mr. Butler could remember seeing Fulton's steamboat navigate the Hudson in 1807, and he could recall incidents of the War of 1812. In 1833 he visited the site of Chicago and predicted the future importance of the place. He had been a law student in Martin Van Buren's office years before the latter's election to the Presidency. He then began the practice of law in New York City in 1835, and in the following year he became a member of the council of New York University.

For more than sixty years, down to the very day of his death, Mr. Butler was the steadfast friend, adviser, and patron of the university. His gifts in money were great, but it is as the far-seeing, statesmanlike leader in a bold educational enterprise that this quiet man of affairs most commands our admiration and respect. He lived to see many of his far-reaching plans for the university's development in a fair way to realization.

Mr. Butler was one of the founders of Union Theological Seminary, and its faithful supporter. He was identified with many works of philanthropy in and about New York. In his career, as in those of Professors Tyler and Drisler, the dominant fact was a steady fixedness of purpose, the unfaltering pursuit of a lofty ideal. Such lives are all too rare.

HON. WILLIAM L. STRONG, Mayor of New York City, 1895-97.

## NEW YORK'S CIVIC ASSETS.

# A SUMMING-UP OF THE PROGRESS MADE DURING MAYOR STRONG'S ADMINISTRATION.

### BY WILLIAM HOWE TOLMAN.

JANUARY 1 the greatest municipal experiment in the history of our country will be put to the test of actual work-a-day experience, in the administration of the Greater New York. The urban tendency is now axiomatic, and the phenomenon of the coalescence of neighboring municipalities excites no wonder, but the union of the five boroughs of the greater city has attracted the attention of the world. Interest has been deepened, in view of the recent election, when the opposing forces of good and mal-administrative methods were so clearly defined

that each voter exercised what he knew was a deliberate individual choice—that his city should be ruled by a man who was a political cipher, of no value, unless the unit, his master, stood alongside, or that his municipality should be ruled by a man pledged to make its interests his first choice.

Three years ago the majority of the voters of New York made a deliberate choice of what was called a reform administration, and all the political fractions were reduced to a common denominator; this result, reduced in turn to its lowest terms and expressed in votes, demonstrated that the success of reform is simply a question of mathematics.

On the threshold of the Greater New York it will be of interest, as well as a matter of duty, to reckon up the assets of the city of New York in starting upon its new and wider municipal career. What has New York gained, in the three years of reform rule, that has contributed toward its higher life, and made it a desirable civic home for the hundreds of thousands whose only capital is their good health and their brawny arms, and the hundreds whose inherited fortunes or brilliant brains have made it possible to gratify every wish that may be bought by money?

### TRUE DEMOCRACY.

William L. Strong was the mayor, whose qualification for the office was the unimpeachable honesty and integrity of a successful business man. To supplement his ignorance of the management of a great city, he brought to the mayoralty a large fund of common sense, backed by a grim determination to do what he believed was for the best interests of the city. reason he was compelled to seek the advice of others, when it became necessary for him to make appointments, and many of his mistakes were the fault of his advisers and not his own. He was essentially a democratic mayor, and the citizen who was without a friend in the world could always get a hearing and the redress of a real grievance. The fact that the milk supply of New York is as pure as any city in the United States is directly traceable to a letter written by a poor woman to him, asking if he would not see that what was sold her for milk was milk, so that her baby would drink what would bring life and The affection of the plain people for Mayor Strong was sincere, and sprung from their feeling that he was their friend. In the last campaign, when the unique spectacle was presented in political life of the chief executive taking the stump to advocate that the voters should intrust the city government to a man whom the mayor felt possessed the necessary qualifications for that office, he said to the writer: "Put me down for meetings on the East Side; I want to get among the people." The fact that Mayor Strong had come down to talk to them crowded the halls, and brought forth enthusiastic applause for the man and his utterances.

### CIVIC SERVICE.

He has always held himself in readiness to respond to calls of civic service, and all parts of the city have had the opportunity of honoring themselves in honoring the mayor.

It is a fact of supreme significance to the plain people of this city that during his entire term of office Mayor Strong has read every letter that has come to him as Mayor of the City of New York, and no official has decided for him what communication should be laid before him and what withheld.

### DEMAND OF COMMERCE.

In a discussion, therefore, of the great deeds of social service, during the administration of Mayor Strong, his own opinion is of value and interest. When I asked him what he considered were the most important factors in the promotion of the welfare of the people, he replied:

"I am much pleased with the new buildings and the other decent accommodations for the aged poor and helpless people on Blackwell's Island, who are the wards of the city. These improvements are particularly gratifying because so few New Yorkers realize what wretched conditions prevailed three years ago. The new water mains along Fifth Avenue will provide the lower part of the city with an ample supply for that necessity of life for drinking, and also for putting out fires. Thirdly, the great improvement of the North River, whereby the dock facilities may be made ample for the utmost pressure demanded by commerce, by lessening the transportation and reshipment of foodstuffs, is a lessening of their cost and an advantage to all the wage-workers."

### TRAMPS AND VAGRANTS.

The Department of Charities concerns itself with the sick, the poor, and the insane—that large class of dependents who are compelled to take whatever the city sees fit to give them. This department touches very closely the large body of citizens who are workers with their hands. Blackwell's Island there are now about 3,500 dependents. Three years ago the 1,200 old men at the almshouse had to line up at 10 o'clock for a 12-o'clock dinner. Why? Because the dining-room had sittings for only 395. The conditions were a trifle better in the case of the old women at the almshouse, simply because there were fewer of them. To day ample dining-rooms have been added to the almshouse. Now, when the sick people must go to the Island, they are helped on board by uniformed, paid attendants, and cared for by trained nurses and doctors, with every appliance for ease and comfort, instead of being jostled about by workhouse prisoners, tramps, and vagrants who had been detailed for this hospital service. Now, when the old men at the almshouse want a drink of water, they are not obliged to go down two flights of stairs, if they are on the third story, to the hydrant in the courtyard, because water is now provided on every floor. That fact has made possible water-closets and lavatories on every floor.

Instead of about a dozen detached kitchens, the preparation of food has been centralized, and can be delivered hot to any one of the buildings. New pavilions have been added, so that shelters fit for human beings now cover all the dependents at the Island. In all the city hospitals the most improved type of ambulance has been supplied, and the old appliances, chiefly of wood, in the operating-rooms have been displaced by nineteenth-century models. These improvements seem very minor when recounted, but they mean to that great class whom the city must care for the difference between an existence of daily suffering and torture and a life of serenity and comfort.

### FIFTY MILLION GALLONS.

For years the lower part of the city was without adequate water supply for protection from So inadequate was it that the Board of Underwriters were most insistent upon protection in this direction. The work of providing a water supply of 50,000,000 gallons a day was begun, and the pipes laid along Fifth Avenue, as the only available route. When this work has been started, thirty blocks between the Washington Arch and Fifty-ninth Street will be sewered as well, because in many cases the old sewers were found to be simply drain-pipes of terra cotta, broken, and absolutely useless. In many cases the department had no maps of the underground conditions of the streets, and work was necessitated that should have been performed a generation ago. Now the lower part of the city will have a water supply sufficient for its needs.

### GRAND HIGHWAY.

Park Avenue, from Fifty-sixth Street to Ninety-sixth Street, has been made a grand highway 140 feet wide, its grade lowered, and its name, Park Avenue, justified.

The Boulevard, from Fifty-ninth Street to One Hundred and Twenty-fifth Street, has been reclaimed from a third-class roadway to a beautiful parkway. Many miles of granite pavements have been converted into smooth and noiseless roadways during the last administration, scores of miles of asphalted streets have been laid, of which a large number are in the tenement districts, where there are the greatest number of people to The fact of highways on which benefit by them. the noise of vehicular traffic is minimized means untold relief, not only to the sick and those suffering from nervous diseases, but also to every other person in the city, because his system is to that

extent unimpaired. In our city, where the tension of daily life is so high, and where the workers are keyed up to the highest pitch, the above facts mean added years of life and thousands of saved lives among the sick and suffering. The asphalting of streets is a splendid illustration of the interdependence of municipal departments, because the efficiency of the Street Cleaning Department is quadrupled by the ease and thoroughness with which street dirt of all kinds can be removed, and at the same time the street inspection by the Health Department is made the more easy. The new viaduct uptown will be an architectural acquisition to the city.

### LESSENED COST OF BREADSTUFFS.

Every citizen, even the humblest, is directly concerned in the commercial prosperity of his city, because the more highly developed the city may be commercially, the greater is the opportunity for the useful employment of thousands. Improved commercial facilities mean lessened charges for transportation, which in turn means lessened cost of breadstuffs-not the luxuries, but the necessities of life. The Department of Docks found that the piers and docks of this city were totally inadequate for the accommodation of the great ocean steamships, which could not be berthed at the present docks. The Oceanic, which will be launched next May, will be 704 feet long. What is known as the great North River Improvement, extending from Charles to Twenty-third Street, will have cost \$18,000,000, but will have provided sixteen piers for the accommodation of the largest steamships now building or likely to be built. In addition, a marginal street 250 feet wide will extend along the whole improvement. It has been estimated that at the end of thirty years, on which many of the rentals of the piers are based, this great improvement will have paid for itself and netted \$3,000,000 to the city.

### PIER PARKS.

Students of social phenomena are coming more and more to test a given movement by the amount The opporof recreation which it contains. tunities for healthful recreation in American cities are sadly deficient. The churches are unable or unwilling to meet the demand, and the other agencies, like the settlements and workingmen's clubs, are so few as practically to exert The great recreative factor very little influence. in American city life is the saloon, which, under present social conditions, is not altogether an unmixed evil, but the citizenship of New York should not be entirely dependent on the saloon for its recreation. Thousands of cities have river parks, but the Department of Docks has made

possible the most unique system in the world by the opening of pier parks, or, as they are called, recreation piers. A pier is selected in the most congested districts and is roofed over, the second story being devoted to a place of promenade and In summer it affords a delightful resort, extending out into the river, and in the winter the department is planning to inclose them with glass and decorate them with palms and flowering shrubs from the city greenhouses, while fountains and music will delight the eye or the ear of the patrons. These recreation piers are the only places where the residents within walking distance can have an opportunity for the most healthful and delightful recreation the year round absolutely free, and indicates that this great department, in making them possible, has been actuated by motives of sincerity in providing for the recreation of the people. Two of these piers have been already opened, and contracts for the other three are let.

### NOMINAL FINES.

Two years ago a poor woman wrote Mayor Strong asking if he would see that what was sold her for milk was milk. The mayor at once brought the matter to the notice of the Health Department, who informed him that the number of inspectors for the city of New York was five, and that even when a dealer was convicted of selling impure or adulterated milk the fine was so nominal that he could afford to pay it, even if he were arrested four times a year, and yet make a handsome profit. When this matter of impure milk was pushed the first fine imposed was \$250 the maximum—and when the second offender was brought before the courts the sentence was \$250 and thirty days on the Island. To-day the people in the tenements and throughout the city have as pure milk as any city in the world, and the number of arrests for the sale of impure or adulterated milk was only 220 for the past year.

### CULTURE STATIONS.

By means of more than a hundred culture stations in different parts of the city, any physician may leave cultures of diphtheria or tuberculosis, which will be forwarded at once to the central office of the department for examination, and reported on within twenty-four hours by the department. Thus the physician may be almost certain that his diagnosis of these two dread diseases is accurate, and the necessary remedial measures can be applied in time. These facts mean hundreds of saved lives all over the city. At each station antitoxin is furnished without cost.

Until this summer there was no inspection of the thousands of children in attendance at the public and private schools for the purpose of ascertaining communicable diseases. This work has not attracted great attention, but is of extreme value to every tenement-house home. ing the above facts into their true significance, it means that the citizens who are obliged to live in the tenement-house quarters of New York are protected by this great department, as never before, in all of the essentials of health, which in turn means the ability to enjoy the most of life and at the same time have the maximum capacity for wage-earning. The same intelligent activity has guided the inspection of foodstuffs in the tenement-house districts, evidenced by the fact that 3,992,030 pounds were condemned in 1897 up to December 1.

The rear tenements of New York have always been pointed to as a standing disgrace to a nine-teenth-century civilization. Under the present administration 94 rear tenements have been condemned as unfit for human habitation, and, what is better, of this number 40 have been demolished, and 17 others have been remodeled for dwellings so as to satisfy the requirements of the Board of Health, and others can never be occupied for dwellings, but have been transformed into manufacturing establishments.

### RESEARCH WORK.

The research work of the department has been carried on quietly and unostentatiously, while in the study of tuberculosis it has been rewarded with such success that the characteristics of this disease have been determined with great accuracy, and the most progressive preventive measures advocated. One result of the demonstration, that this disease is communicable, alone justifies this study.

Thousands of the dwellers in our city had no opportunity to attend school in their own country, but they want their children to have the advantages of a common-school education. New York City also wants this most earnestly, because every foreigner's child who comes under the influence of the public school means a start at least in Americanism, and in no better way than by education can the assimilation be hastened. The enemies of good government do not want good schools, because the more ignorant their constituents, the more easily can they be manipulated at elections.

### ROOF PLAYGROUNDS.

When Mayor Strong took the chair of office there were 50,000 school children in the city unable to secure sittings in the public schools. When he leaves the mayoralty the number will have been reduced to 3,000. Until his ad-

ministration, there has been no realization of the significance of the inadequacy of our school accommodations, and no serious attempt has been made to attempt the solution of the To-day, forty sites for new buildings, including annexes, have been made, so that all the school children may obtain entrance to the These buildings will be an archipublic schools. 'ertural ornament to the city, as well as equipped with the very latest, hence best, educational ap-Roof playgrounds, baths in the basements, light class-rooms, laboratories for manual training and gymnasia, will place the public schools of New York in the very front rank. Attention has been given to secondary education by the equipment of three model high schools, and by competitive examination the very best principals in the country have been obtained. The old trustee system has been abolished and the management of the schools centralized on scientific and economical principles; the kindergartens have been increased to the number of forty; a truant school has been established, where children whose only offense is playing "hookey" can be taught, without being sent to institutions where they are compelled to associate with youthfil delinquents and criminals; the salaries of teachers have been raised about 7 per cent., and an up-to-date course of study is now provided.

### EDUCATIONAL PROGRESS.

The immense advance made by New York's school system during Mayor Strong's term of office is summarized by Prof. Nicholas Murray Butler in the Educational Review for January, 1898, from which we are permitted to quote. Professor Butler enumerates the distinct achievements of Mayor Strong's administration as follows:

- 1. Secondary education has been introduced into the public-school system for the first time under modern conditions, and it is offered in high schools presided over by three of the best and most competent principals in the country, aided by carefully chosen faculties.
- 2 Kindergarten training has been greatly extended, and more than forty kindergarten classes are now in operation. A special supervisor of kindergartens has been appointed.
- 3 New York has been made the only city in the world, perhaps (certainly one of very few), in which a child can pass successively through all grades of instruction—kindergarten, elementary, secondary, and collegiate—at the public expense.
- 4. More new schools have been begun and more have been completed than in any other equal period in the city's history.
- 5. More property has been acquired for school purposes than ever before.
- 6. For the first time in twenty years, practically all of the children *seeking* a public-school education have been accommodated. Provisions made during Mayor

Strong's term will, in two more years, probably provide for all the children who are *entitled* to and in need of school accommodations.

- 7. A successful truant school has been established.
- 8. A new course of study, much more intelligent and comprehensive than its predecessor has been introduced.
- 9. A new and scientifically adjusted schedule of salaries, founded upon length of service and merit, has been adopted and will go into operation on January 1, 1898. This schedule provides an average increase of 7½ per cent. on the salary of every teacher now in the public-school system.
- 10. A virtual alliance has been effected with the Board of Health, by means of which there is a daily inspection of the school children in order to detect the presence of contagious disease. This inspection is contributing to the decrease of the death-rate.
- 11. Manual training has been introduced in all the schools.
- 12. The instruction in music has been thoroughly reorganized and put upon a higher plane under the supervision of Mr. Frank Damrosch.
- 13. Plans have been adopted and contracts let for a new building for the Board of Education and its administrative officers. The present quarters are grossly inadequate.
- 14. The character of the school buildings has been greatly improved—as Superintendent Snyder shows in this issue of the *Review*—and a new standard of excellence and convenience has been set.
- 15. The vacation schools will hereafter be under the care of the Board of Education, becoming a part of the public-school system.

### REFLEX HOME INFLUENCES.

The tenement-house population, from their ignorance and helplessness, are most affected by the absence of improved sanitation. Clean streets and the rapid removal of garbage are the means of saving scores of lives which otherwise would have been lost, due to diseases brought on by uncleanliness. The separation of ashes from other waste materials, the removal of ashes in closed cans, and the separate removal of rubbish have freed the streets from the irritation and unsightliness of the past. While this improvement may not have made a deep impression on the dwellers on the East Side, yet the object-lesson of insistence on tidy streets cannot fail to have had a reflex influence on the home life. Particularly is this true in the case of the children who have been formed into the organization of the junior leagues for the express purpose of doing their share toward keeping the city clean.

The experimental crematory for the burning of rubbish which had no commercial value, and the careful sorting of the remainder for the sake of saving the waste paper, bottles, metals, and rags, instances the courage and the willingness of the department to experiment with a difficult problem. By means of these experiments it has been shown that there is a possibility of a revenue to the city—a fact which in the last analysis lowers the tax-

rate, this in turn being an advantage to those citizens who pay no taxes as well as to the tax-payers.

### PUSH, NOT PULL.

In the removal of unharnessed trucks from the streets an object-lesson was given to every man on the force, as well as to every other department in the city, that a law could be carried into effect by a department that was determined that nothing should cause it to swerve from its determination to do so. In addition to the streets being free for traffic, the standing vehicles are no longer a menace to decency. The introduction of discipline has taught the men that their positions no longer depend on their "pull," but their "push," and the system of arbitration insures to every man justice as well as correction.

### SNOW-REMOVAL.

To thousands of the dwellers in the lower parts of New York life is a constant struggle for the means of procuring a shelter, food, and clothing. In the latter expenditure the money which the poor pay for shoes or rubbers is very slight. Colds are most easily taken from wet feet, and then other diseases may follow a cold, particularly when persons are careless or ignorant of its treat-The rapid removal of snow from the streets has a direct bearing on the health of the people, because those who cannot afford to pay for overshoes are protected from wet feet by clean streets and crossings, particularly when the streets in the tenement quarter receive just as good attention as those in the brown-stone district.

### ELIGIBLE LIST.

Early in December of this year a man begged one of the police commissioners to appoint his friend on the force because he knew that he would not have to pay for his position. commissioner refused, because, he said, all appointments must be made from the eligible list, which was comprised of men who had passed a competitive examination. A few months ago six captains were appointed without its costing one of them a single cent. That fact is of great significance to all New Yorkers having an intimate knowledge of that department previous to December 10, 1897, for the first time in the history of the department, the rank and file were brought together for an inspectoral review by the commissioners in one of the large armories. Merit has been rewarded and demerit punished. The present department found a man as rounds. man with a record of having saved the lives of twenty-seven people; he was at once promoted to sergeant

### POLICE IMPROVEMENTS.

The northern part of the city had some precincts without a telephone, and in some cases express wagons served as patrol wagons; now every station-house has direct telephonic communication with headquarters, and the most approved type of patrol wagons is in daily use. The Bertillon system of measurements makes the identification of criminals as accurate as possible. The absence of blackmail and the infusion of discipline into the force has brought the police well toward the front rank. The humbler citizen so often knows the power of authority only by means of the police, and its power can be so easily misused, unless kept in check by head officials who insist that fairness and justice shall characterize its activities.

### SMALL PARKS.

Central Park is essentially a driving park, and practically out of reach of the thousands below Twenty-third Street, who cannot afford the small amount of car-fare to go and come with their The great need of lower New York has been small parks. Within the last three years Mulberry Bend Park has been brought down to earth, after an existence of ten years on Corlears Hook Park, along the river front, was also opened, and it has been a means of healthful recreation and enjoyment to thousands. Bone Alley exists no longer, and rookeries which made it possible are now demolished, to make way for a small park; while some distance below, three other blocks have been condemned for the express purpose of another small park. A third small park has been authorized on the lower part of Rivington Street, near the river.

Several bridges have been projected by the Department of Parks, and when completed will be ornaments to the city, a consideration which is of significance because indicating a breaking away from the strictly commercial and utilitation.

### MAXIMUM OF EFFICIENCY.

The Fire Department has always had the reputation of affording the maximum of efficiency. This was true; but in the last three years the comfort of the men has been considered with the same degree of thoughtfulness as the efficiency of the service. New quarters have been built and repairs have been made in old houses, so that the men might be able to sleep without the rain falling on their beds, and that due regard might be paid to the other comforts and necessities of these men, who are always on duty, and respond to its call at the hourly risk of their lives.

COOPERATION OF PRIVATE PHILANTHROPY.

Apart from a study of the municipal departments, the work of the Association for Improving the Condition of the Poor may be typical of what a great private charity has accomplished.

During the last four years the association has been maintaining vacation schools—that is, through the cooperation of the Board of Education ten public-school buildings were placed at the disposal of the association, which operated these vacation schools during a period of six weeks, beginning early in July. No text-books were used. The association claimed that it was not its business to maintain vacation schools, which were clearly a municipal function which should be undertaken by the Department of Education. The department agreed with the association, and next year the vacation schools will be under the care of the municipal department. Following the work of the Gilder Tenement House Committee of 1894, the association organized the Improved Housing Council, which in turn organized the City and Suburban Homes Company, with a capital of \$1,000,000, for the building of improved tenements in the city and small homes in the suburbs. Through the association's labor bureau, thousands of wage-earners have become independent and are working out their economic salvation in positions which have been found for them. This very month 600 laherers were sent out of the city to the country. The Vacant Lot Farms were organized in New York by the association, because it believed in a wheme of relief by work. Its success commended itself to a large body of influential citizens, who formed the Mayor's Committee on the Cultivation of Vacant City Lots by the Unemploved, so called because Mayor Strong accepted the honorary presidency.

### PEOPLE'S BATHS AND PUBLIC COMFORT STATIONS.

In addition to securing the cooperation of the chief executive of the city, the Park Department has just cooperated by placing at the disposal of the committee three hundred acres of unused park land in the northern part of the city. The People's Baths, under the care of the association, is one of the few public baths open the year round for a hot or cold water bath on the payment of a five-cent fee.

The absence of public baths and public comfort stations has been a reproach to American cities, but particularly to New York City, because the thousands from European cities who have made New York their home have been accustomed to these establishments in their own country. The initial impulse to this movement for the United States was given by Mayor Strong through the

appointment of a committee of citizens to serve him as an Advisory Committee on Public Baths and Public Comfort Stations. One underground public comfort station is already under way, just opposite the post-office, and situated on one of the busiest thoroughfares in the city. The contract for the first public bath was let in December, but the plans have been ready since the middle of August.

The aquarium in Battery Park has been opened, and plans are projected for a great zoölogical and botanical garden in the northern part of the city.

### LIBRARY CONSOLIDATION.

The consolidation of the great Astor and Lenox foundations with the Tilden donation raises the library accommodations of New York to the front rank. In comparison with other cities the library facilities of New York have been totally inadequate, and this step should have been taken years ago, without waiting for a private benefaction or a consolidation to have made it possible.

### A CIVIC BAROMETER.

The supreme test of a nineteenth-century city as a desirable civic home is the safety and protection which it guarantees to human life; in other words, the death-rate is the civic barometer, and as it rises or falls human beings live or die. A low death-rate is usually coincident with a high tax-rate, because an administration which dares to provide the most improved methods in its various departments must pay for them, and in matters touching human life the best is never too high-priced. No one department can ever bring about a low death-rate, but it will always depend on the intelligent and harmonious working of all the branches of the city's service.

For New York City the death-rate in 1891 was 26.31; 1892, 25.95; 1893, 25.30; 1894, 22.76; 1895, 23.11; 1896, 21.52; 1897 (up to the week

ending December 11), 19.62.

During the administration now drawing to a close New Yorkers have seen many instances of indifference and stupidity on the part of their public servants, due to the fact that they were called to the management of a great department with no other training than that of politics; but, on the other hand, they have had officials whose municipal patriotism and civic pride lead them to place the welfare of the city as of first importance. To them, therefore, and to those citizens who helped them by word and deed, is due the fact that when the balance-sheet of New York is struck at the end of 1897 the civic assets will far exceed the liabilities, and this credit balance will provide a working capital whereby the Greater New York shall become the Better New York.

## THE POSITION OF THE BRITISH NAVY.

BY LORD BRASSEY, K.C.B., D.C.L.

AS an old financial officer of the Admiralty, it is natural to look to the expenditure of the several powers as the measure of their strength and the clearest indication of their naval policy.

The British navy estimates for 1895-96 amounted to £19,861,000. The expenditure increased to £22,336,000 in 1896-97. It will be maintained at that same high level through the current financial year. For 1897 the French navy estimates amount to £10,650,000, and the Russian to £6,239,000. The expenditure on the British navy exceeds that of France and Russia combined by nearly five and a half millions sterling. Our total expenditure during the period 1885-98 aggregates in round figures no less than sixty and a half millions sterling, as against thirty-one and a half millions for France.

Limiting our view to the votes for shipbuilding, the increase in recent years has been on a vast scale. It will be interesting to trace the movement under the powerful influence of the When I first entered Parliament a public press. listless anathy prevailed on naval affairs. France had been struck down by a disastrous war, and little effort was required on our part to maintain a leading position. In 1870-71 the expenditure on new construction for Great Britain was £1,330,000, as against £412,000 in France. In 1877-78, during the Russo-Turkish war, our expenditure on new construction and the purchase of ships amounted to £2,922,000, as against £1,502,000 for the French navy. In 1878-79 a sudden contraction of British expenditure brought us down to a level with France, the expenditure in each country being slightly in excess of one and a half millions sterling. That was very much the position when I went to the Admiralty in 1880. We had to do the best we could with limited appropriations. In 1883-84 our votes for new construction were £400,000, and in the following year £730,000, in excess of the French. Then came the national scare, organized by Mr. Stead and his colleagues in the press, and the historical demonstration by Captain Mahan of the great part which the British navy had filled in the making of the empire in the past and in maintaining it secure from attack. In 1885-86 the votes for new construction were: Great Britain, £3,737,000; France, £1,335,000. During the thirteen years which have since elapsed shipbuilding for the British navy has been pushed on with a vigor and abundance of

resource which it has not been possible to rival elsewhere. The expenditure for the British navy. as provided in the estimates for 1897-98, was £7,200,000, to which a supplementary sum of £500,000 has since been added.

### NEW SHIPS.

In the present financial year it is proposed to lay down four battleships, three third-class cruisers, two sloops, four gunboats, and two torpedo-boat destroyers. Including new orders, there will be in construction in 1897–98 the following ships:

	•

For the French navy the total expenditure on construction for 1897, as originally proposed, was £2,902,750. Since the ordinary estimates were submitted the government has submitted for the approval of Parliament an additional programme of construction, involving an expenditure of £3,200,000, spread over eight years.

In Russia the vote for new construction for the navy has been reduced in the latest estimates from £2,033,353 to £1,679,508.

It will be observed that the aggregate expenditure of France and Russia on new construction for the current year is £5,211,000, as against £7,700,000 taken for the same services for the British navy. In the last five years our expenditure on construction has exceeded that of France by some £11,000,000. The margin in excess seems ample, and it may be confidently assumed that we get the best value for any given outlay.

### MANNING OF THE NAVY.

Having given the total expenditure, let us see how we stand in relative resources for the manning of the navy. The estimates for the present year provide for 100,050 men, as against 44,225 in the French and 32,477 in the Russian service. In the last five years Great Britain has added 26,000 men to the navy. Behind our permanent force we have a royal navy reserve of 25,000 It is estimated that men and 10,000 pensioners. France could, in two days, bring in 33,000 men from a reserve numbering 120,000 men, all of whom have served three years in the navy, but are not called out after their period of service has been completed. Men not regularly drilled must gradually lose their efficiency for the manning of the fleet in a period of rapid change in ships and armaments. The French lists include men who have not been to sea for twenty or thirty

It has been asserted by outside critics, and notably by Sir Charles Dilke, that we are not increasing the men in proportion to the ships. That charge was met by Mr. Goschen, in an exhaustive speech, delivered on March 5 last. Arguing the case on behalf of the Admiralty, "the test," he said, "as to the sufficiency of the seamen is this: Can we man our ships as fast as they are ready?" On this point he gave a confident assurance to the House of Commons. The Admiralty were well prepared for manning every ship which would be sent to sea on the outbreak of a war. They did not aim at maintaining a permanent force sufficient to man every ship in the navy. As they had a reserve of men, so the older types formed a reserve of ships, for which crews could be raised as the exigencies of the situation required. The Admiralty, on their responsibility, have declined, and rightly declined, to raise more seamen than can be properly trained and advantageously employed. go beyond what is necessary for the permanent force of the navy would be a waste of public resources.

### RIVAL FLEETS.

Turning from the men to the ships, the standard laid down by the Admiralty has been equality to the fleets of any two foreign powers. Taking France and Russia as the two strongest naval powers after Great Britain, the actual position is summarized in the following statement:

	Great Britain.		France.		Russia.	
	bhips.	Tons.	Ships.	Tons.	Ships	Tons.
BATTLESHIPS:

" T	hird Class	20	36	0
Vedettes		73	9	109

On a general review the position of Great Britain is certainly not unsatisfactory. The power of the navy essentially depends on its battleships. In this all-important class we have a decided advantage. No foreign power possesses ships equal in fighting power to our seven Royal Sovereigns or our nine Majestics; nor can any type of battleship be said to be more effective than our own improved Centurions, of which no less than eight are building.

In the older battleships of the second and third class we have a decided superiority. In coast defense we are weak. It has not been the policy of the British Admiralty to expend money on ships only available for defensive operations. is a grave question whether the time has not come when vessels should be laid down of a type corresponding with the Henry IV., lately laid down for the French navy. Vessels of light draught are necessary for inshore operations, and to hold the channel in time of war.

In cruisers we have a conspicuous superiority. The requirements of the British navy in this class cannot be computed on any fixed basis. quire cruisers in large numbers as lookout ships. They are the eyes of the fleet. We must be prepared to give protection to our vast commerce by convoy in the narrow seas; by patroling the great trade routes across the ocean; by ships stationed at the great converging points of trade, and by hunting down commerce · destroyers wherever they may be. We must keep open the commu-

nications with our colonies. It is difficult to say that any preparation would be fully adequate to our needs. This, at least, is certain, that in the cruiser class, if we look to numbers of fighting efficiency, we have attained an overwhelming superiority. That superiority would become more and more conspicuous in the progress of a great struggle. Our industrial resources are unrivaled, and if concentrated on the reënforcement of the fleet the balance of power at sea would incline more and more in our favor. The work done in 1896 affords striking evidence of the capability of our shipbuilding yards. No less than fifty-nine ships were launched in the United Kingdom for British and foreign governments. Their aggre-The progate displacement was 155,845 tons. pelling machinery was of 377,980 indicated horse power, and the value, when completed, £10,750,000. Of these ships nine were launched from the royal yards and fifty by private firms. Of the latter, twenty-four were for foreign governments, including Japan, Brazil, Chili, Spain, and the Argentine Republic.

#### SEA-POWER IN THE PACIFIC.

In this connection let us turn to the navies on the seaboard of the Pacific, in which we in Australasia are specially interested.

In Japan a building programme is under consideration which, if carried out, will lift that country to a high place among naval powers. It is proposed to complete by the year 1902 fiftyfour ships of a total displacement of 45,890 tons, and by 1906 to construct a further 69,895 tons, distributed in sixty-three vessels. In the first series are included one battleship of 14,900 tons. two first-class cruisers, three second-class cruisers, one torpedo gunboat, eight destroyers, five firstclass, twenty second-class, and six third-class torpedo boats. In the second series are included three battleships, two first-class, two third-class cruisers, two torpedo gunboats, one torpedo depot ship, three destroyers, eighteen first, three second, and twenty-nine third class torpedo boats. Such is the programme. It is ambitious; possibly it may not be carried to completion. Programmes are seldom completed. It is not probable that the naval aspirations of Japan will affect the balance of power in the Far East in a sense unfavorable to British interests.

China has not yet awakened from her defeat. A programme of shipbuilding is, however, under consideration. Two protected cruisers are building at Elswick, each of 4,500 tons displacement. Three cruisers have been ordered at the Vulcan Yard at Stettin. Four large destroyers have been ordered from Herr Schichau. A cruiser of

'0 tons is completing at Foo Chow.

Having compared the votes for shipbuilding and the programme in course of execution, it is an agreeable duty to pay their due meed of praise to the chief constructor of the navy, Sir William White, to his able staff, and to the private shipbuilders of Great Britain, for the admirable skill with which they have responded to the call recently made on their administrative and professional ability.

#### BRITISH CONSTRUCTIVE SKILL.

The latest reports of the United States officers quote some remarkable examples. Our first-class battleships of 14,900 tons are completed for sea within two years. Two of this class—the Magnificent and the Majestic—as the United States officers point out, beat the record, the former having been completed in one year, four months, and twenty days, and the latter in one year and ten months from the date of laying down the keel. The monster cruisers Powerful and Terrible, of 14,200 tons and 25,000 horse power, were completed six months within their contract dates. The first lord remarked in his memorandum accompanying the estimates for 1897 that in these vessels, though in many features going beyond precedent, the intentions of their designer had been completely realized or exceeded in regard to draught, stability, and speed. As another example of rapid construction, it may be mentioned that a cruiser of the Diadem class, of 11,000 tons, was launched from the famous Fairfield Yard on the Clyde in 214 working days from the date of laying down. In France they have not yet approached the British rate of build-The United States officers report that there has been much complaint of the delay in completing ships and the slow rate of construction. The time necessary to build various types of large vessels is approximately for battleships five years, and for cruisers from three to four years. several ships recently built in France large alterations have been necessary. In the desire to increase the fighting power the French ships have been overladen with superstructures and military masts of colossal proportions, thus lowering the stability beyond the margin of safety.

In a recent lecture I referred to comparisons of cost of building made by German naval constructors, showing a marked inferiority in the efficiency of labor in public as compared with contractors' yards in France. The incapacity of a red-tape administration has never been more signally illustrated than recently in Spain. As part of the programme now in course of execution, three armored cruisers of 7,000 tons displacement were commenced at La Carraccas, Ferrol, and Cartagena. None of these vessels has yet

been launched. The first, laid down in October, 1889, was last year still on the way, progressing at the rate of 0.088 ton per day. The cost of building in the Spanish naval yards is from three to four times greater than in the private yards. In the case of three ships of the same type, two of which were lately built in England and one in a Spanish dockyard, the cost in the latter case was five times greater than that of the two sister ships.

While largely adding to the men and ships, we are making great efforts to improve and fortify our dockyards and strong places at home and The expenditure for these services in 1897-98 will be no less than £2,600,000. new graving docks have recently been completed at Portsmouth; three are in hand at Gibraltar; Devonport has been equipped for building, as well as fitting out, the largest ships. At Gibraltar, Portland, and Dover extensive moles are being constructed, inclosing anchorages of sufficient extent to enable large fleets to lie secure from torpedo-boat attack. In addition, a sum of £1,120,000 is taken in the army estimates for defensive works at Portsmouth, Plymouth, and Four great strategic harbors are to be constructed at Falmouth, Lough Swilly, Berehaven, and the Scilly Islands. The defenses of Gibraltar, Cape Town, Hong Kong, and Singapore are to be completed.

#### FLEETS IN COMMISSION.

If we turn from the comparisons already given of the total available force in men and ships to the fleets in commission it will be seen that the British navy is well able to hold its own. battleships in commission, or partial commission, in European waters are as follows: England, 20 first, 6 second, and 2 third class; France, 10 first-class, 8 second-class; Russia, 5 first-class, 4 second-class. Our total strength is 28 ships, as against 27 for France and Russia, the British ships being distinctly superior in fighting efficiency. In reserve we have the first-class battleships Renown and Victorious; 4 second-class and 8 third-class, including the Hercules, Sultan, and Bellerophon; Triumph, 4 ships of the Audacious We have 6 coast-defense ships. French have in reserve 3 wooden second-class battleships.

On foreign stations the British force in commission includes 1 battleship, 5 armored cruisers, 4 first-class, 10 second-class, and 9 third-class protected cruisers of modern type, 11 third-class cruisers of the older types, 25 sloops and gunboats, the *Monarch*, the coast-defense ships at Bombay and Melbourne, and the cruisers carrying reliefs to the several stations. France has

on foreign stations the old armored cruiser Bayard, 4 second-class cruisers, 4 third-class, 7 sloops and gunboats. In the China seas the Russians have 4 powerful armored cruisers, 1 second-class cruiser, and 2 coast-defense ships.

In this connection reference may appropriately be made to the recent review of the fleet at Spithead. It was not the least impressive of the incidents connected with the recent celebration of the diamond jubilee of our great and good queen. No less than 165 vessels were brought together, manned by more than 50,000 men. There were still available 2,000 ratings in the Portsmouth reserve alone. The marines and the coast guard had been only partially drawn upon; the reserve had been barely touched.

The fleet mustered at Spithead included 15 first-class and 6 second-class battleships; 11 firstclass, 27 second-class, and 5 third-class cruisers; gun vessels, 20 gunboats, 30 torpedo-hoat destroyers, 20 seagoing torpedo boats, 8 special-service vessels, and 18 training ships, including 6 corvettes, 4 ironclads, and 8 brigs. The displacement of the ships aggregated over half a million of tons. The number of guns was over 2,000, including more than 500 heavy quick-firers. The speed of the battleships averaged about seventeen and a half knots, while that of the cruisers was about nineteen and a half knots. With some twelve exceptions all the vessels had been designed, laid down, launched, and completed in a period of eight years. It was, as the Army and Navy Gazette observed, a truly magnificent record of the work recently accomplished in the reënforcement of the fleet.

#### A FRENCH VIEW.

The impression made on foreign observers may be gathered from the remarks of M. Maurice Loir, as reproduced from the French press in the Army and Navy Gazette:

Though a naval review is the official title given by the jubilee programme to the imposing concentration of British men-of-war in Spithead Roads, that title is hardly an accurate one. What is contemplated is far less a review than a great naval manifestation, or, to put it in plain words, the solemn affirmation of the seapower of England. Of course, I knew beforehand that in thus assembling 165 men-of war in front of the greatest naval harbor and arsenal in the world England meant to give the world the measure of her strength; but I freely confess that I was not prepared for such a deep, such a penetrating, sensation as that which I experienced when, on arriving in the steamer from Havre, I passed in front of that fleet, extending over a length of ten kilometers [five miles and two furlongs], and massed in four dense lines.

I would draw from its assemblage the lesson that it conveys. First be it noted that in order to bring to-

gether this formidable armada England has not drafted a single unit from her Mediterranean squadron or her divisions in the Atlantic, Pacific, or the Far East. The ships which she arrays before us at Spithead all come out of home stations and harbors, and we cannot forget that, besides this powerful home force, 140 men-of-war are flying the St. George's ensign all over the world, even in its remotest regions. No wonder the English are proud in the consciousness of their strength. They manifest their joy somewhat noisily, perhaps, but I for one do not blame them. I admire them, and, to tell the truth, my admiration is not untinged with envy, for if they have attained the degree of power which they unquestionably possess it is to themselves, to their energy, to their tenacity, to their indomitable will, that they owe it. Their supremacy at sea has long since been established on the ruin of nations who once had a seapower that balanced theirs. But never has their seapower been greater than at the present moment.

That great muster at Spithead is suggestive of many grave reflections. While careful to maintain the strength of the navy adequately in every arm, the prudent administrator will not carry expenditure beyond what is necessary in the cir-We shall, with concumstances of the time. fidence, anticipate the developments of the future. That inner line of destroyers at Spithead had an ominous look. How would it fare with the firstclass battleship if assailed at the same moment, and with dauntless courage, by ten or by twenty destroyers? Is it certain that in an attack by day not one of the puny assailants would strike home? And what would be the probable issue under the cover of fog or darkness? These are considerations which cannot be put out of view in framing a programme of construction. They are, indeed, a fatal objection to any programme extending far into the future.

#### THE STRENGTH OF THE EMPIRE.

The opinions of fereign observers must, in some respects, carry more weight than those expressed by British officers. The views of leading authorities in France on the state of our navy, including writers in the press, ex-ministers of marine, and naval officers, have lately been published in the London Morning Post. The strength of our position appeared to these foreign critics indisputable. In Egypt and Gibraltar we occupied the two gates of the Mediterranean. In all the various types of ships of which a fleet is composed, from the battleship to the torpedo boat, our vessels were equal to any types which can be seen under foreign flags. The general opinion was summed up by M. Greville Reache, one of the authorities quoted: "I always look with profound astonishment on the statesmen of your country, who, in order to get the navy increased, pretend that it is less considerable, or threatens to become less considerable, than that of such and such a European power. The naval forces of England are so great that they can face, not a combination of any two European navies, but perhaps of any three. Such is my sincere impression of the naval power of Great Britain."

The London Daily Chronicle has recently published an important opinion with reference to the manning of the British navy from the pen of Captain Mahan. That able writer is of opinion that the longer service of British seamen is a great advantage to our navy. "In France the seaman is discharged just as his raw period has Not so in England, where the service, having been at the trouble and expense of training him, retains for a lengthened period the services of the perfectly drilled man. The British navy has another advantage in the comparatively early promotion of its officers. In France the average age of becoming a captain in the navy is With us, unless an officer obtains fifty years. promotion to the rank of captain before he is forty he never becomes an admiral."

"Yet another advantage the British navy possesses, as against a combination of any two powers. One whole is better than two parts, and sometimes very much better. One nation, with one training, one cause, one purpose, and a common language, should certainly be superior to any combination. History is not favorable to coalitions."

It has been the special object of the present paper to review the naval strength of the British In a general comparison we should not fail to take note that as a military power we have many legions at our disposal. The approximate strength of the British armies exceeds 900,000 men. In the regular army we have 220,000 men; in the army reserve, 80,000; in the militiawhich, with little additional expenditure, could be made a most efficient force—108,000; in the yeomanry and volunteers, 232,000 men. Australian and Canadian contingents have each a strength of 30,000. All these are of our own In addition, we have the native forces in India and other parts of the empire. We have recently, for the first time in peace, effectively organized the transport and supply services. Two corps of 70,000 men are ready to take the field. We alone of all nations could place our armies at short notice in any part of the globe. This power of transport may be set in the scale against the superior numbers of foreign powers.

It has been said that money is the sinews of war. Our financial position was described in glowing terms by Sir Michael Hicks-Beach, in moving the budget for 1897-98. He showed that in the sixty years of the present reign the public revenue of the United Kingdom had increased from £52,000,000 to £112,000,000 a year: the

imports from £67,000,000 to £442,000,000 a year; the deposits in the savings banks from £19,000,000 to £155,000,000. In no quarter of the House of Commons was a speaker found to contest the soundness of the British position, or to express a doubt as to the general prosperity and steady improvement in the condition of the people.

While regretting the necessity for the rapid growth of expenditure on warlike preparations, it is difficult to find any indications that the mother country is sinking under her burdens. Never has the public revenue been more elastic; never has the traffic on the great railways of the United Kingdom been so active; never have the numbers of the unemployed in the skilled trades been so The increased appropriations for few as to-day. the navy have been provided in great part by a succession duty. That impost has fallen heavily It has compelled reductions of on landowners. expenditure which have been chiefly felt in rural places, where fine old mansions have been closed and troops of retainers have been dispersed. But the money raised has gone at once into circulation elsewhere, in payments for materials and for the wages of the workers employed in shipbuilding. It is not clear that the country at large has suffered by this redistribution of money. It is by no means certain that trade would have been more prosperous if the vast sums lately spent on the navy had been invested in reproductive enter-Certain it is that the increase of production would have reduced prices, and that manufacturing enterprise is, and has long been, far from remunerative. All will agree that we have not suffered the exhaustion which would have been caused if a like amount had been spent on the purchase of ships built for the British mavy in foreign vards.

The recent celebration of the diamond jubilee has brought prominently into view a source of strength greater than any force which can be created by the most lavish preparations for war. The source of strength to which I refer is derived from the mutual affection and respect of the mother country and her daughter states. We need not look for alliances to foreign powers; our alliances are, as it was well said by a leader-writer in the Australasian, of Nature's own making. Our allies are our sons in these noble colonies, whose strength and resources are steadily growing, and whose love for the old country preserves, and will preserve, her for all time from the weakness of isolation.

It has been the purpose of this paper to show the great height to which the naval power of the British empire has been raised in 1897. The work has been undertaken and carried forward with equal zeal by Liberal and Conservative administrations. To use the words of Lord Dufferin in bidding farewell to the British Embassy in Paris, it has become a national conviction, deeply rooted, that in spite of Christianity and civilization no nation's independence or possessions are safe for a moment unless she can guard them with her own right hand. Under this conviction, we have greatly strengthened the navy.

#### THE WORLD'S PEACE.

Meanwhile we must spare no effort to establish good relations with all foreign powers. Let us listen to the voice of one who had had much experience of war. General Grant, the soldier President of the United States, was a strong supporter of the Universal Peace Union. Writing in 1879, he said that though he had been in many battles, yet there was never a time when he lost his desire that some just and fair way should be devised for settling difficulties, instead of bringing innocent persons into conflict. just and fair way of adjusting difficulties between all nations, and especially friendly and kindred nations, which General Grant desired to see, has lately been proposed by the government of Lord Salisbury and favorably entertained by President McKinley.

It has been and it is our duty to create such naval forces as will insure the safety of the empire and secure due respect for our rights and consideration for our views and opinions. present anxious posture of affairs we shall not relax our efforts; but if, in the process of time, we can bring about a closer union between ourselves and the United States, if we can establish a perpetual league for settling differences by arbitration-nay, more, for mutual defense if threatened by external foes—then we shall have changed Our latest resources will be the circumstances. too overwhelming to be challenged or contested, and the day may at length have come when the vast resources which we are now expending on preparations for war may be devoted to the arts of As we read the Naval Annual let us cherish the hope that a consummation so happy may some day be reached by the sagacity of statesmen and the growing wisdom and good will of kindred peoples.

### THE REBUILT NAVY OF THE UNITED STATES.

[The Hon. Theodore Roosevelt has answered with the following letter the editor's request to read Lord Brassey's article, which appears on the preceding pages. What the United States is doing to fill the naval want which Mr. Roosevelt sees, and how the efforts of this country toward naval progress compare with those of the great foreign powers, are largely shown in the information culled from Secretary Long's current report, which we have printed following Mr. Roosevelt's letter.—The Editor.

#### I.—A LETTER FROM MR. ROOSEVELT.

A NY man who knows the needs of the American news must read to ican navy must read Lord Brassey's article with extreme interest; and in reading it, it is difficult not to feel a very keen regret at the contrast between the splendid energy and farsighted patriotism which the British people display in building up their navy and the slow steps with which we in America are compelled to advance. I do not believe there is a more patriotic people in the world than ours, but I do not think our foresight is always as good as our patriotism, and as yet we are not sufficiently awake to the need of having a navy commensurate with our rank as a great power. If we really appreciated the benefit such a navy would be to us, and the terrible humiliation and disaster its lack may some day cause us, I do not believe the people would hesitate one moment to insist on its preparation.

Nevertheless, it must be remembered that though our navy is small it is highly efficient, both as regards the ships and as regards the men aboard of them. We stand in immediate need of additions to our force of battleships, and especially of torpedo boats; but when those now building are ready, we shall possess a fleet that will be formidable if opposed to that of any nation of continental Europe; and indeed I am tempted to say that this is already true, taking into account merely the ships we now have.

Any man who has personally witnessed the energy, intelligence. and zeal with which our officers have developed the to them untried possibilities of our battleships and torpedo boats, any one who knows how steady has been the improvement in the efficiency of the enlisted men. must of necessity feel an entire confidence in the personnel of our navy as compared with that of any foreign power, no matter how good.

The same thing is true of our ships. Personally I should entirely dissent from Lord Brassey's statement as to the alleged superiority in fighting power of British ships of the Royal Sovereign or Majestic class when compared, for instance,

with the *Iowa* and *Indiana*. Neither type of ship has actually been tried in battle against an equal antagonist; but it may well be questioned whether, against battleships, the rapid-fire 6-inch gun of the British ships is in any way as effective as the American 8-inch.

For Americans there is a peculiar interest in that paragraph of Lord Brassey's article in which he touches upon the sea-powers of the Pacific, and especially upon the energy with which the Japanese are turning their country into a firstclass naval power. If the United States is to continue to hold on the Pacific the position to which its great sea-front and its wealth and population entitle it, then we must steadily go on building up our navy; and, above all, we must ratify the treaty of annexation with Hawaii which President McKinley has submitted. Hawaii cannot permanently stand alone; it must go to some power, and if we decline to take it ourselves we have no right to prevent its being taken by some other nation more keenly alive than we are to national self-interest. With Hawaii as a naval base we will have gone far to secure our own coasts from attack; but with Hawaii in the possession of a hostile power we would have before us the certainty of a long and doubtful struggle in order to regain the advantage which we had so foolishly cast away.

THEODORE ROOSEVELT.

II.—THE PRESENT CONDITION, NEEDS, AND PROSPECTS OF OUR NAVY.

(From the Report for 1897 of the Secretary of the Navy.)

SECRETARY LONG'S report for the year 1897 shows that the present effective fighting force of the navy consists of 4 battleships of the first class, 2 battleships of the second class, 2 armored cruisers, 16 cruisers, 15 gunboats, 6 double-turreted monitors, 1 ram, 1 dynamite gunboat, 1 dispatch boat, 1 transport steamer, and 5 torpedo boats. There are under construction 5 battleships of the first class, 16 torpedo boats, and 1 submarine boat.

There are 64 other naval vessels, including those used as training, receiving, and naval reserve ships, tugs, disused single-turreted monitors, and some unserviceable craft.

There is, further, the auxiliary fleet. This consists, first, of more than 20 subsidized steamers which comply with the requirements of the postal act of March 3, 1891, with regard to their adaptability to naval service, and to an armament of main and secondary batteries; second, of a very much greater number of large merchant-marine steamers, which can be availed of at any time of need.

These auxiliaries, ranging from 2,000 to 12,000 tons, will, if occasion require, form a powerful fleet of ocean crusers, capable of swift and formidable attack upon an enemy's commerce. Their great coal capacity will also enable them to remain a long time at sea in search of the whereabouts of hostile vessels.

This force shows an addition of 14 keels since the last report of the Secretary of the Navy —2 sea-going battleships, the *Oregon* and the *lowa*, 1 armored cruiser, the *Brooklyn*, 8 gunboats, the lightning-like torpedo boat, the *Porter*, with a speed of 28.63 knots an hour, and the coast-defense monitor, the *Puritan*.

#### SHIPS WAITING FOR ARMOR.

In addition to the 54 fighting vessels in good condition, the 22 vessels in course of construction will be completed during the coming year with the exception of the 5 battleships, which will not be ready for service until near the close of 1899. The changed aspect of the United States as a naval force in 1899 will be apparent from a glance at these bare figures, which show that the country will then possess 9 heavy fighting ships of the first class as against only 4 at present. Three of these battleships, the Alabama, Illinois, and Wisconsin, will have to be accepted by the Government without armor, owing to the difficulty of obtaining armor for This contretemps, them at the price fixed by law. the result of the legislation restricting the price of armor for these vessels to \$300 per ton-a price which the manufacturers refused-will work an actual delay in the completion of the ships which the Secretary heartily deplores. the meantime the armor-factory board of officers appointed by the Navy Department has made thorough investigations of the field for the proposed national armor-plate manufactory.

#### THE GUNBOAT FLEET.

Many naval experts are inclined to place the utmost reliance on the offensive powers of a fleet of light-draught active gunboats, some of them going so far as to doubt the capability of any practicable force of heavy ships to withstand the insect-like annoyance and elusive maneuvers of a swarm of these small vessels. The Navy Department is not blind to the effectiveness of this type of craft. The Secretary says:

An important addition of light-draught and composite gunboats to the effective force of the navy has been made since the last annual report. At the present time the three light-draught gunboats built at Newport News are in active service, as are all the composite gunboats except the Princeton, which will probably be completed in February. These vessels are a valuable and necessary force, and will be especially effective in maintaining our interests in foreign waters, especially in times of civil disturbance. The first cost of all these gunboats was low, aggregating about \$2,000,000 for the nine, or not more than the cost of a single first-class armored cruiser. The cost of their maintenance also, particularly in the case of the composite vessels, should not be excessive, and the reports of their trials, as well as the opinion of officers in command of them, have been distinctly favorable.

#### THE PRESENT DISTRIBUTION OF OUR NAVY.

It is interesting to have a bird's-eye glance from the point of view of the Secretary of the entire activity and local significance of the country's fighting ships. The whole body of ships in commission were engaged as follows this year:

The North Atlantic squadron, under command of Rear Admiral Bunce until May 1, 1897, and since then under Rear Admiral Sicard, has had during the past year the benefits which result from exercises in drill and fleet maneuvers. This squadron is composed of the New York (first rate), flagship; Massachusetts (first rate), Puritan (first rate), Indiana (first rate), Iowa (first rate), Texas (first rate), Maine (first rate), Brooklyn (first rate), Terror (second rate), Montgomery (second class), Marblehead (third rate), Wilmington (third rate), Detroit (third rate), Annapolis (third rate), Nashville (third rate), Fern (fourth rate), Vesuvius (fourth rate).

Embracing three battleships of the first class, two of the second, and some of our best cruisers, it makes the most formidable fleet assembled since the civil war. The Department has been able during the past year, for the first time, to exercise battleships as a squadron. This fleet visited Charleston during February, and was exercised in a blockade of that port. The value of exercises of this kind to the fleet cannot be overestimated, and it is the intention of the Department to utilize the North Atlantic squadron as far as possible in drills and maneuvers, from the results of which data can be obtained as to the most effective method of using the fleet in time of war.

The smaller ships of the squadron have been assigned in turn to active duty in connection with enforcing neutrality laws on the Gulf coast and the coast of Georgia, Florida, and the Carolinas. The work has been done with great vigilance and to the credit of the commanding officers.

The Pacific squadron, Rear Admiral Miller commanding, consists of the Oregon (first rate), Philadelphia (second rate, flagship), Montercy (second rate), Monadnock (second rate), Bennington (third rate), Wheeling (third rate), Alert (third rate), and Marietta (third rate).

The Asiatic squadron, Rear Admiral McNair commanding, consists of the Olympia (first rate, flagship), Boston (second rate), Yorktown (third rate), Monocacy (third rate), Machias (third rate), Petrel (fourth rate).

The Concord (third rate) and the Helcna (third rate) have been ordered to join it. These vessels have been cruising on the coast of Asia wherever it was deemed advisable to show our flag or look after American interests; and during the summer all the ships, except the Monocacy, rendezvoused at Chefoo.

The European squadron, Rear Admiral Selfridge commanding, comprises the San Francisco (second rate, flagship), Raleigh (second rate), and Bancroft (fourth rate), and during the greater part of the past year has been engaged in protecting American interests in the eastern part of the Mediterranean, where the unsettled condition of affairs which finally resulted in the war between Turkey and Greece made the presence of the fleet desirable.

The South Atlantic squadron, Captain Chester commanding, consists of the Cincinnati (second rate) and the Castine (third rate).

In addition to the vessels in the squadrons there are the following: Apprentice training ships Essex (third rate), Adams (third rate), Alliance (third rate), the gunnery school ship Amphitrite, the cadet practice ship Standish, the first-class cruisers Columbia and Minneapolis in reserve, the Dolphin (third rate) and Vicksburg (third rate), unassigned, the Newport (third rate), on special duty, and torpedo boats Porter, Du Pont, Cushing, and Ericsson on special service.

The newly completed flagship *Brooklyn* was present at the jubilee commemorating the sixtieth anniversary of the coronation of Queen Victoria, and, with its officers, was cordially received as representing there our naval establishment and our national interest in the occasion.

#### OUR PROGRESS COMPARED WITH OTHER COUNTRIES.

While the present constructive activity of the United States Navy Department is well in advance of former years, a glance at the statistics below will show that we are scarcely overreaching ourselves, so far as comparative values are in evidence. Of all the countries of the world, England is, of course, spending most money and building the greatest number of new and powerful ships. The \$26,500,000 appropriated for her naval construction of 1897–98 provides for vessels which will bring the total new ships to be completed or under construction during the coming year to

- 15 battleships, 6 twin-screw gunboats, 12 first-class cruisers, 56 torpedo-boat destroyers,
- 9 second-class cruisers, 8 light-draught steamers, 10 third-class cruisers, 1 royal yacht.

10 third-class cruisers, 1 royal yacht.

France will have 7 heavy battleships under construction, 8 armored cruisers, 10 protected cruisers, and miscellaneous vessels sufficient to make a total of 69 keels.

#### JAPAN MISTRESS OF THE PACIFIC.

The most significant item in all this comparative statement of the world's navy-building is the astonishing advance of Japan, which brings her ahead of Russia, Italy, Germany, Spain, and the United States. The programme outlined below will, when carried out in 1902, make Japan the strongest naval power in the Pacific Ocean. She has now building:

- 3 battleships of 14,800 tons displacement (1 at Thames Iron Works, 1 at Thomson's, Clydebank, 1 at Armstrong's);
- 1 battleship of 10,000 tons displacement reported as ordered of Armstrong, but contract not signed and specifications not completed;
- 4 first-class armored cruisers of 9,600 tons displacement (2 at Armstrong's, 1 at Vulcan Works, Stettin, 1 at Forges et Chantiers, France);
  4 protected cruisers (2 in the United States of about
- 4 protected cruisers (2 in the United States of about 4,760 tons displacement and 2 at Armstrong's of 4,500 displacement),
- 1 protected cruiser of 2,800 tons, and
- 1 of 1,800 tons at the government yard at Yokosuka, Japan;
- 9 torpedo-boat destroyers (4 by Yarrow, 4 by Thornycroft, and 1 by Schichau, at Elbing, Germany; 8 of about 300 tons displacement, 1 somewhat smaller);
- 18 torpedo boats of about 85 to 90 tons displacement (8 by Schichau and 5 by Normand).

#### GERMANY, RUSSIA, ITALY, AND SPAIN.

Germany is to spend \$9,000,000 during 1897-98, and will be building on

8 first-class battleships, 1 armored cruiser, 5 protected cruisers, 1 torpedo-boat destroyer,

8 torpedo boats, 2 gunboats.

Russia's appropriation is \$7,668,277, and will have under construction

9 battleships,

4 protected cruisers,

2 coast-defense vessels,2 armored cruisers,

4 gunboats, 40 torpedo craft.

The Italian budget allows for \$5,000,000 for naval construction, and will construct

5 battleships, 5 armored cruisers, 1 protected cruiser, over 15 torpedo craft.

Spain has recently purchased one armored cruiser and completed

2 first-class armored cruis- 2 gunboats,

ers, 1 protected emisser 6 torpedo-boat destroyers.

1 protected cruiser,

She will have under construction during the coming year

4 armored cruisers,

4 torpedo boats,

4 protected cruisers, 4 gunboats, 8 battleships to be equipped with armament and motive power in France.

## OUR NAVY'S MOST URGENT NEED—DOCKING FACILITIES.

The Secretary says without qualification that the most decided weakness of the United States navy lies at present in its docking facilities. Of the eleven government docks—nine on the Atlantic and two on the Pacific coast—three were designed to accommodate battleships of the first class, one at New York, one at Port Royal, S. C., and one at Bremerton, Wash., on Puget Sound. But the dock at New York-has been for six months and is likely for three months more to be undergoing repairs, and at the dock at Port Royal there is not only an insufficiency of water, but the cross-section of the dock is too small to safely admit battleships with bilge keels affixed. A modern ship should be docked every few months, and owing to the above condition of the docks on this coast it was necessary to send the Indiana to Halifax in August last for this purpose.

On the Pacific coast there is but one dock of sufficient size to dock a modern battleship. This is on Puget Sound, 900 miles from San Francisco. Access to it is through a narrow channel 20 miles wide, one side of which is in possession of a foreign country.

To remedy this need, the Navy Department's special board of investigation recommends urgently the building of docks at Boston, New York, Norfolk, Port Royal, New Orleans, and Mare Island.

#### AS TO THE FUTURE.

Secretary Long asks from the present Congress authorization for only one new battleship for the Pacific coast, which has none at present, as against seven, when the new ships are ready, on the Atlantic, and a few torpedo boats and torpedo-boat destroyers, "both of which are comparatively of little cost, and more of which are desirable to bring this swift, mobile, and handily effective arm of the service up to its place in the general scheme for coast defense."

The Secretary gives the total cost of maintaining the United States navy during the year ending June 30, 1897, as \$17,514,231.13, an increase of about two millions over the preceding year. He calls particular attention to this increase as a matter which should be made definitely known to Congress and the people, that they may understand that the cost of maintaining a navy even in our present state is distinctly a growing one.

### OUR NEED OF A NAVY.

# CAPTAIN MAHAN'S NEW BOOK, "THE INTEREST OF AMERICA IN SEA-POWER."

THE Hon. Theodore Roosevelt's affirmation, in his letter printed on a preceding page, of the outward responsibility of the United States and the necessary naval policy to meet that responsibility, sounds the key-note of the essays in which Capt. A. T. Mahan, of the United States navy, has given forth the same convictions, from the point of view of the strategist and of la haute politique, now appearing in book form. The position of Captain Mahan in regard to the naval policy of the United States has become well known throughout the civilized world, from his books on the phenomenon of sea-power, the best known of which is "The Influence of Sea-Power upon History, 1660 to 1783." Considering the question of the maintenance of navies in its largest aspects, Captain Mahan believes that in the present condition of economic and political strife and competition standing armies and navies are necessary, and will be for a long time to come; and that furthermore, it is of the greatest importance that an adequate distribution of military power, especially on the sea, should give that cautionary safeguard against the horrors of war that is undoubtedly a result of an all-around "preparedness for war." The application of this principle to the United

States is seen through Captain Mahan's eyes in the following paragraph:

"Our only rivals in potential military strength are the great powers of Europe. These, however, while they have interests in the western hemisphere, to which a certain solidarity is imparted by their instinctive and avowed opposition to a policy to which the United States, by an inward compulsion apparently irresistible, becomes more and more committed, have elsewhere yet wider and more onerous demands upon their attention. Since 1884 Great Britain, France, and Germany have each acquired colonial possessions, varying in extent from one million to two and a half million square miles—chiefly in Africa. This means, as is generally understood, not merely the acquisition of so much new territory, but the perpetuation of national rivalries and suspicions, maintaining in full vigor, in this age, the traditions of past animosities. It means uncertainties about boundaries—that more fruitful source of disputes when running through unexplored wildernesses—jealousy of influence over native occupants of the soil, fear of encroachment, unperceived till too late, and so a constant, if silent, strife to insure national preponderance in these newly opened regions. The colonial expansion of the seventeenth and eighteenth centuries is being resumed under our eyes, bringing with it the same train of ambitions and feelings that were exhibited then, though these are qualified by the more orderly methods of modern days and by a well-defined mutual apprehension—the result of a universal preparedness for war, the distinctive feature of our own time which most guarantees peace."

To this plea for the soldier, and to the companion theory of the gain in the sterner virtues from military training, Captain Mahan in each of these essays adds an apprehension, vague it may be, but still worthy of consideration, that the huge armaments of the civilized countries are not without their value as a safeguard against any such uprising and out-pushing of the vast Asiatic hordes as took place in the days of Attila.

More concretely, in the matter of the appropriate policy for the United States, Captain Mahan advises for an enlarged and systematical increase of our navy and the better drill of sailors, because he takes it that we have no power to assume our isolation and our freedom from responsibility. The vast revolution which the introduction of steam on the ocean has brought about in transportation methods and in communications has brought our outward responsibility to us: we have not been left to go out and seek it. Captain Mahan treats it as a fact which we must deal with seriously and prudently. The same argument is made in regard to our utilization of Hawaii as a military post. It is not that we should seek to carry the spirit of militarism in the Pacific Ocean by establishing a naval station at Honolulu; it is rather that the spirit of militarism is there, and will be concretely in the shape of some other European power if we do not take Hawaii. Specifically, Captain Mahan says it will be a dangerous matter for the United States if any foreign power gets possession of a coaling station within 3,500 miles of San Francisco. Hawaii is within 2,500 miles, and is on the ocean road from San Francisco and Puget Sound to Australia and New Zealand, and from the Isthmus of Panama—which Captain Mahan assumes will certainly be canaled in the not distant future—to China and Japan. Again, for the proper defense of our coasts and as a preventive of war in the sense of offering no tempting inducement for a profitable war to a possibly hostile nation, Captain Mahan goes at length into the strategist's reasons for the establishment of a proper coaling station in the Caribbean Sea, which he shows to be one of the most important military points in the New World. He compares the Caribbean with the Mediterranean Sea, and calls the former "preëminently the domain of sea-power." For the command of "communications," the leading element in strategy, he specifically advises that the great routes of trade, which would be vastly increased in importance in the event of an isthmian canal, would be commanded by the islands of Jamaica and Guba. "These two islands are the real rivals for control of the Caribbean and the Gulf of Mexico; and it may be added that the strategic center of interest for both Gulf and Caribbean is to be found in the Windward Passage, because it furnishes the ultimate test of the relative power of the two islands to control the Caribbean." As between these two islands, he finds the situation. the strength, and the resources—the three elements of strategic importance—greatly and decidedly in favor of Cuba. "To bring Jamaica. to a condition of equality or superiority is needed an ample force capable of keeping the Windward Passage continuously open, not only for a moment, nor for any measurable time, but throughout the

Captain Mahan's idea of a navy for the United States or any other country, and of its offensive action, will be unanticipated by the good American whose conception of our naval history is probably bounded by a remembrance of the thrilling victories obtained by the Constitution and the Wasp, by Paul Jones and Decatur. In fact, Captain Mahan, with a graceful acknowledgment to the moral effect of these dramatic naval passages-at-arms, proceeds to call them worse than useless, utterly unable to even cripple, much less subdue, an enemy. The fighting ships of a belligerent country must, he says, in the rôle of commerce-destroyers, justify the reason of their existence. Only through this channel can any enemy be continuously hurt so as to have a real and important effect on the termination of the war and the decision of the question involved.

It is in this character that Captain Mahan sees a growing American navy as a guarantee of To the opposed theory of a navy for depeace. fense only he replies: "Now in a certain sense we all want a navy for defense only. It is to be hoped that the United States will never seek war except for the defense of her rights, her obligations, or her necessary interests. In that sense our policy may always be defensive only, although it may compel us at times to steps justified rather by expediency—the choice of the lesser evil—than by incontrovertible right. But if we have interests beyond sea which a navy may have to protect, it plainly follows that the navy has more to do, even in war, than to defend the coast; and it must be added as a received military axiom that war, however defensive in moral character, must be waged aggressively if it is to hope for success."

# COUNT TOLSTOI ON THE DOCTRINE OF . HENRY GEORGE.

[Count Tolstoi's adherence to the views of the late Henry George has not been unknown in this country. His latest expression, however, of the single-tax creed derives an exceptional interest from the recent death of Henry George and the forthcoming publication of the extended economic work upon which Mr. George had spent the last years of his life. We present herewith two letters written by the great Russian thinker, one to a propagandist of the Henry George doctrine in Germany and the other to a Russian peasant living in Siberia. It is perhaps needless to add that our publication of these interesting letters does not imply an indorsement of their teachings.—The Editor.]

# I.—TO A GERMAN DISCIPLE OF GEORGE.\*

In reply to your letter I send you the inclosed with special pleasure. I have been acquainted with Henry George since the appearance of his "Social Problems." I read them, and was struck by the correctness of his main idea, and by the unique clearness and power of his argument, which is unlike anything in scientific literature, and especially by the Christian spirit, which also stands alone in the literature of science, which pervades the book. After reading it I turned to his previous work, "Progress and Poverty," and with a heightened appreciation of its author's activity. You ask my opinion of Henry George's work, and of his single-tax system. My opinion is the following:

Humanity advances continually toward the enlightenment of its consciousness, and to the institution of modes of life corresponding to this consciousness which is in process of enlightenment. Hence in every period of life and humanity there is, on the one hand, a progressive enlightenment of consciousness, and on the other a realization in life of what is enlightened by the At the close of the last century consciousness. and the beginning of this a progressive enlightenment of consciousness occurred in Christianized humanity with respect to the working classes, who were previously in various phases of slavery; and a progressive realization of new forms of life—the abolition of slavery and the substitution of free hired labor.

At the present day a progressive enlightenment of human consciousness is taking place with reference to the use of land, and soon, it seems to me, a progressive realization in life of this consciousness must follow. And in this progressive enlightenment of consciousness with reference to the use of land, and in the realization of this consciousness, which constitutes one

of the chief problems of our time, the fore-man, the leader of the movement, was and is Henry George. In this lies his immense and predominant importance. He contributed by his excellent books both to the enlightenment of the consciousness of mankind with reference to this question, and to the placing of it upon a practical footing.

But with the abolition of the revolting right of ownership in land the same thing is being repeated which took place, as we can still remember, when slavery was abolished. The governments and ruling classes, knowing that the advantages and authority of their position among men are bound up in the land question, while pretending that they are preoccupied with the welfare of the people, organizing workingmen's banks, inspection of labor, income taxes, and even an eight-hour day, studiously ignore the land question, and even, with the aid of an obliging and easily corrupted science, assert that the expropriation of land is useless, harmful, impossible.

The same thing is happening now as in the days of the slave trade. Mankind, at the beginning of the present and at the end of the last century, had long felt that slavery was an awful, soul-nauseating anachronism; but sham religion and sham science proved that there was nothing wrong in it, that it was indispensable, or, at least, that its abolition would be premature. To-day something similar is taking place with reference to property in land. In the same way sham religion and sham science are proving that there is nothing wrong in landed property, and no need to abolish it.

Religion blesses such possession, and the science of political economy proves that it must exist for the greatest welfare of mankind. It is Henry George's merit that he not only exploded all the sophism whereby religion and science justify landed property, and pressed the question to the furthest proof, which forced all who had not stopped their ears to acknowledge the unlaw-

<sup>\*</sup>These letters were especially communicated by Count Tolstoi to Mr. Fletcher, editor of The New Age. London.

fulness of ownerships in land, but also that he was the first to indicate a possibility of solution for the question. He was the first to give a simple, straightforward answer to the usual excuses made by the enemies of all progress.

The method of Henry George destroys this excuse by so putting the question that by tomorrow committees might be appointed to examine and deliberate on his scheme and its transformation into law. In Russia, for instance, the inquiry as to the means for the ransom of land, or its gratuitous confiscation for nationalization, might be begun to-morrow, and solved, with certain restrictions, as thirty-three years ago the question of liberating the peasants was To humanity the indispensableness of this reform is demonstrated, and its feasibleness is proved (emendations, alterations, in the singletax system may be required, but the fundamental idea is a possibility); and therefore humanity cannot but do that which their reason demands.

#### II.—TO A SIBERIAN PEASANT.

The scheme of Henry George is as follows. The advantage and profit from the use of land is not everywhere the same; since the more fertile, convenient portions, adjoining populous districts, will always attract many who wish to possess them; and so much the more as these portions are better and more suitable they ought to be appraised according to their advantages—the better, dearer; the worse, cheaper; the worst, cheapest of all.

Whereas the land which attracts but few should not be appraised at all, but left conceded without payment to those who are willing to cultivate it by their own manual labor. According to such a valuation, convenient plow land in the government of Toula, for example, would be valued at about five or six rubles the dessyatin [about two and three-quarter acres]; marketgarden land near villages at ten rubles; the same, but liable to spring floods, fifteen rubles; and so on. In towns the valuation would be from 100 to 500 rubles the dessystin; and in Moscow and Petersburg, in go-ahead places, and about the harbors of navigable rivers, several thousands or tens of thousands of rubles the dessyatin.

When all the land in the country has been thus appraised Henry George proposes to pass a law declaring that all the land, from such a year and date, shall belong no longer to any separate individual, but to the whole country, to the whole nation; and that thereafter every one who possesses land must gradually pay to the state—that is, to the whole nation—the price at which it has been appraised.

This payment must be expended on all the public needs of the state, so that it will take the place of every kind of monetary imposition, both interior and exterior—the custom-house.

According to this scheme, it would follow that a landowner who was at present in possession of 2,000 dessystins would continue to own them, but would have to pay for them into the treasury, here in Toula, between twelve and fifteen thousand rubles a year, because hereabouts the best land for agricultural and building purposes would be included; and no large landowner would be able to bear the strain of such a payment, and would be obliged to give up the land. Whereas our Toula peasant would have to pay about two rubles less for each dessyatin of the same ground than he does at present, will always have available land around him which he can hire for five or six rubles, and in addition, will not only have no other taxes to pay, but would receive all Russian and foreign articles which he needs without imposts. In towns the owners of houses and manufactories can continue to possess their property, but will have to pay for the land they occupy, according to its valuation, into the common treasury.

The advantage of such a system will be:

1. That no one will be deprived of the possi bility of using land.

- 2. That idle men, possessing land, and forcing others to work for them, in return for the use of the land, will cease to exist.
- 3. That the land will be in the hands of those who work it and not of those who do not.
- 4. That the people, being able to work on the land, will cease to enslave themselves as laborers in factories and manufactories, and as servants in towns, and will disperse themselves about the country.
- 5. That there will be no longer any overseers and tax collectors in factories, stores, and custom-houses, but only collectors of payment for the land, which it is impossible to steal, and from which taxes may be most easily collected.
- 6 (and chiefly). That those who do not labor will be freed from the sin of profiting by the labors of others (in doing which they are often not to blame, being from childhood educated in idleness, and not knowing how to work); and from the still greater sin of every kind of false-hood and excuse to shift the blame from themselves; and that those who do labor will be delivered from the temptation and sin of envy, condemnation of others, and exasperation against those who do not work; and thus will disappear one of the causes of dissension between man and man.

LEO TOLSTOI.

### LEADING ARTICLES OF THE MONTH.

#### MR. BRYCE ON THE POLICY OF ANNEXATION.

MR. JAMES BRYCE contributes to the Forum an article on "The Policy of Annexation for America." The author of "The American Commonwealth," especially in the last edition of that work, has made his readers fairly familiar with his point of view in relation to the territorial expansion of the United States. does not believe that America can improve her condition by adding to her territory, and her present position among the nations, in his opinion, renders the creation of a great navy unnecessary. If, however, Cuba and Hawaii should be annexed, the United States would have to maintain powerful fleets, one in the Pacific and another in the Gulf of Mexico, to defend these islands in case of attack from other nations.

Mr. Bryce admits that the United States is abundantly able to build and maintain a navy adequate for this purpose, but he questions whether it is worth her while to do so. Such a navy, he says, would be a very costly luxury. We have no occasion for a navy equal to those of the great European nations.

#### ENGLAND'S EXPERIENCE.

Mr. Bryce's argument in the *Forum* article is largely based on the supposed unfitness of the populations of Cuba and Hawaii to receive and be governed under American institutions. On this point he cites the experience of Great Britain in dealing with similar elements in certain of her dependencies:

"Britain has had painful experience of these difficulties in her own colonies; yet in her monarchical system and her colonial service she possesses machinery much more flexible and more adaptable to these conditions than the far more consistently democratic system of the United States has ever possessed or seems capable of constructing. In other words, the problems which the United States would have to solve in Cuba or in Hawaii, were either of them to be annexed, would be, for the United States, perfectly new and extremely perplexing problems. He must be a sanguine man who thinks that a democratic government, intended to be worked by educated men of the best European stock, whose ancestors have enjoyed freedom and been accustomed to self-government for centuries, can, without danger to its new subjects and injury to itself, either set up among an inferior and dissimilar population

its own democratic institutions or so far depart from all its own traditions as to attempt to govern that population and its own citizens abroad by despotic methods."

#### COLONIZING IN THE TROPICS.

In those British colonies which proved to be fit to receive the overflow of England's own population, especially those lying in the temperate zone, Mr. Bryce admits, of course, that prosperous democratic states have been established; but this, he says, is because their inhabitants are of British stock. Britain's tropical possessions he puts in an entirely different category. India and the great regions of tropical Africa lately acquired by Great Britain Mr. Bryce regards as sources of disquietude rather than of profit.

"The example Britain has set, in taking East Central Africa, for instance—a region into which she was drawn by a train of circumstances she could hardly control—is one not to be recommended for imitation. It cannot be denied that the impulse or fancy for coloring new territories British on the map has had something to do with these recent extensions of British authority. But the impulse has been in some cases an unfortunate one; and this needless assumption of responsibilities, with no prospect of a corresponding return, will be doubly unfortunate if it helps to lead the United States into any similar courses."

Mr. Bryce sums up and enforces his argument in the concluding paragraphs of his article:

"What have the United States to gain by territorial extension? No parts of the earth's surface remain in which colonies like the British self-governing colonies can be planted. Tropical dominions would cost more than they are worth: and they are occupied by races unfit to receive American institutions. Possessing on her own continent an enormous territory of unequaled natural resources, and capable of easily supporting more than twice its present population, the United States needs no transmarine domains in which to expand. One sometimes hears it said that her mission is to spread democratic principles. Polynesians and Asiatics, Creole Spaniards and mulattoes, are not fit to receive those princi-Neither are negroes fit, as the history of Hayti and of most of the South American so-

called 'republics' proves."

"The United States has already a great and splendid mission in building up between the oceans a free, happy, and prosperous nation of

two hundred millions of people. And one of the noblest parts of her mission in the world has been to show to the older peoples and states an example of abstention from the quarrels and wars and conquests that make up so large and so lamentable a part of the annals of Europe. Her remote position and her immense power have, as I have said, delivered her from that burden of military and naval armaments which presses with crushing weight upon the peoples of Europe. It would be, for her, a descent from what may be called the pedestal of wise and pacific detachment on which she now stands, were she to yield to that earth-hunger which has been raging among the European states, and to imitate the aggressive methods which some of them have pursued. The policy of creating great armaments and of annexing territories beyond the sea would be, if a stranger may venture to say so, an un-American policy and a complete departure from the maxims -approved by long experience—of the illustrious founders of the republic."

#### A FAVORABLE VIEW OF HAWAII.

I N the North American Review Mr. Arthur C. James, who has recently visited the Hawaiian Islands, sets forth what he conceives to be certain advantages of annexation.

Mr. James states that before his visit to Hawaii he was strongly opposed to annexation, but that he returned to this country an ardent annexationist. He has become convinced that the Hawaiian Islands would bring to the United States great commercial and industrial advantages. They are situated in the most fertile part of the world, and are capable of producing all the sugar and coffee that this country can consume, besides large quantities of rice and tropical fruits. They have three excellent harbors, and would control the cable communication of the Pacific.

Even more significant than the commercial importance of Hawaii is her strategic position in relation to the protection of the Pacific coast of the United States, and this Mr. James regards as another reason why we should desire annexation. To the objection that annexation would be a radical departure from our traditional policy Mr. James replies by citing the cases of Alaska, Louisiana, New Mexico, Texas, California, and other States, whose value at the time of their annexation was less apparent than is Hawaii's value to-day. Even now Alaska is farther away and less accessible than Honolulu.

To the question, "Have the natives been consulted?" Mr. James replies:

"No, but were the American Indians con-

sulted in the early days here, or the natives of Alaska in later times? The natives have proved themselves to be incapable of governing and unfitted for the condition of civilization, as is shown by their rapid decline in numbers and their inability to adapt themselves to changed conditions; and the importance of their supposed opinions on annexation has been greatly exaggerated. Numbering 500,000 in the time of Captain Cook, they are now reduced to about 30,000, and occupy much the same relation to the white population as our Indians do here. Indolent and easy-going, they are perfectly content with any form of government which allows them to sun themselves, bedecked with flowers. This view is borne out by the failure of the recent mass-meeting in Honolulu, organized solely for the purpose of proving that the native Hawaiians are actively opposed to annexation. It is natural that the white man should become the governing power; and in the exercise of this power it is equally natural that he should wish to turn over his territory to a strong civilized nation for protection and advancement, since, if they rely solely on their ability to defend themselves, it is impossible for the islands to maintain their independence for any length of time."

The question is, to what country shall Hawaii be annexed—to Japan, to England, or to the United States? Annexation to one or the other is inevitable.

#### ANGLO-SAXON DOMINANCE.

That the mixed character of the Hawaiian population is a real drawback Mr. James admits, but the difficulties, he holds, are not insuperable.

"The Chinese are not yet dangerous. numbers are large; but they are a peaceable people, without cohesion, and would give no more trouble than the same race does in our Western States, where the battle has been fought and the question is now practically settled. annexed, they would be readily amenable to our The Japanese element is by far the most serious difficulty. Since the war with China these people have become exceedingly arrogant and self-assertive, and the spirit of national aggrandizement extends from the Mikado to the lowest From the standpoint of the Japanese, this spirit may be most commendable, but it will have to be firmly met by the United States when our own interests are at stake. The Portuguese are a harmless element. I can see no reason why we should not expect people of the Anglo-Saxon or German race to become dominant, not only in power, but also in numbers, as soon as the question of government is finally settled. Certainly, few Anglo-Saxons or Germans would care to become the subjects of a dusky queen under a constitution like the one which caused the revolution of 1893."

The question of statehood Mr. James considers no more imminent than that of Alaska's statehood. Annexation in itself would violate no precedent and would set none, so far as other territories are concerned, but each case would be decided on its merits, as the former cases have been.

#### HAWAIIAN EDUCATION.

I T appears from the report of Prof. F. B. Dresslar, published in the January number of the Educational Review, that the school system of Hawaii is well organized and fairly comparable with that of any of our States.

"The educational interests of all the islands are in the hands of a minister of public instruction and six commissioners. These together form an executive department, known as the Department of Public Instruction. The minister of foreign affairs is ex-officio minister of public instruction, and is charged with the chief administrative work of the department. The commissioners are appointed by the president of the republic, and serve for a term of three years, the term of two expiring each year. Two of these commissioners may be women; but 'no person in holy orders, or a minister of religion, shall be eligible as a commissioner.' The commissioners serve without pav. "

"The work of supervision and inspection of the schools is delegated by the department to an inspector-general of schools, whose term of service is at the discretion of the department. It is his duty to visit all the schools in the various islands as often as possible, and 'to inform school officers and teachers of their duty.' If the department so direct, the inspector-general may have the power to appoint teachers, remove teachers, examine and license teachers, and modify the course of study prescribed. He shall make a careful report of all his official acts, together with a statement of the needs and conditions of the schools."

"The law provides that all instruction, whether in public or private schools, shall be in the English language, except in cases where 'another language is to be taught in addition to the English language.' Under this condition the department may authorize such instruction, either by general rules or special orders for individual instances. No school shall be recognized by the department which does not conform to these regulations."

There is a compulsory education law which is said to be well enforced. Professor Dresslar speaks enthusiastically of the efficiency and professional spirit of the present able inspectorgeneral, Prof. Henry S. Townsend, and of the teachers under his charge.

# "EMPIRE CAN WAIT"—SPEAKER REED'S VIEWS OF ANNEXATION.

SPEAKER REED, in the course of a recent conversation with the editor of the *Illustrated American* on the policy of adding more territory to the United States, made use of an expression that bids fair to become a rallying cry for the opponents of Hawaiian annexation. "Empire can wait," he said. This now famous remark of the Speaker is made the topic of an article prepared by him at the request of the editor of the *American*, and published in the first December number of that periodical.

In studying the successive rise and fall of empires in history, Mr. Reed is impressed with the fact that in each case the source of the empire's destruction has been within itself; and to his mind this source has been the failure of each section of a great country to keep abreast of the other sections, "to think the same thoughts, and to promote always the common interest." Applying this test to our own nation, Mr. Reed remarks:

"That there are vast differences between the ideas and wants of our separate regions is not so well known as it ought to be, or perhaps so fully taken into account.

"In each one of the States themselves there are communities which stand out against their surroundings and refuse to be assimilated, and to become one in thought with the others. The geographical differences are real and powerful. Once in our history the danger which comes of internal disagreement has been realized, and the destructive War of the Rebellion will always be a warning of possible danger, though its result is a protection also.

"These differences are really differences in civilization. It does not matter which section is more advanced, or which is less advanced. The only fact of importance is the difference. Similarity is the great want of nations. All the people must be in touch with each other. Modern appliances are all on our side. Lightning, even more than steam, has annihilated space, and brought together the uttermost parts of the earth. Both together are the soul of business, and business unites with ties which are deeper than sentiment.

"Judging from the teachings of history, the great aim of a nation should be to use all the ap-

liances for advancing knowledge, to assimilate its peoples to a common standard.

"To that end we must not hasten.

"Not every opportunity for aggrandizement should be seized. Too much food may mean indigestion, and we are sure not to be hungered while the middle of our empire, perhaps in the future the richest part of it, lies undeveloped. Until that region reaches its growth we are governed and to be governed by a minority.

"This will be a heavy strain on our institutions; for unless this power in the Senate, given for the future, is used very sparingly in the present, there will be a sense of injustice which will

be very bad for the republic.

"There is no need of hurry. As we grow, we will spread fast enough. Our strength grows with our years. Men, who are but of yesterday and will never see to-morrow, must seize time by the forelock. But those empires which hope for eternity can wait."

#### HAWAII AND SEA-POWER.

I N the discussion of the Hawaiian question the opponents of annexation have made much of the argument that the acquisition of the islands would involve this country in immense expenditures for fortification and naval defense. argument has been urged especially by the New York Evening Post, and it has also been set forth in the signed editorials contributed by the Hon. Carl Schurz to Harper's Weekly, from one of which we quote below.

Mr. Schurz contends that the annexation of Hawaii would present to hostile powers a vulnerable point such as we do not now present to any

foreign nation which may wish us ill.

"The Hawaiian Islands are 2,000 miles distant from our nearest coast. If we acquire them we cannot let them go again without great humiliation, for, after all that has happened, they will appear as an especial object of our desire, to be held at any cost. In their present unfortified condition they would be an easy prey to any hostile power superior to us in naval force. But even if well fortified, their defense would oblige us to fight on a field of operations where the superiority of our land forces would be of no avail, unless we had a navy strong enough to protect the communication between our western coast and Hawaii against any interruption. Our situation would be somewhat like that of Russia during the Crimean The allied armies would have had little, if any, chance of final success had they attempted to invade the interior of Russia. But, forcing Russia to a fight at an exposed point, the communications of which with the interior of the empire

were at that time so imperfect as seriously to impede the use of Russia's vast resources, they succeeded in forcing Russia to submit to a humiliating peace. For similar reasons the possession of the Hawaiian Islands by the United States would not serve to deter a foreign power from attacking us, but rather be calculated to invite attack, for it would offer to a foreign enemy the possibility, not now existing, of forcing us to a fight on ground on which we cannot bring the superiority of our resources into play, and of gaining by a rapid stroke at the beginning of a war an advantage extremely embarrassing to us. In this respect, we shall by annexing Hawaii

simply acquire a vulnerable point.

"It may, indeed, be said that, if annexed, Hawaii would not remain in an unfortified state. That is true. But, as the history of our harbor and coast defenses shows, it will require years to put those distant islands into a reasonably secure And then it will require a big war condition. fleet to make those fortifications really tenable, and to keep the communication between Hawaii and our continent safely open in case of war. Such a big fleet we can build, too. We can do all these things. If the people are willing to pay the bills and to endure the effects of that sort of policy, we can do this, and much more. But is not the really important question whether as a sensible people we should do it? Should we adopt a policy obliging us to do it, instead of maintaining the safe ground on which we now stand?"

So far as the commercial advantages promised by the annexationists, the coaling stations, etc., are concerned, Mr. Schurz asserts that these benefits may be had without annexation just as well as

with it.

#### ENGLAND'S ABSORPTION OF EGYPT.

UR late diplomatic agent and consul-general in Egypt, the Hon. Frederic C. Penfield, writes in the North American Review about the Egyptian policy of Great Britain—a policy of territorial acquisition which Mr. Penfield regards as without a parallel, although, strangely enough, it was omitted altogether from Mr. Bryce's résumé of recent instances of national expansion in his Forum article on the American policy of annexation.

Essentially, says Mr. Penfield, the ancient land of the Pharaohs has been severed from the Ottoman empire and incorporated as an integral part of Queen Victoria's realm, and this has been done by an adroit system of military "occupation."

"The time-honored principle, teaching that territorial extension should be accomplished by discovery, conquest, treaty, or purchase, has been

thrown to the winds by England. For years she has been familiarizing herself with the advantages of getting area by simple seizure and boundary dispute. These methods, direct, and at times defensible, do not carry an iota of the stigma attaching to acquisition by the specious process called 'occupation,' of which the British are the ablest exponents, if not the inventors.

"In matters of international comity it has long been supposed that the term 'occupation' had a significance quite as unmistakable as 'annexation' and 'protection.' 'Protectorate' is the name fitting present conditions in Egypt, with acknowledged dominion to follow, if the English have their way."

#### HISTORY OF THE BRITISH PROTECTORATE.

"It is nearly sixteen years, it will be remembered, since the revolt in Egypt which led to the sending of a military and naval force by England to suppress Arabi Pasha and his followers, who had arrogated to themselves the government of the country. The Khedivial authority was trodden under foot, and the Khedive was a prisoner in one of his palaces, the Egyptian army having sworn fealty to the fanatical Arabi. Riot and rapine were rampant; the situation was critical.

"Then came the massacre of Europeans in Alexandria and the subsequent bombardment, in which the French declined to take part; and consequently, in 1883, the dual control of Egyptian finances by England and France came to an end. Since that time Egypt has been in everything but name a dependency of England, the French in the meantime trying to recover their share in its control. They have more than once asked the Sultan, the actual suzerain of Egypt, to order the English from the country, and for many years they have doggedly obstructed Great Britain's administration of affairs."

The Gladstone government, which sent the troops and ships to Egypt, repeatedly announced that intervention was made solely in the interests of humanity and to restore the Khedive, and these pledges were accepted in Europe in good faith. After the suppression of the revolt Arabi Pasha was tried for treason, found guilty, and sentenced to death; but Great Britain secured a commutation of his sentence to banishment for life, and then sent him into exile in British territory, thus taking upon herself police power in the matter.

"The British Government announced, after the crushing of Arabi, that its 'army of occupation' would be withdrawn as soon as law and order could be restored, and a date was actually fixed for the departure of the troops. Her philanthropic task not being completed, in her opinion, at the

end of the six months, an extension of time for another six months was made. At all events, the occupation was only to last for the brief period necessary to teach the Egyptians the easy art of self-government.

"But the soldiers have never left Egypt, and have been there nearly sixteen years. When pressed for a reason why the reins of government are not restored to the Khedive, and the farce of 'occupation' terminated, most Englishmen will say it is because evidence is wanting that a stable administration of the country can be had without British aid. Many other reasons are given in justification, but it is only when discussing the situation with each other that they are honest enough to admit that they have no intention of ever quitting the Nile country."

#### THE BETTERING OF EGYPTIAN FINANCES.

Direct military control of the Suez Canal is not the only benefit that has accrued to England from her prolonged occupation of Egypt. It is recalled that perhaps half of Egypt's bonded debt was held in England when this occupation began, and at that time Egyptian credit was at the lowest notch.

"English people owned bonds to the face value of \$275,000,000 in 1882, it is estimated, and these could not have been sold then for more than half that sum. 'Egyptians' are now quoted at a premium of from 3 to 6 per cent., and the difference between the estimated value in 1882 and the value to-day of England's supposed financial stake in Egypt is the comfortable sum of \$140,000,000—sufficient to pay for the army of occupation for more than a century! This restoration of Egyptian credit has benefited all bondholders equally—French, German, Italian, Austrian, and Russian, as well as English."

As an incidental reason why England retains her hold on Egypt, Mr. Penfield mentions the fact that the cotton crop of the Nile valley reduces more and more each year the dependence of British spindles on the cotton fields of the United States.

#### OTHER BENEFITS.

The question whether or not the people of Egypt are materially benefited by English rule Mr. Penfield answers frankly:

"Unquestionably they are. Unpopular as it is with nearly every class in Egypt, and condemned throughout Europe, the occupation has done vast good. No fair investigator can witness the present condition of the Egyptian fellaheen, knowing what it was before the advent of the English, without conceding this. For half a dozen years Egypt has fairly bristled with pros-

perity. The story of that country's emergence from practical bankruptcy, until its securities are quoted nearly as high as English consols, reads like a romance; and there is no better example of economical progress through administrative reform than is presented by Egypt under British rule.

"Security is assured to person and property; slavery has been legally abolished; official corruption is almost unknown; forced labor for public works is no longer permitted, and native courts have now more than a semblance of justice. Hygienic matters have been so carefully looked after that the population has increased from seven to nine millions in a decade or more. Land taxes have been lowered and equalized, and are systematically collected, and scientific irrigation is so generally employed that the cultivable area has been considerably extended. Egypt was probably never so prosperous as at the present time."

Mr. Penfield closes his article with the prediction that a dozen years hence all that portion of the Nile valley extending from the Mediterranean to Khartum will be British soil.

#### Mr. Henry Norman's Views.

England's position in Egypt is the subject of some remarks by Mr. Henry Norman in the December number of *Cosmopolis*, in which he recalls the circumstances under which the Soudan was evacuated by the Egyptian Government in 1882-83:

"The Mahdist rebellion swept over the whole district, engulfing the Egyptian garrisons, whom Gordon vainly tried to save, and, when he failed to do so, refused to avail himself of the opportunity either of safety or of escape. The European officers in the Khedive's service were almost all either massacred or taken prisoners by the Mahdists, and a reign of horror and bloodshed only second to that which England has just extirpated at Benin ruled the Soudan. It must be carefully borne in mind, however, that although the Egyptian Government retired, this was under the pressure of military necessity, and involved no abandonment whatever of her claims or titles to the evacuated country. From the moment of the evacuation Egypt deliberately set herself to reorganize her forces, with a view of reconquering her lost provinces at the earliest possible moment.

"The process of recovery has now been pushed to such a point that the next step will be the capture of Khartum, and this, I venture to say, will occur, at the latest, by next spring. The power of the Khalifa will then have been utterly crusked, and all that would, under normal cir-

cumstances, remain, would be for the Khedive's forces to pursue the Dervish remnants through the equatorial provinces, and gradually reduce or destroy them. I have spoken all along of Egypt having done this, but it has, of course, been done by Great Britain. She has been in occupation of Egypt; she has alone, and in spite of unscrupulous opposition, reorganized Egyptian finance and the Egyptian army, and she has led the latter to victory after victory, supporting it, when it was necessary, by imperial troops. was at the bidding of Great Britain that Egypt evacuated the Soudan, and therefore Great Britain is the trustee of Egypt for those provinces; and if her work for Egypt-a work so splendid that if the British empire should go down in flames to-morrow this would be of itself a sufficient claim for her to be held in imperishable memory by mankind—is to be finished, she must place Egypt again safely in possession of her original boundaries. What is there to hinder this?"

#### THE ANGLO-FRENCH DISPUTE IN WEST AFRICA.

M. FRANCIS DE PRESSENSÉ, writing in the Nineteenth Century, says that the dispute in West Africa is a very pretty quarrel, which will require very careful handling if it is to be settled peaceably. The chief danger lies in the obstacles raised by the command of two credited politicians.

#### "THE PATENTED PROXY OF IMPERIALISM."

M. de Pressensé says:

"It is not my own fancy that the Cabinet of St. James is divided by the struggle of influences around this Western African question. Everybody in England asserts or believes-some to rejoice and draw the most favorable auguries. others to deplore and foresee funest consequences-that Lord Salisbury is no more the undisputed master on this ground; that Mr. Chamberlain, as Colonial Secretary and patented proxy of imperialism, has claimed the right to say his say; that he pulls all the strings of all the puppets, not only of his governors, from Sir William Maxwell to Sir Gilbert Carter, but of the head and of all the agents of the Niger Company, and that he opposes resolutely the acceptance by British diplomacy of a conciliatory solution, where he should see only betraval and cowardliness. What is perhaps the most to be regretted is the echo these arrogant doctrines find among the public.

"Such, however, is the spirit which has too much prevailed in the preliminary discussions of the West African issue, where the question was of titles, dates, documents, papers, and facts—where the best would be to bring to bear mutually a loyal desire to adjust and reconcile together, and with the maintenance of peace, apparently contradictory rights. It has appeared sometimes as if some arch-plotter wanted to break loose a spirit of contentiousness, chicanery, arrogance, and provocation. Fortunately, all this has happened far below the sphere where Lord Salisbury sits alone and meditative. It appears more and more every day that this African business is destined to be the touchstone of the true strength of the two rival statesmen in the councils of the queen

#### A FRENCH VIEW OF MR. CHAMBERLAIN.

Of Mr. Chamberlain of his pushfulness, of his recent jingoism, I shall not speak here. What the public knows or guesses about the Prime Minister of England does not make very probable the enlistment of the heir of the Cecils in the ranks of the army of which St. Jingo is the God and Mr. Chamberlain the Prophet.

"The principal guarantee of a successful and friendly settlement is to leave the hands free to the statesman as distinguished from the politician. The fate of the Anglo-French understanding is trembling in the balance. Everything that should give to Mr. Chamberlain a victory would go directly against the restoration of the entente cordiale. Let us hope Lord Salisbury has a mind broad enough, and a grip strong enough, to dare to defy and to checkmate the profligate imperialism of his colonial secretary."

#### A Plea for a Give-and-Take Policy.

The Rev. W. Greswell, who writes on this subject in the Fortnightly Review, is very strongly in favor of coming to some amicable arrangement with the French. He says:

"A railway communication connecting Senegal with the Niger is a main point of French West African policy. If a further connection can be made between Bammakou and the forts of Assinie and Grand Bassam on the Ivory Coast our colonies of the Gambia and Sierra Leone would be effectually isolated and the whole of the Hinterland won over to the French. At the same time this nation would deflect a great deal of the trade to themselves, and could play a waiting game with regard to the Timbuctoo, and possibly the Saharan, extension.

"Sooner or later the question of the various spheres of West African administration will have to be decided on broad lines. The little coast strips and settlements which color and diversify the map of West Africa are nothing in themselves if they are not to imply an extension in the

Hinterland. Granted that concessions are made to France on the west and that such a position as Gambia was surrendered to her, Great Britain would be justified in asking for compensation in the kingdom of Sokoto and the Hansi states. It is most desirable that all outstanding difficulties with France should be amicably settled, and it is a pity that a basis of a good understanding on the subject of the 'French shore' in Newfoundland cannot be found in an adjustment of West African affairs."

"A give-and-take spirit should be created, and if England, which has long been a pioneer influence in West Africa from the days of the earliest explorers, is willing to surrender privileges and positions to France she should be met in a similar mood."

#### THE FUR SEALS: THE AMERICAN CASE.

I T is not often that the American side of an international question is presented in a British periodical by a Briton. In the December number of the Contemporary Review. however, "A British Naturalist" states the position of the United States on the preservation of the fur seals with both candor and directness.

After reviewing the biological facts of the matter, with which our readers have been made familiar through various articles (especially in May, 1897), this writer comes to the point in controversy—namely, the question whether the whole or the greater part of the autumnal mortality of the pups, which has been repeatedly observed by naturalists, is due to pelagic sealing or to natural, irremediable causes. President Jordan asserts that most of this mortality is due to the killing of the mothers at sea, while Professor Thompson, the British expert, holds that it is due to the action of the same causes that occasioned the mortality in the summer months.

"A British Naturalist" gives his own views of the matter as follows:

"Professor Jordan's claim may be exaggerated, but it is doubtful whether the exaggeration is serious. It is admitted that every matka killed between the end of July and the beginning of November entails the starvation of a pup; hence a considerable pup mortality by starvation is depriorian necessary consequence of the pelagic sealing under existing regulations. It is further admitted that the two principal causes of the summer pup mortality—viz., the crowded state of the rookeries and the fights between the sea-catchie—are removed before the middle of August. But the only certain test is dissection of the dead pups, and possibly an insufficient number of these were examined to enable a final opinion to

be expressed. Last year 122 pups were subjected to post-mortem examination: of these, 103 had died during the earlier, and seventeen during the autumnal, mortality; of the former, 30 per cent. were due to starvation, and of the latter 88 per cent.

"It is conceivable that the conditions last year were exceptional; but the only statistics available at present favor the view that the killing of female seals at sea is the direct cause of the death of many pups on shore. Prof. D'Arcy Thompson, in his report to the foreign office, tells us that 'while I believe that there are sufficient discrepancies to indicate the presence of other factors in the case, yet it would, in my opinion, be useless to deny that the figures tend to corroborate the presumption that pelagic sealing is responsible for a large part of this autumnal mortality."

"A British Naturalist" proceeds to show that the killing of the mothers is a wasteful method of Their skins are smaller and of less value than those of the males, and after the end of the close time they are not in good condition.

#### PELAGIC VS. LAND SEALING.

He then gives his reasons for believing that under the present system of pelagic sealing the killing of females threatens the destruction of the herd:

"The exact proportion of the two sexes killed at sea is matter of dispute. But it is admitted by both sides that while no females are killed on land, the majority-the Americans say a great majority—of those killed at sea are females. Complete figures are at present uncertain; but a comparison of the price fetched by the skins of the pelagic sealers with that given for the Pribilof Island skins shows the inferior value of the former. In 1896 the Canadian catch realized in London an average of 32s. 2d., while the Pribilof Island skins sold in the same market before February fetched 68s. 1d. This great difference affords some idea as to the preponderance of female skins in the pelagic crop.

"A comparison, therefore, of land and pelagic sealing shows that the former is economically satisfactory and that the latter is extravagant and wasteful. Hence, if the present drain on the herd is excessive, protection must be given by

some reform of pelagic sealing.

"Assertions relating to the destruction of the herds have no doubt been recklessly exaggerated, while there have been many misunderstandings owing to looseness of phraseology. But the evidence seems conclusive that the herds have diminished in numbers. It is difficult to compare the records of naturalists who visited the islands about twenty years ago with existing conditions

without feeling that the numbers have decreased. The Americans say that the decline is serious. Last year, for example, the lessees of the Pribilof Islands had no difficulty in making up their quota of 30,000 skins; but this year they had to be content with 20,000. A reduction this year is especially significant in reference to the influence of pelagic sealing, as it is the generation born in 1894 that was available for killing, and in 1894 the pelagic catch reached its maximum of Hence the decrease in the number of killable seals this year appears due to the excessive pelagic activity of 1894."

#### ENGLAND'S ATTITUDE.

"A British Naturalist" concludes, therefore, that the regulations instituted by the Paris Award are inadequate for the protection of the seals, and that the United States is justified in asking for a revision. He does not consider the industry as of great commercial importance, and he recognizes the fact that the United States can settle the whole question without consultation with Canada

or England by branding the seals.

"Hence, considering that the industry is commercially of no great importance, that the pelagic sealing involves the killing of pregnant females and the starving of their pups, and that the United States can settle the question over the heads of England and Canada, it seems a pity that the argument should be imbittered by abuse of the United States. The question has been so simplified that the officials on both sides no doubt see the advisability of a friendly settlement. And it is to be hoped that the British press will give that fair open-minded consideration to the American claims that has marked the irreproachable attitude of the British Foreign Office."

#### THE HEADSHIP OF THE ENGLISH RACE.

#### Will It Be British or American?

HE question whether the English-speaking race will crystallize into unity around Washington or London is a problem of which we shall hear much more in the twentieth century than we have done in the nineteenth. in Britain nor in the United States has much attention been paid to the question, which underlies the whole future relations of the empire and the republic. It is interesting to find the subject mooted by a Frenchman, Baron Pierre de Coubertin, in the Fortnightly Review for December.

#### THE PROBLEM OF THE BRITISH EMPIRE.

After giving in general terms the result of his survey of the British empire, he declares that the problem of the British empire is the question whether England or the United States will take precedence in the English-speaking race. He

"The British empire exists, and exists as a republic, a confederation of states. How long will it probably last? That is the final problem. In order to solve it we must take a still wider sweep and look at the Anglo-Saxon world as a whole. It will then be seen that this world has two poles, one in London, the other in Washington. On reflection it would not seem that unity can be attained by means of an agreement between England and the United States. Such an agreement would have to be absolute. Now an understanding is possible, but absolute agreement will be unattainable for a long time to come. One thing, however, is obvious, that the United States can take 'precedence' of the British empire in default of England, and that they will take it if once she lets it go. The feeling of emulation and jealousy which exists between the Americans and the English wears off as soon as the latter have left England behind them; the Scotch and the Irish have never shared in it. Thus the newborn British nations have no feeling but fraternal sympathy with the Americans.

#### THE AMBITION OF THE AMERICAN REPUBLIC.

"In Australia their popularity grows greater every day. The experiments which Australians are making in social politics are followed with the liveliest interest in the United States, and their literary and artistic works find ready appreciation there. With South Africa there is far less interchange of ideas, but the electric chain of sympathy is just as strong. The Yankee recognizes a kindred spirit in Cecil Rhodes; they have arrived at a common understanding on the negro question, which later on may lead to common action. The Canadians are a little less on the defensive. They have not forgotten the past, least of all the War of 1812, but they live under the direct influence of American civilization, and they appreciate the benefits of it. As to annexation, it is not seriously wanted, for everybody would lose by it. The French-Canadians have just seen one of their countrymen raised to the supreme power, and they would certainly not choose this moment to renounce a nationality of which they are so justly proud. Besides, their independence is not threatened; American ambition takes another form. Federation as a rule is not particularly consistent with the policy of annexation, but it agrees very well with the policy of influence. In the future the United States will not be keen on annexation, but their thirst for influence, for moral dominion, will be insatiable. It is so already."

#### A PROPHECY.

"It may be said that the United States are beginning to be conscious of their future mission, and that they are educating themselves to accept it. Certainly they are by no means Anglomaniacs, but they are becoming more British every day. The Great Republic will be ready to fulfill its imperial functions when its universities have prepared it for the task. As for England, so far from having before her a career of indefinitely increasing prestige and power, if she would fulfill her own functions she must consent to make many sacrifices of interest and self-love. She will probably make them out of pure family affection.

"However this may be, we ought to be perfectly willing to recognize the fact that, in one way or another, the triumph of Anglo-Saxon civilization is secure, and that it will leave its mark upon the world of To-morrow."

#### world of 10-morrow.

#### THE FUTURE OF THE NORTHWEST.

In the January Harper's, Mr. J. A. Wheelock reviews the gigantic progress of our magnificent Northwestern domain, especially of Minnesota and the Dakotas, and affirms that the past four years of leanness have been felt but very little by the farmers in that fertile and yet untrammeled section. The declines in real-estate values have been almost wholly confined to the cities.

#### THE FARMERS OF THE NORTHWEST.

"There has been no sensible fall in the price of farm lands. In Southern Minnesota, where mixed farming prevails, the farmers have been prosperous through all the hard times, and although pinched by the low prices of their chief product for several years, the wheat farmers as a class have more than held their own. . . . With the return, at least temporarily, of higher prices for their products, the farmers of the Northwest are enjoying a period of prosperity which is reflected in the cities." Mr. Wheelock estimates the market values of the current crops of the three prairie States as follows:

Minnesota	\$105,000,000
North Dakota	60,000,000
South Dakota	40,000,000
	\$205,000,000

This gives an average of about \$900 for each farm in the three States, exclusive of revenues from hogs, cattle, sheep, and dairy products.

#### IT IS YET A NEW COUNTRY.

Mr. Wheelock's figures show that this Northwest domain offers yet a great virgin field for expansion, and that the boundaries of the United

States contain vast tracts of fertile land and stores of mineral wealth to entitle it to be considered a new country. "Half of Minnesota's nearly 40,000,000 acres are still unfarmed. Of the two Dakotas, only 19,000,000 acres are occupied, with four times that extent still waiting the further advance of civilization. Not a tithe of the mineral wealth of the Mountain States has been developed. Alaska, reached by numerous steamship lines from Seattle, Tacoma, and Portland, with its boundless wealth of auriferous rivers and mountains, is an outpost of this Northwest belt. Large areas of fertile but arid land in Montana, Washington, and Northwestern Dakota, now useful only as pastures for cattle and sheep, may easily be converted into fruitful fields by a scientific system of irrigation, for which nature affords abundant facilities in the mountain streams and in the artesian basins which underlie the Dakota plains. The areas adapted to agriculture in other sections of the United States are so largely occupied that immigration will be turned perforce to these broad expanses of fertile plain and valley in the New Northwest. And he would not be a too sanguine prophet who, taking into view all the progressive forces in operation in this field, should estimate its probable population at 10,000,000 in 1910. Hereafter, as heretofore, the railroad locomotive will furnish the 'pillar of cloud by day and the pillar of fire by night' which is to guide the great exodus of the poor from the crowded communities of the Old World and the New into this promised land."

#### COMMERCE DIRECT WITH EUROPE.

Mr. Snyder's article in the last number of this Review showed in detail the engineering plans for a great waterway from Duluth to Liverpool. Mr. Wheelock says:

"It is among the possibilities of a not very distant future that the ships which carry the wheat and cattle of the Northwest to Liverpool will load at Duluth instead of at New York. But events are not waiting on this remote achievement. The foreign trade of this country is insignificant by contrast with the stupendous proportions of its inland commerce, which forms nine-tenths of the whole; and the same facilities of cheap and speedy transit to which it owes its enormous magnitude tend to make its interior cities the chief centers of its distribution."

#### THE VAST MARKETS OF ASIA.

But even such a commercial triumph as a waterway from the wheat fields to the English markets would be second in importance to the rapidly growing possibilities of a trade across the

Pacific with the hungry millions of China. "That trade is destined to reach proportions not now calculable. The Northern Pacific and the Great Northern, as well as the Oregon Railway and Navigation Company, have formed close alliances with transpacific steamship lines for traffic connections with Asiatic ports, and are looking forward to the completion of the Siberian Railway for the extension of their passenger service to this new route of travel around the Seattle, Tacoma, and Portland have a distinct advantage over San Francisco as entrepôts of this Asiatic trade, in that they are several hundred miles nearer the seaports of China, Japan, and Siberia. But Asiatic enterprise is running ahead of American in the development of proper trade relations between the two conti-Within the brief period since Minnesota nents. became a State Japan has broken her ancient shell of semi-barbaric isolation, has adopted the instruments and methods of European civilization, and become an important maritime power.

#### DIRECT COMMERCE WITH CHINA AND JAPAN.

"The Japan Mail Steamship Company, known as the Nipon Yusen Kaisha, operates a fleet of eighty-three steamships, besides hundreds of coasters and junks, its tonnage exceeding that of any other company in the world, except one. Its lines extend to all the ports of China and Japan, to the Russian Vladivostok, to Australia, Honolulu, Calcutta, and Seattle. With this great Oriental steamship company the Great Northern has entered into a contract for its freight and passenger service. The heavy subsidies it receives and the small wages paid to Japanese sailors enable this company to carry cargoes at rates so low as to open for the first time prospects of a large exportation of cereals and other products of the Pacific slope to China and Japan. Considerable cargoes of flour have already been shipped to these countries from Washington and Oregon, and a recent order for 500,000 barrels from Hong Kong indicates a rapid expansion of the trade. A very limited consumption of wheat per capita by the immense seaboard population of the Asiatic Orient would absorb the entire surplus of the Pacific States. This new market, once opened, will be capable of immense extension. China, too, since the drubbing she recently received from her island neighbor, shows new evidences of awakening from her sleep of centuries; and when she shall join hands with Japan in her forward march along the ways of modern civilization no section of the United States will profit more from the opening of this new field to American trade and enterprise than the New Northwest."

#### DISCRIMINATION IN FREIGHT RATES.

"CR Interstate Protective Tariffs" is the subject of an article in the January Arena by Mr. James J. Wait, who makes a strong showing of facts in support of the contention that the discriminations made by the great railroads are in their effect equivalent to tariff barriers between States and sections of the Union. He says:

"It is probable that this state of affairs has been brought about, not by deliberate intent to accomplish the result as a whole, but by the strife of each carrier to secure business and protect itself from the extraordinary competition to which transportation inte... are subjected. Until within a short time ago merchants who were injured satisfied themselves with an individual remedy by means of rebates or similar concessions, overlooking the fact that competing markets were probably accorded equal facilities; but now that freight tariffs are something more than the paper they are printed upon, their inequalities concerning localities are becoming more apparent to commercial interests. Since the interstate commerce law has become a menace to the shipper, and no protection to him against his neighbor who is not law-abiding, a more general remedy must be sought. We are all familiar with the maps issued by the passenger agents, showing that each has the 'short' line, but only the few who are conversant with the details realize how cities have been moved about the map and geographical distance annihilated by the changes in freight tariffs. A few examples of these discriminations will make the foregoing

"The freight tariffs applying upon manufactured articles from the Ohio River to the Southeastern States are on a much higher relative scale than those applying from the Eastern seaboard. In some cases much shorter distances have actually higher rates.

"This is the result of an adjustment reached nearly twenty years ago, providing for a division of traffic to restrict the former disastrous competition among the railroads in the territory south of the Ohio and east of the Mississippi While the agreement itself may not so state, there is fairly good evidence that the hidden basis was an understanding that the lines running coastwise should carry manufactured articles from Eastern territory, and that Western lines should carry provisions and grain products. To this end what are known as the class rates are so high from interior points that they are burdensome and sometimes prohibitory. the other hand, the rates on provisions and grain products are made to encourage movement from

the West. In some cases they appear unusually low when compared with merchandise rates.

"The rates from Atlantic cities to Colorado and Utah are lower than from Detroit. Periodically they are less than from the Mississippi River.

"The explanation offered is that the low rates are forced by water competition through the Gulf ports. The distance from Galveston to Denver is about the same as from the Mississippi River to Denver, so that they are a practical gift of 2,500 miles free water transportation, marine insurance, and rehandling. These rates apply not only from the coast cities, but the cost of shipping to tidewater is absorbed from points as far west as a line drawn through Oil City, Pa., and sometimes including Pittsburg. A similar condition affects Texas, with the addition that it has been further proposed to make rates from the East the same as those applying from Kansas City.

The rail and lake rates from New England to Duluth are only a little higher than to Sault Ste. Marie. What are known as Missouri River rates apply from the head of Lake Superior to the Far West.

"If a merchant on the Missouri River freights his manufactured goods from the East via the lakes, and makes a sale to a customer in Butte. Mont., the property must pay a toll nearly equal to the cost of rail transportation from New York to Chicago more than if the business had been handled by his Northern competitors. This is not balanced in corresponding territory. If he makes a sale in Salt Lake City, the freight cost via the competing route is the same as his, so that to a point straight west of him he has no protection, while he may be barred out from competition at a point straight west of Duluth. This situation is the result of the policy of the roads whose termini are at the head of Lake Superior to control the business via that route. The president of one of them is said to have remarked that in a few years he would confine the merchandise business of the interior States to a line drawn through Sioux City. One of these roads has its own steamboat service from Lake Erie ports, and sometimes makes the same rates on heavy goods from the manufacturing districts of the Mahoning Valley as are in effect from the Missouri River. If this continues there is little question but that the prophecy quoted above will be accomplished.

"Points on the Missouri River from Kansas City to Omaha, inclusive, are grouped, the same rates applying in and out on through business. The average distance to Omaha on the north and Kansas City on the south from St. Louis is longer

than the distance from Milwaukee to St. Paul. The average distance from Milwaukee to the Missouri River is just about the same as from St. Louis to St. Paul. Milwaukee rates are one-third higher to the Missouri River than from St. Louis. St. Louis rates are 5 per cent. only higher to St. Paul than from Milwaukee, which is about half the distance.

"This situation was objected to as follows by the head of the freight department of one of the roads interested:

"'It is our opinion that the present adjustment is unfair and unwarranted, and we believe that the rates from St. Louis to St. Paul-Minneapolis should bear the same relation to the rates from Milwaukee as the rates from Milwaukee to the Missouri River bear to the rates from St. Louis to the Missouri River.'

"This seems a perfectly fair proposition, but it was defeated. Carloads of heavy goods manufactured at St. Louis pay one-half cent more freight to St. Paul than if shipped from Milwaukee. If shipped from Milwaukee to the Missouri River they are charged five cents per hundred more than if shipped from St. Louis, the relative distance and conditions being practically alike. A fraction of a cent per hundredweight is frequently sufficient to influence the sale of heavy merchandise."

Mr. Wait advocates the placing of the ratesregulating (not rate-making) power in the hands of the Interstate Commission, and the power of the commission must be great enough to compel equal justice to merchant and carrier alike.

#### THE AMERICAN CABLE CAR IN ENGLAND.

MR. HIRAM S. MAXIM, the inventor, is contributing to the Engineering Magazine a series of articles on various differences in industrial conditions between England and the United States. He has been especially impressed by what he terms an ignorant prejudice in England against American products. This he illustrates with an amusing bit of personal experience:

"A short time ago an American cable line was established in Brixton, a suburb of London. Upon first visiting Brixton I failed completely to recognize the system, as each car was provided with a small and extremely ugly locomotive. Upon closer inspection, however, I found that the locomotive carried simply the clamping device. Upon asking the 'driver,' or the man at the clamp, the object of the apparatus, he said:

"' Oh, this is the locomotive. This draws the

" Oh, I said, 'how nice! Please explain it."

- "" Well, underground here is a wire rope; this 'ere thing goes down through this 'ere slot and clamps the rope, and the rope pulls the locomotive, and the locomotive pulls the carriage, don't you see?"
  - " What is the object of the locomotive?"
  - " 'Why, to draw the car, of course."
- "" But why not put the clamp on the car and dispense with the locomotive altogether?"
- "After he had thought the matter over a short time, I asked again:
  - " 'What is the use of the locomotive?'
  - "His reply was:
  - " 'I'll be hanged if I know.'
- "Now, if this system and been introduced into a country like Germany, France, or Spain the natives would have had sufficient respect and confidence in American engineers and systems to have put it up in the exact manner that it was imported; but as the English engineers were used to a locomotive and wished to make some change in the American model, they added the 'locomotive,' which certainly looks very awkward, and is, without question, superfluous."

### A FIREMAN'S SENSATIONS IN A HEAD-ON COLLISION.

THE January Mc Clure's contains a thrilling and remarkably well-written account of some dramatic incidents of railroad life from the pen of the railroad man author, Mr. Herbert E. Hamblen, the author of "On Many Seas." Mr. Hamblen shares with Cy Warman the honor of bringing the locomotive into literature. His account, from the point of view of the engine caboose, of his experiences in a head-on collision under particularly disastrous circumstances is given in such simple, forcible style that it is well worth quoting:

"About six months after I filed my application," says Mr. Hamblen, "there was a mistake made in orders that came very near winding up my railroad career for good. I did not know at the time exactly what the trouble was, nor can I say now positively. Simmons and the engineer, who were both discharged, asserted that they were sacrificed to save the dispatcher, who was a sonin-law of the president of the road.

"Whoever was to blame, the result was disastrous; for we met the train which we expected to pass at the next siding in a deep cut under a railroad bridge. Both trains were wheeling down under the bridge at a forty-mile gait, so as to have a good headway on to take them out the other side. As the view of both engineers was obstructed by the stone abutments of the bridge, neither doubted for a moment that he had a clear track.

"They met exactly under the bridge, with a shock and roar that seemed to shake the solid earth; the locomotives reared uplike horses, the cars shoved their tenders under them in such a way as to jack them up and raise the bridge off its abutments; and then as the cars climbed on top of each other they battered it from its position until it lay nearly at right angles to its own road, like an open draw, resting on top of the wreck.

"Our conductors sent flags back both ways to hold all trains; but before the men could get up the bank to flag on the cross-country road a belated gravel train came hurrying along and plumped in on top of us, helping to fill up the cut still more. Their engine set fire to the wreck, and as we were some distance from a telegraph office, all three trains and engines were entirely consumed before help reached us, nothing remaining but a tangled and twisted mass of boilers, wheels, rods, and pipes, partly covered by the gravel train's load of sand.

"I was on the engine, sitting on the fireman's seat, looking out ahead. As it was daylight, there was not even the glare of a head-lamp to give us the fraction of a second's warning, and our own engine made such a roaring in the narrow cut that we could hear nothing else. The first intimation we had of approaching danger was when we saw the front end of the other locomotive not forty feet from us. Neither of the engineers had time to close their throttles—an act that is done instinctively on the first appearance of danger.

"I cannot say that I was frightened. Even the familiar 'jumping of the heart into the throat,' which so well describes the sensation usually experienced on the sudden discovery of deadly peril, was absent; for though I certainly saw the front end of that engine as plainly as I ever saw anything in my life, I had no time to realize what it meant. I made no move or effort of any kind, and it seemed that at the same instant that she burst upon my view daylight was shut out and I was drenched with cold water; yet before that happened they had come together, reared up, s I have said, and I had been thrown to the front of the cab; the tender had come ahead, staving the cab to pieces, thereby dropping me out on the ground, and by knocking a hole in itself against the back driving wheel had deluged me with its

"The flood of cold water caused me, bewildered as I was, to try and get away from it. I knew I was under the wreck, and for a few minutes I could hear the cars piling up and grinding overhead.

"I knew what that was, too, and feared they

would smash the wreck down on top of me and so squeeze my life out. But the engine acted as a fender; for, being jammed among the wreckage, she could not be pushed over; and as she stood on her rear wheels, she could not be mashed down.

"It was perfectly dark where I was, and, as I knew it was still daylight outside, this proved to me how completely I was buried under the wreck, and was far from reassuring. How could I ever hope to make my way from under those tons of cars and engines? The only wonder was that I had escaped being killed instantly, and for a few minutes I felt but little gratitude at having been spared, only to be slowly tortured to death.

"When I attempted to move I found that as far as sensation was concerned my right leg ended at the knee; so I felt down to see if it was cut off, as I knew it would be necessary to stanch the flow of blood in that case or I would soon die from that cause alone. To my great joy I found that my leg and foot were still with me, though how badly hurt I was unable to tell; for, being drenched with water, the blood might, for all I knew, be flowing from many severe wounds.

"At this moment there was another crash and grinding and splintering overhead, caused by the wrecking of the gravel train, but which I attributed to the explosion of one of the boilers. In this second wreck two men were killed outright, and the engineer died of his injuries the next day; yet to it, I have no doubt, I owe my escape, for it disturbed the position of the cars so that I perceived a ray of daylight, away, as it seemed, half a mile ahead of me. I exerted myself to the utmost to reach it, and how far off it was! I had to work my way back under the wrecked tender and several cars. I found the space under the tender piled so full of coal that it was impossible to pass, yet that was my only way out; so I began digging with my hands, feverishly, madly, in the desire to get away while I still had my senses and strength—and oh, how I wished then I had never gone railroading!

"After digging, as it seemed for hours, until my hands were raw and bleeding and I had blocked my retreat by the coal I had thrown behind me, I found myself confronted by the axle of the rear truck, which stood at such an angle as to positively forbid all hope of my ever getting out that way."

#### PENNED UNDER A BURNING WRECK.

"The wreck was on fire, and though I might have resigned myself to lie still and die, I could not endure the thought of being roasted alive; so again made desperate by great fear, I dug my bleeding hands into the coal, and commenced to burrow like a woodchuck in the direction where I could see that the truck was elevated highest above the rail, and to my great joy I soon found that the coal pile extended but a short distance in that direction.

"It wasn't long before I had crawled under the truck, which had been raised from the ground by the corner of a car, and was making fairly good progress among the tangle of wheels, axles, and brake-gear, in the direction of the ray of light which had first attracted my attention. I found it came down by a very small, crooked, and much-obstructed passage through the débris of broken cars above my head-a passage entirely too small for me to get through, and which I could never hope to enlarge myself. The smoke was now suffocating, and it was only at longer and longer intervals that I could catch my breath. I had not as yet felt the heat of the fire; but when I looked up through the narrow opening above me I could see the flying clouds of smoke, sparks, and small firebrands, which told me that the wind was blowing in my direction, which induced me to make the most frantic efforts to escape. I might as well have tried to lift the ponderous locomotive as to move the tightly wedged wreckage that imprisoned me; and as I glanced at the little patch of blue sky, now nearly blotted out in black smoke, an agonizing sense of my desperate situation filled

"I opened my pocket-knife—it wasn't very sharp, but still it might serve me at a pinch; how much better to open an artery and quietly pass away than to be suffocated by smoke or roasted by fire! I sat thinking these desperate thoughts, and waiting, I presume, until my position should become absolutely unbearable, when I saw a man step across my little glimpse of light. Having, fortunately, just refreshed myself by a breath of fresh air, I let a desperate yell out of me, and saw him stop and look all around, as though saying to himself, 'What was that?' 'Here! here!' I shouted: 'right down in this hole under your feet!'

"Finally, after frantic work with the axe, dangerous to the penned up victim below, an aperture was opened. I wasn't out yet, though, for overhead there was a solid sheet of flame, roaring in the wind like a furnace, and completely covering my exit. Although still drenched with water, I could feel my hair curling with the intense heat.

"There was one course and one only open to me; so taking as long a breath as I could, I shut my eyes and made a dive for liberty. I scrambled upward and outward, now bu ning my hands by contact with hot iron, and again tearing them on the jagged ends of broken wood, my head fairly bursting with the heat and suppressed respiration. Suddenly I stepped forward upon nothing; having no hold with my hands, I fell, struck on my side, rebounded, and fell again, down, down—I could have sworn for miles—and then unconsciousness came over me.

"It seems that when I got out of the hole I rushed blindly off the end of a blazing car, piled high in the wreck, and in falling I struck on various projections of the wreckage, tearing off nearly all my clothing, which was a providence, as I was all ablaze, and finally brought up with a dull thud, as the reporters say, on solid ground, shaking and bruising myself dreadfully, but almost miraculously breaking no bones, though I had fallen from a height of thirty feet."

#### THE IMPOVERISHMENT OF SPAIN.

THE wretched condition of Spain at home, resulting from her rule-or-ruin policy in Cuba and the Philippines, is depicted by Mr. John Foreman in the National Review (London).

After reviewing the acknowledged failure of the attempt to whip the Cubans into submission, and briefly discussing the measures of home rule at last granted by the home government, but not accepted by the insurgents, this writer proceeds to expose the fiscal weakness of the Madrid government in a most remorseless manner. He declares that Spain's financial condition was never more deplorable than at present, and that the outlook is most discouraging.

"The latest published official customs report shows, for the nine months ended September 30, 1897, an excess of exports over imports, declared value, pesetas 78,600,000 at exchange 33.70, £2,332,344.

"The Bank of Spain's note circulation was never so high, and being quite out of proportion to the gold reserve, it is not likely that exchange will improve. One-third of the thirty-milliondollar Philippine loan was put up to public subscription in Manila, and according to El Correo of November 3, only two millions (of the ten) were paid in cash, one million was not subscribed at all, and seven millions were covered by a simple exchange of other government securities for the loan bonds. The loan being guaranteed to the government, this will probably entail a further issue of paper to the still further detriment of exchange and import trade. More than seven months ago the naval estimates were voted, but at the cabinet council of November 3 it was declared that the money destined to that purpose

was exhausted. When General Blanco arrived in Havana a month ago the pay due to the troops in Cuba was nine months in arrears.

"The finance minister of the last cabinet, Navarro Reverter, was so pressed for money that he was on the point of selling the government forest lands, but, fortunately, influences were successfully brought to bear against the realization of such a disastrous project. Then he seized certain domains and revenues at Lluch, in Majorca Island, which were claimed by the Church. This brought him into conflict with the bishop of the diocese, Jacinto Cervera, a very irate old man, who poured forth his angry soul in a circular and fulminated excommunication against the offending The bishop died a month afterward. The matter stirred up all Spain at the time, and was at length referred to the Pope, who restored the minister to the fold of the faithful. It seems almost incredible that in the midst of all this financial chaos the same minister should have had the caprice to start purchasing gold bullion for the coinage of twenty-dollar gold-pieces!

"The late cabinet made a supreme effort to keep clear of the foreign money markets in their But past experience seems to have loan-raising. shown the present finance minister the futility of attempting to draw more cash from the country. The Bank of Spain has already advanced far beyond its metal reserve, and if required to redeem its paper currency bankruptcy would follow. The last national loan was only raised under pressure, which I explained in a previous article. A large foreign loan is therefore in contemplation, and it will be interesting to see what guarantee will be It will have to be at a high rate of interest or at a big discount to equalize the existing 4-per-cent. exterior loan."

#### HARDSHIPS OF THE PEOPLE.

The system of recruiting for the Cuban er.d. Philippine wars has been the source of much distress among the poor.

"Cases are cited of one son after another being drafted off to the wars, leaving widowed mothers absolutely resourceless. Some have gone mad; others have hoped to find relief in suicide. Nearly every fortnight brings to Cadiz, Barcelona, or 'orunna the sickening spectacle of several hundreds of poor fellows returned from Cuba and the Philippines maimed in combat or broken down with disease. Until about two months ago little heed was paid to their personal comfort on arrival. They were disembarked and transported to hospitals or barracks just as they came. So many expired between ship and shore that charitable persons united to provide them with suitable clothing, and now they are well cared for by the

Red Cross Society and other analogous beneficent institutions."

INCREASE OF BEGGARY AND STRIKES.

V. Spain is notoriously a country of beggars, but these last two years I have observed quite a non-professional class of mendicants seeking public alms. Home trade and private incomes are so crippled by taxation that economy is forced upon the moneyed classes, who can no longer support so many hangers on. An empty treasury, due to the wars, has brought paralyzation in public Scores of municipalities are virtually insolvent. The spirit of enterprise, never very pronounced in Spain, is damped by the uncertainty as to what may happen next, for civil war is the prospect after the pacification of the colonies and the return of the troops. Even with a bountiful harvest, Spain always requires large stocks of With the recent abnormally high foreign wheat. prices of this staple abroad, and import duty raised (from 31 pesetas) to 101 pesetas per 100 kilograms, the average price of flour has necessarily risen. But the municipality of Madrid controls the selling price of bread, and brought pressure to bear on the bakers, who declared they could no longer sell bread at the old price. do so they would have to lower the journeymen's wages. For a couple of months the men went out on strike. They demanded the ludicrously small pay of thirteen pence (seven reals) per day and food! The government took up the matter for the public weal, and deputed 350 soldiers, assisted by forty volunteer bakers, to work at eighty bakeries which the strike af-Eventually the men yielded, and the strike ended November 2. Small shopkeepers find business so slack that they try to make up for it by keeping open up to unreasonable hours to draw custom. Madrid is menaced now by an agitation among the grocers' shopmen in favor of early closing. They object to working from 8 A.M. till 11 P.M. on week days and till 4 P.M. on Sundays, and ask to close at 9 P.M. on week days and at 2 P.M. on Sundays. The newspaper El Pais warmly advocates their cause. If their demands are refused they threaten to take 'more energetic proceedings,' which means to strike, with temporary misery to themselves, for, like the bakers, they have no trade union. Wages around the mining districts of Biscay province are now so low compared with the high cost of living—the staple food being bread, partly made with imported wheat, and dried codfish (bacalao), imported entirely—that a miner with a wife and family to support hardly lives—he merely exists. Increased taxation on the mineowners and freight rated on the gold basis render

it impracticable to pay higher wages, hence there have been several strikes requiring military aid to quell them. These are some of the causes why we now see the towns crowded with able-bodied men appealing to public charity."

#### LESSONS OF THE ENGINEERING STRIKE.

HE great strike in the English engineering industries has enabled the employers to call attention to the prejudice in the trade unions against the use of machines. Unless this prejudice can be rooted out the employers feel themselves at a serious disadvantage in competition with American manufacturers. In previous numbers we have quoted from articles in the Engineering Magazine which illustrate this point. In the same periodical Mr. Hiram S. Maxim discusses "The Effects of Trades Unionism Upon Skilled Mechanics." Mr. Maxim declares that English trade unions at the present moment, by their prejudice against the efficient use of the best machinery, are the greatest danger to British industrial supremacy. He says:

"The man is considered the most skillful who is able to do the best work in the shortest time. In a large shop like that of Pratt & Whitney, where, say, a thousand hands are employed, it is no exaggeration to say that at least eight hundred of these hands are expecting to rise to the top, each by his own efforts. It is this struggle to excel in work and rapidity of production that produces the incomparable mechanics of New England. If we consider rapidity as well as excellence of workmanship, I think any one must admit that the trade unions have a very detrimental effect upon the development of skilled mechanics. There can be no question but what the value of a mechanic to the country in which he lives depends altogether upon the skill which enables him to do work quickly."

Mr. Benjamin Taylor, who writes in Cassier's Magazine on the "Machine Question and Eight Hours," makes the same bitter complaint of the interference of the union. He says:

"The A. S. E. seek to lay down a rule that whenever an A. S. E. man is put to a machine, even temporarily, or under pressure of circumstances, that machine shall for all time coming be regarded as an A. S. E. machine, to pay the rate which the A. S. E. say should be paid for it, whether the operator be an adept or not."

In order to enforce these demands, they employed tyrants of the worst sort, who are called "shop stewards:"

"These shop stewards are men appointed by the district committees of the A. S. E. to keep watch and ward in every shop, and in every department of every shop. They are themselves paid workmen, but also the paid spies of the society."

#### MACHINE-CRIPPLING. BY UNIONISTS.

Mr. Taylor quotes Colonel Dyer as a witness in support of his assertion that the unionists deliberately limit the output of the machines intrusted to their care. This is what Colonel Dyer said:

"We have a very large boring-machine at Elswick; this boring machine is 80 feet long. We do very rough work on it—i.e., we take the center out of the shaft by means of a trepanning We took the center out of a shaft the other day 70 feet long. The whole center was trepanned out. We selected a man for working the machine; a man came round, a very intelligent-looking man, and that was all we had to judge by-we cannot ask him what society he belongs to. We asked him if he could work this machine. He said of course he could. We put him on the machine, and he worked it about six or seven months. We could never get more than four or five inches an hour out of the machine. We pressed him, and begged him to do better; we were very busy at the time, but we could never get above four. At last we could go on no longer; we knew that the machine should do more, and we said the machine was not giving satisfaction, and he was dis-We then selected a boy, a very intelcharged. ligent-looking young fellow, but he knew absolutely nothing about machines. We said, will you learn this machine? He said he was most anxious to do so. He buckled to, and the lad in three weeks had increased the production of the machine up to six inches an hour, and the other day I got a note that the machine was doing eleven inches an hour."

#### THE RESULT.

The result is that Colonel Dyer tells his English readers frankly in his paper that they are being beaten very badly by their American competitors:

"It is a remarkable fact that at this moment the Carnegie Company, of Pittsburg are delivering rails in Calcutta at a less price than similar rails can be bought in England, and if the energy and capacity of these gentlemen have been accurately gauged, they will not stop at rails. It must be borne in mind that up to a very recent date the greater part of the rails used in America were supplied from England. The trade has now been reversed, and American rails and pig iron are being delivered here in large quantities, and only recently the Americans have ob-

tained large orders for engines, electrical machinery, and tram cars for London, water mains for the corporation of Glasgow, while American machine tools are to be found in almost every engineering establishment in the kingdom."

#### IS THE MACHINE THE ENEMY OF LABOR?

Mr. Taylor ridicules the idea that labor-saving machines are detrimental to the employment of labor. He savs:

"The more labor-saving machinery is employed in engine shops, the more increased is the avenue of employment for skilled operatives, because the cheapening of production increases the demand for the joint product; and the more labor-saving machinery is wanted, the more engineers are needed to construct it."

Compared with this question of the man's strike against the machine, and the deliberate attempt to cripple his inanimate competitor, the arguments concerning the exact length of the working day used by the employers are comparatively unimportant.

#### THE EIGHT-HOUR DAY.

Colonel Dyer expresses a very strong opinion against the eight-hour day. He says:

"It means nothing more or less than that the employers shall give to their workmen six weeks' holiday every year and pay them full wages for work not performed; that all their machinery and stock in trade shall remain idle and unproductive during these six weeks; that their rates and taxes and other outgoings are to be contimed as though their workshops were at workand we are asked gravely to believe that this is one of the most efficient means of competing with our foreign rivals. Wages paid to engineers at Hamburg are 24s. for a week of 59½ hours. For smilar work in London the wages are 38s. for a week of 54 hours, and it is now proposed to reduce them to 48 hours. It requires no argument to prove that, assuming the men in Hamburg and the men in London are working similar machines, the production in London cannot possibly comgete in price with the production of similar machines at Hamburg. If the working week is reduced to 48 hours this demand would add from 15 per cent. to 17 per cent. to the cost of production in England; but, important as this advance is, it is a minor consideration, comparauvely speaking, to the serious decrease in the volume of work which would ensue."

#### TRADE UNIONS AND MACHINES.

But while New England encourages this very competition which enables each man to do his best, the English trade unions, in Mr. Maxim's

opinion, are little better than the Luddites, who burned the mills where machinery was employed. He says:

"It appears to me that trade unions oppose, and always have opposed, the use of machinery which enables work to be turned out quickly and cheaply, and I believe there has never been a machine, apparatus, or system introduced into England which has helped to give her the position which she now occupies as a great manufacturing nation which has not been opposed tooth and nail by the ignorant and unthinking who make up the rank and file of English trade unions."

#### A CASE IN POINT.

Mr. Maxim gives the following instance of this spirit:

"At the present time the trade unions seek to specialize work and to put every obstacle in the way of learning more than one thing. I remember employing a very skillful Swiss mechanic. He was not only an exceedingly good fitter, but one of the best men on a planing-machine I had ever seen. On one occasion, while working as a leading hand in the fitting shop, it became necessary for him to do certain work on a planing. machine. As there was no one at hand to do the work, he did it himself, and, in consequence, was warned by the trade union that this would not be allowed. He replied that he was a master of his profession, that he prided himself on being able to work every sort of machine relating to his profession, and that if the trade union would not allow him to work at his own profession in his own way, or wished to curtail or interfere with his working the tools that he had learned to work as an apprentice, he would withdraw from the union-which he did."

#### "MAKING WORK."

But this is only one among many illustrations which are forthcoming as to the restrictive policy of the unionists. Mr. Maxim tells a curious story of the way in which the unionists endeavor to make work. Unionists have, for instance, insisted upon making dies for forgings which left a large margin to be removed by the milling-machines. Then, again, they increased work by milling the forgings roughly, so as to make work for the fitters with the files. Of one part of the Maxim gun, he says:

"When this part was very roughly milled and left a great deal too large by the union men it required more than a day for the fitter to file it into shape. At the present time, however, the milling is so accurate that the fitter is able to do fifteen pieces in one day, or twenty times as much as he did formerly."

### ANOTHER STORY WITH A MORAL.

Now the tendency in the United States and on the continent is to produce machines which practically run themselves, involving, no doubt, for a time, the displacement of labor.

"On one occasion, finding one of our leading hands, a strong union man, in Paris, I took him into a French shop to show him the rapidity with which the work was turned out. I pointed out to him that the machines were running with double the speed and that they were taking at least double the cut that they did at our place, while one girl was working six machines, and instead of getting from eighteen to twenty-four cents an hour, these girls got only about ten cents an hour. On his return to England he made a most interesting and instructive speech at a trade-union meeting held at Crayford. pointed out that whereas the Crayford Works at that time were employing more than three hundred hands, if the men should do as much work as these French women did only about sixty would be employed. He said he had figured it carefully out, and he asked what in the name of Heaven would become of the other two hundred and forty hands. 'Shall we allow them to starve?' said he."

Mr. Maxim's practical conclusion is that English skilled workmen will discover that they had much better leave unionism to unskilled labor and go in for each doing his best work and getting the most he can for it.

#### The Real Issue of the Strike.

In Cassier's Magazine Colonel Dyer deals with the same subject, and treats it from his own point of view. His article, entitled "The Engineering Dispute," covers wider ground than Mr. Maxim's, but part of it touches the same question—the objection of trade unions to laborsaving machinery. This, he maintains, is the real question that lies behind the strike for the eight-hour day, and in support of this he quotes "the letter which Mr. Barnes, the general secretary of the A. S. E., addressed to the People's Journal, Dundee, of August 7, 1897, in which he says with charming candor, referring to the machine question: 'We have so far outgeneraled Colonel Dyer as to have averted the fight upon an unpopular issue, and to have shunted it on to a question upon which we ought to get, and I believe will get, the support of our fellow-workmen.'"

#### THE DEMANDS OF THE A. S. E.

The unpopular issue, of course, is the strike against machines. Colonel Dyer chiefly devotes himself, however, to pointing out the way in

which this prejudice operates to the detriment of the efficiency of the machine. Colonel Dyer maintains that the demand of the Amalgamated Society of Engineers—to which he always refers as the A. S. E.—was in plain terms that the whole of the machines in the workshops should either be placed in charge of members of that union, or that the men employed upon them should receive the same rate of wages, irrespective of skill. On the heels of this demand came another, which Colonel Dyer considers to be even worse:

"It was nothing more or less than that the employers should permit the Council of the A. S. E. to settle the wages that should be paid for operating every machine in every workshop, and that this rate should be paid, irrespective of the class of work the machine was doing, or the simplicity with which it was operated. Hundreds of instances might be quoted where the most unreasonable, despotic, and tyrannical demands were made, and as a rule granted by the employers, who were besieged by the mighty power of the A. S. E."

#### ALL A QUESTION OF OVERTIME.

He maintains, also, what is strenuously denied by the men, that the whole question really turns upon the question when the payment for overtime will begin. The very men who are loudest in their demands for the shortened day are the most clamorous for the privilege of working overtime when the shortened eight-hour day has been conceded:

"In plain English, the demand is that the employers shall begin to pay for overtime one hour earlier each day than hitherto, for it is well known to all employers that men will not remain in workshops where overtime is not worked, and that they seek those shops in which overtime is more general. To such an extent is this realized by employers that it is one of their greatest difficulties with their foremen to restrain them from employing their friends on continued overtime."

#### THE MEANING OF "THE SOCIAL MOVEMENT."

IT is the aim of Prof. Albion W. Small, in a thoughtful article contributed to the American Journal of Sociology, to explain and illustrate what has come to be known as "the social movement" of our time. This modern movement of society, in his view, comprehends something more than the impulse among men to better themselves, for men have always had that impulse; but now, in Professor Small's opinion, there is a new note in their purpose, a new force and a changed outlook. By the new note in men's purpose is meant this: men used to accept the situation, and

tried to make themselves as comfortable as possible in it. To-day they propose to change the situation. Besides trying to better themselves in the condition to which they were born, they now try to better the condition itself.

"They are not content with trying to get bet-They want to overthrow the wage system. They do not stop with plans to provide for a rainy day. They want to abolish the rainy day. They are not content with conjugal fidelity. They want to reconstruct the family. They are not satisfied with improvements in the working of governments. They want to eliminate governments. They look with contempt upon adjustment of re-They want to lations between social classes. obliterate social classes. The emphasis to-day is on change of conditions rather than upon adjustment to conditions. Consequently too much of the labor problem is simply the problem of avoiding labor. Instead of feeling a pride and obligation in service, men and women through all the grades are debauched by the vision of escape from service, or, what amounts to the same thing, exchange of work for a state that seems to require less work. Not how to do well the work of our present condition, but how to get into a condition which seems to promise release from work, is the question which teases the least respectable and sometimes the more respectable of those who make the social movement. der countries Americans are constantly surprised by evidences of pride in being the latest of several generations in the line of fathers and sons who have succeeded to the same lowly occupation and still find satisfaction in conducting it well. With us the rule is discontent unless the occupation of the children promotes them to conditions supposed to be more dignified than those of their parents."

The new force or volume of the social movement is shown in the higher degree of what is called "social consciousness." "The people who used to be called the rabble are now making their own appraisal of their social value." Moreover, this increasing volume of social force has new leverages in the form of popular education, improved means of communication, greater power of organization. These have made the social movement much more than a class movement.

"It includes among its active promoters people of all social strata, except perhaps the enormously rich, and even these do not always oppose the tendencies that I am describing. The social movement is popular in the most inclusive sense—i.e., it is made up of all sorts of people. Property is universally conservative, but in our day great property-holders who, on the whole, sympathize with the main tendencies of the social movement

are by no means rare. The social movement is thus not the inertia of the many slightly disturbed by the few—it is the momentum of the many hardly restrained by all the arts that the few can contrive."

#### MODERN ENDS AND AIMS.

Professor Small defines the modern outlook of the social movement as follows:

"The supreme purpose of life has sometimes been to escape the wrath to come. People are today fleeing from the wrath that has come, and they are frankly prospecting for happiness. may argue with this state of things as we please; the fact remains. The social movement is a deliberate undertaking to get more satisfaction out of life than it has ever yielded. It is impelled by the bold and stubborn presumption that men are fools not to be happy and comfortable in this world. There is not very much reckoning with the conditions of another world in the present social movement. The idea is that there is a way to be physically and morally happy now if we can find it, and then the hereafter will take care of itself. This way of looking at things is not necessarily opposed to religion. It is opposed to all conceptions of religion which make it a matter of greater importance to dead men than to living ones.

"It may be charged that if I have correctly described the social movement it is selfish and sordid and materialistic. That would be true in particular cases. It would not be true in general. I would rather say that the social movement is an effort for concrete, specific, definable goods, without much attention to the relation which these may bear to remoter abstract goods. The social movement is a demand for shorter working hours; for more sanitary working space; for better tenements; for higher wages; for less breadwinning by women and children; for shifting of the burden of taxation so that the load will bear more equally on all backs; for expenditure of public moneys in ways that will give all classes a rightful share of benefits; for the use of governmental machinery so that it will help most those who can do least for themselves, and not artificially increase the advantage of those who can do most for themselves. The social movement is in spirit a very sincere attempt of people who are sure they want certain things to secure those things. People are reaching for goods that they understand, or think they do, without bothering their heads much about goods that they do not understand."

Certain distinguishing features of the social unrest of to-day are reserved by Professor Small for treatment in the latter part of his article. He remarks that things supposed to have been assured to all Americans a hundred years ago now seem to many to be in jeopardy. Among the "inalienable rights" of the Declaration of Independence were "life, liberty, and the pursuit of happiness." It was deemed "seif-evident" that all men are endowed with these rights.

"The case is distinctly different now. that the theory has changed, but conditions have changed so that thousands of men distinctly believe and other thousands vaguely suspect that the latest gains in civilization have clouded the title of the average man to life, liberty, and free pursuit of happiness. The social movement of to-day is in great part a desperate struggle to save what seems to have been lost in the industrial rev-The toiling millions can buy with their wages more comforts than they ever could before. The laboring class, as a class, is more necessary to civilization than ever. The individual laboring man to-day, however, is haunted by the thought that he may any day lose his job. feels that he has less certainty of keeping himself and family from starvation or pauperism than the average American slave had of living in comfort through old age. The freeman's freedom to-day is evidently a struggle with severer and more relentless contingencies than slaves, as a class, have encountered in civilized countries in modern times.

"Men are accordingly beginning to feel that the wide, wide world is a very crowded place, and that its accommodations are not as free as they used to be. Somehow a great deal of the space has been spoken for in advance by people who hold it in reserve for themselves and their friends. We find ourselves very seriously playing the old game of 'goals.' There are fewer goals than there are players. Each change of places gives somebody a chance to improve his condition, but at somebody's peril of losing his Opportunities are to-day so controlled that men feel themselves more subject to the caprice of others than at any time since serfdom disappeared. It is no comfort to the side-tracked man to read in tables of statistics the story of material and moral gains by all classes. These tables make no exhibit of the sense of insecurity among individuals within the classes. schedule could be filled out it would show a balance of unhappiness so great that it possibly makes our present civilization bankrupt. chinery and capital and commercial combinations put multitudes in a condition of dependence on vast operations upon which they can exert but feeble influence. The many are getting into a state of panic as they contemplate the possibilities of this dependent condition. They feel that they have somehow been tricked out of their

share of guarantees for 'life, liberty, and the pursuit of happiness.' They suspect that they are really being deceived by smooth words. They think they detect the beginnings of a slavery for the many in which the masters are released from the moral responsibility which mitigated the lot of former slaves, and at the same time have subtler means of making their mastery oppressive.

"I will not undertake to discuss the grounds of this belief nor to pass upon its correctness. state the fact that men by millions take virtually this view of present social conditions, and the social movement is to be understood accordingly. It is really, in one part of its strategy, an abandonment of the old lines in which men a century ago fought for 'liberty, equality, fraternity.' That fanciful frontier is much too far advanced. men of to-day are fighting not primarily for these They are fighting for security: ideal conquests. security of standing ground; security of opportunity; security of personal recognition among the shareholders in the inheritances of the ages; security of a man's chance to be a man; security that the mighty impersonal power of capital and organization shall not be allowed to march masses of men roughshod over individual men in pursuit of schemes vast in aim but needlessly terrific in means."

#### SOCIALISTS AND ANARCHISTS ON EDUCATION.

THE editor of the Educational Review publishes in the January number of that periodical the opinions of several representative socialists and anarchists on the subject of popular education.

Mr. Charles H. Matchett, the candidate of the Socialistic Labor party for the Presidency in 1896, says that while socialists believe in "higher education," and that every man and woman should get all the education possible, through either public or private provision, they consider it more important at present that the Government should provide an abundance of elementary schools. Compulsory education laws are now practically inoperative; under the coöperative commonwealth, Mr. Matchett thinks that such laws would be unnecessary.

"Then there would be an abundance of leisure for all members of the family. Men would be freed from the continuous grind of work to which they are now subjected, which not only occupies the bulk of their time, but so wears upon them physically that they lose all stimulus for intellectual effort. Under the new social system, with less work there would be less worry, less wear and tear. The mind of the workingman, instead of being fagged out as it is now, would

be responsive to all educational influences. Under such an enlightened spirit it would not be necessary to compel children to learn: they would do so willingly.

Mr. Lucien Sanial, who was the Socialistic Labor party's candidate for Mayor of Greater New York, is rather more specific in his definition of the socialistic ideal in education:

"While, first of all, we should provide for primary education, as I have already stated, I am in favor of giving every child the highest education which its natural intellectual aptitudes permit him to receive. Therefore, dealing with the practical question, I would first provide for compulsory primary and grammar school education, and then give the children that had shown superior ability a free education in the higher grades of science. One great difficulty in enforcing compulsory education arises from the poverty of the parents of children growing out of the present economic condition. I would have the municipalities provide free meals for poor children, as is done in Germany; free clothing, if necessary; and even free lodgings if the condition of the parents were such as to make that advisable."

#### THE VIEWS OF ANARCHISTS.

Mr. Benjamin R. Tucker, the editor of *Liberty*, says:

"The anarchists do not believe that education should be furnished to children by the State. We have no objection to philanthropic efforts in that direction—people voluntarily combining together for such a purpose—but we do object to public schools supported by compulsory taxation.

"So far as education is connected with what is commonly called the 'general intelligence' of the public, the anarchistic idea is that the most intelligent public is the public which is educated to know how to do what it wants to do. The people may always be trusted to find out the means to provide for the instruction they desire. To be worth anything, education must come as the supply responsive to demand. Private enterprise always furnishes anything for which there is a demand, provided the demand is a practicable one.

"The anarchist believes that education does little or nothing in the direction of forming the morals of the people. It puts weapons in the hands of those who are criminally inclined, and instruments for good in the hands of those whose inclinations are good. Whoever is educated has power, and that power may be used for evil or for good.

"As to what education a child should have, the answer is, the education that it wants. Any one

who feels the need of higher education has the opportunity to strive after it and find the means of getting it. Educational enterprise should be, like any other, a commercial enterprise. It offers what is wanted to those who want it at a competitive price; those who want a little education will buy a little, those who want much will buy much."

#### THE "LET-ALONE" POLICY.

Dr. Gertrude B. Kelly makes elementary education an exception to the anarchists' rule of laissez-faire:

"While it is true that, briefly stated, the anarchistic creed may be stated as 'hands off; no interference,' this principle cannot be enforced in the bringing up of little children, because a little child is absolutely dependent upon its mother. But I suppose that every one who has anything to do with the bringing up of young children will agree that the less we interfere with them the better it will be. Certainly, under the wiser modern methods of child-training we seek to develop, as much as possible, the sympathies of the child's own nature; that is the idea of the kindergarten, and of modern primary-school education. The child is taught, by natural methods, to see and do the right thing. In a well-ordered family it is the same; the child learns to do right more by the force of example than by listening to the precepts of the moral law. In the same way it learns to speak correctly, not from continually referring to a grammar, but from hearing its parents and their friends use proper

These writers generally agree in commending manual training and scientific studies as parts of the school curriculum.

# THE FRANCISCANS OF OUR DAY. Sir Walter Besant on the Salvation Army.

SIR WALTER BESANT contributes to the Contemporary Review an article upon "The Farm and the City" which is one of the most thoroughgoing and enthusiastic tributes to the work of the Salvation Army that has recently appeared.

Sir Walter Besant thus states the reasons which led him to write the article:

"For manifest reasons—especially the interest which attaches to any popular movement—it has been my pleasure for many years to watch the society, or order, called the Salvation Army. It has recently become a necessary part of my work to study all their documents and to investigate personally the practical results of their great endeavor. It will be conceded at the outset that such an investigation—for which I claim no orig-

inality—should be at least usefu in clearing up doubtful points in one's own mind. It will be also conceded that the man who conceived, created, and organized this vast society must be regarded as a remarkable man; remarkable if the charges brought against him are true—they have been repeated over and over again; remarkable in that case for an unblushing audacity, for a brazen front worthy of Titus Oates, for an audacity in hypocrisy beyond parallel; remarkable, if the charges are false, for his tenacity, his perseverance, his silence under attack; still more remarkable, if it should prove that his efforts are inspired by a genuine desire to raise the fallen and to relieve the unhappy; most remarkable, if it should prove that the machinery invented by him is the most practical and the most promising, and already the most fruitful of results, that has ever been imagined or designed.

"I think that it is a plain duty to bear witness to things seen and examined and proved. I think that when one has become firmly impressed with the present importance, the stable character, and the vast possibilities of such a scheme as is now at work in our midst it becomes his bounden duty to testify as to what he believes, and to show cause for his belief."

#### THE SALVATIONISTS AND THE FRANCISCANS.

Sir Walter Besant has examined the working of the social scheme in all its bearings, and he is immensely impressed with what is being done. He declares that the Salvationists are the modern Franciscans. He says:

"Theirs is a mission to go down, down, down among the depths where there is ever a lower depth still; theirs is the task to raise the worst and the most hopeless. At present, I am firmly convinced, they are moved one and all by the most sincere pity, the most real and pure passion of pity, for the outcasts of the world. They are ruled by an organization which seeks to produce its results by personal service, self-denial, enthusiasm, and sympathy. They are controlled and regulated by a system and an order which I cannot find in any other institution in the world. To me it has been for many years an everincreasing delight to watch this society growing, developing, inventing, and creating, in every direction of humanitarian effort. But they must remain poor. They must always remain poor. That is essential."

#### THE SUCCESS OF THE SOCIAL SCHEME.

He is particularly pleased with the farm colony, nor is he in the least daunted by the fact that at present the farm colony entails a net annual loss of \$20,000. That is, in fact, five times

recouped by the gain to the society of the men whom it reclaims and redeems. In sheer money, he reckons the farm colony at Hadleigh saves society \$110,000 a year, and he says:

"For that alone, without counting the reformation of so many wastrels, I maintain that further and wider recognition on our part is due to the man and to his scheme. The farm was an experiment; it is now an achievement. And as soon as one such farm can be shown to succeed there may be dozens."

#### THE SHELTERS AND THE PRISON BRIGADE.

Sir Walter Besant, leaving the farm, goes into detail over all the various departments of the social scheme. He says:

"I have gone through most of the work attempted and achieved by the army. There remain the shelters. These have been much abused, and are continually attacked. The great reason for attacks seems to me jealousy of the great organization that is spreading over the whole country, dwarfing and swallowing up the efforts of the various churches to reach the very poor."

General Booth could not wish for a more thoroughgoing certificate of all the virtues than that which Sir Walter Besant has given him. Incidentally, Sir Walter comments upon the fact that although a departmental committee recommended that the army should be allowed opportunities to visit prisons, "yet in all the countries except our own where the Salvation Army has been received the officers are allowed to visit the prisons, and to hold meetings within the prisons, and even to enroll prisoners as members of their society—so-called soldiers of the army."

#### ATTITUDE OF THE CHURCH OF ENGLAND.

If, then, the army is doing so much good, if it is doing all this excellent work which Sir Walter Besant describes with so much appreciative enthusiasm, why is it that it is not as universally recognized as it deserves to be? Sir Walter Besant's reply is that it is chiefly owing to the jealousy and suspicion with which it is regarded by the Church of England. The Church is prejudiced against any one who adopts new methods, and who does not conform to its standard; and, further, it dislikes the Salvationists just for the same reason that the secular clergy hated the The Salvationists, like the Franciscans, "pay no heed to the parish, they ignore the vicar; and the greatest work ever attempted for the relief of the poor, the rescue of criminals, the reformation, elevation, and civilization of the outcast class, has been organized and is going on, is advancing by leaps and bounds, is covering the whole world, without the help or the advice or the leadership of bishop, priest, or minister. This, I believe, is the chief reason why the social work of the Salvation Army is looked upon by the Church as a body with jealousy and suspicion and dislike. Will the Church ever be able to take over the Salvation Army? Never. It is not possible. The only way, the best way, is for the Church to recognize far more freely than has hitherto been the case the importance and the reality of the social work undertaken by the most remarkable man that the history of social endeavor has yet presented to the world."

# THE NATIONAL GOVERNMENT AND THE PUBLIC HEALTH.

A PROPOS of the recent yellow-fever epidemic in the South, the North American Review for December has three articles by physicians on various aspects of the proposition for Federal as opposed to State control of quarantine and other health regulations.

Dr. John H. Girdner gives an account of the efforts recently made in Congress to secure the enactment of a bill providing for the establishment of a health bureau in the Treasury Department. This bill was defeated because of opposition, chiefly from the South, on the ground of its interference with State rights. Commenting on this opposition, Dr. Girdner says:

"Carried to its logical conclusion, the argument amounts to this: A State's rights are more precious than the lives of its people, and though all should die, yet must not the assistance of the other States of the Union be accepted by the afflicted one, because their power can be exerted only through the common central government.

Members of Congress from the Southern States, where the opposition to national health legislation was greatest, boasted that sanitary conditions in the Southern cities had been so much improved, and the local and State boards of health had become so efficient, that all fear of yellow fever becoming epidemic again was without cause, although the leading sanitarians and scientists of the country held a contrary opinion."

#### INDIVIDUAL STATES UNEQUAL TO THE TASK.

"It has taken less than four years to prove that this boasted sense of security was false. The recent epidemic of yellow fever long and obstinately defied the utmost efforts of the local and State health authorities to stamp it out. It is no reflection on these afflicted States that they failed and were obliged to ask aid from other sections of the country. Similar failure is hable to be the experience of any State when attacked by an

epidemic disease, because no State can have at hand proper resources in money and organization to repel promptly and effectively an extensive invasion of disease germs, any more than it can be expected single-handed to repel an invasion of its territory by a foreign army.

"It is unjust and unreasonable that one State should have to bear alone the brunt of suppressing an epidemic which appears within its borders. By reason of climate and geographical location some States are more liable than others to epidemic outbreaks, and the burden of protecting all other States in the Union should not fall on the State attacked. Disease germs have no respect for State lines, and no effective warfare will ever be made on them until the resources of the whole country are united in a thoroughly equipped national health department, which will stand ready at all times to promptly stamp out infection wherever it may appear, regardless of political divisions of the country.

"Scarcely any two States in the Union have the same health laws, and many of them have none at all, or they are so inefficient, both in construction and enforcement, that they are unworthy of serious consideration in the light of modern knowledge of the causation and prevention of disease. This present condition of chaos in the health laws of the various States of the Union destroys all hope of stamping out or materially lessening the microörganisms which produce any one of half a dozen diseases which attack hundreds of thousands of our people annually. The efforts of any one State to destroy within its borders disease-producing germs will be neutralized by the failure of all the other States to act in concert."

It is as if forty-five persons were set to work to sweep a large floor, and each one, acting on his own account, should decide to sweep only in a little circle around his standing-place. "The dust from each sweeper would simply be tossed into the circles of the others and back again, and so on forever, without the floor becoming cleaner. Now, let some directing force insist that all sweep in one direction, each aiding the other, and the work is soon completed."

#### THE WAR AGAINST DISEASE GERMS.

Dr. Girdner insists that quarantine, or the keeping out of disease germs, should be only one, and that not always the most important, feature of a proper national health organization. "Our point is that Congress should look away from the coast line to the interior, and not only legislate to keep out disease, but establish an efficient national health organization which would also result in a practical application of our knowledge as to the

prevention of those diseases which always exist among us. Cholera, yellow fever, typhus fever, and bubonic plague are practically the only diseases which quarantine stations pretend to keep out, and these diseases taken together have not caused an average of one thousand deaths per year for the past twenty years. On the other hand, three diseases alone-viz., tuberculosis, typhoid fever, and diphtheria—destroy 157,072 And be it remembered that we lives annually. are as familiar with the cause and means of preventing these three scourges of our people as we are with those of the diseases against which we quarantine. If it is contended that the low deathrate from those communicable diseases against which the nation keeps up a quarantine is directly and solely due to the quarantine, we will admit the contention, and that fact at once becomes the strongest argument why the national Government should also carry on a successful warfare on those other disease germs which already exist within our borders.

"When an epidemic of yellow fever, such as has been in the Southern States this autumn, appears, the public is thrown into a condition of semi-panic; business and transportation are interfered with, and that disgrace of the close of the nineteenth century, the shotgun quarantine, is established. The same people who are so afraid of an occasional epidemic of communicable disease are not at all disturbed by the fact that three or four other diseases, just as communicable and just as eradicable, are always in their midst, causing a hundred and fifty thousand deaths per year. And, worst of all, their representatives in Congress have hitherto opposed every effort to secure legislation which would make all the resources of all the people available for the immediate suppression of these periodic epidemics which they so much fear, and, what is of greatest importance, for keeping up a steady and efficient warfare on all the microscopic enemies of the human race within our borders until, like the buffalo, they shall become extinct."

#### The Training of Physicians.

Dr. Alvah H. Doty, health officer of the port of New York, calls attention to the present lack of medical men specially equipped for service as health officers:

"The majority of graduates of medical colleges leave these institutions without having seen a single case of any quarantinable disease; they know practically nothing of disinfection or disinfectants, or the care of infected ships or houses. Therefore, when they have been brought face to face with these conditions they are frequently powerless to act. This is only too soon recog-

nized by the public, and a want of confidence in a health officer of this kind is naturally followed by such excesses as shotgun quarantines, etc. That the necessity for this education is appreciated by the profession is evident from the fact that a special course in the study of infectious disease and sanitation will probably soon be added to the curriculum of the different medical colleges."

#### Local Quarantine in the South.

Dr. C. M. Drake, chief surgeon of the Southern Railway, who has had good opportunities for observing the operation of the local quarantine regulations of the Southern States during yellow-fever epidemics, cites the recent experience of the Gulf States as a telling argument for the Federal control of quarantine:

"Illustrations of confusion and conflict of sanitary and quarantine regulations during the recent epidemic were to be found everywhere in the territory involved. Unreasonable quarantine restrictions were imposed. One State quarantined against another State, and one town against another town. One or two small villages in Alabama and Mississippi quarantined even against Travel was interfered with or wholly the world. suspended; commerce was paralyzed throughout Alabama, Mississippi, Louisiana, and Texas, and greatly hampered in all contiguous States; while the movement of railway trains in these States was either entirely forbidden or limited. United States mails were stopped and more than once destroyed by local authorities. The requirements of State and local boards of health for disinfection were in many instances as absurd as they were incompatible with each other, and the absence of uniformity in regulations imposed unjust hardships upon the traveling public and the railways interested. The loss to the country must be estimated by millions of dollars. The South was on the very threshold of prosperity; crops were abundant in yield, manufactories were opening up, and new life and hope were ready to enter. In the presence of this happy condition a single case of yellow fever was introduced, and the disease was allowed to spread, producing a panic among the people, destroying commerce and traffic, and affecting injuriously every enterprise in the section. State and municipal authorities found themselves unable to cope with the disease or to stamp it out, because they lacked experience and the machinery for effective quarantine and for the enforcement of sanitary rules and regulations."

It is gratifying to learn that the people in the regions affected by the recent epidemic are beginning to favor national quarantine.

#### SOME WOMEN NOVELISTS OF THE DAY.

I N the Christmas double number of the Woman at Home Mrs. Sarah Tooley gives an account, with portraits and autographs, of twenty-three women novelists, most of whom are natives of the British Isles or of British colonies.

The following table condenses much of the information which Mrs. Tooley collected:

first stroke. They had the usual difficulties with publishers. Sarah Grand had to publish "Ideala" herself, and sell it as best she could. Blackwood declined "Ships That Pass in the Night" on the ground that it was too sad ever to be popular; but it jumped off with a great success at once, and it has continued to be a favorite ever since. Miss Braddon published "Lady Audley's Secret"

MARRIED OR SINGLE.	Novelist.	Born.	Now LIVING AT-	FIRST NOVEL.
M. M. S. M. M. M. M. S. M. M. M. S. M.	Sarah Grand	Manchester London . America West Indies . Italy (?) . Portsmouth . Ipswich . Hampstead . Keswick . Brighton . London . Eversley . Brighton . Ireland . Holland . (Half French) . South Africa . Derby . Harrow .	Lichfield House, Richmond. Washington. Putney Lancaster Gate, London. London Colville Gard., Longridge Rd., Earl's Ct., Lond. Southsea. Villa Julia, Hastings Hampstead Brougham House, Malvern. St. Peter's, Eastbourne. The Edge, Tooting Graveney Common, Lond.	Nellic's Memories. Some Emotions and a Moral. Mrs. Keith's Secret. The Romance of Two Worlds. Under Grey Walls. The White House by the Sea. Ships That Pass in the Night. Azeth the Egyptian. Won by Waiting. A Bad Beginning. Mrs. Lorimer. Love's Conflict. Great St. Benedict's. Lover and Husband. How It All Happened. The Story of an African Farm

From this it will be seen that of the twentythree women novelists, fifteen are married and eight are spinsters. Of the fifteen who are married, at least three-of whom two were married at the age of sixteen and one at nineteen—are either separated or divorced from their husbands, while three are widows. Another interesting item is the extent to which the women novelists of to-day have been subjected to other than insular influences. Mrs. Clifford, Olive Schreiner, and Mrs. Humphry Ward were all born in the John Oliver Hobbes was born in the United States, and Mrs. Molesworth in Holland. Ouida is half French. Mrs. Steel was trained in India, where Florence Marryat also spent some of her early years. Marie Corelli, Miss Betham Edwards, and Mrs. Macquoid were all more or less subjected to French influences, while Beatrice Harraden has spent some years in California. Mrs. Harrison, Charles Kingsley's daughter, has also been subject more or less to Indian influences, and Sarah Grand spent her married life in Singapore, Hong Kong, and the Far East. It will be seen that not more than eight out of the twenty-three escaped the influence of American, colonial, or continental life. Of the modern novelists. Mrs. Meade and Sarah Grand were born in Ireland, and Mrs. Steel is a Scotchwoman. Of their books, several achieved great success at the

when she was twenty-four, while John Oliver Hobbes was only twenty-two when she wrote "Some Emotions and a Moral." Olive Schreiner must hardly have been more than twenty when she wrote "The Story of an African Farm." Mrs. Humphry Ward, Miss Adeline Sergeant, and Beatrice Harraden all enjoyed the advantages of a university education. Mrs. Hodgson Burnett was too poor to enjoy such a privilege, as, when a child, she could find no paper on which to write her stories excepting old butcher books.

#### ENGLISH NEWSPAPER WOMEN.

N an article which Janet E. Hogarth contributes to the Fortnightly Review on the "Monstrous Regiment of Women" which is endeavoring in a miscellaneous kind of fashion to storm the professions, being driven thereto chiefly by a distaste for teaching and a loathing for the conditions of domestic service, she describes the doleful case of the woman journalist. College girls, she says, have a hankering after journalism, of which she endeavors to cure them by writing as follows:

"Ask half the girls now at the universities who have their own living to carn how they propose to earn it, and they will answer, 'In any way except by teaching.' Press the question home, and you will find that the altruists incline to the public service and the individualists to a profession, about which they are in such blissful ignorance that they use journalism and literature as interchangeable terms.

"If they only knew a little more of the position and prospects of the average woman journalist, of the desperate struggle to make both ends meet, of the necessity of accepting the most humdrum and distasteful tasks, of the trials of the interviewer, and the endless subterfuges of the society reporter! But they have heard of the lady who swayed South African politics, or they see occasional contributions to the daily papers headed by well-known names. Never for one moment do they suspect what should be proclaimed far and wide and made matter of common knowledge, that the really successful women journalists—successful, that is to say, from a masculine, and not a merely feminine, standpoint—can be counted on the fingers of one hand. Nor, as far as one can see, is this likely ever to be different. The supposed freedom of a journalist's life, with its possible literary introductions, is at least as attractive to young men as it is to young women; and which sex will in the long run prove best able to withstand the inevitable strain and unwholesome conditions of the journalist's life? If a woman cannot do night work, and regular night work, the prizes of Fleet Street are not for

"I do not say that she may not make a living, but she will have to content herself with a kind of journalism far enough removed from literaturewith the chatty article, or the women's papers, with the Forget-Me-Nots, the Home Notes, the Nursery Chats, and the hundred-and-one scrappy periodicals which have so successfully hit off the taste of the rising generation that they bid fair to reduce England once again to a condition of illiteracy. Indeed, there is a deeper depth still. What shall be said of the journalistic tout, unconnected with even the most ephemeral of newspapers, who lives by pouncing upon little scraps of information and hawking them around the different newspaper offices, eking out, Heaven knows how, the precarious existence doled out to her in shillings and half-crowns by the shrewd business manager? Is that a life which commends itself to an educated woman? No: there is room in the world for a few more women doctors; there will probably in the future be a very considerable demand for women as factory inspectors, inspectors of schools, officers of health, superintendents of cottage homes, matrons of prisons and workhouses, and highly trained philanthropic workers; but for anything except the woman who is content to make the wages of occasional journalism supplement other resources this London world has no place. And occasional work is not, strictly speaking, professional work, in journalism or anywhere else."

#### DO PEOPLE READ EDITORIALS IN THE PAPERS?

HE January Atlantic Monthly opens with an essay by E. L. Godkin on "Growth and Expression of Public Opinion." Mr. Godkin takes occasion to discuss the effect on public thinking of newspaper editorials, and speaks very plainly his lack of belief in the importance, so far as influence on public opinion is concerned, of the editorial writing in America to-day. one reason, the collection of news has become such a business in this country, and has been so greatly increased by improvements in the printing press, that the newspapers are frantic to outdo each other in the greater number of facts that they can bring to the public notice, more and more regardless of the intrinsic importance of such facts. In this way the sense of proportion about news has been destroyed. Many of the items of news are of little moment. business requires that as much importance as possible shall be given to them by the manner of producing each item, or what is called 'typographical display.' Consequently they are presented with separate and conspicuous headings, and there is no necessary connection between They follow one another, column after column, without any order, either of subject or chronology." The result of this is that the newspaper reader has become trained to run his eye down a list of more or less startling and entirely disconnected head-lines, and he is not willing to summon the attention and concentration necessary to peruse an adequate editorial article.

#### THE PRESS AT CROSS PURPOSES.

"The result," says Mr. Godkin, "is that the effect of newspaper editorial writing on opinion is small, so far as one can judge. Still, it would be undeniably large enough to possess immense power if the press acted unanimously as a body. If all the papers, or a great majority of them. said the same thing on any question of the day, or told the same story about any matter in dispute, they would undoubtedly possess great in-But they are much divided, partly by fluence. political affiliations, and partly, perhaps mainly, by business rivalry. For business purposes, each is apt to think it necessary to differ in some degree from its nearest rivals, whether of the same party or not, in its view of any question, or at all events not to support a rival's view, or totally to ignore something to which it is attaching great importance. The result is that the press rarely acts with united force or expresses a united Nor do many readers subscribe to opinion. more than one paper; and consequently few readers have any knowledge of the other side of any question on which their own paper is, possibly, preaching with vehemence. The great importance which many persons attach to having a newspaper of large circulation on their side is due in some degree to its power in the presentation of facts to the public, and also to its power of annoyance by persistent abuse or ridicule.''

#### THE FINANCIAL SIDE.

Still another agency which has interfered with the press as an organ of opinion is the greatly increased expense of starting and carrying on a modern newspaper.

"The days when Horace Greeley or William Lloyd Garrison could start an influential paper in a small printing office, with the assistance of a boy, are gone forever. Few undertakings require more capital or are more hazardous. most serious item of expense is the collection of news from all parts of the world, and this cannot be evaded in our day. News is the life-blood of the modern newspaper. No talent or energy will make up for its absence. The consequence is that a very large sum is needed to establish a newspaper. After it is started, a large sum must be spent without visible return, but the fortune that may be accumulated by it if successful is also very large. One of the most curious things about it is that the public does not expect from a newspaper proprietor the same sort of morality that it expects from persons in other It would disown a bookseller and cease all intercourse with him for a tithe of the falsehoods and petty frauds which it passes unnoticed in a newspaper proprietor. It may disbelieve every word he says, and yet profess to respect him, and may occasionally reward him; so that it is quite possible to find a newspaper which nearly everybody condemns, and whose influence most men would repudiate, circulating very freely among religious and moral people and making handsome profits.

"A newspaper proprietor, therefore, who finds that his profits remain high, no matter what views he promulgates and what kind of morality he practices, can hardly, with fairness to the community, be treated as an exponent of its opinions. He will not consider what it thinks, when he finds he has only to consider what it will buy, and that it will buy his paper without agreeing with it."

#### A PAINTER OF CHILDREN.

HE January McClure's opens with a pleasant article by Norman Hapgood on Boutet de Monvel, the French painter of child life. There is nothing rarer than really good portrayers of children in any sort of art, and it is especially This French painter, M. true in pictorial art. de Monvel, has set himself the task of giving to his childish figures individuality, character, and youthfulness, not to paint a physical child with a spiritually adult expression, but to give the real boy and the real girl. He succeeds, too, in differentiating between children, something which the artist who casually turns his attention to child life rarely does. M. de Monvel is now a man of age and experience, head of a household, and with a place in the world sustained with dig-But he is not merely amused with the ingeniousness of the children he depicts, but considers the portrayal of them a noble and worthy phase of his beloved art. M. de Monvel chose art as a profession and entered the studio of Tabernel when he was a little over twenty. served in the army after Soudan, and then went through the studios of Julius and Carolus Duran. His pictures have been published in colored illustrated books most largely. His "Joan of Arc" is perhaps his most famous work, and "Xavière" is, with "Joan," his best-known production. marvelous what an amount of mien M. de Monvel attains in his boys with a dot or a dash here and there. The meaning is never in doubt, and every pin-point of color is replete with meaning. M. de Monvel is now making frescoes for the church building at Domremy, the birthplace of the maid whose story he is to tell again, but his studio is full of portraits of children and of sketches for illustrations.

"An increasing demand for De Monvel's portraits of children has been the natural result of the popularity of his illustrated books. Of course he had always been making portraits in his illustrations; he has told himself how hard it is to make each little figure in a group a separate person; and all these constant efforts of many years made the step to portrait-painting an easy one. His portraits have been as successful as his own fanciful children. Not only has he been able to give the appearance of his sitter with the certainty and vividness which was to be expected of him, but he has proved his high artistic judgment in the way which all accessories are subordinated and yet used to strengthen the central effect. Just as in the picture from 'Xavière,' on page 202, full as it is of objects — table, chairs, window, all conspicuously placed — we see, nevertheless, only the faces, the attitudes, the light, all giving the spirit, the sentiment, the significance

of the scene; so in his portraits, backgrounds and the arrangement of accessories show exquisite tact, and while serving their purpose of putting the face and figure into relief, add, one might say, some side explanations to the type. It is marvelous how all parts of the canvas belong to the portrait; how typical accessories and background are so subtly and intelligently handled that one does not realize they are there at all."

#### ANIMATED PICTURES.

A N interesting account of the new and wonderful processes in photography by which pictures of animate objects in motion are produced is contributed by Mr. J. Miller Barr to Appleton's Popular Science Monthly.

Mr. Barr's explanation of the principles on which are based the class of machines represented by the kinetoscope and the cinematograph is as follows:

"Though differing much in the details of their construction, these various machines are designed to fulfill the same general purpose—viz., the display in rapid sequence of a long series of photographs, which hence convey to the eye and brain the impression of a continuous and animated scene. In the kinetoscope the small pictures are viewed through an enlarging lens by reflected light, whereas in the cinematograph, phantascope, vitascope, etc., they are projected upon a screen—a plan that is obviously best suited to the requirements of a public exhibition.

"A machine of the last-mentioned type may be shortly described as a stereopticon, combined with such mechanism as is requisite for the precise manipulation of the celluloid picture-film. When the apparatus is set in motion the long band of celluloid passes quickly, though not continuously, behind the projecting lens, between spools or bobbins which revolve at a uniform rate. While thus passing from its original spool to the winding reel the film encounters certain pulleys and toothed rollers that serve to accurately direct its movements. Along its edges are numerous small perforations into which the teeth of the rollers fit with precision, and by this means the small transparencies are made to occupy exactly similar positions when their images are projected upon the As each picture in its turn attains this critical position it is momentarily brought to a standstill. At the same time a shutter is opened and an image of the picture flashes for an instant upon the screen. The shutter is then quickly closed, the picture resuming its motion, while its successor in the series is brought into a similar fixed situation."

In the vitascope and phantascope, however, the shutter is omitted. The intermittent motion of the film does not seem to mar the continuity of the pictures, and they are more fully illuminated, as Mr. Barr explains in a foot-note.

"This temporary stoppage of the film (or rather of a portion thereof), as each picture attains its proper place behind the projecting lens, is a very essential feature of the process. It is effected by various ingenious devices, among which those of Acres, Edison, and the Lumière brothers are deserving of special notice. Without, however, attempting to describe these diverse forms of apparatus, I will try to indicate in general terms the means by which an intermittent motion of the film is secured. Let us assume that a picture has arrived at the fixed position already referred to. At the instant of its arrival a portion of the film on the preceding side of the picture will be in an unstrained or slack condition. The 'slack' is then taken up by a continuously moving sprocket pulley, whereupon a rod or roller is quickly brought to bear against the now tightened film, pressing it to one side and as quickly releasing it. By this movement the next picture is pulled into its fixed position, while the film is made taut (or nearly so) on the following side of this picture. These operations are repeated continuously until the entire film has passed through the holding device in rear of the lens. The process may be compared, in a general way, with the automatic feeding of a web of paper to an ordinary printing

The camera used in taking the negative from which motion pictures are made is provided with a similar mechanism to that employed in showing the finished photographs. The picture roll is replaced by a roll of sensitized film, upon which the exposures are made at the rate of from 25 to 50 per second. The films range in length from 50 to 200 feet, and contain, when finished, from 800 to 3,000 tiny negatives.

After the film has been subjected to the usual photographic operations it is made to pass, in contact with a second sensitized film, beneath an incandescent lamp, and by this means the photographs are printed upon the sensitized surface. This second film is then in turn passed through the various photographic processes, and when complete it is wound on a spool which may then be placed in the machine used for exhibiting the pictures.

"Thus the pictures, when displayed before an audience, are seen to flash out in the same rapid sequence in which the original scenes were presented to the 'eye of the camera.'

"A homely illustration may aid the reader in arriving at a perfectly clear comprehension of this subject. Let us take the case of a man who is slowly walking past a high picket fence and

gazing intently at some moving object on the other side of the fence. His view will be interrupted at regular intervals by the pickets as they successively encounter his line of sight. But if he proceed more quickly a seemingly continuous view of the object in question will be obtained, though rapid alternations in its brightness will be manifested. These effects are due to a wellknown cause—viz., the persistence of luminous impressions upon the human retina. Thus our observer's eye retains for a brief period its impression of each momentary glimpse that is afforded him under the conditions just described; and the successive visual images become merged into one another, while the rapid fading of these retinal impressions gives rise to the pulsating effect that is familiar to everybody.

"Now, the well-known optical phenomena which I have here attempted to describe are, in fact, closely analogous to those exhibited by the animated pictures. In the former case we have to deal with a moving body; in the latter, with photographs of such bodies; and since the momentary images in the first-mentioned case are practically changeless, it is evident that a similar general effect must be produced upon the rgan of vision."

#### ST. PAUL'S CATHEDRAL.

THE second day of December, 1897, was the two hundredth anniversary of the opening of the present St. Paul's Cathedral in London for divine service. A writer in Blackwood's calls attention to the close association of both old and new St. Paul's with England's national history. There was, he says, a convention in the old cathedral that was a prelude to Runnymede. "There was thanksgiving in old St. Paul's after Agincourt, as there was in new St. Paul's after Oudenarde. For several hundreds of years it has been selected as the appropriate place for the expression of the nation's grief or joy and gratitude: in this century there have been three imposing manifestations of such—the funeral of the Duke of Wellington, the thanksgiving for the recovery of the Prince of Wales, and, freshest in our memories, the jubilee celebrations of Much of the money spent upon the cathedrals was raised by voluntary or enforced subscriptions throughout the whole kingdom. It 18 said that in the records still existing of the sale of indulgences on behalf of old St. Paul's there is evidence of money received from every diocese. Bishop Maurice, when it was begun, on the ruins of an older, in the eleventh century, set himself the task of building a church that should be worthy of the capital of the kingdom.

Six centuries later, Bishop Compton claimed for its successor, the present cathedral, that it was 'of very public concernment, and the whole nation, in some sort, interested in it, and the glory of the work will redound to the whole nation, to which it will not only be a singular ornament, but likewise a standing monument of the public affection and zeal of this Protestant kingdom to piety and good works.' And that sentiment in great measure is applicable to St. Paul's in the present day."

#### A MUNICIPAL SHRINE.

"Old St. Paul's, standing at the heart of London from Norman times to the Restoration, had the closest associations with our ecclesiastical and civil history; but of these we may not speak. They have found their enthusiastic historian in Dean Milman. The cathedral's relation with the civic life of old London, however, is more relevant to the story of the building itself. east end of the churchyard, as has been mentioned, the citizens held their folkmotes; they assembled to arms at the west. In both cases they claimed these usages as rights. One of the earliest bishops, 'Bishop Norman,' used his favor with the Conqueror to preserve the Londoners in many of their privileges, and for centuries, probably beyond the time of Elizabeth, his tomb in the cathedral was visited once a year by the senate and citizens in procession."

#### "OLD ST. PAUL'S."

"Many of our readers will be acquainted with the appearance of old St. Paul's through prints after Hollar. It was a Gothic building, showing traces of many styles. Begun in 1087, it was doubtless designed on the lines of contemporary Norman churches, with little of a choir, possibly with no choir at all. At the time of the burning in 1136 the building had not gone very far toward completion, and afterward, as the restoration and the new work dragged on, great alterations were made on the original plan. When the choir—possibly we ought to call it the new choir—was finished in 1240, the change was considered so great that there was a fresh dedication of the cathedral. There had been a spire for twenty years before that, but the famous spire dated from 1315, when the cathedral was pronounced complete. There were twelve bays in the nave and twelve in the choir, giving a long and beautiful perspective from the west doorway to the Lady Chapel with its fine wheel-window in the east. The transepts were peculiar, in that they had important entrances in the north and south, and aisles on both the east and the west sides."

#### THE PERIODICALS REVIEWED.

#### HARPER'S MAGAZINE.

THE January Harper's contains an article by Mr. J. A. Wheelock on "The New Northwest," from which we have quoted in the department of "Leading Articles."

#### A GROUP OF AMERICAN PLAYERS.

Mr. Laurence Hutton contributes some readable reminiscences of "A Group of Players," which include Edwin Booth, "Billy" Florence, Lawrence Barrett, John McCullough, Lester Wallack, and Henry J. Montague. Mr. Hutton is a man whose sincere and enthusiastic appreciation of the personal charm which the histrionic temperament so often has, delights in the sympathetic, gentle, and "sweet" character of Henry J. Montague, whom he can call "a womanly man in a way without being at all unmanly." He tells, too, of the handsome face and winning smile of "Billy" Florence, of whom he says: "At the time of his death I knew of no man on the English-speaking stage who did so many things so well. Florence was a great joker, and his last joke was not the least notable of his efforts. He always stopped at the Fifth Avenue Hotel, and on his last visit there found that Fritz, the barber who always shaved him, was dead. Florence could not go to the funeral on account of his professional engagements, but when the boys in the shop told him of having raised twenty-three dollars for a floral tribute, Florence said: 'Here are twenty-seven more. Make it something handsome.' In return he was asked to prepare the motto to be fixed in purple violets across the mass of enormous white roses which had been ordered for the occasion-something everybody would understand and which Fritz himself would have liked. Without a moment's hesitation the actor said 'Next,' and the word was accepted and adopted." To support his belief in the fine tone which is possible in the actor's character, Mr. Hutton tells of joining Florence and McCullough in Delmonico's café just before he, Mr. Hutton, was going to be married. When that fact was announced McCullough replied that he was glad of it. "And then he spoke as a bishop might have spoken of the ennobling influence upon any man of a good woman's love. Florence coincided with him in every point; and rarely has woman received a more touching tribute than was paid her by those two play-actors in a public restaurant."

#### SOME HOPE FOR POPULAR JUDGMENT.

Mr. Charles Dudley Warner, in the "Editor's Study," finds some ground for optimism in the popularity of Tennyson's work throughout the English-speaking world, and he is final enough in his judgment of the Victorian poet to place him with such company as is mentioned in this paragraph: "The stepping-stones along the highway of the centuries are not many. Homer, Plato, Dante, Shakespeare, Goethe—they are not many; they and the heroes of action whose memory the writers have helped to save from indistinctness. Tennyson is one of them. . . We talk, and advisedly, of the want of literary appreciation in this hasty time. We see how sky-rockets are stared at, and how popular are many feeble, banal, and meretricious productions.

we say the public has no discrimination. But there

seems to be somehow existing a sound popular judgment. When anything genuine appears, the world is not very slow to take it to heart. Witness the quick response, only the other day, to Rudyard Kipling's 'Recessional.'"

#### THE CENTURY MAGAZINE.

HE January Century lends several of its pages to Archibald Forbes, the famous war correspondent and writer, for the purpose of exploding "A Myth of Waterloo," the myth in question being that on the day before Waterloo the Duke of Wellington rode over to Wavre to ascertain definitely what aid he was to expect from Blucher in the impending battle. Mr. Forbes sifts the evidence brought forward by Colonel Maurice, the chief authority for the story, and succeeds pretty well in proving that the ride to Wavre was never ridden. Mr. Forbes' chief evidence in rebuttal of Colonel Maurice is that none of Lockhart's superior officers ever spoke of a knowledge of it; that Wellington could not have evaded identification in the Prussian camp, and that notwithstanding the efforts of several Boswells to pump from the Duke of Wellington some testimony in regard to it, none of them has ever shown the slightest results. Moreover, the Duke of Wellington contradicted the story with his own lips in 1837, and in 1842 vicariously. This last Mr. Forbes considers the most final proof of all and sufficiently final for any one.

#### A NEW NOVEL BY DR. MITCHELL.

The versatile and prolific Dr. S. Weir Mitchell has not breathed between the end of his fine novel, "Hugh Wynne," and the beginning of a new story, the first chapters of which appear in this number of the Century, called "The Adventures of François." The hero is the famous François Villon, foundling, thief, juggler, and fencing-master during the French Revolution.

Gustav Kobbé gives some dramatic examples of "every-day heroism" in an article under that title.

#### THE FRENCH LACK OF GENIALITY.

There is a good article on "French Wives and Mothers," by Anna L. Bicknell, with illustrations by the inimitable Boutet de Monvel. The writer finds a lack of genial kindness in the French home. The French are well satisfied to let people attend to their own business. They are not hospitable, and do not like to have an outsider admitted to their home. Miss Bicknell gives some curious instances of this spirit. At the same time they are willing to show absolute sacrifice of self for some given specific motive, and their love of dramatic contrasts leads ladies of the highest rank who seem to be almost engrossed by frivolous pleasures to perfectly heroic acts of charity.

Leonard Huxley, a son of the famous scientist, contributes a paper giving some "Scenes from Huxley's Home Life," with some very interesting matters concerning the relations of the father to his children.

Another very fascinating collection of reminiscences is Martha Littlefield Phillips' "Recollections of Washington and His Friends."

Altogether this number of the Century is a notable one.

#### SCRIBNER'S MAGAZINE.

HE January Scribner's contains a deliverance from Mr. Reginald De Koven entitled "Some Tendencies of Modern Opera," in the course of which the author of "Robin Hood" works delicately up to his proposition that "the great stumbling-block in the way of operatic development at the present time, if not Wagner, is certainly Wagnerism." Mr. De Koven quarrels with the introduction of the leitmotiv on the ground that this musical device is pictorial rather than emotionally suggestive-"and it is emotional suggestiveness which is at the base of all modern musical thought." Notwithstanding his obvious efforts to arrive at his conclusion without arraying the Wagnerian myrmidons against him, Mr. De Koven will probably find them in open opposition at once when he says: "Future writers of opera, while not neglecting the orchestral lesson which Wagner taught, will inevitably recur to a saner use of the human voice. . . . We shall also, one would think, in future operas, when we have more thoroughly assimilated the great lessons that Wagner taught, and shaken out the chaff from the grain, come back to a more simple, a more lucid, a less complex and less turgid manner of expression." Mr. De Koven thinks that Verdi's "Falstaff" is as little appreciated and understood, as regards its possible bearing on future operatic development by the public of the present day, as "Lohengrin" was when first produced.

After a long silence, Mr. Thomas Nelson Page is heard again in the opening chapters of "Red Rock: A Chronkle of Reconstruction." The story opens in Virginia, in the year preceding the war, and is obviously bound on aquest for the honor awaiting the novel of the civil war. It is, to judge from the first chapters, a very picturesque and pretty story, and shows that Mr. Page has not allowed his pen to rust during these several years of inactivity.

Another feature of this number is the first installment of "The Story of the Revolution," which is being told by the Hon. Henry Cabot Lodge, with many and many illustrations. It is probably to be a serial of some length, as these first twenty-nine pages only reach through "The First Blow."

Bret Harte contributes a two-page poem, "The Birds of Circucester," with fine illustrations by Howard Pyle.

#### THE ATLANTIC MONTHLY.

WE have quoted in another department from Mr. E. L. Godkin's essay which opens the January Atlantic Monthly, on "The Growth and Expression of Public Opinion."

It is followed by a charming article by John Muir on "The Wild Parks and Forest Reservations of the West." Mr. Muir as a poet, as well as a naturalist and explorer and a magazine writer, or rather in all those capacities, delights in the tendency, becoming more marked every day of the nerve-shaken, free, civilized American, to go out into the wilderness. He is beginning to flud out that "going to the mountains is going home: that wildness is a necessity; and that mountain parks and reservations are useful, not only as fountains of timber and irrigating rivers, but as fountains of life. Awakening from the stupefying effects of the vice of over-industry and the deadly apathy of luxury, they are trying as best they can to mix and enrich their own little ongoings with those of Nature, and to get rid of rust and disease. Briskly venturing and roaming, some are washing off sins and cobweb cares of the devil's spinning in all-day storms on mountains; sauntering in rosiny pine woods or in gentian meadows, brushing through chaparral, bending down and parting sweet. flowery sprays; tracing rivers to their sources, getting in touch with the nerves of Mother Earth; jumping from rock to rock, feeling the life of them, learning the songs of them. panting in whole-souled exercise and rejoicing in acep, long-drawn breaths of pure wildness. This is fine and natural and full of promise."

Mr. Muir goes on from this hopeful consideration to speak of the particular regions still left in their primeval beauty in the great West. During the past thirty years that most beautiful central valley of California, 500 miles long and 50 miles wide, has been turned from one continuous bed of golden and purple flowers into a farm of plowed fields and pasture lands, and most of our finest forests have been scarred and ravaged. The most extensive, least spoiled, and most unspoilable of the gardens of the continent are the vast tundras of Alaska. They extend from about latitude 62 degrees to the shores of the Arctic Ocean. They show undulating beds of flowers in summer and in winter sheets of white snow flowers. Though they are small in stature, they are bright and cheery, and in the spring rise high enough to ripple and wave in the wind and display masses of purple, yellow, and blue. This vast region, especially that about Kotzebu Sound, has been protected by frost from depredation.

Aside from Alaska, the health and pleasure grounds left in the West are chiefly the four National Parks, the Yellowstone, Yosemite, General Grant, and Sequoia, and thirty forest reservations, all of them fairly accessible. These reservations contain 40,000,-000 acres of land, most of which is not yet spoiled, though most of it is wasted. Mr. Muir goes on to describe these different sanctuaries of the wilderness as only he can.

Gilbert Parker begins a new novel in this number of the Atlantic which opens with the opening of the nineteenth century as to time, and in the Norman-English island of Jersey as to place.

Thomas Wentworth Higginson contributes an article on "Literary Paris Twenty Years Ago" which makes very pleasant reading, and Mr. Edward M. Shepard analyzes the recent municipal elections and their results in his essay entitled "The Political Inauguration of the Greater New York."

At the conclusion of an essay on "The Present Scope of Government" Mr. Eugene Wambaugh decides there is no sufficient reason to fear that by and by Government will interfere dangerously with individual liberty, or will undertake more than it can undertake successfully, nor that it will fail to enlarge its scope as soon as there is seen to be a necessity for enlargement; and he thinks that the governing factor is the demand for individual liberty, and the intent to secure the public welfare will automatically prevent an undue movement in either direction.

Mr. Hall Caine's much-talked-of "Christian" is very much cut up in the anonymous essay "'Moral' Melodrama to Order," by an author who makes a chemical analysis of "The Christian" as follows:

"Item, one suicide; item, three murders; item, one bloodhound; item, four seductions; item, ballet-girls, gamblers, monks; item, two deaths in bed; item, music halls, thieves' dens; item, one impossible heroine; item, one impossible hero; item, one ha'penny worth of purpose to this intolerable deal of bombast."

#### McCLURE'S MAGAZINE.

WE have quoted in another department from Mr. Herbert E. Hamblen's chapter in "The Life of a Railroad Man," and from Mr. Norman Hapgood's article on Boutet de Monvel, the painter of children.

Cy Warman has a characteristically breezy chapter of his European experiences, which he calls "An American at Karlsbad." Here is a paragraph from his picture of the passing show at that great resort:

#### CY WARMAN'S IMPRESSIONS OF KARLSBAD.

"It is a great show: men and women from everywhere, with every disease that can possibly be charged to the liver, stomach, or gall. Even nervous people come here for the baths; and get well, or think they do, which is the same thing. There are men whose skin and eyes are yellow; and others green as olives; German dandies who walk like pacing greyhounds; fat young Germans who seem to be walking on eggs; and old, gouty Germans who do not walk at all, but shuffle. There are big, bony Britons in knickerbockers and elderly Englishmen whose love of plaids is largely responsible for the daily rains that come to this otherwise delightful region. There are modest Americans, with their pretty wives and daughters; and other Americans, who talk loud in the lobbies and cafés; Tyrolese, in green hats trimmed in feathers; and Polish Jews, with little corkscrew curls hanging down by their ears, such as we see in Jerusalem. Then there are a few stray Frenchmen, walking alone; and once-but not more than once-in a while a Parisian lady, and you know her by the charming cut of her skirt and the way she holds it up and the beautiful dream of a petticoat the act discloses. There are Austrian soldiers in long coats, and officers in pale blue uniforms, spurred and cinched like the corset-wearers of France."

#### CHARLES A. DANA AT VICKSBURG.

In Mr. Charles A. Dana's "Reminiscences of the Civil War," the third chapter of which appears in this number, the late editor writes of life in the trenches at Vicksburg, of Grant's efforts to secure reënforcements, and the diversions of the camp behind Vicksburg. When the Federal army entered Vicksburg on its capitulation Mr. Dana says that the buildings were in much better condition than he expected from the tremendous bombardment that had been going on so long. There were, however, a great many people living in caves under the banks, and the shells could not get at these vaults at all. There were immense stores of ammunition and siege guns, so immense that General Grant said there was enough to keep up the defense for six years at the rate they were using it. Mr. Dana's account of what he saw, and the quotations from his lengthy telegrams to Secretary Stanton, make a more graphic picture of the portions of the civil war which form his subject-matter than any other history we have

The fiction in this number of McClurc's is made up of the features we have been accustomed to find in that bright little magazine. Robert Barr has a short story called "The Long Ladder;" Anthony Hope continues his "Rupert of Hentzau," which is embellished with a frontispiece full-page illustration by C. D. Gibson, and there are short stories by authors of less "ue.

#### THE COSMOPOLITAN MAGAZINE.

I N the January Cosmopolitan the third chapter is given of the imaginary history of "Our Late War with Spain." The Germans and Canadians appear as active participants in this sanguinary conflict, a conclusion to which is promised in the next number of the Cosmopolitan.

A schedule of the curricula of the Cosmopolitan University is printed in this number, and the announcement is made that President Potter has enrolled more than 12,000 applicants for admission, a little more than four months after the plan had been first given to the public. President Potter has gathered his corps of assistants, and the preliminary organization has been completed. The Cosmopolitan Magazine has made an appropriation of \$150,000, payable in annual installments not to exceed \$30,000 each, for the maintenance of the university, that sum being regarded as ample for the support of the institution for five years. But the unexpected dimensions which the undertaking has assumed render these resources entirely insufficient for the services to be performed in view of the daily growing list of applicants. The editor hopes there will be generous-minded and appreciative people who will give such help as lies in their power, and announcement is made that any student who wishes to may contribute a fee of five dollars per quarter.

Mr. John Brisben Walker, editor of the magazine, makes a protest over his signature against the practice in modern journalism of distorting news in a sensational direction and the resulting impossibility of finding truthful things in our average daily papers. He instances an occasion when he asked a reporter "why he had misrepresented me in an interview which he had sought at my home some days previously. 'The managing editor wished me to color it to suit the paper's proclivities,' he replied. 'Why did you not refuse to do so?' was asked. 'It would have meant loss of job,' was the reply." Mr. Walker thinks that in its heart the public is tired of inaccuracy and wants truth, and it is a good business certainty that truth will pay in journal-

ism.

#### THE LADIES' HOME JOURNAL.

HE January Ladics' Home Journal has a readable feature in "The Inner Experiences of a Cabinet Member's Wife," an article written under the pen name of "Mrs. Cummings," and in the form of letters to her sister. The editor says that the name of the Cabinet member's wife is for obvious reasons withheld, and that no attempt at portraiture has been made in the illustrations. She says that Washington is a poor place for the matrimonial prospects of young girls. "They have a choice between the department clerks, whose salaries are barely enough to keep one, let alone two; the poor young army man, rich old politicians whose first wives have succumbed to the battle with social duties, and the attachés at the legations, many of whom secure the appointments, it is said, in hopes of picking up an American millionairess, as they are often poor younger sons themselves." "Mrs. Cummings" says: "One thing that strikes me particularly is that the Anglomaniacs are so much more English than the Englishmen of the legation. Many of the department clerks who go into society, and who pay for their invitations by their presence and good nature, clip their words and put on English airs until quite frequently, even when listening intently, I cannot understand one word

they say." One of the millionaire Senators keeps a man of worldly breeding and position in his familly on a very big salary, in return for which he arranges all their entertainments, engages the artists for musicales, supervises the house decorations, and generally regulates the family behavior, even to the selection of dresses, it is said.

The bright and undismayed Miss Lilian Bell continues to contribute letters to the Ladies' Home Journal describing her foreign experiences. She is occupied at present with her first days in Paris and her correspondence constitutes a very readable and fresh series of travel sketches.

#### LIPPINCOTT'S.

N the January Lippincott's an essay on "Druggists, Ancient and Modern," for the facts of which Mr. Oscar Herzberg is responsible, says that the origin of the druggist is shrouded in mystery, but that he obtained when the cuneiform inscriptions of Assyria were made, and that in Egypt one branch of the priesthood of Isis was proficient in his art. In Germany Mr. Herzberg can find no record of a drug store prior to 1267, when there was one at Münster. It was in the seventeenth century that the druggist came to America, and in 1636 the colony of Virginia had already passed a law which regulated the prices and fees of the druggist. The apothecary does not seem to have gained much in social status, to judge from the fact that Governor Hunter, of New Jersey, was one of the trade. New Jersey is credited by Mr. Herzberg with the honor of having produced the first patent medicine, in "Tuscarora Rice," sold as a consumption cure by Mrs. Masters in 1711. She erected a large factory in New Jersey, and probably inaugurated the patent-medicine trade in the United States.

George Ethelbert Walsh tells about the great botanic gardens of the world, and shows how far ahead of the Americans most countries are in beautiful and edifying public gardens. The largest botanic garden of the European continent is the Jardin des Plantes at Paris, two hundred and fifty years old, and the home of fashion and of student life. In England the Kew Gardens are the most famous, and probably the most extensive plant collection of the whole world. They were laid out by Queen Elizabeth with her own hands. They cover three hundred acres, and are crowded with all the rare and beautiful plants and trees of the world, arranged, classified, grouped, and named so that he who runs may read.

Mr. Calvin D. Wilson tells of some of the picturesque things that are to be seen on "the eastern shore" of Virginia, the home of the terrapin and innumerable ducks and snipe and fish. In fact, Mr. Wilson tells us that "the eastern shore" produces more table delicacies than any other region in the world of equal area, and it is plain that a family may there enjoy the luxuries of life cheaper than elsewhere, and that the really poor man can live for less on the peninsula than anywhere else, save perhaps certain parts of Asia. The rural negro there averages \$200 a year for his work, while many do not make \$100, but he is able to get an abundant supply of food and clothing. A cabin on a patch of ground may be rented for \$20 a year; 1,000 herring can be bought for 50 cents, and cured and barreled for 50 cents more, etc., etc.

The complete novel of the month is "John Olmstead's Nephew," by Henry W. French.

#### THE CHAUTAUQUAN.

In the January number of the Chautauquan Mr. Charles S. Burwell answers the question, "Should the Government Establish Postal Savings Banks?" more decidedly in the affirmative than most writers who have been heard recently. He believes the postal savings banks would supply a public need that cannot in the nature of things be supplied by private enterprise, that they would promote thrift and good citizenship, and would thus prove a great boon to millions of our people. He makes a rough guess at the total deposits under a postal savings bank system such as has been suggested of \$700,000,000, and he has no suggestions to make concerning the profitable and conservative investment of such a huge sum.

Mr. G. A. Copeland gives a slight sketch of "The Fishing Industry of the United States," in the course of which he tells us that on the Grand Banks of Newfoundland alone there were 88 men lost last year in this occupation, the year before 94 men, and the year before 30 vessels and 137 men. Twenty years ago as many as 681 fishermen went to their death in this dangerous region alone. The average loss of vessels is 15 every twelve months on the Banks. When one considers the average which this shows for the total number of people engaged in fishing on the Banks, and the small amount of possible gain to be derived from the fearfully hard and exposed work, it seems curious that it should survive as a regular occupation.

#### MUNSEY'S.

N the January Munsey's Dr. A. Conan Doyle says that his favorite novelist is Sir Walter Scott, though Charles Reade's "The Cloister and the Hearth" is spoken of in superlative, too.

Theodore Dreiser has a pleasant sketch of "The Haunts of Bayard Taylor," in which he describes the bucolic scenery of that quiet Pennsylvania village on the Brandywine, in Chester County, where Mr. Taylor had his beautiful country home, at Kennet Square. Mr. Dreiser says that five years before he died, in 1873, Mr. Taylor wrote from Germany to a friend who had congratulated him on his success in life: "You exaggerate what you consider my successes. From 1854 to 1862 or thereabouts, I had a good deal of popularity of the cheap, ephemeral sort. It began to decline at the time when I began to see the better and truer work in store for me, and I let it go, feeling that I must begin anew and acquire a second reputation of a different kind. For the last five years I have been engaged in the struggle, which is not yet over."

The features of Munsey's for 1898 are to be, in the way of fiction, a new story by Stanley J. Weyman called "The Castle Inn," and one by Max Pemberton called "The Woman of Kronstadt."

#### THE BOOKMAN.

THE Bookman, in its editorial comment, calls Phil May, the young artist who has taken Du Maurier's place on Punch, the most gifted black-and-white artist of our time. "He is now exclusively retained by Punch and the Graphic, so that his days as a free-lance are over." Mr. May is thirty-three years old, and has been making his living since he was a boy of twelve. His favorite author is Dickens, whom he can read all day long, and in whose many pages he cannot find

one dull one. It is certainly fortunate, under these circumstances, that Mr. May is the man who is going to make illustrations to the édition de luxe of Dickens' works to be brought out by Mr. George Allen this year.

The Bookman says that quite the most-talked-of woman in London now is Mrs. Craigie, otherwise known as "John Oliver Hobbes," and whose latest book, "The School for Saints," promises to make her as notable as Sarah Grand. She says she adopted the name of "John Oliver Hobbes" to keep her from being sentimental.

The Bookman has discovered a new Scotch romancer, Mr. Neil Munro, whose "John Splendid" will appear during the year in Blackwood's Magazine. Mr. Munro is a Highlander, one of the few left. "John Splendid" is his first sustained effort, and is, according to the Bookman, "a remarkable performance, recalling the best of Stevenson, and succeeding where Stevenson failed, in portraying a womanly heroine with a glamour of witchery that wins the reader from the start."

The "American Bookman" selected for this number is Walt Whitman, who is discussed by M. A. De Wolfe

Howe.

#### THE CANADIAN MAGAZINE.

A BRIEF article by Goldwin Smith in refutation of the Bacon-Shakespeare theory opens the Christmas number of the Canadian Magazine. Mrs. Delia Bacon, who originated the theory, is believed by Professor Smith to have been inspired by her natural regard for the name, thinking that the plays were too good to have been written by any one but a Bacon.

"With Booker's Column" is the title of a series of personal reminiscences of the Fenian raid of 1866, by Robert Larmour. This article deals with a rather obscure passage of border history, and is interesting as

showing the present Canadian point of view.

Dr. Bourinot's papers on "The Makers of the Dominion of Canada" are dealing with a great range of topics connected with the early history of what now forms the Dominion.

The magazine has had a good year, and promises a number of important features for the ensuing volumes.

#### THE ARENA.

W E have already quoted at length from Mr. James
J. Wait's article entitled "Our Interstate Protective Tariffs," in the January Arcna.

Governor Rogers, of Washington, writing in this number on "Freedom and Its Opportunities," takes the ground that the right of taxation for public purposes does not obtain in the case of land used and occupied by the individual citizen as a necessary means of supportand not needed for public use. He would expressly exempt by law every homestead valued at not more than \$2,500 from taxation of every kind.

The Canadian view of the question of annexation to the United States is set forth in an article by John D. Spence, who uses considerable space in controverting the position maintained by Prof. Goldwin Smith in favor of some aggressive action on the part of the United States. Mr. Spence contends that Canadians are very well content to remain as they are, that they have as much political freedom now as the citizens of the United States, that certain forms of lawlessness which flourish in some parts of this country are unknown in Canada, and that they have no reason for desiring annexation.

The benefits of municipal proprietorship of quasipublic enterprises are very fairly discussed by Mr. Augustus L. Mason, who closes his article with an ingenious proposition by which cities having constitutional debt limitations may secure the creation by the Legislature of one or more "auxiliary corporations" with all their capital stock owned by the city.

"The powers of such an auxiliary corporation would relate to the ownership and operation of one or more of these local enterprises. It might have officers quite independent of the city government, or the mayor and other city officials might be, ex-officto, its officers. The debt of such an auxiliary corporation would not form any part of the city debt. It would represent the actual investment, and would gradually disappear by means of a sinking fund raised from the operation of the

properties."

In an article on American domesticity Mrs. Helen Campbell describes the "stag towns" of the West and the "she towns" of New England. The latter are "those cotton-mill towns of New England and the South or West, in which, as one goes through the poorer streets, house after house is found to be locked up, little faces looking from the windows. The mother and older children, if she has them, are at work in the mill, and the baby and younger ones locked up at home. Often the husbands of the women who make up the 'she towns' are at the remote West, in the 'stag camp,' or, at the best, working a distance from home. In any case there is an enormous disparity of men in Massachusetts; for example, out of 61,246 workers in the cotton mills, nearly \$2,000 are women and 7,579 are children."

Mr. B. O. Flower contributes to this number a study of "James G. Clark, the American Laureate of Labor," and Dr. John Clark Ridpath indulges in a satirical

editorial on "Plutocracy and War."

#### THE FORUM.

MR. BRYCE'S article in the December Forum on "The Policy of Annexation for America" is reviewed elsewhere in this number.

Ex-Comptroller Eckels reviews the work of the Wolcott Commission, and concludes that the experience of the past six months has only confirmed the opinion widely held before the appointment of the commission, that an international agreement is in fact an impossibility, and that the quest of bimetallism should be abandoned by the American people.

In the third installment of Senator Morrill's "Notable Letters from My Political Friends" appears a letter from Horace Greeley, dated March 12, 1872, which con-

cludes as follows:

"As to myself, the end of my career cannot be distant. I was a pack-horse for Weed and Seward for the first half of my career. I revolted at last, and was not ruined. I can bear whatever the future has in store for me."

Capt. J. C. Ayres, U.S.A., proposes a scheme of instruction by which our national guard may be made more effective for seacoast defense. He urges the organization by the States on the Atlantic coast of regiments of seacoast artillery.

Gustav Kobbé says of the dramatist, Gerhart Haupt-

"His plays are analytical, but they also have action, the throb of poetry, and the warm glow of passion. He is not a 'decadent' dramatist. He is no more to be classed with Ibsen or Maeterlinck than Goethe is. He is the greatest figure in German literature—perhaps in all literature—to-day. He is the one living poet who is also a born writer of plays, the one living master of realism who is also a master of idealism."

The Hon. Charles A. Prouty, of the Interstate Commerce Commission, writes on the subject of railway pooling, concluding that the right to make pooling contracts would to a large extent do away with the demoralization of rates and bring about good results. He emphasizes, however, the fact that in legislation of this kind the public interests must first of all be protected, and that the present interstate commerce law is practically powerless to offer such protection.

The Hon. Daniel Agnew, ex-Chief Justice of the Pennsylvania Supreme Court, makes an argument to prove the unconstitutionality of the pending Hawaiian treaty with the United States. This is a phase of the question to which neither party in the controversy is directing much attention, and the points adduced by Mr. Agnew, while they should be given due weight, are not likely to affect the decision of the question in the public mind.

Chairman Loud, of the Congressional Post Office Committee, advocates, as a step toward economy in the postal service, the exclusion from the privilege of second-class matter of all books or reprints of books, and the abolition of the sample-copy privilege. These two changes would, he says, effect a saving to the Government of about \$13,000,000 a year. He estimates that one-third of the second-class matter now carried would be cut off by the reforms proposed. Sample copies and books would then pay eight cents a pound, which would make this class of matter about half self-sustaining.

The Hon. Herman C. Kudlich, one of the city magistrates of New York, who before he took office had had much experience and contact with the poorer classes of New York's citizens in the courts, contributes a thought ful article on "The Abuse of the Police Power." He shows that the power of making arrests is frequently abused by the police of New York, and doubtless by those of other cities as well, and that the police power and the judiciary system do not always coöperate as they should to promote the ends of justice. He asserts, however, that great improvement has lately been made in the New York police force, which is now more efficient in preventing and suppressing crime than ever before. The faithful and honest application of the civil-service system has greatly improved the force.

Professor Price, of Oxford University, writes on "The Present Condition of Economic Science;" Mr. Charles G. D. Roberts has a suggestive paper on "The Poetry of Nature;" Prof. R. Eucken, of Jena, contributes an instructive article on "Liberty in Teaching in the German Universities," and Prof. Theodore W. Hunt, of Princeton, defines "The Mission of Literature."

#### THE NORTH AMERICAN REVIEW.

In another department we have quoted from the articles on "The National Government and the Public Health," from the Hon. Frederic C. Penfield's account of "England's Absorption of Egypt," and from Mr. A. C. James' exposition of the advantages of Hawiian annexation, all appearing in the December number of the North American.

Prof. Cesare Lombroso begins a series of studies attempted with a view to answering the question, "Why Homicide Has Increased in the United States." As regards the effect of immigration, Professor Lom-

broso believes that the greater increase of homicides in the Atlantic States is due rather to the character than to the extent of the immigration. In the Central States, on the other hand, the crime of homicide is repugnant to most of the foreign settlers, who are largely composed of Germans and Swedes. He finds a much greater cause of homicide in the United States in the great number of colored people who live here. Accepting the statement that 60 per cent. of the homicides are furnished by the whites and the remaining 40 per cent. by the colored race, it must be remembered that the whites constitute 88 per cent. of the population and the colored race about 12 per cent. Professor Lombroso concludes, therefore, that if it were not for the negro population the crime of homicide would be almost as rare in the United States as it is in most civilized countries of Europe.

Dr. Louis Robinson contributes an original and attractive study in "The Psychology of Golf," in which he attempts to explain what he terms the "semi-auto matic actions" characterizing that game, which on analysis seem to reveal a wonderful complexity.

The Hon. Robert P. Porter, in writing on "The Census of 1900," takes occasion to defend himself against the attacks of the civil-service reformers on the methods by which the eleventh census was taken. He contends that the defects of that census did not arise from the character of the employees, who were, in fact, a capable corps of experts, but resulted from delayed legislation, hasty preparation, and an overburdening of the office with useless inquiries. Col. Carroll D. Wright has declared his belief that the eleventh census was as good a one as any one could take under the present system. The faults of the present system are thus enumerated by Mr. Porter:

"1. Inadequate time for preparation.

"2. A hard-and-fast law rushed through the day before the adjournment of Congress, calling for innumerable statistical investigations and inquiries, many of which are useless and impracticable, and some of which are impossible.

"3. Supplemental questions for the twenty million or more schedules, called for by Congress ninety days prior to the actual enumeration.

"4. Placing upon the shoulders of the superintendent, whose mind should be fully occupied with his experts in planning the work, the responsibility of the appointment of an office force of several thousand clerks."

Captain Crowninshield, of the navy, makes a plea for the speedy completion by our Government of the Nicaragua Canal. He says that as a political factor in increasing the influence and power of this country in the Pacific the canal will be far-reaching. In the event of a war to-day with Japan over the Hawaiian Islands we should be at a disadvantage because of the fact that at this time Japan's naval force is greater than our Pacific and Asiatic squadrons combined. To reënforce our Pacific fleet we should be obliged to send ships from our Atlantic squadron, forcing them to make a voyage of 12,000 miles, thus consuming many weeks; whereas with the Nicaragua Canal in existence, our whole North Atlantic squadron could be transported to the Pacific within a week, thus enabling us to more than double our naval strength in the Pacific.

Prof. R. H. Thurston, of Cornell University, calls attention to the great lack of well-trained engineers in our navy. He says that the cost of educating such engineers at Harvard, Johns Hopkins, or Cornell is only

about one-eighth the cost of educating a graduate of the United States Naval Academy. It would certainly seem as if the Government should take advantage of the facilities for this special kind of training which are already provided by private institutions.

Mr. J. O'Connor Power writes on "Edmund Burke and His Abiding Influence;" William H. Rideing has an article on "Tennyson in the Isle of Wight," and Albert D. Vandam describes the life of "Officers in the

French Army."

#### THE FORTNIGHTLY REVIEW.

THE Fortnightly Review for December contains
Baron de Coubertin's "French View of the British Empire," from which we have quoted elsewhere, and several other papers that are well worth reading.

#### THE PROBLEM OF SHAKESPEARE'S SONNETS.

Mr. William Archer writes some seventeen or eighteen pages on what he calls the Southampton-Pembroke problem. The young man of the sonnets was, in Mr. Archer's opinion, not Southampton, but Pembroke. He is quite sure about this. He says:

"I will try to show that the history of the sonnets no longer ranks among the obscurest of literary problems, but rather among those which we can solve with as near an approach to certainty as circumstantial evidence can, in the nature of things, afford."

Among other arguments which he uses in order to prove his case, he says:

"Southampton was, to all intents and purposes, a man of Shakespeare's own time; Pembroke, to all intents and purposes, belonged to a younger generation. There is the matter in a nutshell. The seven years' difference in age between Pembroke and Southampton is equivalent to the difference between the altogether probable and the all but impossible."

#### THE INFLUENCE OF HENRY GEORGE IN ENGLAND.

Mr. J. A. Hobson describes the circumstances under which Mr. George made his appearance in England, and explains how it was that he achieved so great a success. Mr. Hobson says:

"The influence of George is not to be measured by the number or zeal of the advocates of a wholesale policy of nationalization of the land. It is rather to be traced in the energy which, during the last fifteen years, has freely flowed into many channels of land reform. George, like other prophets, coöperated with the 'spirit of the age.' But after this just allowance has been made, Henry George may be considered to have exercised a more directly powerful formative and educative influence over English radicalism of the last fifteen years than any other man."

#### " LORD ROSEBERY'S APOSTASY."

An anonymous writer makes bold to Genounce Lord Rosebery as an apostate because of the fashion in which he spoke at Manchester about free trade:

"Is Lord Rosebery a strong man or a weak man? Is he either a radical or an imperialist? Is he a man of set purpose or a mere political kite swayed by every changing gust of popular feeling? Lord Rosebery started public life with exalted ideas and apparently profound beliefs. Where are those ideas and those beliefs now? If he has not renounced them all, he has at least shifted his ground till it is impossible to understand how much

Either he has 'a craven fear of being great'

or in his attempt to combine radicalism and imperialism he has landed himself in hopeless mental chaos and uncertainty. Mr. Chamberlain assures us that imperial federation, which used to be considered a fad and a dream, is within measurable distance of realization, and Lord Rosebery would seem to have become a renegade from the cause in the very hour when its prospecta are brightest."

#### A FRENCH "DOLL'S-HOUSE."

Some time before Ibsen wrote his "Doll's-House," a Frenchman of the name of Villiers de l'Isle Adam wrote a play called "La Revolte," which, curiously, anticipates the motive of the play in which Hedda Gabler is the heroine. In the Frenchman's play, however, the wife who anticipates the rôle of Hedda Gabler, after departing from her husband in order to live her own life, discovers before the sun rises the next morning that it is no use, and she promptly goes back. She explains the motive for her return as follows:

"I could no more concentrate myself in meditation. I had forgotten how to soar above the world, how to shut my ears against the mocking laughter of mankind. It was over with me. . . . Oh, God! I see it is too late. One must not stoop even to win freedom. I had given way too much-overvalued the daily bread. The eyes of my youth are gone. Enthusiasm too. Art no longer exalts. Silence does not appease me. That man has drunk up my soul as if it had been water. These four years of drudgery have broken my spirits-nothing can be blotted out. It was boasting to say I wanted to live. I give it up. I have become like those who have never had a glimpse of heaven. That man's perpetual smile has filled my soul with bitterness and gloom. His accounts have crippled my mind. Whether he lives now or dies, it is just the same to me. I must remain what I have become."

#### THE PROSPECT OF A CARLIST RISING.

Three writers—the Marquis de Ruvigny, Cranstoun Metcalfe, and Leonard Williams—discourse on "The Crisis in Spain." They are all Carlists, and they all believe we are on the eve of a Carlist rising. They set forth lucidly the facts on which Don Carlos bases his claim to the throne, and it must be admitted that they make out a very good case. The Marquis de Ruvigny and Cranstoun Metcalfe say:

"The situation is grave because it seems impossible that a coup d'état of this magnitude, even if successful, can be accomplished without bloodshed, and alteration in the dynasty may be regarded with alarm by the powers, and will certainly be considered most seriously by the United States. Yet we know that such an alteration is to be attempted in the Peninsula before the world is many weeks older, and we therefore do not hesitate, as otherwise we might, to give a summary of the case for Don Carlos as we apprehend it to be. There may be local fighting more or less severe, but, except in the event of intervention by the powers, war there need not be."

Mr. Leonard Williams, who asks, "Can Sagasta Save Spain?" evidently thinks that the odds are heavily against it:

"Carlism is ever dangerous in Spain, chiefly by reason of its obvious justice. The Salic Law is a permanent part and parcel of Spanish monarchy, and to suppose that a king like Ferdinand VII., a libertine and scoundrel who never cared a button for his country's

welfare, could validly bully the Cortes into gratifying a parent's personal whim, is patently grotesque. The so-called Duke of Madrid is as much Charles VII. of Spain at this moment as our Victoria is legitimate sovereign of Great Britain. Two-thirds of the Spanish people are with him at heart, and in the last Carlist war, if Charles had displayed more valor, tact, and energy in combat, and less licentiousness toward the wives of his most loyal officers, he must, beyond a doubt, have stood upon the winning side. Even as it is, unless the present administrators of the boy-king mend their predecessors' conduct toward the nation, there will be bloody fighting once anew in the Peninsula."

#### OTHER ARTICLES.

Mr. C. Stein reviews Mrs. Oliphant's book on "Blackwood." Mile. Y. Blaze de Bury writes on the French actor Mounet Sully, and Mr. Nowell Smith. who criticises the poetry of William Morris, declares that it has no backbone, and that the poet, as he himself said, was only an idle singer of an empty day. The Rev. Dr. Moore concludes his essay on "Dante as a Religious Teacher" with the following sentence:

"And the sum and crown of all Dante's religious teaching is the grand truth that the complete merging of the man's will in the will of God is not only the essential condition of inward peace, but also that of intellectual and spiritual enlightenment. 'If a man will to do his will he shall know of the doctrine.'"

#### THE NINETEENTH CENTURY.

I N the Nincteenth Century for December M. Francis de Pressensé renews his appeal to England to ally berself definitely with France and Russia. He maintains that the policy of isolation was all very well when each of the powers stood on its own feet and played two my game for its own hand, but we are now in an era of syndicates and trade unions, and it is madness to remain isolated any longer.

THE RESERVES FOR MANNING THE BRITISH FLEET.

Lord Brassey and Lord Charles Beresford write on this subject, Lord Charles' paper being nominally a criticism upon Lord Brassey's, but he concludes it by propounding under twelve heads his own ideas as to what should be done. He says:

"We require a reserve of at least seventy thousand officers and men, because we have to fill up the difference between the limit at which we can put the active-service ratings and the number required in actual warfare; and, above and beyond, we must form a reserve to replace losses. It must be a reserve which has served in the fleet, because a reserve should always be the best men. It must not be a reserve of bluejackets alone, but of engine-room ratings and marines. We must increase the marines, and give them the charge of some of the coaling stations, because these must be under the control of the admiral in command of the station in war time and not under control of a general."

#### PROFESSOR HUXLEY AS A TEACHER.

Prof. Sir George Mivart, in his paper on "Some Reminiscences of Thomas Henry Huxley," revives many pleasant memories of that redoubtable man of science. We have room for a brief extract:

"For years I attended his lectures, but never once did I hear him make use of his position as teacher to inculcate, or even hint at, his own theological views, or to depreciate or assail what might be supposed to be the religion of his hearers. No one could have behaved more loyally in that respect, and a proof that I thought so is that I subsequently sent my own son to be his pupil at South Kensington, where his experience confirmed what had previously been my own. On one occasion, when I was urging the danger of making unguarded statements to the young and the possibility of impressions being thereby produced quite other than those intended, he replied: 'It would be very wrong to do so, and at least tend to make young prigs of them. Children should be brought up in the mythology of their time and country, but as they grow up their questions should be answered frankly.'"

#### APPROVED-BY AN EXALTED PERSONAGE.

Who is the Nineteenth Century's exalted personage? I ask the question because Dr. Jorgensen's article, giving the "Danish View of the Sleswig-Holstein Question," is introduced with the following unusual imprimatur:

"[The following reply to Prof. Max Müller's article in the May number of this review is published at the desire of an exalted personage in this country interested in the Danish side of the question, who considers that Prof. Max Müller's views are incorrect and inconsistent with historic truth. The author died before he saw the proofs, which have been submitted to and approved of by the same exalted personage.—Ed. Nineteenth Century.]"

It is not necessary to follow Dr. Jorgensen in his polemic with Prof. Max Müller, but the following is the only passage which has any bearing upon present-day politics. Speaking of the treatment which Denmark received at the hands of Germany, Dr. Jorgensen says:

"It was not only that old legitimacy was overthrown by the total disregard of the Gottorp renunciation of Holstein in favor of King Christian the Ninth, nor that old and continually renewed treaties in favor of the Danish crown's right to Sleswig were torn asunder, but also the principle of nationality-the sole principle which might with some show of right have been invoked against the arrangement of 1852-was put aside in the most shameful way. More than one-half of Sleswig is to this day inhabited by Danish people, who do not wish anything better than to return to the union with the mother country, whereas the Prussian Government endeavors, in spite of the promise given in Prague, by all possible means to subjugate the Danish element and to efface its national peculiarities. It is a slap in the face to the whole Scandinavian race, and a derision of the favorite talk in Germany of the solidarity of the German people."

#### THE FUTURE OF TAMMANY.

Mr. F. A. McKenzie is not by any means prejudiced or bigoted on the subject of Tammany. He says:

"Judged morally, it certainly promotes much friendship and social intercourse; and many a poor man in New York has found his Tammany membership the greatest help when in trouble. The Tammany 'captains' may not be overscrupulous when it comes to winning an election, but they often enough give time, trouble, and money in helping comrades in distress, quite apart from any prospects of reward in votes."

His view as to the future is not very sanguine:

"Tammany has now the opportunity to redeem its character. If it gives Greater New York an honest government, and performs one-half of the promises of probity and capacity made in its election addresses, much of its past will be forgiven and forgotten by the world at large. But every prospect seems to point to its doing far otherwise. In Greater New York, with its three million people, its enormous patronage and immense revenue, an incapable or dishonest administration will have such power of plunder and wrongdoing as the western world has never seen before. Even Tammany's worst enemies cannot but hope that for once it will disappoint the fears of its foes and the hopes of many of its baser friends."

#### THE ADVANTAGES OF "SETTLEMENTS."

Canon Barnett, in one of his useful papers on the "Ways of Settlements and of Missions," points out that missions are very different from settlements, and the advantages of the settlements which have sprung up all over the world in imitation of Toynbee Hall may be commended to any one who is wondering what he should do by way of benefiting his fellow-men.

#### THE CONTEMPORARY REVIEW.

THE Contemporary Review for December opens with another short dialogue on the Liberal policy, which is published anonymously under a pseudonym, "A New Radical." The "New Radical" writes well, and puts his points with much vigor. His theory is that the Liberal party can only find salvation by adopting alabor policy; and he takes what he regards as the attack by the employers on trade unions in the engineers' strike in order to point his moral.

#### THE LIBERALS AND THE LABOR PARTY.

He goes on to ask a representative of the official Liberals the following questions:

"What in the name of wonder do you suppose your people do want to do? If you brayed your whole front bench in a mortar—or any of your other benches, for the matter of that—would you get a single ounce of constructive policy out of them? You are all dumb dogs—that's what you are. You have the leaders you require. So long as you have no ideas and don't want to bring anything to pass, what you require is not leadership, but figureheads. But propose something—anything. Show some sign that you are alive. At present you are a row of mummies solemnly propped up against a wall, and you do nothing with the situation but stick there and grin at it."

#### MR. GRANT ALLEN'S BOOK.

Mr. Andrew Lang writes on Mr. Grant Allen's book, "The Evolution of the Idea of God." The essay is hardly as carefully fluished as most of Mr. Lang's work. Here is a sentence in which Mr. Lang disposes summarily of one of Mr. Allen's favorite theories:

"Mr. Allen's theory c\* the origin of the belief in immortality rests on the appothesis that cremation belongs to a later stage of culture than corpse preserving or burying. I have demonstrated that all modes of disposing of corpses coexist, and have coexisted, in the lowest stage of culture known to us in practice. Therefore we have only guesswork to guide us when we say that one mode was, everywhere, prior to another mode. And that demolishes Mr. Allen's theory of the three corresponding stages of practice and belief."

THE LIBERAL CATHOLICS AND WHAT THEY WANT.

A Roman Catholic, discreetly hiding his personality under the nom de plume of "Romanus," deplores the action taken by the pope in issuing his letter concerning the Bible. "Romanus" says:

"This unfortunate letter is so shocking because it imposes only on the weak and ignorant. Even at Rome they must know that a really vigorous attempt to force educated Catholics to affirm that there are no statements in the Old and New Testaments which are historically untrue would cause an exodus indeed!"

"Romanus" tells us, what is not generally known, that the old Index Expurgatorius did not apply to England. The special mission of Liberal Catholicism, i.1 "Romanus" opinion, is to accommodate old doctrines to newly discovered truths.

#### WOMEN'S WORK AND WOMEN'S WAGES.

The Women's Industrial Council recently conducted an inquiry into the actual earnings of four hundred working women of London who earn money by working at home. Nine-tenths of them belong to sixteen of the different regular small trades. According to the writer of this article, which is anonymous, the inquiry proves that "a considerable proportion of women who avowedly work for supplementary profits earn more per hour, and sometimes at the same work and same rate, than those who grind for daily bread. If this be so, then the common view that supplementary wage-earning reduces the rate of pay can hardly be supported."

#### AN ARTIST ON PHOTOGRAPHERS.

Mr. Joseph Pennell devotes several pages to a painstaking effort to convince the unhappy photographers that they are not artists, and never can be. He says:

"There is no doubt that many artists and draughtsmen do now depend upon photographs, more or less. Instead of taking a sketch-book, or else along with it, they take a camera. If they take a camera alone, they simply shirk their work and ruin their style. Unless a man can draw with his own unaided hand he is not an artist, he never has been considered one—and he never will be."

#### EMIGRATION TO RHODESIA.

"Afrikander," writing upon the British position in South Africa, suggests that the government might do worse than promote emigration to Rhodesia. He says:

"We hear of the decline of farming in this country and the impoverishment of our rural population. Well, here is a vast territory in which agricultural settlers are needed, and in which the soil and climate offer many attractions. We hear also of the congestion of our urban centers in England, and here is a vast country which might well serve as a home for a portion, at least, of our surplus population. It would be in the interest of the Chartered Company to grant parcels of land on easy terms to such emigrants as the home government might assist to settle in Rhodesia."

#### THE FIRST RUSSIAN CENSUS.

Dr. E. J. Dillon tells all about how the Russians succeeded in taking that first census on January 28 of this year. No similar enterprise had ever been carried out before. To prepare the people for the visit of the census takers "over a hundred million leaflets containing the questions to be answered in all the tongues and dialects had to be distributed in good time in every nook and

corner of the empire. These papers weighed, we are told, 1,060 tons."

After the ground had been carefully prepared, "On January 28, at break of day, an army of 150,000 individuals left their homes to count the number of people inhabiting an empire which occupies one-sixth of the globe. The results may be summed up very briefly as follows: The population of the Russian empire and the Grand Duchy of Finland numbers 129,211,-114 souls, of whom

#### 94.188.750 inhabit the 50 governments of European Russia

9,442,590	**	10	44	Poland
9,723,553	**	11	**	the Caucasus
5,731,782	**	9	••	Siberia
3,415,174	44	5	**	the Steppe regions
4,175,101	**	Provid	ces of Tr	anscaspia and Turkestan
6.413	**	Khiva	and Bou	khara
2.527.801	**	Finlar	ıd	

#### 129,211,114

"There are 19 cities in Russia with a population of more than 100,000 souls each, and 35 which have from 50,000 to 100,000."

#### OTHER ARTICLES.

Lady Jeune writes a pleasantly worded tribute to the Duchess of Teck. Dr. W. T. Davison, in an article upon "The Spirit of Modern Methodism," takes up the cudgels on behalf of the Methodists, being provoked thereto by the somewhat slighting remark made by an irreverent vicar in the September number of the Review. "A British Naturalist" states the American case in favor of protecting the fur seals. Mr. E. H. Parker writes on "China and the Pamirs," and the Countess Martinengo Cesaresco describes the life of the "Peasants of Ancient Greece."

#### THE NATIONAL REVIEW.

THE National Review is, as usual, weighed down by its sense of the responsibility which attaches to the solitary organ in the English press devoted to the cause of bimetallism. The editor thrusts all the blame for the failure of the Wolcott Commission's negotiations upon the Indian Government. He asserts that not "a single member of the British Cabinet expected a hostile reply from India." The reply from Calcutta was as unexpected as it was inept, and "was received with dismay by the British Cabinet."

#### THE IRISH LOCAL GOVERNMENT BILL.

Mr. Richard Bagwell, writing on "Rural Administration in Ireland," laments the approaching disappearance of grand juries. He says:

"The Grand Jury Act of 1836 and the several amending measures have worked well, and the best plan will be that which involves least change in the substantive law. Two meetings of the county council annually would amply suffice, with elective bodies in each barony to take the place of the existing presentment sessions. Irish county councils are likely to be extravagant, for the franchise will be democratic, and power will not be in the hands of those who pay most of the rates. It is certain that many large farmers dread the change. Parish councils may be put out of the question in Ireland, for the parish has there no administrative existence. As railway communications are not good, it may be necessary to have two councils in some of the larger counties. The great difficulty is about district councils.

All householders are sure to have votes, and there is sure to be no qualification for county councilors. The result will be a spirited popular policy involving the employment of labor at the expense of the minority. Useless works in the nature of outdoor relief are the great danger."

#### LIBERTY AS IT WAS IN SPAIN.

Mr. John Foreman, writing on "The State of Spain," draws a terrible picture of the reign of terror which prevailed under the government of Canovas. He says:

"Expression of public opinion was stifled, except in such formidable institutions as the Republican Union. Small meetings of the middle classes were constantly raided by the police with excessive violence. The obnoxious Consumos tax (levied upon commodities) was largely increased, and rented out to a band of ruffians who, through their agents, assumed tyrannical authority over the people, giving rise to open riot in many towns, especially in Madrid itself, where the troops were called out and charged the indignant mob. On the pretext of anarchism no man's life or property was safe. On the declaration of any low, irresponsible informer the secret police would forcibly enter the premises of any peaceful citizen, arrest him, and torture him. He would then find himself arraigned before a judge indisposed to listen to his defense, and finally purchase his freedom in the form of fees."

#### BLACKWOOD'S.

A MONG the important articles in the December Blackwood's may be noted a protest against the recent change in the regulation for the admission of cadets to the navy. The writer on the "Entry and Training of Naval Officers" is a thoroughgoing advocate of the old system of letting the lads in when they are only thirteen, and he puts his points vigorously and well.

There is a very readable account of the "Eglinton Tournament," from which it appears that when the men of 1839 endeavored to assume the armor of their ancestors they found that the coats of mail would not fit, the moderns having much longer legs than the short-limbed, stocky-built knight of ancient days. The writer, who describes the tournament, says that it was a great disillusion, for the knights, when swathed and locked in plate armor, lost their individuality, and became as lifeless as a machine. In the charge itself, there was little that was spontaneous or energetic. Everything was awkward, monotonous, and almost ludicrous.

A writer in this number says of the late Sir Rutherford Alcock:

"A generation has passed since the veteran who has just died at the great age of eighty-eight retired from official life. His name recalls a period which is practically forgotten by men now living, and which is separated by a very wide gulf from the actualities of to-day. The deceased statesman, for he is surely entitled to be so called, played a part in the history of his own time worthy of the best traditions of Englishmen. Among those who have successively represented Great Britain in the Far East there is no name greater than, and only one as great as, that of Rutherford Alcock, who shares with Sir Harry Parkes alone the proud preëminence as man of action to which no other name on the roll has approached. Exemplifying in his own person the mutations of statecraft and the caprices of policy, he stands like a tide-pole marking the high-water level of British prestige in the East, and if not quite its low-water level, at least the perceptible beginning of the ebb."

We have quoted in another place from the article on "The Story of St. Paul's."

#### COSMOPOLIS.

R. ORTMANS' great "tri-lingual" and international review is just entering on its third year, and the publishers announce an extension of its supplement system. At present a supplement is published in Russian, which is added (gratuitously) to the ordinary edition of Cosmopolis in Russia, and may be had separately in other countries. During the coming year similar supplements are to be published in the Scandinavian, Dutch, Italian, Spanish, and even Greek languages. Every article will be printed, as heretofore, in the language in which it was originally written; no translations are published in Cosmopolis. For the coming year the editor announces a second series of letters of John Stuart Mill; in French, the letters of Emile Ollivier to Richard Wagner, and in German, the correspondence of Tourguéneff.

The Heine centenary is the occasion of the publication in the December number of articles in English by the novelist Zangwill and Prof. Edward Dowden, of one in French by Edouard Rod, and of one in German by Karl Frenzel. Professor Dowden says of Heine:

"He belongs to the race of skeptics, but he is a skeptic who inquires, a skeptic who hopes. He felt the need of a religion of joy and also of a religion of sorrow, and he states the case on behalf of each. He felt that the political future belongs to the populace—they have, fortunately or unfortunately, a right to eat; but he would preserve the higher rights of an aristocracy of intellect. He swam with the current of romantic art, and he headed round and swam more vigorously against the current, so anticipating the movement of realism which was to meet and turn the tide; but Heine's ideal of art, at once realistic and romantic, is still unattained."

We have quoted in our department of "Leading Articles of the Month" from Mr. Henry Norman's survey of current international happenings entitled "The Globe and the Island." The Austrian entanglement, the Dreyfus case in France, and the Anglo-French situation in Africa are the principal topics included in Mr. Norman's résumé of last month.

Articles embodying much fresh information from the Orient are M. Chailley-Bert's study of the Dutch in Java (French section) and Herr von Brandt's account (in German) of the daily newspapers of China and Japan.

#### THE FRENCH AND ITALIAN REVIEWS.

#### THE REVUE DE PARIS.

IN the first November number of the Revue de Paris M. Noblemaire writes an article entitled "In the Country of the Afridis." He visited this wild region in the northwest of India, which is now becoming so painfully familiar to us in the daily newspapers, in March of 1897. He begins with a description of Peshawur-not the English cantonment, with its monotonous crowd of Anglo-Indians with their monocles, bungalows, ponies, dogcarts, and tennis costumes, all exactly like those of every other cantonment-but the native city which the lordly Cook does not deign to mention on his programmes. M. Noblemaire relies a good deal on M. James Darmesteter's masterly description of Peshawur in his "Lettres sur l'Inde," but after all the town is only the base of the operations on the northwest frontier, and it is of more immediate interest to follow M. Noblemaire in his subsequent journeyings. He describes with humor the long lines of camels bringing supplies of all sorts from Peshawur to the front. At Jamrud our traveler stops and explains the unsavory reputation of the Afridis for murder and pillage, and the action of the government in paying them salaries to guard the Khyber Pass and to abstain from pillaging the caravans. He has a high opinion of the conjuring powers of the Afridi native police. For two minutes only he left a valuable sword-stick in his carriage, and on his return it had mysteriously disappeared. Of course the Afridis knew nothing about it! M. Noblemaire did not go beyond Ali Musjid, a fort which reminded him of Queyras, in the Dauphiné. It is, he thinks, a strategic position of the greatest importance, and would eventually prove a formidable obstacle to the Russians.

In the second November number M. Saurin writes a rather portentously long paper on the peopling of Tunis with Frenchmen. The other colonies of France—Ton-

quin, the Congo, on the banks of the Niger, French Soudan, and Indo-China-are quite unsuited, owing to their tropical climate, for the maintenance of a large French population. But Tunis possesses a healthy climate, the native population is collected mainly along the coastline, and the interior affords an ideal nursery for a hardy and prolific race of French colonists. M. Saurin points, in answer to the objection that in France itself the population does not perceptibly increase, to the fertility of the race in Canada and Algeria, and he observes triumphantly that Tunis alone of French colonies now pays its way. He declares that two hundred and sixty thousand French people must be brought to settle in Tunis, and shows in detail how they can be planted onthe soil to increase and multiply for the glory and benefit of France.

Among other articles may be mentioned M. Deschanel's two papers, of the greatest interest to philologists, on the corruptions of the French language; and M. Durand's study of the measures for the support of agriculture in France, with special reference to the policy of M. Méline.

#### THE NOUVELLE REVUE.

NDOUBTEDLY the most important contributions in either of the November numbers of the Nouvelle Revue are two papers and one letter on the Soudan, and an article by M. Sevin-Desplaces on French interests in the Niger territories.

The papers on the Soudan are respectively by an anonymous officer and by Colonel G. Humbert, formerly a commandant in the French Soudan. The anonymous officer's article is principally historical, and it is only now interesting from its outspoken expressions of regret for the past blunders of French policy and for the support which it lends to the view, held by many competent persons in England, that France's colo-

nial ambition and her policy in every part of Africa are based on a lively recollection of the magnificent Indo-French empire of Dupleix, which was thrown away by the fatuity of Louis XV. Colonel Humbert deals in a blunt, soldier-like fashion with the realities of the situation. He says that the Soudan-by which term he means, of course, the French Soudan-is a vast country, almost depopulated, the products of which, though varied, are scarcely remunerative. The moment of disillusion is, he says, at hand. He advises his country to make the best of a bad job in the following manner: (1) Establishing numerous means of communication roads and railways—and dredging the rivers so as to make them navigable by light-draught steamers; (2) increasing the effective strength of the French troops there; (3) destroying Samory as quickly as possible; (4) sending to the Soudan numerous commercial missions to ascertain the true value of its products; (5) encouraging and protecting French traders; and (6) distributing the troops through the country on a better plan.

The Prince de Valori gives in a pair of articles a vivid and touching picture of "The Last of the Bourbons." Charles X., the Duc and Duchesse d'Angoulême, and the Comte de Chambord. When a young man the writer often accompanied his father to Venice, where the last King of France and his family were living in exile. He gives a very striking picture of the moribund court. The most important contribution to history is the Prince de Valori's solemn testimony to the fact that Louis XVI.'s daughter, the Duchesse d'Angoulême, never attached the slightest credence to the many circumstantial stories of the escape of her brother, Louis XVII., from the Temple. There is little doubt that the legend has retained so much vitality in France on account of Madame d'Angoulême's alleged refusal to believe in the absolute certainty of her brother's death.

The Marquis de Castellane, in an article on the French elections of 1898, expresses the conviction that France is neither Socialist nor Orleanist, but Democratic.

#### THE REVUE DES DEUX MONDES.

M. BRUNETIÈRE'S great review is quite as edifying and informing as usual this month.

The ordinary globe-trotter's impressions of America we all know by heart, but M. Brunetière is not an ordinary globe-trotter, and his paper on Eastern America, evering New York, Baltimore, and Bryn Mawr, in the first November number of the Revue des Deux Mondes, contains matter of interest, as well as a certain distinction of style which characterizes the work of this accomplished writer; but the material of the paper was all contained in M. Brunetière's contribution to McClure's Magazine for November, which we noticed at the time of publication.

#### THE DUTCHMAN'S COLONIES.

M. Leclercq has an important article on Java and the Dutch colonial system. Little Holland has retained with extraordinary tenacity for three centuries a colonial empire as large as France, and containing thirty-six millions of inhabitants. Java, the queen of the Archipelago, was England's from 1811 to 1816, when she stupidly gave it up out of sheer ignorance of its value, although the great Adam Smith himself expressed the highest opinion of its commercial importance. Needless to say, the Dutch colonies are not allowed the slightest degree of self-government. One Van den Bosch estab-

lished a system of state monopoly combined with forced cultivation; but this, though it enormously increased the population of Java, has had its day, and under a new agrarian law, which has now made European colonization possible, the private enterprise which flourished under the brief English occupation is growing stronger and stronger. The introduction of railways was long resisted in the island, and what really caused them to be allowed was the extreme inadequacy of the old system of transport, under which the inhabitants of one district might be perishing of hunger while those of another district were reveling in as much rice as they could eat.

#### OTHER ARTICLES.

In the second November number M. Lévy writes a long article on the money markets of Germany. He shows that the German banks perform the functions both of the English banks of deposit and of the French financial associations, and have consequently two valuable strings to their bow. The results in the world of trade and finance are such as to alarm the writer, who urges France to make renewed efforts to keep pace with her great rival.

Among other articles in both numbers of the Revue which may be mentioned are one by the Marquis de Gabriac on Chateaubriand as minister for foreign affairs; an appreciation by M. Rod of M. Arnold Bœcklin, a painter of Basle, who recently celebrated his jubilee; a study by M. Valbert of Louise Ulrique, Queen of Sweden and sister of Frederick the Great; a somewhat technical excursus on realism and idealism in music by M. Bellaigue, and a continuation of M. Lamy's series of papers on Church and State in France.

#### THE ITALIAN MAGAZINES.

`HE Causes of Latin Effeminacy" are stated by Prof. A. Mosso in the Nuova Antologia (November 16) to lie in the modern Italian system of education, and not to be inherent in the race. Italy supplies a purely intellectual education to her young men, whether at school or college; as a result, they are at once precocious, physically feeble, and addicted to vice. It is a fact that among army conscripts the class of university students takes almost the lowest place in regard to chest-development. The professor recommends shorter hours of study, more exercise, and a scheme of gymnastic training suitable for a hot climate. This somewhat acrimonious discussion has arisen out of Prof. G. Ferrero's recent and very striking book on "Young Europe," which is lengthily reviewed in the same number. Professor Ferrero has drawn conclusions very unfavorable to his own nation from comparisons between the Latin and Teutonic races. The most instructive point in the situation is that the present moral and physical degeneracy of the Italian people is taken for granted on both sides; the discussion merely turns on the probable causes and possible remedies.

The Civiltà Cattolica protests energetically against the recent ministerial circulars prohibiting Catholic congresses and meetings being held in churches except under police supervision. The action of the Marquis di Rudini has caused the standing quarrel between Church and State in Italy to enter once more upon an acute stage.

#### THE NEW BOOKS.

#### RECENT AMERICAN PUBLICATIONS.

#### ILLUSTRATED EDITIONS.

"Quo Vadis." A Narrative of the Time of Nero. Translated by Jeremiah Curtin from the Polish of Henryk Sienkiewicz. An illustrated edition. Two vols., octavo, pp. 365—358. Boston: Little, Brown & Co. \$6.

Nothing in the recent annals of publishing is more significant than the great success of the novel "Quo Vadis," by Sienkiewicz, which has run through several editions in this country, and has now been brought out in a richly illustrated form. Various artists have contributed to this new edition of the celebrated Polish novel, among them Mr. Howard Pyle, from whose paintings six exceedingly effective illustrations have been made; Evert Van Muyden, who has done some very clever drawings for the work, and Edmund H. Garrett. There is also a map of ancient Rome, a map of the route from Antian to Rome, two plans showing Roman houses, and other features of distinct and permanent value. The work is printed from new type, and is a model of modern typography. It is one of the artistic masterpieces of the year just closed.

()ld Creole Days. By George W. Cable. Quarto, pp. 234. New York: Charles Scribner's Sons. \$6.

Mr. Cable's famous collection of short stories has been beautifully illustrated by the Scribners, with a number of striking photogravures, large and small, made from drawings by Mr. Albert Herter. The artist has entered thoroughly into the spirit of old Creole life, and although Mr. Cable's charming stories have already had not less than five editions, they are likely to find in this new form a still wider circle of admirers, if we are not mistaken. As a specimen of book illustration the publishers have produced something quite out of the ordinary, and we hope they will receive encouragement to undertake further experiment in this line with such publications as lend themselves readily to it.

Social Life in Old Virginia Before the War. By Thomas Nelson Page. Octavo, pp. 109. New York: Charles Scribner's Sons. \$1.50.

Mr. Thomas Nelson Page's essay on "Social Life in Old Virginia Before the War" has been very tastefully illustrated by the Misses Cowles. The essay abounds in taking subjects for illustration, especially in the bits of description devoted to the old darky people of ante-bellum times and their customs. The artists have also made good use of even the slighter matter referred to in the text, and there are several interesting pictures of old Virginia furniture and plantation odds and ends, all of which have a peculiar interest in connection with Mr. Page's writings.

A Sentimental Journey Through France and Italy. By Laurence Sterne. 12mo, pp. 442. New York: Longmans, Green & Co. \$1.

Messrs. Longmans, Green & Co. have issued an exact reprint of the first (1768) edition of Laurence Sterne's "Sentimental Journey." The illustrations of the volume, which are numerous, were made by Mr. T. H. Robinson, and as a whole are cleverly done. The practice of issuing these cheap illustrated editions of classic authors seems to be growing in favor both in England and in this country.

The First Christmas Tree. By Henry van Dyke. Octavo, pp. 76. New York: Charles Scribner's Sons. \$1.50.

We are indebted to Dr. Henry van Dyke for the text, and to Mr. Howard Pyle for the pictures, which go to make up the

beautiful little volume published this season by the Scribners, entitled "The First Christmas Tree." A novel feature of the publication is the embellished margin of the printed page, which is continued throughout the book. The illustrations are photogravures made from Mr. Pyle's original drawings.

A Book of Old English Love Songs. With an introduction by Hamilton Wright Mabie. 12mo, pp. 193. New York: The Macmillan Company. \$2.

The Macmillans are issuing "A Book of Old English Love Songs," for which Mr. George Wharton Edwards has furnished a series of decorative drawings. An interesting and scholarly introduction has been written by Mr. Hamilton W. Mable.

Rubáiyát of Doc Sifers. By James Whitcomb Riley. 12mo, pp. 111. New York: The Century Company. \$1.50.

Mr. James Whitcomb Riley's latest tale in verse, of which the hero is the old-fashioned country doctor, is issued by the Century Company in a dainty volume, illustrated by C. N. Relyea, who has cooperated with the author in the fullest sense in reproducing the genial features of "Doc Sifers." On the cover of the book there is a picture of the goodnatured doctor in his gig.

London as Seen by Charles Dana Gibson. Folio. New York: Charles Scribner's Sons. \$5.

The peculiar qualities of Mr. Charles Dana Gibson's series of drawings illustrating London life are seen to far better advantage in the folio pages which the publishers have generously provided in this volume than was possible in the more restricted scope of magazine illustration. Those who followed Mr. Gibson's studies as they appeared in Scribner's Magazine will be interested to see them in a new dress, with many additions.

#### TRAVEL AND DESCRIPTION.

Java, the Garden of the East. By Eliza Ruhamah Scidmore. 12mo, pp. 339. New York: The Century Company. \$1.50.

Familiar as is the name of Java, our knowledge of the country and its people is decidedly limited. This is largely because there have been few interesting works descriptive of the country published in English. Miss Scidmore has undertaken very successfully to supply this lack. She has not only traveled through Java, but has studied both land and people to some purpose, and the outcome of her researches is a very entertaining and instructive volume. The publishers have supplied a number of interesting pictures and a bright cover of original and appropriate design.

Following the Equator: A Journey Around the World By Mark Twain. Octavo, pp. 712. New York: Doubleday & McClure Co. \$3.50.

Whether old admirers of Mark Twain will agree with the New York Sun in its opinion that his latest book is his best is doubtful, but that it will take a very high rank in the long catalogue of Mr. Clemens' contributions to our knowledge of the world and of human nature is certainly true. People do not commonly go to Mark Twain in the same spirit in which they consult the cyclopedia, and yet, while his books are entertaining, and are meant to be that above all, they are at the same time the repositories of a vast deal of useful and serious information. The present volume, for example, gives a great deal of attention to Australia, and

the reader gains from Mr. Clemens' chapters an astonishing number of important facts about a portion of the earth's surface of which most of us have very vague knowledge. The same is true of the accounts of India and South Africa. The way in which the story is told—and it could not be told in any other way by Mark Twain-neither vitiates its essential truth nor detracts from its importance. Few writers of so-called informational works succeed half as well as Mr. Clemens in communicating to their readers the really vital elements of what they have to tell. As to the humor, which is distinctively Mr. Clemens' own, nothing need be said. It permeates his latest volume as it did his first, and the quality is not greatly changed. The publishers have succeeded in presenting the new book in a most attractive form. Such artists as Dan Beard, A. B. Frost, B. W. Clinedinst Peter Newell, A. G. Reinhart, and others have cooperated in making this one of the most richly illustrated books of the season. The volume is well printed and bound, with an artistic cover design.

Impressions of South Africa. By James Bryce. Octavo, pp. 297. New York: The Century Company. \$3.35.

It is impossible at this time to more than hint at the contents of Mr. Bryce's important work on South Africa, which has already taken rank, in the estimation of some critics, with the same author's well-known "American Commonwealth." In some respects the present volume is even more encyclopedic in character. The author, in fact, gives a history of South Africa from the time of its first discovery by Europeans up to the present. The scenery, animal life, and the climatic conditions are fully described; the author discusses the various problems involved in the rivalry of Dutch and English, and considers in detail the different political conditions. Such an observer as Mr. Bryce does not produce a book of merely transient impressions; he cannot travel through a country without studying its fundamental social and political conditions. So we have in his last volume an exhaustive treatise on South Africa such as is not likely to be superseded for many years to come, if ever.

Oriental Days. By Lucia A. Palmer. Octavo, pp. 252.

New York: The Baker & Taylor Company. \$2.

The latest volume of Oriental travel to come to our notice is from the pen of Mrs. H. R. Palmer. The work is based on notes made during successive journeys through Egypt and the Holy Land. Several half-tone illustrations have been added to the Christmas edition.

Hawaii: Our New Possessions. By John R. Musick. Octavo, pp. 546. New York: The Funk & Wagnalls Company. \$2.75.

Mr. Musick seems to have taken time by the forelock in the selection of a title for his new work on Hawaii. Whether that country can be numbered among "our new possessions" is still an open question. But the very fact that the question is open makes a publication of this kind the more acceptable, since every one is eager now to get the fullest and most reliable information about the islands and their inhabitants. This is said to be the first work descriptive of Hawaii, from the American point of view, that has appeared since the recent change in the Hawaiian Government. Mr. Musick has gleaned his information from various sources, and has made a personal visit to the islands. He has heard both sides of the controverted questions, and has aimed to present both fairly and equally. The volume is fully illustrated.

#### BIOGRAPHY.

The Story of Jesus Christ: An Interpretation. By Elizabeth Stuart Phelps. 12mo, pp. 413. Boston: Houghton, Miffin & Co. \$2.

For the purposes of rough classification this remarkable book may be considered as biography, notwithstanding the author's expressed wish that it be not placed in this category. Whether it should have a place on the shelf devoted to formal "lives" of men or not, it is, at any rate, the story

of the one supreme life in human history, and it can be regarded in no other light. Least of all is it a book of theology; it promulgates no creed, nor does it voice the tenets of any religious sect. Its strength is in its freedom from all these things—in its sheer simplicity. It is purely a narrative—a story in which the transcendently important facts in Christ's career on earth are presented, to the neglect of minor details. The pictures by Hoffman, Du Mond, Da Vinci, Gérome, and others add greatly to the interest.

Life and Letters of Harriet Beecher Stowe. Edited by Annie Fields. 12mo, pp. 406. Boston: Houghton, Mifflin & Co. \$2.

It is merely repeating a truism to say that this is the most important American biography of the past year, or, indeed, of several years. Mrs. Stowe's wide acquaintance embraced men and women who served their times in a greatvariety of callings. Her friends and correspondents were not restricted to any special class. Many names eminent in literature here and abroad were among them; statesmen, agitators, clergymen, leaders in church and state-in short, the people who were making history a half-century ago, and especially the men and women who led the vanguard of the anti-slavery movement, are all represented in the attractive volume before us. The task of selecting those letters on which the reading public would seem to have the most valid claim has doubtless been attended with no little difficulty, but Mrs. Fields has succeeded admirably in presenting the things of real moment and of permanent interest.

The Letters of Elizabeth Barrett Browning. Edited, with Biographical Additions, by Frederick G. Kenyon. Two vols., 12mo, pp. 492—464, New York: The Macmillan Company. \$4.

The long-awaited volumes of Mrs. Browning's correspondence have been cordially welcomed on both sides of the Atlantic. The fact that Mrs. Browning was in Paris during the coup d'état of Napoleon III. and lived in Italy during many troublous times makes her record of personal experience the more interesting. Americans will turn to the letters written to Mrs. Harriet Beecher Stowe, and the pen pictures of George Sand, whom Mrs. Browning met more than once, have a curious interest. Taken all in all, the "Letters" reveal much in a career that has always had a singular fascination for the English-reading world.

Marchesi and Music: Passages from the Life of a Famous Singing Teacher. By Mathilde Marchesi. With an introduction by Massenet. 12mo, pp. 315. New York: Harper & Brothers. \$2.50.

The teacher of Eames, Gerster, Nevada, Melba, and a host of other notable singers of our time hardly requires an introduction to the American public. Madame Marchesi's career has been a long and successful one, and in the course of it she has come in contact with many of the great musicians of the age. This fact makes her recollections especially interesting to all who follow her art. Her memoir contains reminiscences of Liszt, Mendelssohn, Rossini, Rubinstein, Verdi, and other great composers and performers.

Forty-six Years in the Army. By Lieut.-Gen. John M. Schofield. Octavo, pp. 575. New York: The Century Company. \$3.

General Schofield was appointed a West Point cadet in 1849, and he was retired from the command of the army, as lieutenant-general, in 1895. In reviewing this long period of service General Schofield naturally devotes his attention more especially to the four years of the civil war. Some of his comments on the operations of the Union army under Thomas and Sherman are likely to provoke controversy, although made impartially and in the interest of military

criticism. Several of General Schofield's chapters contain important contributions to the history of campaigns and engagements in which he had a part.

Campaigning with Grant. By Gen. Horace Porter, LL.D. Octavo, pp. 564. New York: The Century Company. \$3.50.

General Porter's interesting volume may be regarded as a supplement to General Grant's own "Personal Memoirs." It makes no such distinct contribution to our understanding of the strategy of the civil war, but it adds in a very marked degree to our knowledge of the personal side of Grant's life, thus supplying what was chiefly lacking in the "Memoirs." The circumstances of General Porter's association with his chief, together with natural gifts and training, combine to qualify him as the interpreter of Grant to his countrymen. The illustrations, many of which are the work of the Century's best artists, form an important feature of the book.

#### ESSAYS, ADDRESSES, AND MISCELLANY.

The Quest of Happiness. By Philip Gilbert Hamerton. 12mo, pp. 187. Boston: Roberts Brothers. \$2.

This unfinished work by the late Philip Gilbert Hamerton may be regarded as in some respects a sequel to "The Intellectual Life." It embodies the author's matured philosophy of life—an optimism based on workaday human experience and having but little in common with pure idealism. Dreams of an ideal existence are to be indulged in, it is true, but realization is not to be expected in this life, says Mr. Hamerton. "The Quest of Happiness" was written to show that all unhappiness is the result, not of the misuse only, but of the non-use, of our natural faculties.

Happiness as Found in Forethought Minus Fearthought. By Horace Fletcher. 12mo, pp. 251. Chicago: Herbert S. Stone & Co. \$1.

In this volume Mr. Fletcher considers certain psychological problems which are now receiving the attention of many experts in pedagogical science. He presents these topics in an interesting and suggestive, if not a strictly scientific, discussion.

Life on High Levels: Familiar Talks on the Conduct of Life. By Margaret E. Sangster. 12mo, pp. 320. New York: Eaton & Mains. 90 cents.

In this book Mrs. Sangster's genius for sane and welldirected counsel to the young is repeatedly revealed. The subjects of the chapter-heads are nearly all the plain matters of every-day experience, and each chapter is brief, definite, and to the point. The book is to be commended for its pervasive common sense, both in style and substance.

Success. By Orison Swett Marden. 12mo, pp. 347. Boston: W. A. Wilde & Co. \$1.25.

Mr. Marden is the author of several books intended to stimulate and inspire youthful readers to persevering effort. In the present volume he has gathered much anecdotal material of a suggestive character for the elucidation of his theme, and numerous interesting biographies are cited.

Nineteenth Century Questions. By James Freeman Clarke. 12mo, pp. 368. Boston: Houghton, Mifflin & Co. \$1.50.

This volume of essays was partly prepared by Dr. Clarke for publication shortly before his death. Some of the papers are on literary subjects, some on religious and philosophical problems, and others concern themselves with historical and biographical themes. All had either appeared at some time in periodicals or been delivered as lectures.

The Coming People. By Charles F. Dole. 16mo, pp. 217. Boston: Thomas Y. Crowell & Co. \$1.

In this little book the Rev. Charles Fletcher Dole declares the faith of the avowed optimist in the world's social

and religious regeneration. Mr. Dole writes persuasively and candidly; the effect cannot be other than wholesome and invigorating.

The Relations of Art and Morality. By Washington Gladden, D.D. 18mo, pp. 81. New York: Wilbur B. Ketcham. 50 cents.

A cogent statement by Dr. Gladden of the harmony between art and morality, made plain by copious illustration and persuasive reasoning.

The Cigarette and the Youth. By E. A. King. Paper, 16mo, pp. 24. Ann Arbor, Mich.: Wood-Allen Publishing Company.

This little tract presents the evils of the cigarette habit in boys most convincingly. It should have a wide circulation. The distribution of the pamphlet broadcast over the country would be an effective kind of missionary work, and a few dollars will go a good way in accomplishing this under the liberal terms offered by the publishers.

The Self-Made Man in American Life. By Grover Cleveland. 12mo, pp. 32. Boston: T. Y. Crowell & Co.

Ex-President Cleveland's address at Princeton University on the occasion of the one hundred and fifty-first anniversary of that institution.

Men in Epigram: Views of Maids, Wives, Widows, and other Amateurs and Professionals. Compiled by Frederick W. Morton. 16mo, pp. 228. Chicago: A. C. McClurg & Co. \$1.

The Flowers of Life. By Anthony J. Drexel Biddle. 12mo, pp. 88. Philadelphia: Drexel Biddle. 90 cents.

#### RELIGION AND MISSIONS.

The Epic of Paul. By William Cleaver Wilkinson. Octavo, pp. 722. New York: Funk & Wagnalis Company. \$2.

"The Epic of Paul" is the sequel to Professor Wilkinson's "Epic of Saul." It is longer than the earlier poem, and in some respects a more ambitious effort. The action includes the missionary journeys, sufferings, imprisonment, and final martyrdom of Paul. The first epic was generally recognized as a work of unusual power, and of unique artistic merits as well. The sequel abounds in the same qualities, and is even more remarkable and fascinating as a literary creation.

The Evolution of the Idea of God: An Inquiry into the Origins of Religion. By Grant Allen. Octavo, pp. 454. New York: Henry Holt & Co. \$3.

This is a laborious attempt, on the part of an agnostic writer, to account for the existence of religion without reference to the ethical element. Those who do not feel compelled to part company with the author at the start will find that the book renders a certain service in pointing out the close relationship of Christianity to earlier faiths, and the essential unity of all religions. The argument tends to justify and sanction, rather than to undermine, the grounds of rational religious belief.

The Theology of an Evolutionist. By Lyman Abbott. 12mo, pp. 197. Boston: Houghton, Mifflin & Co. \$1.25.

This book, the outgrowth of a series of Plymouth Church sermons, forms a companion volume to "The Evolution of Christianity" and "Christianity and Social Problems." Dr. Abbott's point of view was made evident in these earlier works; he is a Christian evolutionist, and his books assume the truth of the principle of evolution as interpreted by such scientists as Le Conte, who defines evolution as "a continuous progressive change, according to certain laws, and by means of resident forces." This principle Dr. Abbott seeks to apply to the fundamental problems of religion.

If I Were God. By Richard Le Gallienne. 16mo, pp.87. Boston: Thomas Y. Crowell & Co. 50 cents.

In this brief sketch Mr. Le Gallienne touches the deepest of human problems. His treatment of these themes is said to have been suggested by talks with Mr. and Mrs. Hugh Price Hughes and Sister Lily, of the West London Mission. He represents a man and woman as discussing the meaning of existence, the woman expressing the mature Christian view and the man failing to reconcile the fact of the world with the possible reign of a good God.

The Providential Order of the World. By Alexander Balmain Bruce, D.D. 12mo, pp. 346. New York: Charles Scribner's Sons. \$2.

This volume contains the lectures delivered by Professor Brace, on the Gifford foundation, at Glasgow University, in 18%. The lecturer is candid in his examination of controverted points, and apparently hospitable to every form of honest inquiry.

Christian Institutions. By Alexander V. G. Allen, D.D. Octavo, pp. 598. New York: Charles Scribner's Sons. \$2.50.

In this new volume of the "International Theological Library" Professor Allen traces the history of the Christian Church as shown in the development of its organization, creeds, and forms of worship. The work is characterized by breadth of view and thoroughness in treatment.

The Veracity of the Hexateuch: A Defense of the Historic Character of the First Six Books of the Bible. By Samuel Colcord Bartlett, D.D. Octavo, pp. 412. New York: Fleming H. Revell Company. \$1.50.

Ex-President Bartlett states his position clearly in the preface of his book. Among Old Testament critics he desires to be classed as a conservative. He regards the so-called higher criticism as in some sense an attack on the veracity of the Scriptures—an attack which he feels called upon to repel by argument partly based, like that of the higher critics themselves, on modern discovery.

- Thoughts on Religion. By George John Romanes. Edited by Charles Gore, M.A. Paper, 12mo, pp. 195. Third Edition. Chicago: Open Court Publishing Company. 50 cents.
- History of Dogma. By Dr. Adolph Harnack. Translated by Neil Buchanan. Vol. III. Octavo, pp. 336. Boston: Roberts Brothers. \$2.50.
- Sequel to "Our Liberal Movement." By Joseph Henry Allen. 16mo, pp. 157. Boston: Roberts Brothers. \$1.
- The Problem of Jesus. By George Dana Boardman. 12mo, pp. 62. Philadelphia: American Baptist Publication Society. 50 cents.
- The Culture of Christian Manhood. Edited by William H. Sallmon. 12mo, pp. 309. New York: Fleming H. Revel. Company. \$1.50.
- Strategic Points in the World's Conquest. By John R. Mott. 16mo, pp. 218. New York: Fleming H. Revell Company. \$1.
- Shall We Continue in Sin? By Arthur T. Pierson. 16mo, pp. 122. New York: The Baker & Taylor Company. 75 cents.
- The Philosophy of Ancient India. By Richard Garbe. 12mo, pp. 89. Chicago: Open Court Publishing Company. 50 cents.
- The Congregational Year-Book, 1897. Octavo, pp. 454.

  Boston: Congregational Sunday School and Publishing Society. \$1.

- A Life for a Life, and Other Addresses. By Prof. Henry Drummond. With a Tribute by D. L. Moody. 18mo, pp. 75. New York: Fleming H. Revell Company. 25 cents.
- Faith or Fact. By Henry M. Taber. With preface by Robert G. Ingersoll. Octavo, pp. 347. New York: Peter Eckler. \$1.
- Glimpses of God, and Other Sermons. By B. Gwernydd Newton. 12mo, pp. 259. Cleveland: Published by the Author. \$1.
- Illustrative Notes: A Guide to the Study of the International Sunday School Lessons. 1898. By Jesse Lyman Hurlbut and Robert Remington Doherty. Octavo, pp. 399. New York: Eaton & Mains. \$1.25.
- The Talmud. By Arsène Darmesteter. Translated from the French by Henrietta Szold. 12mo, pp. 97. Philadelphia: The Jewish Publication Society of America. 30 cents.
- Plain Living and High Thinking: A New Year Homily. By Theodore T. Munger. 18mo, pp. 61. New York: Wilbur B. Ketcham. 50 cents.
- The Growth of Christianity. By Joseph Henry Crooker. 16mo, pp. 241. Chicago: Western Unitarian Sunday School Society. 50 cents.
- A Vision of the Future: A Homily for Young Men and Women. By F. B. Meyer, B.A. Paper, 12mo, pp. 22. New York: Wilbur B. Ketcham. 15 cents.
- Joy, Rest, and Faith. By Henry Drummond. Paper, 12mo, pp. 16. New York: Wilbur B. Ketcham. 15
- The Growth of the Kingdom of God. By Sidney L. Gulick, M.A. 12mo, pp. 320. New York: Fleming H. Revell Company. \$1.50.
- The Christ Brotherhood. By Louis Albert Banks, D.D. 12mo, pp. 323. New York: Eaton & Mains. \$1.20.
- The Picket Line of Missions: Sketches of the Advanced Guard. With an introduction by Bishop W. X. Ninde. 12mo, pp. 321. New York: Eaton & Mains. 90 cents.
- A Concise History of Missions. By Edwin Munsell Bliss, D.D. 16mo, pp. 321. New York: Fleming H. Revell Company. 75 cents.
- Ideals of Strength. By John Watson. 18mo, pp. 76. New York: Wilbur B. Ketcham. 50 cents.
- The Ministry to the Congregation: Lectures on Homiletics. By John A. Kern, D.D. Octavo, pp. 565. New York: Wilbur B. Ketcham. \$2.
- The Pew to the Pulpit: Suggestions to the Ministry from the Viewpoint of a Layman. By David J. Brewer, LL.D. 18mo, pp. 76. New York: Fleming H. Revell Company. 25 cents.
- The Colloquy: Conversations About the Order of Things and Final Good, Held in the Chapel of the Blessed St. John. Summarized in Verse by Josiah Augustus Seitz. Octavo, pp. 236. New York: G. P. Putnam's Sons. \$1.75.
- In Journeyings Oft: A Sketch of the Life and Travels of Mary C. Nind. By Georgiana Baucus. 12mo, pp. 334. Cincinnati: Curts & Jennings. \$1.

#### EDUCATION AND TEXT-BOOKS.

Children's Ways. By James Sully, M.A. 12mo, pp. 193. New York: D. Appleton & Co. \$1.25.

This is a volume of selections from Professor Sully's "Studies of Childhood," with some additional matter in the form of stories. The book has been adapted to the needs of the general reader, and in many of its features it will be found highly entertaining, while from first to last it is original and instructive.

 A Working System of Child Study for Schools. By Maximilian P. E. Groszmann, Ph.D. 16mo, pp. 70.
 Syracuse: C. W. Bardeen. 50 cents.

Dr. Groszmann, whose duties as superintendent of the Schools of Ethical Culture in New York City gave him unique opportunities and experience, has prepared a brief manual which will be found useful and suggestive in the application of new pedagogical methods.

Educational Value of the Children's Playgrounds: A Novel Plan of Character Building. By Stoyan Vasil Tsanoff. 12mo, pp. 209. Philadelphia: John Wanamaker. \$1. (By mail, \$1.10.)

Mr. Tsanoff's book treats of a comparatively neglected subject, but of one that has long deserved the attention of all interested in the training of children. The great merit of Mr. Tsanoff's presentation of the matter consists in its correctness. The model playground of which he writes is not a mere dream of a pedagogical enthusiast, but under wise direction it is fast becoming, in Philadelphia, at least, a realized hope. We have never seen the advantages of the playground so well set forth as they are in Mr. Tsanoff's treatise.

School Boy Life in England: An American View. By John Corbin. 12mo, pp. 226. New York: Harper & Brothers. - \$1.25.

For the purposes of the American student of English educational institutions, Mr. Corbin's book admirably supplements "Tom Brown's School Days." For the less serious purposes of the American schoolboy who is curious about the life of his British prototype, the book is equally well adapted. The author has made a careful study of his subject, and his presentation of it is simple, clear, and in all respects adequate.

Nature Study in Elementary Schools: A Manual for Teachers. By Mrs. Lucy Langdon Williams Wilson, Ph.D. 12mo, pp. 282. New York: The Macmillan Company. 90 cents.

The great value of this little book is derived from the fact that the course of nature-study which it outlines has already been tested in actual school work. The course includes special instruction adapted to each month in the school year, and in the range of subjects treated is very broad. The methods suggested are admirable. The extensive use of such manuals as this by the teachers in our elementary schools would practically do away with the bookishness and pedantry which Col. Francis W. Parker, in the preface, rightly attributes to the old system of instruction in natural history; it would lead to a study of nature at first hand.

Principles of Vocal Expression. By Wm. B. Chamberlain; together with Mental Technique and Literary Interpretation, by S. H. Clark. Octavo, pp. 500. Chicago: Scott, Foresman & Co.

The authors of this work have made a serious attempt to provide a rational basis for the study of elocution. Professor Chamberlain gives instruction in this subject at the Chicago Theological Seminary, and has long been a recognized authority, while Mr. Clark is connected with the University of Chicago. Their book is the result of much experience and thought.

Self-Cultivation in English. By George Herbert Palmer. 12mo. pp. 32. Boston: Thomas Y. Crowell & Co. 35 cents.

Professor Palmer's own mastery of English as a vehicle of expression gives special value to the brief paper in which he has endeavored to sum up the philosophy of the matter for the benefit of those whose opportunities for study and training have been limited.

Freshman Composition. By Henry G. Pearson. With an introduction by Arlo Bates. 12mo, pp. 153. Boston: D. C. Heath & Co. 50 cents.

This book was prepared to meet the requirements of the course in English composition given to students at the Massachusetts Institute of Technology in the first term of the freshman year, and it will, we think, be found helpful to students of various grades. The theory of the book—undoubtedly the correct one—is that the learner begins by attempting whole compositions and not merely words, sentences, or paragraphs. In this respect the book has a distinct novelty of plan and arrangement. It commends itself to every progressive teacher of English composition.

German Orthography and Phonology: A Treatise, with a Word-List. By George Hempl, Ph.D. 16mo, pp. 330. Boston: Ginn & Co. \$2.10.

This work covers many points relating to the writing, printing, and speaking of modern German which are not elucidated in the ordinary text-books and lexicons to which the American reader has access. Typographically, the book is a model.

First Book of Physical Geography. By Ralph S. Tarr, B.S. 12mo, pp. 396. New York: The Macmillan Company. \$1.10.

Professor Tarr has prepared a brief treatise on the rudiments of physical geography for the use of such teachers as have found his "Elementary Physical Geography" rather too large a work for their purposes. We have frequently commended Professor Tarr's books on the score of freshness in treatmentand reasonableness in method. In these respects the present volume is in line with its predecessors. The standard of illustration, too, is well maintained.

Manual of Physical Drill, United States Army. By First Lieut. Edmund L. Butts. 12mo, pp. 181. \$1.25.

While this manual was compiled by Lieutenant Butts with direct reference to the systematizing of physical training in the army, it offers many helpful suggestions to gymnasium instructors and others interested in the care and development of the body. The author has availed himself freely of illustration as the simplest mode of description.

Historic Houses and Spots in Cambridge, Massachusetts, and Near-by Towns. By J. W. Freese. 12mo, pp. 152. Boston: Ginn & Co.

This book is a capital illustration of one way to make local history interesting as a school study. Principal Freese has been engaged for more than twelve years, as he tells us, in searching out and studying the most ancient homes of Cambridge and the vicinity for the benefit of his pupils. In this little volume pictures of these old houses are given, together with notes of their location and history. Several historic public buildings of the neighborhood are treated in the same way. Principal Freese's work should be an example to other teachers in places of historic interest.

The Kindergarten System: Its Origin and Development as Seen in the Life of Friedrich Froebel.

Translated and adapted from the work of A. B.

Hauschmann by Fanny Franks. 12mo, pp. 269.

Syracuse: C. W. Bardeen. \$2.

# The World of Thrift and Money Matters.

The Report of the Secretary of the Treasury.—Secretary Gage's report for the fiscal year 1897 was presented to Congress the first week in December. The total receipts were \$430,387,167.89, and the expenditures for the same period, \$448,439,622.30, showing a deficit of \$18,052,454.41. The increase in receipts as compared with 1896—\$20,911,759.11—would have been sufficient to show a surplus instead of a deficit had there not been a corresponding increase of \$13,594,713.49 in the expenditures. The principal items causing this unfortunate showing are: the amount paid out for sugar bounties, \$4,992,630.88 more than last year; \$1,542,839.46, payment to the Southern Pacific Company; an increased deficiency of \$1,849,-206.13 in the postal revenues; and a naval appropriation over seven millions larger than in 1896, some five millions of this going toward new ships. The outlook for the future is not particularly encouraging, as the following estimates for 1898 and 1899 each show a larger deficit than exists at present.

#### FISCAL YEAR 1898.

FISCAL I LAN 1000.		
The revenues of the Government for the currare thus estimated upon the basis of existing is		ær
From customs	\$165,000,000	00
From internal revenue		
From miscellaneous sources		00
From postal service		
Total estimated revenues	\$441,227,076	68
The expenditures for the same period are follows:	estimated	8.8
For the civil establishment	\$88,000,000	00
For the military establishment	60,000,000	Ú0
For the naval establishment	82,000,000	00
For the Indian service	11,000,000	00
For pensions	146,000,000	00
For interest on public debt		00
For postal service		
Total estimated expenditures	\$469,227,076	68
Or a deficit of		
FISCAL YEAR 1899.		
It is estimated that upon the basis of exist revenues of the Government for the fiscal year		

Forward	\$365,000,000	00
From miscellaneous sources		00
From postal service		
Total estimated revenues	\$482,874,647	87
The estimates of appropriations required	for the sau	me
period. as submitted by the several executive and officers, are as follows:		
Legislative establishment	\$4,465,582	05
Executive establishment	20,025,484	60
Judicial establishment	687,620

Permanent annual appropriations	66,836,220	00
Total estimated appropriations, exclusive of sinking fund		22
Or an estimated deficit of	<b>691</b> 847 995	- 05

Japanese Lighthouses.—There has just been inaugurated a series of lighthouses along the Japanese coast, erected by a French firm and equipped with the "Feux-Eclairs" system. This system employs the lightning-flash, and uses petroleum as fuel, about three pounds an hour in a six-wick burner lamp producing a light of some five hundred candle power. One lighthouse on the island of Formosa, which cost complete \$8,000, has been tested and found to give a light of 154,000 candle power, the flash being visible at a distance of seventy miles in clear weather. It is probable that the marked efficiency of this system will make difficult the introduction of electricity for the above purpose, since the authorities are more than satisfied so far with the results of their work: but now that the preliminary steps have been taken, it seems well-nigh certain that the near future will see these oil flash lights replaced by the more scientific and satisfactory electric search lights, such as now dot the coast of The beams from some of these great arc lamps stream out with an intensity equivalent to that of 40,000,000 candles, and there can

be no question as to their superiority over any other form of lighthouse lamp.

Municipal Street Railways Abroad.— The city of Glasgow has made a decided success of its experiment in operating tramways. the failure of the companies three years ago to accede to terms which would have produced a large income for the city the corporation decided to take matters into its own hands. Its offer to purchase the entire plant upon condition that the companies would not try to compete by means of omnibus lines was refused, so it was compelled to supply an entirely new equipment of cars, horses, and stables, and to organize a force of drivers and conductors. In spite of these drawbacks, the administration of the service has been so successful that after all interest charges on the investment had been paid last year there was a net profit of \$416,335 to be turned over to the city treasury. Nor has this financial success been the only gain. Public and operatives alike are better served than formerly. Fares have been reduced, halfpenny hours for workmen have been inaugurated, the lines have been extended in every direction and the cars improved, and the employees have found their hours shorter, while their wages were increased.

In Leeds the incentive toward municipal ownership was found in the grievances of employees who were forced to work fourteen hours a day for scanty wages. The city finally purchased the lines for \$650,000, and is conducting the service with satisfaction to everybody and an annual profit of about sixty thousand dollars. Huddersfield, at the end of a year, during which lines were greatly extended and fares reduced, has been able to show a balance of \$31,495 on the credit side; Sheffield comes out \$36,605 ahead; Blackpool, with a population of only twenty-five thousand, makes \$14,920 out of its system—and all these municipalities have been working with horse traction, electricity being very seldom in use for street tramways throughout the United Kingdom.

The Wage-Reduction at Fall River.—
On December 14 formal notice of the cut in wages was given in the Fall River cotton mills. The price for weaving a cut of 24-inch 64 x 64 print cloth was reduced from 18 to 16 cents, with a uniform reduction throughout all the other departments of 11 1-9 per cent. In the prices of odds, now a staple, each mill figures its own prices, merely cutting off the above percentage from the former rates. As has been the case in every such change for ten years, the spinners' schedule was made the basis for the new rates,

each mill figuring them as it becomes necessary upon changes in number of yards spun. The reduction is very comprehensive, affecting not only all the operatives, but administrative officers as well.

It is declared that there is no alternative to an acceptance of the new scale except a complete shut-down, and the cause of the trouble is believed to be a permanent condition, not, as so often has been the case, a temporary glut of goods which must be disposed of. The fact seems to be that the Southern competition is having a most injurious effect upon all New England cotton manufactures. Not only are the Southern spinners close to the cotton fields—their wages are decidedly lower than in the North, and the Southern operatives work 66 or 72 hours a week instead of 58, as in Massachusetts, or 60, as in Maine. The constant improvement in skill and

THE PRUDENTIAL INSURANCE COMPANY OF AMERICA

JOHN F. DRYDEN, President.

HOME OFFICE: Newark, N. J.

methods of labor in the South has now reached a point where these advantages give the Southern mills a steady and crushing superiority over their Northern competitors. As the Evening Post remarks, it is a condition which cannot last, "for the man who works at a disadvantage of 10 or of 5 per cent. will go to the poorhouse sooner or later."

Butter-Making in the West.—There has of late years been a remarkable development of dairy industries throughout the West. It has been found that even in the buffalo grass regions, on the semi-arid belt between the Missouri River and the mountains, milk and butter production can be carried on with profit. In both Kansas and Nebraska the increase of creameries has been large, but South Dakota shows the most notable growth of this industry. In seven years, since the first creamery began operations in this State, the number has increased to 145, and these have produced in the past six months 12,000,000 pounds of butter, valued at \$2,160,000. During the best grazing season the milk-raising farmers supply products worth \$285,000 a month, and many of the creameries are able to continue operations with profit all through the winter.

Timber Production in Minnesota.—It is estimated that nearly twice as much pine timber will be cut in Minnesota this winter as was taken out last season. The Mississippi River cut for the mills of Minneapolis and points as far down as Clinton, Iowa, will be 550,000,000 feet, as against 240,000,000 last year. In the Red Lake country, which has seen little lumbering for some time, there will be felled 150,000,000 feet. The Duluth and St. Croix districts will contribute 850,000,000 more, making a total of 1,500,000,000 feet of pine to be taken out of the forests this winter. An army of 20,000 men will be required for the work.

Electricity in Siam.—Incongruous as it seems, the king's palace and many of the temples, as well as the streets of Siam, are now lighted by electricity. The plant has hitherto belonged to the government, but an American engineer has recently formed a company which now has a twenty years' monopoly. The capital of £6,000 in 100 shares is about equally divided between American and British subjects, but it seems probable that this will soon be increased to five or six times the present amount, and the company converted into a British registered one of limited liability. It is expected that this will result in a largely increased demand for electrical apparatus of various sorts.

Spring No. 2.

Nature's Nerve Tonic and Restorative. Its Especial Value in Uric Acid or Gouty Dyspepsia.

Dr. HUNTER McGUIRE, M.D., LL.D., President and Professor of Clinical Surgery, University College of Medicine, Richmond, Va. "BUFFALO LITHIA WATER Spring No. 2, has never failed me as a powerful Nerve Tonic BUFFALO LITHIA WATER when I have prescribed it as such. It has a very marked adaptation to diseases of the digestive organs. In that condition especially known as Nervous Dyspepsia, frequently caused by over-mental labor, and in those cases also where there is an excess of acid, in the process of nutrition, it will be found highly efficacious."

Dr. HARVEY L. BYRD, formerly Professor of Practical Medicine in the Baltimore Medical College. "BUFFALO LITHIA WATER Spring No. 2, is an admirable general tonic and restorative, BUFFALO LITHIA WATER increasing the appetite, promoting digestion, and invigorating the general health. It is powerfully anti-acid and especially efficacious in Acid Dyspepsia. It is strongly commended to a very large class of sufferers by a peculiar power as a nerve tonic and exhilarant, which makes it exceedingly valuable, where there is nothing to

contra-indicate its use, in all cases where nervous depression is a symptom."

Dr. GEO. R. FOWLER, Attending Surgeon St. Mary's and Methodist Episcopal Hospital, Brooklyn, N. Y. (Reference Hand-book, Vol. I., page 718), says: "Spring No. 2 seems to be the most potent in its effects upon the digestive and excretory organs. These waters are, therefore, especially indicated in Dyspepsia resulting in or consequent upon the accumulation and deposition of Uric Acid or its salts in the system."

BUFFALO LITHIA WATER is for sale by Grocers and Druggists generally. Pamphlets on application.

PROPRIETOR, BUFFALO LITHIA SPRINGS, VA.

# Be Cured

### Of Catarrh, Bronchitis, Asthma and Consumption?

A test by which the true value of all treatments can be determined.

How many thousands there are to-day who would gladly pay almost any reasonable sum to be cured of either one of the above diseases, but who, knowing of so many remedies and treatments, are at a loss to decide which one to try. It does seem a difficult task, yet becomes a comparatively easy one if the person afflicted will but use a little good judgment and common sense. In the first place every man and woman knows, or should know, that the air passages were made for air alone, and that nature has so constructed these passages that moisture of any kind cannot enter the bronchial tubes or lungs. This at once precludes all possibility of a cure of these deep-seated diseases being effected by treatment requiring the use of sprays, douches, atomizers, vapors or stomach medicines. This all regular physicians admit. They also acknowledge that the diseased parts must be reached through the air we breathe or not at all. Not only this; a germicide must be used which will leave the air dry and yet have the power to destroy the bacilli of disease in the minutest air cells of the lungs.

This decision reached, then comes the question—Is there such a germicide? In answer to this query, thirty-eight hundred physicians and over three hundred thousand persons who have tested

say YES. "HYOMEI" is Nature's own remedy, given through the only vehicle (the air you breathe) which Nature permits to enter the bronchial tubes and lungs.

#### IT CURES BY INHALATION.

There is no danger, no risk. Your money is refunded if it fails to relieve.

"Hyomei" outfit complete, \$1.00; extra inhalant, 50c. "Hyomei" Balm, a wonderful healer, 25c. Sold by all druggists, we sent by mail on receipt of price. Send for "The Story of Hyomei." Mailed FREE.

#### BEECHER'S GREAT SUCCESSOR.

Dr. Lyman Abbott, who succeeded Beecher in the pulpit of Plymouth Church, is undoubtedly the most noted theologian of the day. He is a scholar and critic as well, and he is one of three hundred of the foremost living men of letters who have made the Charles Dudley Warner Library the most remarkable work of the age.

#### THE LAST VOLUMES OF THE WARNER LIBRARY.

THE LAST VOLUMES OF ONLY the three final volumes of the Warner Library now remain to be printed. This insures the completion of the great Library at an early day. Then, as our readers know, the special introductory price which has been extended through Harper's Weekly Club to those who order in advance of publication will be withdrawn. These last volumes are especially noteworthy in character, and will add an incalculable value to the Library. Indeed, they will make this a vast treasure-house of delightful reading, likewise the most perfect and exhaustive work of reference and educational study in the possession of literary English-speaking people.

One of these volumes is devoted to the Famous Books of the World, giving a clear, concise account of the plot and character of every notable book, another to Antology of Famous Single Poems and Lyric Masterpleces representing hundreds of writers of different ages, while the last volume contains a Biographical Dictionary of the Authors of the World, and a most complete Analytical Index which will render every page, author, work, subject, character, and detail treated or referred to in the entire Library instantly accessible to the reader.

In a word, what is primarily a gathering together of the finest literature of all the ages becomes with these sids a huge store of facts, biography, bibliography, and every variety of information.

As the full outlines of Mr. Warner's work are disclosed what a splendid achievement it seems! The whole conception was Napoleonic, and the evident care and completeness and finish of the actual work itself is little short of the marvelous.

Whether it be merely to while away the long winter evenings, or as means of study and intellectual development; whether it be simply as a Library of the greatest literature of the world, or as a means of education and culture, assuredly there never was such a work as this. Think of what endless hours of recreation and enjoyment that the contraction of the property of the contraction of the one might gain from its pages, with an interest that would deepen year by year! What an inspiration and uplift and what a widened mental horizon might come from devoting no more than an hour a day to its heaped-up wealth of literary riches!

Our readers should bear in mind that when these three volumes come from the press the Warner Library will be completed, and the special introductory price which has been extended to club members during publication will be a thing of the past. We advise all who are interested in good literature to write now to Harper's Weekly Club, 93 Fifth Ave., New York, for full particulars of the exceptional club arrangement which ceases with the completion of the Library.

# Λ

IMPORTANT NOTICE.—To make sure of one of these special sets at a fraction of their real value, the \$1 should accompany your application. Remember, you have one whole week for careful examination, with privilege to return if not entirely satisfactory and your money refunded.

In making our inventory at the close of the year, we find in stock a few sets of this great History, in Cloth and Half Morocco only, that are slightly marred—not enough to impair their real value, but sumficient to prevent our shipping as perfect stock at our regular price. There being only a limited number of these sets, we shall not go to the trouble of rebinding them, but, to effect a quick clearance, have decided to offer them at one-third of the regular price. We will also extend to you the easy club payment plan.

If you desire this great work, you can secure one of these special sets at about the cost of making.

WHILE THEY LAST they are yours for a lifetime this easy way:

ONLY \$1 with Order and \$1.00 per month until paid.

സസസസസസസസസസസ

WE GUARANTEE that the entire eight volumes, except for a slight rub or abrasion on the binding, are precisely the same as those sold at full price, yet we cannot offer them as perfect stock, and our loss shall be your gain.

# THIS LIBRARY OF UNIVERSAL HISTORY

Is Positively the Greatest Bargain Ever Offered, and Will Never Be Duplicated Under Any Circumstances.

### WHAT THIS GREAT WORK REALLY IS.

The three great epochs, Ancient History, Mediaval History and Modern History, naturally claim the principal portion of the Library, but Recent History also receives the attention its importance and interest demand, and the record of events is brought right down to the present year. The History of Civilization and The Philosophy of History are more fully treated than in any other work ever published in this country. The Illustrations, from the works of such great artists as Meissonier, De Neuville, and Dore, are numerous and brilliant, marking the turning points of history, and The Historical Maps (there are nearly 100 of them) are more abundant and accurate than in any other work, native or foreign. In every one of those vital features which constitute a comprehensive, accurate, instructive and valuable History of the World, the Library is simply incomparable. It is the Largest and the Best.

How to Secure this Great Bargain.

Bring or send \$1.00 to the Club and the entire Library of eight superb volumes, bound in Cloth, will be forwarded. The balance is to be paid at the rate of \$1.00 monthly for 15 months. The Erst payment for either binding is only \$1.00. In sending your first payment please designate the style of binding you desire, and indicate how you wish the volumes sent, as the charges for delivery must be paid by the purchaser. Remittances received after this special lot is exhausted will be immediately returned. The limited stock at our disposal cannot last long. To protect ourselves against book dealers, etc., we must decline to send more than 2 sets to any one pathy, and in every case we must require the full name and address of each person receiving a set. We have only two styles of binding in this lot—Cloth and Half Morocco—about an equal quantity of each. Order at once to make sure. The absolute confidence that the Library will be thoroughly appreciated, highly valued and cheerfully paid for, is clearly shown by sending such a valuable set of books, the subscription price of which is from \$40.00 to \$85.00, on an advance payment of only \$1.00. The Half Morocco binding will be supplied for 25c. additional per month.

Words of Praise for the Work.

President E. Benjamin Andrews, of Brown University, says:

"The educational value of the Library of Universal History' is sure to be very great."

Dr. W. T. Harris, U. S. Commissioner of Education, writes:

"I appreciate highly the importance of stimulating historical study by the distribu-tion of such a valuable work on the subject."

Rev. Francis W. Greene, Philadelphia, Pa., writes:

"The binding paper, type, and illustrations are beautiful. I have never bought anything in my life that I am better pleased with than I am with this set of books."

### Remember

that these sets are as good for all practithat these sets are as good for all practi-cal purp ses as those for which we are getting the regular price. We guarantee that the interiors are uninjured and the binding of our standard grade. The most serious injury to any set is no greater than may occur in a few days use in your own home.

As positive proof of this statement, you may retain the set for careful examination for one whole week, and if not satisfactory you have the right to return to the Club, and your money will be cheer-fully and promptly refunded. This is positively the chance of a lifetime.

# GREAT BIBLICAL LIBRARY

Beautiful ART VOLUMES, a complete and magnificently illustrated BIBLICAL LIBRARY, for less than the price of an ordinary family Bible.

### CONCEDED TO BE THE MOST WONDERFUL BIBLICAL PRODUCTION OF THE CENTURY.

#### A GREAT LIBRARY.

#\*

In four sumptuous volumes, printed in large clear type, it combines the Authorized Version of the Scriptures, a Bible Dictionary, a Bible Atlas, Helps to Bible Study, a Bible History, Harmony of the Gospels, a most complete Concordance, and a score of other new and valuable encyclopedic features, together with thousands of helpful and illuminative notes, commentaries, explanations, and reflections, which make this Library indispensable to every Bible teacher or Bible scholar, and because it stimulates Bible-reading, especially among the young, it is likewise indispensable in every Christian home.

#### A SUPERB WORK OF ART.

Not only is this magnificent work printed in the highest style, on super paper and in beautiful bindings, but it includes the most remarkable series of Bible illustrations ever brought together. These comprise over four hundred full-page photographs of the actual scenes and places of the great events of Bible history. They are the only truthful Bible illustrations ever obtained. They lend a new and striking interest to the Scriptural narrative and make its events singularly vivid and real. They are as fascinating as a personal journey through the Holy Land.

We have now on file hundreds upon hundreds of letters voluntarily written by our Club members, in unqualified praise of this great Library and their appreciation of our Club plan.

This great work was originally sold at a price far beyond the means of most Bible readers. Realizing this, Our Bible Club secured from the publishers a superb Special Edition, on super paper, and in extra quality of bindings, from the same beautiful plates, and with the same magnificent series of half-tone engravings of Bible scenes. Because the Club took the entire edition, it is able to cut the publishers' price in two. For this reason,

WHILE THEY LAST, all who join our Club secure this splendid Biblical Library at less than the cost of an ordinary family Bible. This exceptional opportunity can last but a short time longer. The edition is almost exhausted, and when all the sets are gone the Club will close. We advise our readers to investigate this remarkable offer at once.

FREE

So that readers of the Review may understand what a truly wonderful work this is, the Club will send, postage paid, to any one mentioning the Review of Reviews, a beautiful art portfolio of copyrighted photographic trees, selected from the remarkable series of 4.6 full-page plates which so beautifully illustrate this new work. home decoration. They were secured for this work at an expense of \$25,000 by a special expedition sent to Palestine and the East for this sole purpose, and constitute the most remarkable collection of Biblical photographs the world possesses.

McClure's Magazine Bible Club, 141 E. 25th St., New York.

# ook Money. How can I make my book money go farthest?

This is a question that every book lover is constantly grappling with. The Union Library Association solves this perplexing question in an ideal manner, for the Association was organized for the distinct purpose of supplying direct to the people all books, of every description whatsoever that are sold in the trade, at wholesale prices. We cannot better demonstrate what we can do for our members than to make public the following letter from Mr. George H. Warner, associate editor of that magnificent work, "A Library of the World's Best Literature," of which his brother, Mr. Charles Dudley Warner, is editor-in-chief. Mr. Warner writes as follows:

NEW YORK, December 30, 1897.

THE UNION LIBRARY ASSOCIATION, NEW YORK CITY-

Gentlemen: In the course of the past two years I have had frequent occasion to buy books of your

Gentlemen: In the course of the past two years I have had frequent occasion to buy books of your Association, and I wish to say that I have been very much surprised at the low price at which you sell books. Some of the discounts from the regular prices which I have obtained are really startling in amount. In order to fully test your prices, I recently selected a dozen standard publications and submitted a list of them to four of the largest book-selling establishments in New York including a department store, a second-hand establishment, and two regular bookstores. My list aggregated at retail prices \$63.75, and the best offer I got from any of the four sources was \$47.75, more than double your price, for I bought them of your Association for \$22.47. My list was selected from different departments of literature, and I regard it as a good test of the saving that may be made by buying of the Association.

Knowing the management and workings of the Association as I do, I fully recommend book buyers to become members of it.

Very truly yours,

GEORGE H. WARNER.

In order to introduce the Association into every section of the country, we have concluded to offer, for a limited time, a MEMBERSHIP FREE to all who will order from us any one of the following standard and well-known books. They are in all cases the regular copyright editions, and are published by such leading publishers as Harper & Bros., The Century Co., D. Appleton & Co., Charles Scribner's Sons, The Macmillan Co., Dodd, Mead & Co., Little, Brown & Co.

		Regular price	Membership fee	Both for
Quo Vadis. By Sienkiewicz. Authorized ed., 12mo, cloth,	-	\$1 00	\$3 00	\$1 00

The books in all cases to be sent postage or expressage paid by the Association. It will readily be seen how liberal is our proposition-you simply purchase one of the above-named works at retail price and obtain a membership, when you will be enabled to purchase any of the thousands of other books at wholesale price. By wholesale we mean at discounts averaging from 30 to 60 per cent., depending upon the book, the publisher, and the conditions of purchase. The Association has inaugurated a series of

#### SPECIAL SALES

and issues several special sale catalogues every year, which are sent free to members. Special Sale ( No. 14 will be issued this month and will contain hundreds of standard books from the best publishers at discounts ranging all the way up to 75 per cent. It will, therefore, be readily seen how important it is that you should become a member without delay.

The Association also does an immense business in Stationery, and furnishes all kinds of fine writing papers and engraved work at wholesale rates. Moreover, orders for all the leading Periodicals are taken, our prices being lower than can be obtained elsewhere.

The Association is NOT AN EXPERIMENT, having been in existence for nearly fifteen years. The proprietors and managers are old and experienced publishers and booksellers who have exceptional facilities for buying, so that the Association is in a position to fully carry out its agreement with its members; in short, to sell books at lower prices than any concern in the United States. Our members receive prompt, careful, and intelligent attention in all cases, and our establishment is one of the busiest in all of busy Greater New York.

All product and communications should be addressed to

All orders and communications should be addressed to

P.S.—Notwithstanding the above very liberal proposition, we will issue a THREE YEAR fully paid up certificate of membership to each of the first 500 REVIEW OF REVIEWS readers who send in their orders.—The U. L. A.

# Historical Works of Permanent Value PUBLISHED BY THE MACMILLAN CO.

#### THE UNITED STATES, ENGLAND, AND FRANCE.

#### A Students' History of the United States.

By Edward Channing, Professor of History, Harvard University, author of "The United States of America, 1765-1865." With maps, illustrations, etc.

#### Cloth, crown 8vo, \$1.40 net.

The Study of lists of references, general readings, and illustrative material make this book peculiarly valuable to the general reader. Suggestive questions will enable any reader to adopt the better methods of studying history, which a few colleges already encourage by their requirements for admission.

#### South Carolina Under the Proprietary Government, 1670-1719.

By EDWARD McCRADY, Vice-President of the Historical Society of South Carolina, Member of the Bar of Cloth, crown 8vo, \$3.50 net. Charleston, S. C.

The story is told vividly, yet with true legal accuracy, and the work as a whole is one which cannot be considered as belonging to one State alone, but as a part of and an important contribution to the nation's history.

#### The Economic History of Virginia in the Seventeenth Century.

By PHILIP ALEXANDER BRUCE, author of "The Plantation Negro as a Freeman," Corresponding Secretary of the Virginia Historical Society, etc.

#### Two vols., 8vo, cloth, \$6.00.

Thomas Neison Page to end I found it absorbingly interesting. It is completely satisfactory. It leaves me with the conviction that the subject has been handled fully and finally. Others may follow and do service. Mr. Bruce has discovered and established his domain, and that is his for all time. He has made a book which will be always a part of the history of Virginia."

#### Essays on the Civil War and Reconstruction and Related Topics.

By WILLIAM A. DUNNING, Adjunct Professor of History, Columbia University. Cloth, 8vo, \$2.00.

Its chief purpose is to present in an impartial manner the most conspicuous phases of the constitutional devel-opment of the United States during the troubled years from 1861 to 1870.

#### American History Told by Contemporaries.

Edited by Albert Bushnell Hart, Professor of History, Harvard University. In four volumes.

Cloth, Crown 8vo, \$7.00 per set. Price of Vol. I. alone, \$2.00.

ERA OF COLONIZATION. (1492-1896.) Ready Vol. I. Vol. II. BUILDING OF THE REPUBLIC. (1689-1788.)
Ready in February.

Vol. III. NATIONAL EXPANSION. (1783-1845.) Vol. IV. WELDING OF THE NATION, (1846-1896.)

This series is made up entirely from the original sources of American history, the records and narratives of men who witnessed and shared in the events which they describe. These extracts are arranged so as to make up a general account of the times from the first voyages to the present day. Volumes III. and IV. are in preparation.

#### Select Documents Illustrative of the History of the United States, 1776-1861.

Edited by WILLIAM MACDONALD, Professor of History and Political Science, Bowdoin College.

The selections, ninety in number, cover the period from 1876 to 1861—from the adoption of the Declaration of Independence to the outbreak of the civil war. Each document is prefaced by a brief introduction and a select bibliog-

### THE MACMILLAN COMPANY, 66 Fifth Avenue, New York.

# New Works on Literature, Social Science, etc. PUBLISHED BY THE MACMILLAN CO.

#### American Literature.

By KATHARINE LEE BATES, Professor of Literature in Wellesley College, author of "The English Religious Drama," etc.

Student's Edition, Cloth, \$1.00; Library Edition, \$1.50.

The history of our national literature is given in unusually close connection with the development of American life. The opening chapter treats of the Colonial Period; the second of the Revolutionary; the remaining four of the National Era, or the Nineteenth Century. This is first surveyed in its changing literary aspects; then the artistic product in prose fiction and other prose and poetry are passed in review, with emphasis on the masters and a grouping of minor writers by geographical sections. A clearly defined sequence of subjects and a rapid, picturesque style will, it is hoped, hold the attention of the student, while a number of portraits also add to the intererst of the volume. add to the interest of the volume.

The Bible as Literature.

#### The Modern Reader's Bible.

ST. MATTHEW, ST. MARK AND THE GENERAL EPISTLES.

Presented in modern literary form by Richard G. Moulton, University of Chicago.

18mo, Cloth, 50 cents.

Paste grain morocco, 60 cents.

#### The Bible Story.

RETOLD FOR YOUNG PEOPLE.

The Old Testament Story. By W. H. BENNETT. The New Testament Story. By W. F. ADENEY. With illustrations and four maps.

Cloth, 16mo, 81.00.

A Manual of the Most Popular Science of the Day.

#### Outlines of Sociology. By Lester F. Ward, LL.D.,

Lecturer on Sociology at the Columbian University, Washington, D. C.

Cloth, 8vo. In Press.

The object of the work is twofold: to furnish a clear idea of what sociology is as distinguished from other sciences, and to lay out the science of sociology itself in a definite scheme of laws and principles,

Sketches Full of Local Color to be Published Shortly.

#### Southern Soldier Stories.

By GEORGE CARY EGGLESTON.

Cloth, Cr. 8vo, 81.50.

Stories of the Southern army in the late war, told with great vigor and "go," with humor and pathos also, and sympathetically illustrated by R. F. Zogbaum.

#### Where the Trade Wind Blows.

By Mrs. SCHUYLER CROWNINSHIELD.

Cloth, Cr. Svo, \$1.50.

A series of sketches portraying the life of the Spanish West Indies, drawn with a firm hand and an intimate knowledge of facts rarely understood.

In View of the Changes in City Government Specially Important.

### The Finances of New York City. By E. Dana Durand.

A timely discussion of an important subject, since the ultimate secret of power is in the control of taxation and governmental expenditure. It should be widely read.

Cloth, Crown Svo, 82.00.

Varying Views of the Life of Our Day.

#### The Celebrity.

By WINSTON CHURCHILL

Cloth, Cr. 8vo, \$1.50. In Press.

A novel of to-day, very real and with an interesting character stody.

#### The Gospel of Freedom.

By ROBERT HERRICK.

### THE MACMILLAN COMPANY, 66 FIFTH AVE., NEW YORK.

# Dr. Ridpath Consents

January 12th we should have been compelled to announce the

# Closing of the Wanamaker History Club,

as the club limit had been practically reached. Such a course would have led to keen disappointment among thousands who, wanting the work, have neglected to join the club. The case was laid before Dr. Ridpath. Here is his answer:

COPLEY SQUARE, BOSTON, Jan. 8, 1898.

HON. JOHN WANAMAKER-

My Dear Sir: I wish to express my gratification at the enthusiastic reception which has been accorded your enterprise in the sale of my "History of the World" through your great commercial establishments in Philadelphia and New York. I note with pleasure the commendations which from all sides have come from our friends who have joined the Wanamaker History Club, and have thus secured at half the usual price sets of my work. Though this reduction in price has involved a corresponding reduction in my own percentages on the "History of the World," I nevertheless rejoice at the wide circulation which the work has secured. less rejoice at the wide circulation which the work has secured through your agency

I do not doubt that a great many people who have delayed in availing themselves of the opportunity which you have offered will be disappointed if the Club should be closed at the present time. I be \( \) leave to suggest that the contingency calls for at g leave to suggest that the contingency calls for at

least a brief continuation of this enterprise.

For my own part, I am willing to make the concession involved in the reduction of my royalties, and to meet any suggestions which you may make, or rather that the publishers—Merrill & Baker—may make to supply the Wanamaker Club with another edition of my "History of the World," of one-halt the number of sets of the late edition, the price remaining the same. I make this offer in order that the public may have the advantage, for a brief interval, of the reduced rates.

Interval, of the reduced rates.

This offer on my part, however, is, I think, all that fairness demands, and I do not feel called upon to make further extension of the arrangement which has been so heartily approved by the public in the sale of the recent edition. I think, therefore, that it would be well, if you so desire, to offer a new edition of one-half the number of sets recently issued, and to give due notice to the public that when the smaller edition shall be exhausted the present arrangement as to reduction of price shall cease. Yours truly, ment as to reduction of price shall cease.

John blass 1 3

With this absolute limit reached, there is NO TIME TO LOSE if you would secure this greatest of histories of the world's nations and people—at half the publishers' regular prices,

# The Club Fee is One Dollar.

The Complete Work, Eight Massive Volumes, Delivered at Once.

each member obligating to make these small monthly payments:

For the work in cloth binding, 15 monthly payments of \$1.50.

For the books in half-Russia binding, which we especially recommend for its beauty and durability, 15 monthly payments of \$2.00.

For the work in sumptuous full morocco, 15 monthly payments of \$2.50.

# Ridpath's History of the World

is the life-work of a busy, broad, wise man, and it comes to you now with his last revisions. It stands alone as a complete and entertaining story of the world's history since the advent of man—the one great history available to American readers.

We will cheerfully take back the work if, after ten days' examination, a club member so desires, and in such cases we will refund the club fee of \$1.00, of course.

Books are delivered free wherever our wagons from either city run. But we pay no freight or express charges. Examine the history freely at the store, if you can come. Or, we will cheerfully mail specimen pages, with illustrations and colored plate, and full information. A postal-card request will start the batch to you in a jiffy.

### OFFER EXTRAORDINARY TO READERS OF THE "REVIEW OF REVIEWS."

Edition de Luxe. 95 Copies Remaining Regular Price. \$150

Offered to "Review" readers AT LESS than one-third the original price, and payable \$3 per month.

# MIZRAIM, or ANCIENT EGYPT.

By DR. SAMUEL AUGUSTUS BINION.

HATHORIC COLUMN TEMPLE OF DENDERA.

This plate in Mizraim is 12 x 18 inches and shows ten
different colors.

Most superbly illustrated history ever published of the art and architecture of any country in the world. A fortune was spent on this work, which is the result of more than ten years of labor of author, artist, and engraver. It is superbly illustrated with 72 full-page plates,  $20 \times 26$  inches, magnificently colored, and representing the temples, etc., exactly as they appeared four thousand years ago.

EGYPT! Whose civilization is the oldest known and yet whose architecture is the wonder and admiration of modern times, and which "for nobility of conception, vastness of detail, and majesty of the highest order exceeds anything ever reared by human hands," has now for the first time been adequately shown forth in these superb volumes. Whether specially interested in Egypt or not, noone who is a lover of good things in art or literature can fail to be fascinated by the beauty, grace, and grandeur of Egyptian art as exhibited in these plates.

Of this work MISS AMELIA B. ED-WARDS, the Queen of Egyptology, wrote: "I wish to tell you how much I am pleased with the specimen plates of your great work."

"A series of illustrations that for beauty of execution have absolutely no parallel."—Illustrated American.

PROF. OTIS T. MASON, of the Smith-

sonian Institution, said: "I am proud to see such creditable work done in our country."

"We have found the text very accurate and up to date."—Biblia (official organ of Egypt Exploration Society).

"A most vivid pen-and-brush pictorial history of the wonders of ancient Egypt."—The Evangelist, New York.

The work has been indorsed by purchase after thorough examination, and at the regular price, by the British Museum, Metropolitan Museum of Art, Boston. Library, and the leading libraries of this country.

# THE ENTIRE EDITION WAS LIMITED TO 800 COPIES AND THE PLATES HAVE BEEN DESTROYED. : : :

### OUR OFFER

### THE GREATEST FAVOR EVER EXTENDED TO THE "REVIEW OF REVIEWS" READERS.

The work is published in twelve parts, each containing six plates with their accompanying letter-press, and these are inclosed in four handsome half morocco portfolios-regular price \$150. To the first 95 subscribers who shall send \$3 we will send the entire work, and the balance can be paid in fourteen monthly payments of \$3 each. We can also supply it in two volumes, bound elegantly in half morocco, by adding 50 cents to each of these payments. If you care to add to your library the most superb work concerning the most fascinating country in all the world, fill out or copy the following acceptance blank.

#### HENRY G. ALLEN & CO., 156 Fifth Ave., New York—

Gentlemen: I accept your offer of the edition de luxe of MIZBAIM, or ANCIENT EGYPT, and inclose \$3 as first payment, balance to be in 14 monthly payments of \$3 each, beginning 30 days after I have received the set. I reserve the privilege of RETURNING THE WORK WITHIN THREE DAYS AFTER RECEIVING IT IF NOT FOUND SATISFACTORY, in which case you are to return the \$3 paid.

# No such offer of **Good Literature** was ever made before.

Are you interested in the day's best literature and art? If so, your attention is invited to "The New York Times Saturday Review of Books and Art," only one dollar per annum. It is a high-class literary weekly for people of refined taste and good judgment. It is edited for the information and entertainment of the young and old who wish to be advised concerning current literature and art-a highclass literary publication at a nominal price. Prompt reviews are given, often from advance sheets, of all important new books, and the news and gossip of authors, books, art and artists, and special contributions from well-known writers on timely topics; in a word, it is a literary newspaper and the only journal properly to be so called. It contains in one year's issues more about literature and art that is good and of general interest than any of the highpriced magazines. It is published every Saturday and will be sent to any address in the United States for one dollar per annum. Every subscriber will also receive, free of charge, the regular Saturday news pages of THE NEW YORK TIMES. No such offer of good news and good literature was ever before made in this or any other country. You cannot well do without it if you want to keep promptly informed concerning current liter-

## REMEMBER, you have one whole week STOCK-TAKING for careful examination, with privilege of returning if not entirely satisfactory, and your money will be promptly refunded.

Very few of these special sets now remain, and fair warning is given that these will soon be claimed. Every reader knows that the work is not only an Encyclopædia, treating over 50,000 topics, but the most exhaustive Dictionary published, defining over 550,000 words, which is 25,000 more than any other. They also know that they are securing the work for LESS THAN ONE-THIRD THE REGULAR PRICE, and as a consequence orders are being received daily from all sections of the country.

In taking stock at the close of our business year, we find a few sets of The Encyclopædic Dictionary (in cloth and half-Russia bindings only), of which the sides of some of the volumes are slightly rubbed—not enough to impair their real value or appearance in your library, but sufficient to prevent their shipment as perfect stock at our regular prices of \$42 to \$70 a set. There being only a limited number of these sets, we shall not go to the trouble of rebinding them, but have decided to

At once a Cyclopædia and a Dictionary.

ENCYCLOPADIC

1000

HXX:

It contains over 250,000 defined words—nearly twice as many as the largest "unabridged"—and is now accepted as AN UNQUESTIONED AUTHORITY wherever the English language is spoken.

spoken.

It is one of the best of all Encyclopædias, treating over 50,000 encyclopædic subjects—the Britannics has about 27,000. JUST THINK OF IT! The whole range of human knowledge condensed for your INSTANT USE by such world-famous scientists as Huxley, Proctor, and a hundred other educators of hardly less renown! It easily takes the place of any half-dozen other reference books that could be named.

It is an ornament to any Library: beautifully printed, substantially bound, profusely illustrated, costing more THAN \$750,000 TO PRODUCE, the regular price being from \$42 to \$70 as est.

#### WHAT THE ABLEST CRITICS SAY.

Library in itself.

"Not only are more words defined in this New Dictionary than in any other, but its definitions are more exhaustive." —Chicago Tribune.

"A standard reference book, treating every branch of knowledge and research in a masteriy mention."

— "Philadelphia Press."

"It forms in itself a library for the busy man of afairs, the merchant ambitious to advance himself in his line, or the student or apprentice just making a beginning."

—Belontific American.

"At the very head of all contemporary publications of its kind, and firmly established as one of the few great reference books of the world."—Christian Herald, N. Y.

REMEMBER These sets are as good for all practical purposes and look as well in your bookcase as those for which we are getting regular prices. We guarantee that the interiors are not injured and the bindings of our standard grade. The most serious harm to any set is no greater than might occur in a few days use in your own home or office. As absolute proof of this statement, you may retain the set for careful examination for one whole week. If not entirely satisfactory you may return the volumes and money will be promptly and cheerfully refunded. This is positively the chance of a lifetime.

How to Secure This Great Bargain Bring or send \$1.00 to the New York Newspaper Syndicate, 23 Fifth Ave., New York, and entire set of four superb volumes, bound in cloth, will be forwarded. The balance is to be paid at rate of \$1.00 monthly for one year. The first payment for either binding is only \$1. In sending your first payment please designate the style of binding you desire, and indicate how you wish the volumes sent, as the charges for delivery must be paid by the purchaser. Remittances received after this special lot is exhausted will be immediately returned. The limited stock at our disposal cannot last long. To protect ourselves against book dealers, etc., we must decline to send more than 2 sets to any one party, and in every case we must require the full name and address of each person receiving a set. We have only two styles of binding in this lot—cloth and half-Russia—about an equal quantity of each. Order at once, to make sure. The absolute confidence of the Syndicate that the work will be thoroughly appreciated, highly valued, and cheerfully paid for, is clearly showr by sending such a valuable set of books, the subscription price of which is from \$42 to \$70, on an advance payment of only \$1. We refer to any newspaper in New York, Boston, Chicago or San Francisco.

The Half-Russia Binding will be supplied for 25c. additional per month.

New York Newspaper Syndicate, 91 & 93 Fifth Avenue, New York.

(Price Reduced to \$10.00)

FRANKLINTON, KY., May 18, 1894. I cannot find sufficient words to express my estimate of the Electropoise. It has literally taken my wife out of the grave. The third time she used it the tumor in her side broke, and her improvement has been rapid and steady. She has gained over 50 pounds in the last three months. It needs no words of praise; its works stand for what it is, a curative agent without a rival. I must admit I bought it without much hope of its doing much good in this case, as the physicians had pro-nounced it incurable. Yours truly,

MICHAEL CONDRAN.

The Electropoise is cheaper than medicine does not wear out-can be used on every member of the family and costs only \$10.00. edition of our 112-page booklet free.

#### Fast Trains to Florida.

Even a few years ago no one would dream of lunching in New York one day and in Jacksonville the next. But such is the character of the travel to the South from the middle of January until March, that the great railroad systems combining to make reasonably straight routes between New York, Boston, Philadelphia, Baltimore, Washington, and Florida points have found it advisable to put such fast trains into operation as are not excelled anywhere else in America in the matter of long-distance speed as well as in luxurious appointment. The routes from the five great cities of the Northeast lie uniformly across Virginia, North Carolina, South Carolina, and Georgia into the land of Ponce de Leon. There are three of these rail routes equipped with all the resources of modern railroad enterprise for the particular comfort and convenience of the midwinter traveler to Florida, who is generally of the wealthier class or else is invalided; or perhaps is some hard-worked man who must take a rest and whose time is worth money-in any case the tourists who go South in midwinter are willing to pay for extra speed and luxury, and they get it.

THE SOUTHERN RAILWAY. THE NEW YORK AND FLORIDA LIMITED.

The Southern Railway is, of course, one of the three. On January 17 it put into operation the fast midwinter schedule of its New York and Florida Limited-a magnificent train which leaves New York City ten minutes after noon on the one day and arrives at Jacksonville 10

THOMAS COOK & SONS' AGENCIES.

minutes after 1 the next. It is just about the distance between New York and Chicago, that is, nearly 1,000 miles, and when it is considered that the Blue Ridge must be crossed in the night, the power and speed of the train are apparent. In fact, the feat of railroading requires a special locomotive, and one of the three largest engines in the world has the honor of racing south with this luxurious train of cars.

The train is heated with steam and lighted with gas. Its special features are its compartment cars, containing two drawingrooms and eight compartments that may be thrown into suits with separate toilet conveniences; its library car, fitted up with a good supply of books, writing-desks and every invitation to read or write, and the observation car at the rear of the train, which serves the purpose, socially, of a general receptionroom and parlor. The manager of the passenger service of the Southern Railway explains that their dining-car is supplied with all the delicacies and seasonable dishes that the North and the South, too, can provide. Certainly such a train offers every temptation to go a-touring in Florida. It runs over the Pennsylvania Railroad's tracks from New York to Washington, over the Southern Railway from Washington through Richmond and Danville to Savannah, and thence into Florida and Jacksonville on the Florida Central and Peninsular Railroad.

THE ATLANTIC COAST LINE.

THE NEW YORK AND FLORIDA SPECIAL.

The pride of the Atlantic Coast Line is called the New York and Florida Special. This department has before made note of the records on this line for long-distance running, and especially of its sending a train from Jacksonville to Washington in 1895, a distance of 780 miles, in 880 minutes. To show how narrowly has the time between New York and Jacksonville been figured by two great competing tourist routes, and how neck and neck the race for supremacy: The New York and Florida Special of the A. C. L. leaves Cortlandt

### Tampa.

The Queen & Crescent Route, in connection with the Southern Railway and F., C. & P., runs daily through Pullman palace sleepers Cincinnati to Tampa in thirty-four book. One hundred and nine miles shortest line to Florida points.

#### Jacksonville.

The Florida Limited is a solid vestibuled train from Cincinnati, twenty-four hours en reste to Jacksonville daily. Through Pullmans also from St. Louis and Louisville to Jacksonville via Lexington and the Queen & Crescent.

### New Orleans.

New Orleans Limited. Through skeepers twenty-four hours from Cincinnati via the (). & C. Route. Sunset Limited connects at New Orleans, making only one change of cars Cincinnati to the Pacific coast.

### Chattanooga.

Three daily trains; nine-and-a-half-hour schedules from Cincinnati; ten hours from Louisville. Only direct line from Cincinnati. Superb caff, parlor, and observation cars. Unsurpassed scenery en route.

#### Asheville.

Only through sleeper from Cincinnati and the North is via the Queen & Crescent Route and the Southern Railway. Elegant through Pullman drawing-room sleepers.

Winter tourist rates now in effect from all Northern points. W. C. RINEARSON, G. P. A., Cincinnati, Ohio,

Street, in New York, at 12:30, arriving in Jacksonville at 1:10 the next day, while the Southern Railway's special train, the New York and Florida Limited, leaves Cortlandt Street at 12:10 P.M., and arrives in Jacksonville at 1:10-a difference of ten minutes in a thousand-mile race. The Atlantic Coast Line runs over the Pennsylvania Railroad to Washington, and then over the Atlantic Coast Line, through Richmond to Charleston, where it enters the Plant system and does not leave it until Jackson-ville is reached. The train has appointments which are second to none, and is solid from New York to Jacksonville. It is heated by electricity. It connects with the various steamship lines and branch railroads of the Plant system.

THE SEABOARD AIR LINE. THE ATLANTA SPECIAL.

The Seaboard Air Line is the third of the direct rail routes to the South. Its course south of Washington is through Rich-mond, Raleigh, Charlotte, and Atlanta, and thence by the Central of Georgia and Plant system to Florida. Atlanta is its main Southern terminus, and its finest tourist train is the solid vesti-buled Atlanta Special, which leaves New York at 11 in the morning, arriving at its destina-tion at 2:50 in the afternoon.

These are not by any means the only through trains operated by these three tourist lines, but they are selected to show the extraordinary efforts made by the tourist lines to secure the profitable Southern passenger traffic of the winter, and also to give the readers of the REVIEW OF RE-VIEWS an idea of the facility and VIEWS an idea of the facility and luxury which to-day characterize a trip to Florida. Every inducement is made by these lines to sportsmen. Their general passenger agents publish books giving the localities which offer the best chances for sport, and the Southern Railway, for instance, publishes a series of bulletins from its agents at the small stafrom its agents at the small stations of the quail districts of North Carolina giving the outlook for game, the effect of the past winter on the crop of birds, the data as to the "posting" of lands in their respective sections by the farmers, and the facilities for procuring guides, horses, and guns. The railroads carry dogs free, too, or, at least, one dog for every ticket.

A MONG the great number of thor-oughly equipped sanatoriums there is none better filted by nature and art to give absolute rest than the Jackson Sanatorium at Dansville, N. Y.

are many, and summer resorts, and health resorts, and pleasure resorts; but Atlantic City, N. J., is all of these in one. It is famous the world over. To get the most out of it, much depends on one's hotel, and this suggests our new booklet. Can we send it to you?

# The Shelburne

J. D. SOUTHWICK, Manager.

# One-third of Your Life is Spent in Bed.

Why not comfortable as possible?

Most people are satisfied to sleep on a hair mattress, but this is the result of a pardonable ignorance. Every one has not yet heard of the Ostermoor Patent Elastic Felt lattress which is advertised on another page of this issue at \$15. This mattress is sold strictly on approval, and must at all times and under all circumstances do what the makers guarantee, or all that you expect, otherwise they refund your money. They positively guarantee that the best \$50.00 hair mattress made is not its equal in cleanliness, durability or comfort; prepay express charges, and sell on the distinct agreement that you may return it and get your money back if not satisfactory in every possible way at the end of thirty nights' free trial. Five years from now no individual, no school, no institution will dream of buy-ing a hair mattress. It is outclassed, superseded, surpassed by modern science and sanitary teaching. Look for the advertisement on another page.

#### FLORIDA.

#### Personally-Conducted Tour via Pennsylvania Railroad.

With its matchless climate, its orange groves, its rivers and lakes, its boating and bathing, its fishing and hunting, and its primeval forests, Florida presents unrivaled attractions for the valetudinarian, the lover of nature, the sportsman, and the explorer.

The next Jacksonville tour of the season via the Pennsylvania Railroad, allowing two weeks in Florida, leaves New York by special train Tuesday, February 8. Excursion tickets, including railway transportation, Pullman accommodations (one berth), and meals en route in both directions while traveling on the special train, will be sold at the following rates: New York, \$50.00; Philadelphia, \$48.00; Canandaigua, \$52.85; Erie, \$54.85; Wilkesbarre, \$50.35; Pittsburg, \$53.00; and at proportionate rates from other points.

For tickets, itineraries, and full information apply to ticket agents; Tourist Agent, 1196 Broadway, New York; cr address Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.

## The United States Government has adopted the Keeley treatment in the Soldiers' Homes and in

an institution for exclusive use of the Regular Army. Seven States have legislated for the application of this treatment to worthy indigent inebriates.

It is a fact, known generally by well-informed persons, that inebriety, morphine and other drug addictions are di-asse, not simply habits, and to be cured they must receive medical treatment.

The method of treatment originated by Dr. Leslie E. Keeley, and administered only at institutes authorized by him cures these diseases. This statement is easily substantiated by facts. Three hundred thousand cured men and women are glad to testify to its truth.

The treatment at these institutes is pleasant. The patient is subject to no restraint. It is like taking a vacation of four weeks. He only knows that he is cured.

Detailed information of this treatment and proofs of its success, sent free upon application to any of the following Institutes:

Lexington, Maes, Detroit, Mich., 50 Washington Ave. St. Louis, Mo., 2803 Locust St. Kansas City, Mo., 1815 Independence Av. Newark, N. J., 18 Central Ave. Buffalo, N. Y., 258 Niagara St. White Plains, N. Y.

#### THE PROGRESS OF THE WORLD.

There are several facts touching the feets About situation in Cuba which we have presented to our readers not once or twice, but many times; and those facts—regardless of the conflicting reports in the detailed news from day to day or week to week—it is well to keep in mind. First, there is absolutely nothing whatever in the situation that justifies the belief that the Cuban insurgents can be led to accept a political compromise. The much-talked-of autonomy proposals are not making an inch of headway. They have been proposed by a cabinet which cannot make them lawful until the Cortes—that is to say, the houses of parliament—enact them into a statute. But the Spanish Cortes is Conservative by a large majority, particularly in the upper house; and inasmuch as the Conservatives are plainly opposed to the Sagasta-Blanco policy, there is no reason whatever to think that any autonomy project that is conceived in good faith will ever be carried through the Cortes. opinion in Spain shows constantly increasing hostility toward the autonomy scheme. Cuba, there is no considerable element of public opinion in the island that for a single moment looks with favor on the Sagasta-Blanco policy. The insurgents will have none of it, and the Spanish Conservatives in Cuba are thoroughly against it. It is true that Governor-General Blanco has been going through the form of giving effect to the new arrangements, and that a Cuban cabinet has been announced; but the whole thing is an empty sham. There will be no real trial of the scheme. The autonomy project has been launched chiefly for consumption in the United States. It is to be looked upon as a makeshift and as a device for gaining time.

The Six To avail anything as a permanent basis feature. To avail anything as a permanent basis feature. Cuba it was necessary that the autonomy project should be accepted in good faith, first, by the Cortes of Spain; second, by the army, which

is the real authority in Spain; third, by the Spanish press as the organ of such influential public opinion as exists outside of military circles; fourth, by the pro-Spanish elements in Havana and the other towns of Cuba; and, fifth, by the Cuban insurgents themselves, who are battling not for a milder form of Spanish rule, but for independence. Autonomy, it is true, is the avowed policy of the present Sagasta ministry in Spain; but the cabinet is only one of the essential features. In a matter of primary constitutional importance like this new departure in administrative methods, the immediate or ultimate concurrence of every one of the six factors that we have just named would be requisite for the safe and permanent settlement of the serious issues that have led to a disastrous three years' Our constant advice to our readers that the autonomy project was doomed to complete failure rested upon the knowledge that the Sagasta cabinet had not secured even the apparent approval or concurrence of a single one of the other five essential factors.

The Cortes, when a new Spanish Five Factors cabinet comes into power, can usually be kept out of session for three months, and then a new election can be held, in which the cabinet, through well-known Spanish methods of patronage and corruption, can ordinarily secure its own kind of a majority in the lower This of course it was always easier for the Canovas party to accomplish than for the Sagasta party, for the palpable reason that the Conservatives are richer, more corrupt, and stronger with the local vested interests that can manipulate the ignorant vote than are the Liberals. When Canovas was assassinated a few months ago the Conservative majority in the Cortes was overwhelmingly large. There has been no true change of sentiment great enough to give the Sagasta cabinet a working majority in the popular branch of the legislative chamber.

GALVEZ

The upper branch is so constituted that its conservative and reactionary character may be relied upon as surely as that of the English House of Lords. The Cortes will not therefore be at all

likely under any circumstances to ratify the Sagasta scheme of Cuban autonomy. As for the Spanish army, its sympathies are wholly with the Conservative party, and its sentiments are best expressed by General Weyler and his friends, who have for weeks past been denouncing the autonomy project with a steadily growing boldness and defiance. The prevailing tone of the Spanish press, furthermore,

have not the remotest intention to accept it. The Spanish-Cuban element has been more bitterly opposed to the patriotic movement of the "Cuba Libre" insurgents than the Spaniards of the home

country; and these Cuban-Spaniards look upon the autonomy scheme as a device which sacrifices them to their enemies. They believe that the eventual result of Cuban autonomy would be to place the home-rule administration in the hands of the leaders of the insurrectionary movement; and they would vastly prefer interference by the United States and an out-and-out annexation to America rather

MINISTER OF POSTS& TELEGRAPHS

DUARDO

as representing the commercial and industrial interests of Spain, is prevailingly hostile to the autonomy scheme, because it is perceived by Spanish manufacturers and merchants that autonomy would inevitably mean such changes in the Cuban tariff as would in the end transfer Spain's specially protected colonial commerce to the merchants and traders of the United States.

But if the ruling factors in Spain are unwilling to grant autonomy to Cuba, still more emphatically is it true that the two essential factors in Cuba itself Spain under an actual local government carried on by the leaders of the existing insurrection. And finally, as for the insurgents themselves, there has never been the slightest reason to suppose that the autonomy proposals would have any attraction whatsoever for them. They looked upon the recall of Weyler and the new Sagasta-Blanco

policy as a public confession of weakness and despair on the part of Spain, and they took heart accordingly, believing the end to be near.

What "Autonomy" The real fact is that the autonomy scheme was in-

tended to delude for a time the people of the United States, with the industrious assistance of certain American newspapers and certain business interests that have discovered reasons of their own for helping the Spanish Government in its endeavors to mislead American public opinion. plan by which in Cuba it was hoped that the bogus autonomy proposals might be used in a way to injure the insurgents ought also to be clearly understood. stead of having these proposals submitted in a straightforward and proper manner to the central authorities, civil and military, of the Cuban republic, it was the plan

of Governor-General Blanco to send emissaries into detached camps, with special inducements to the leaders of a great number of different bands of These emissaries were carefully seinsurgents. lected with reference to the leaders whose defection it was hoped to accomplish. Wherever possible the emissary was an old-time acquaintance or friend of the leader to whom he was sent. When these emissaries were dispatched as peace commissioners to the various insurgent camps, the pro-Spanish press was supplied with endless false dispatches announcing the actual or prospective acreptance of the autonomy plan by one and another of the insurgent chieftains. The game as a whole was an extremely adroit one; and nothing more

SENOR MORET, SPANISH COLONIAL MINISTER, AUTHOR OF THE AUTONOMY SCHEME.

SEÑOR MONTORO, LEADER OF THE AUTONOMIST PARTY IN CUBA.

shamelessly mendacious was ever attempted. These detached Cuban leaders were all of them sworn to do battle in good faith for Cuban independence and to obey absolutely the orders of their superiors. This fact was well known by the Spanish governor-general and his emissaries. Nevertheless, the literary bureau of the governor-general was sending out false reports of the desertion of one after another of these Cuban chieftains from the patriot cause.

The Execution of Colone Ruiz. After awhile, however, the Spaniards were not able further to suppress the news that their emissaries were not returning; and in due time the world received the

> shocking announcement of the execution of General Blanco's aid-de-camp Colonel Ruiz, who had been sent to the camp of the insurgent chief Rodriguez. Ruiz had been tried by a Cuban courtmartial, condemned to death, and immediately shot. There has been a great deal of condemnation of the Cuban insurgents as barbarians in view of this action. It should be borne in mind, however. that deadly warfare exists in Cuba, and that the emissaries of General Blanco were not in good faith carrying peace proposals to the insurgents, but were using the bogus autonomy project as an ex-

A COLUMN OF SPANISH INFANTRY ON THE MARCH, IN THE PROVINCE OF PINAR DEL BIO.

cuse for getting access to separate subordinate Cuban leaders, with the purpose of bribing them to become traitors to their cause. It was well known by the Spanish authorities that all these commanders of detached fighting bands of insurgents were under orders to consider no proposals from the enemy and to treat any Span-

THE LATE COL. D. JOACHIN RUIZ.

We have no hesitation in ish emissaries as spies. expressing the opinion that under all the circumstances Rodriguez and his court-martial were justified in condemning Colonel Ruiz, and that the fate which overtook other emissaries sent out by Blanco was equally justifiable from the standpoint of military necessity. In no other way with so little loss of life could the Cuban insurgents have convinced the world promptly and unmistakably that the Spanish authorities were engaged in a conspiracy of trickery and falsehood in their widespread reports that the insurgents were rapidly accepting autonomy, and that the insurgent chieftains were one after another gladly availing themselves of opportunities to obtain commissions in the Spanish army or civil offices under the proposed autonomist government. The juncture was a grave one, and the insurgent authorities could not afford to allow suspicion to be cast upon any of their leaders in the field. ery one must regret the death of Colonel Ruiz, precisely as the death of Major André will always be lamented. But the justification for the execution of Ruiz was more clear than that which led our Revolutionary forefathers to execute André. Each of these officers was engaged in negotiations to secure the treasonable defection of a military opponent. But in the case of Benedict Arnold, the British emissary had been actually invited into the corrupt negotiation; while Colonel Ruiz took his life in his hand at the behest of his superior, General Blanco, in a presumptuous attempt to bribe and corrupt an insurgent chieftain who certainly could not afford to have any suspicion cast upon his loyalty to the Cuban cause. The execution of such emissaries, like the execution of spies in time of war, rests upon grounds of military necessity that must exist until wars themselves are abolished.

The Blanco administration in Cuba had American begun with the announcement that the Charitu Solicited. starving reconcentrados should be immediately relieved; but the promise proved an empty one. Owing to the collapse of the Spanish treasury there was no pay for the soldiers; and the food supplies at General Blanco's disposal were wholly insufficient for his own troops. It was impossible, therefore, to do anything worth mentioning for the Cuban peasants who had been driven from their fields and homes and were starying to death by the scores of thousands in the garrisoned towns. Under these circumstances the Spanish Government, through Minister De Lome at Washington, intimated to our Department of State that it would be agreeable to Spain if the charitable people of the United States should make contributions for the relief of these unhappy Cuban sufferers, and further assurances were given that it would be satisfactory to Spain if money and supplies sent from this country should be forwarded to the American consuls in Cuba and distributed under their surveillance. Accordingly the Secretary of State, by direction of President McKinley, gave public notice of the need that existed in Cuba, and an appeal was made to the charitably inclined to make their contributions. It had heretofore been a part of the pro-Spanish conspiracy in the United States to deny the reports of starvation among the Cuban peasants, but the appalling facts could no longer be suppressed. The deathrate for several months past has been so high that the majority of the reconcentrados have already passed beyond the need of help.

The Riota at Mavana. The proffer of American relief, though made upon purely humanitarian grounds, was not kindly received by public opinion in Spain, and it was resented by the Spanish conservative element in Cuba on the ground that it was the entering wedge for American interven-

tion. The dissatisfaction of this Spanish element at Havana with the autonomist proposals became so great that it finally expressed itself on January 12 in formidable riots, directed chiefly against the offices of two or three Havana newspapers which were supporting the autonomist plan. These riots were participated in very largely by men wearing the uniforms of Spanish military offi-It was feared for a time that the rioters would mob the American consulate; but Consul-General Lee's headquarters were promptly protected by an ample body of troops, and the suppression of the riot was a comparatively simple matter. The outbreak had accomplished no great harm, but as a symptom it was deemed a matter of the most serious import. circumstances indicated an intense desire in Havana to precipitate a crisis that would lead to some sort of a final solution, and it was considered by those best competent to judge that this preliminary rise of the mob might soon be followed by rioting of a more general and desper-The first rumors that reached the ate character. United States were so manipulated by the sensational newspapers as to sell large editions of socalled "war extras." These newspapers, appearing at very frequent intervals through several hours on January 13, informed their credulous readers that the whole Atlantic squadron of our navy had been ordered to get up steam immediately and sail for Havana.

The reports conveyed by these ex-Our Navy tras were not precisely accurate; in Southern Waters. nevertheless they rested upon a certain foundation of truth. Undoubtedly Consul-General Lee had informed the authorities at Washington that the situation was extremely critical, and that American interests in Havana required that a sufficient naval force should be immediately accessible. In any case, it had been decided by the Secretary of the Navy, with the President's approval, that our Atlantic squadron should rendezvous in the Key West neighborhood; and the southward movement of the ships, already arranged for, was expedited on account of the alarming situation in Cuba. It was publicly announced that the fleet would proceed to the Gulf of Mexico, sailing from Hampton Roads, Virginia, on January 15, to the Dry Tortugas, which will be the headquarters of the squadron for some time to come. We present herewith a little outline map which will remind our readers of the precise position of the Dry Tortugas with relation to Key West and Havana. From this harbor it would be possible to proceed to Havana on about six hours' notice. assembled in these southern waters is a very formidable one, and in fighting power is regarded as actually superior to the entire resources of the Spanish navy. Admiral Sicard is in command.

Will the White Squadron Advance to Havana? Probably the presence of so powerful an American squadron in the vicinity of Havana

will have some restraining effect upon the excited population of the Cuban capital. Nevertheless it would seem to us now as more than likely that the fleet would be compelled by circumstances in the early future to proceed from the Dry Tortugas to the Cuban coast. Much, of course, will depend upon happenings in Spain. The Sagasta cabinet is by no means secure, and it would not be strange if it should be overthrown before these General Weyler is pages reach our readers. moving heaven and earth to attain political control in Spain, in order to ride rough-shod over his enemies. His remarkable protest addressed directly to the Queen Regent against the allusions in President McKinley's message has been given General Weyler must either take to the public. the chances of a court-martial or must succeed in producing a cabinet crisis and overthrow the Sagasta ministry. In the event of a new Conservative cabinet, dominated either openly or behind the scenes by General Weyler, a clash between Spain and the United States would be almost in-The conviction is growing throughout the whole civilized world that the Cuban question must be settled very soon, and that the United

SENATOR MARCUS A. HANNA, OF OHIO.

States, in one manner or another, is destined to be drawn into the controversy. If in our presentation of the history of the month we have given an unusually large space to the Cuban contest, it is because for American readers the matter has at this time an exceptional importance.

The election of United States Sen-The Senatorial ators has given occasion for many Ohio. serious scandals in our recent poli-If Senators were elected directly by the people, the Legislatures would be relieved of a duty that is both distracting and demoralizing. Since, however, our institutions do not provide for the direct popular selection of Senators, the people in some States have undertaken to reach practically the same end by naming their senatorial preference in the regular party convention. This is done with the understanding that members of the Legislature will heed the party instruction, precisely as the members of the electora. college invariably cast their votes in accordance with the presidential nominations made by the national party conventions. The Ohio campaign of last fall—though waged directly for the election of a governor and other State officers and a new Legislature—was in reality led on the two

opposing sides by the accredited party candidates for the United States Senate. The Republican State Convention, while granting a renomination to Governor Bushnell, designated the Hon. Marcus A. Hanna as its choice for the United States Senate. It will be remembered by our readers that when the Hon. John Sherman was appointed Secretary of State in President Mc-Kinley's cabinet, his vacated seat in the Senate was temporarily filled by Governor Bushnell's appointment of Mr. Hanna. Such an appointment by a governor holds good until the Legislature meets in regular session and elects a Senator. Mr. Sherman's unexpired term will have been served out on March 4 of the present year: and it became the duty of the new Ohio Legislature, which assembled on January 3, to elect a Senator for the remaining weeks of the present term and also for the full six-year term, beginning March 5. The Ohio election in November resulted not only in the success of Governor Bushnell, but also in the election of a Republican Legislature by a small but safe majority. The great struggle of the campaign had been for the control of the Legislature, and had been managed by Mr. Hanna on the Republican side and Mr. John R. McLean, the proprietor of the Cincinnati Enquirer, on the Democratic side. It was perfectly understood and agreed throughout the State that if the Democrats should gain the control of the Legislature Mr. McLean would be elected to the Senate: while Republican success would mean that Mr. Hanna should not only continue to serve through the few remaining weeks of the present term, but should also be chosen for the full succeeding period of six years.

Mr. Hanna's victory was therefore A Custom Stronger Than considered by the country at large as entirely assured when it was learned that a Republican Legislature had been chosen. This assurance rested upon precisely the same grounds of American political custom as made certain Mr. McKinley's success when it was ascertained in November, 1896, that the Republicans had secured a majority in the electoral college. Nobody supposed for a moment that the friends of Speaker Reed, Senator Allison, or any other prominent Republican would endeavor to persuade a few Republican presidential electors to join with Democratic electors in the scheme to cast their votes in the electoral college for some other Republican, in order to defeat Mr. McKinley. There was, of course, no law to prevent their entering into just such an arrangement. In accordance with both the letter and the original intention of the Constitution, the electors could have cast their votes for any eligible American citizen at

HON. CHAS. KURTZ.

GOVERNOR BUSHNELL

MAYOR M'KISSON.

their discretion. But in this matter of electing Presidents the existing custom has become as accepted a rule as if it were embodied in the Constitution and statutes. In just the same manner it has come to be understood that where in any given State a legislative campaign is fought upon party lines and the party conventions have named senatorial candidates, the members elected to the Legislature are bound in good faith to vote for the party's senatorial nominee. Only such members of the Legislature as clearly and openly during the campaign had avowed an independent position on the question of the senatorship could be regarded as free to work and vote against the party's choice for the United States Senate. Ever since the memorable legislative campaign in Illinois, when Abraham Lincoln was the Republican choice for the United States Senate and Stephen A. Douglas the Democratic choice, the plan has at times been employed of selecting the senatorial candidate in party convention; and where such selections have been made they have been adhered to in good faith by the Legislatures.

In view of these facts and consideration. In view of these facts and consideration. In view of these facts and consideration, it may well be imagined that Ohio was thrown into fierce excitement when it was discovered on the eve of the assembling of the Legislature that—under the leadership of Mr. Kurtz, the former chairman of the State Republican Committee, with the countenance and moral aid of Governor Bushnell—a strenuous attempt was being made to effect an agreement by which a handful of anti-Hanna Republican legislators should be supported by the entire body of Democrats in the Legislature, to defeat Mr. Hanna and elect a Republican belonging to the other faction of the party. Mr. Kurtz played this unprecedented political game with an

amazing energy, and his combination seemed at first to be sure of success. The Ohio Legislature contains thirty-six members in the Senate and one hundred and nine in the House, a total on joint ballot of one hundred and forty-five. January 3 Mr. Kurtz' combination defeated the regular candidates for presiding officers in both houses, and elected anti-Hanna Republicans. All that was needed for the defeat of Mr. Hanna on joint ballot of the houses was eight Republican votes, with the solid concurrence of the sixty-five Democratic members. The excitement became intense, and the leading Republicans from every part of the State flocked to Columbus, while the Ohio Congressmen also deserted Washington to participate in the struggle. Charges of bribery and other improper methods were freely made by both sides. The half dozen Republican legislators who had secured the anti-Hanna organization of both chambers were besieged by hordes of indignant constituents from their home counties, and subjected to intense pressure by the principal leaders of both sides.

Several of them wavered, and finally Mr. Hanna's Victory. went back to the Hanna camp. A great effort was being made, meanwhile, to induce two or three of the Democratic members to desert the combination and throw away their votes by casting them for Democrats who were not actual candidates. The plan at length succeeded, and Mr. Hanna was elected by the barest possible majority. The tactical weakness of the anti-Hanna combination was due to its failure to have a strong candidate ready. It seemed to be understood that Mr. Kurtz himself was to be the man: but at the last moment Mayor McKisson, of Cleveland, was substituted. Whatever may have been the motives of individuals, the antiHanna movement as a whole seems to have been actuated by personal and factional rivalries. Mr. Hanna, it is true, was soundly denounced as a boss; but so far as outsiders have studied the political situation in Ohio, they do not find much choice between the methods employed by the two great rival factions of the Republican party, nor do they discover any great distinctions of method between the Republican and the Democratic machines. In Ohio, as in Pennsylvania, New York, and Illinois, party machinery has come to be stronger than public sentiment; and it is to be feared that money contributed by corporations is a more potent influence than enthusiasm for political principles or for trusted leaders. It is better, however, that the men who really dominate the political situation should be in responsible office than that they should be behind the scenes; and since Mr. Hanna and Mr. Foraker are the real masters of Republicanism in Ohio, it is rather to be desired that they should be in the United States Senate than that they should send men subject to their orders. It is well understood that the political chieftains of Ohio in both parties are preparing themselves for a great national rôle in the presidential campaign of 1900. Ohio has become our political storm-center.

The Mastery of Richard Croker to a position of acknowledged authority in politics is absolutely without parallel in the history of the United States. Thus far the new government of the huge metropolis of New York has been conducted personally by

MB. RICHARD CROKER.

MR. CROKER AND HIS NEW COAT OF ARMS.
(Drawn for the New York *Herald* by C. de Fornaro.)

Mr. Croker quite as if he were a prince regent, with Mayor Van Wyck as titular occupant of the throne, but disqualified on the ground of infancy or mental incapacity. ever the truth may be, nobody has given Mayor Van Wyck credit for the selection of a single one of the great list of municipal appointees announced in the opening days of January. Mr. Croker, and not Mayor Van Wyck, who is thought to be consulted on all matters of moment and responsibility. Not content with his oldtime quarters in the Tammany Hall wigwam on Fourteenth Street, Mr. Croker has made himself the dictator of an uptown politico-social organization known as the Democratic Club, which was in a moribund condition. He has at a single stroke made it the most popular and prosperous club in the country, has purchased for it the splendid quarters of the New York Athletic Club, and has installed himself there in his capac. ity as monarch of New York. There he holds court, and his hundreds of followers accord him every mark of deference and eager loyalty. Mr. Croker's mastery of the Greater New York has been strengthened by a series of treaties with the minor bosses of Brooklyn and the other annexed districts, under which treaties these smaller magnates are retained in local authority, and gladly acknowledge Mr. Croker as their over-With his metropolitan mastery thus assured and undisputed, Mr. Croker has proceeded with his plans first for the control of State politics, and then for that of the national Democratic

FORNARO'S IDEA OF MAYOR VAN WYCK, WITH A SUITABLE COAT OF ARMS,

organization. Abundant indications have been given of his cordial understanding with the Republican machine, whereby the ancient maxim of "live and let live" can be observed for mutual advantage. The working arrangement between the two machines will undoubtedly supply the key to the course of legislation at Albany this The Republican machine holds the Legislature in the hollow of its hand, and thus it is in a position to accord favors to Mr. Croker on the basis of a substantial quid pro quo. understood that the scheme for the ultimate mastery of the State of New York includes a close alliance with Senator Murphy, and that ex-Senator David B. Hill is to be boycotted.

But Mr. Croker's strategy for national Croker domination is of more interest and moment than his scheme to control the Democracy In his own State his of the State of New York. success will be too easy even to be exhibited: while his ambitions of a national character will meet with opposition enough to lend excitement to the struggle. The National Democratic Committee is not to be brought under Mr. Croker's thumb at a moment's notice, and there he must bide his time; but the Congressional Committee at Washington, which is to take charge of the campaign for the election of a new Congress in the present year, is said to have been engaging Mr. Croker's instant and particular attention. And, further, he is said to be working for an organization hostile to Mr. Bryan's aspirations. To

that end, it is reported, he exerted himself last month against the selection of Congressman Hinrichsen, of Illinois, as chairman of the Democratic Congressional Committee, Mr. Hinrichsen having been brought forward as the candidate of the Bryan free-silver men. Mr. Hinrichsen has in due course been defeated, Congressman Hunter being chosen as the Illinois member of the committee, while the chairmanship will go to Senator Faulkner, of West Virginia. Mr. Croker has not, indeed, taken an open stand against Mr. Bryan and the Chicago platform; but it is generally believed that he intends to do everything in his power to build up a combination that will prevent Mr. Bryan's renomination in 1900 and that will subordinate the free-silver issue. Croker and Mr. Bryan represent diametrical extremes in our political methods. The Tammany leader affords the most striking example of boss and machine methods that our recent tendencies have yet evolved; while Mr. Bryan, who is an

MR. BRYAN AND HIS NEW MEXICAN SOMBRERO.

orator and a true leader, represents the convictions and enthusiasms of great multitudes of men and the triumph of principles over party machinery and campaign funds. In the great pending struggle between Croker and Bry. an for the control of the Democratic party, Mr. Croker may happen to represent a safer public policy in

the matter of finance than is represented by Mr. Bryan. But it is certainly to be hoped that there are in this country a good many thousands of firm believers in the gold standard who would rather see political power wielded in the government of this nation by a free-silver man of Mr. Bryan's type than by a sound-money man of Mr. Croker's. There are worse things to be feared than the disasters of a mistaken financial policy, although we do not underrate the gravity of such disasters. Mr. Bryan's only hope of success in the struggle for future leadership in the Democratic party must, in our judgment, depend upon his freedom from complicity in the methods of such political leaders as Richard Croker. He was perhaps justi-

Señor Mazzantini, the Spanish bull-fighter.

Mr. Bryan, the American bimetallist.

TWO DISTINGUISHED FRIENDS OF THE SILVER DOLLAR WHO HAVE BEEN VISITING MEXICO, (From El Ahuizote, Mexico City, December 26.)

fied, from his own national standpoint, in expressing no preference during the great municipal contest in New York. But on the other hand it would probably have strengthened Mr. Bryan's hold upon the country if he had boldly avowed his real sympathy with Mr. Henry George's campaign and his desire to see Mr. George elected.

Mr. Bryan has recently spent some weeks in Mexico, where he went to observe the working of the silver standard. The Mexicans treated him with every consideration, and the country will doubtless sooner or later have the benefit of Mr. Bryan's experience. We reproduce on this page a Mexican cartoon which illustrates Mr. Bryan's visit, and which also orings it into rather amusing contrast with that of an even more distinguished visitor, namely, Señor Mazzantini, a great Spanish bull-fighter from While much honor was shown to the American who came to study the silver dollar from the standpoint of monetary science, a much greater popular homage was paid to the toreador who was after the Mexican dollar in a more strictly practical sense. Mr. Bryan continues to draw great audiences wherever he speaks throughout the West, and it would seem to us a mistake to assume that his hold upon the popular confidence has been weakening. It has been reported in some quarters that he would be a candidate for Congress this year, but the statement is denied. The practical question is, Will he stick to "16 to 1?"

Tammany and the Transit Question.

It did not, however, make any important addition to the community's knowledge of municipal affairs, nor did it throw much light upon the

actual intentions and proposals of the Tammany administration. It professed great zeal for improvements and for progress in every direction; but these professions took rather the form of glittering generalities than of precise promise. The principal importance of the mayor's inaugural lay in its discussion of the question of rapid transit. An ingenious argument was presented to show that the city's borrowing power, under the constitutional limit, would probably not be large enough to permit the construction of the proposed underground rapid-transit system; and the improvement and extension of the elevated system was urged as a substitute. It was at once understood that Mr. Croker and his friends had, for reasons of their own, probably concluded to put all possible obstructions in the way of the plans of the rapid-transit commission, and that some kind of agreement had been made with the corporation that owns the elevated lines, under which its franchises and privileges were to be extended in various desired directions, on the condition that it would proceed without delay to substitute electric power for the existing steam locomotives. Following the mayor's message has come the authentic announcement by Mr. George Gould, president of the elevated system, that electricity will be employed at the earliest possible moment on the third-rail plan now in use on the elevated lines in Chicago. The motive which has led Tammany to interfere with the perfected plans for the underground system is not hard to discover. That system was to have been constructed on the public credit, but under a strictly drawn contract with a private company. It would have been built economically, and there would have been no political spoils involved in its construction. For obvious reasons Tammany prefers that public money

spent on improvements should be under the direct control of the politicians, with the consequence that many thousands of men would be employed and Tammany's political influence thus maintained, while profitable contracts and perquisites would redound to the personal comfort of many patriotic henchmen of Mr. Croker's. If, however, the debt limit should be approached by the construction of the underground system, Tammany would lose the opportunity to enter upon a great variety of less pressing schemes of improvement. It is too much to expect that

MR. GEORGE J. GOULD, WHO CONTROLS THE TRANSIT SITUATION.

Tammany should make this great renunciation, and consequently New York is not likely to see the early consummation of the underground project—than which no more admirable transit scheme has been planned for any great city.

A New York State question that has Millions for the Political excited much discussion during January has been the bill of expense involved in improving the Erie Canal. The people of the State had voted directly on the proposition to expend \$9,000,000 for canal improvements, this sum having been declared ample by the authorities. It is now declared, however, by the very same men, that fully \$16,000,000 will be needed, the \$9,000,000 having been already exhausted by work done or by contracts let, only a little more than half of the proposed work being accomplished or provided for. No satisfactory explanation has been made of the manner in which the public was deceived; for it now appears that nothing has occurred to change either the plans or the cost of the improvement. The politicians

seem to have adopted the well-known American plan of getting the public committed to an expensive project with the idea that it will be easy enough to secure further appropriations from time to time. In this way Boss Tweed's court house, which was to have cost a million or so, was made to swallow up thirteen millions of public money; while the State house at Albany, which it is promised will be finally completed this year, has cost some twenty millions of dollars, although it was originally to have cost only two or three millions, which sum would easily have provided the State of New York with a suitable and satisfactory State house. If the additional seven millions now demanded for finishing the canal work is granted, there is small reason to believe that when the politicians have spent it they will not demand still further millions. Statistics for 1897 show that the commerce of the port of New York has been falling off; and it is true that money might advantageously be spent for public improvements that would benefit the trade of the city and State. But it is by no means certain that the pending enlargement of the Erie Canal will have much effect upon traffic. This particular method of improvement is not to be compared as a commercial factor with the building of a ship The improvements particularly needed are in the nature of better dock facilities and the reduction of charges in and about the harbor of New York. Among recent developments there has been announced a combination among the railroads and coal-mining corporations that supply New York by which a great reduction is to be effected in the methods of handling and distributing coal. But it is to be feared that the new monopoly will absorb the benefit of the proposed economies, and that the patient public will gain very little, while a great number of local coal dealers will be forced out of business.

The sealskin embargo, which we an-Seaiskins nounced last month, went promptly and Diplomacy. into effect, with results amusing to some people and exasperating to others. Our readers will remember that Congress, in December, passed an act prohibiting the so-called pelagic sealing—that is to say, the slaughter and capture of fur-seals in the open sea; and in connection with this prohibition it was enacted that inasmuch as our own citizens were debarred from killing seals in the open sea our markets should be closed against seals thus captured by citizens of other countries. Such a regulation is obviously not easy to enforce. The rule was laid down that all sealskin garments entering our ports or crossing our frontiers should be marked for purposes of identification. Thus travelers coming across the line from Canada wearing sealskin coats or caps have been subjected to custom-house processes annoying in a high degree; while American travelers going away from this country have been obliged to provide themselves with certificates identifying their sealskin garments, in order that they might be enabled to bring these useful winter appurtenances back home again. These annoyances of course are the minor incidentals, and have no great bearing on the main purpose of the new law. The thing aimed at is the further discouragement of pelagic sealing by the withdrawal of the American market

PRESIDENT DOLE, OF HAWAII, WHO IS VISITING THE UNITED STATES IN THE INTEREST OF THE TREATY.

from the men who resort to this method of depleting the seal herd; and the object, in our judgment, is a good enough one to excuse the disagreeable incidents that are connected with the enforcement of the law. Meanwhile, it has been announced that the question of damages on account of our enforcement of patrol regulations in the Bering Sea previous to the Paris arbitration is at length settled by the arbitrators.

As we remarked last month, the Hathe Sugar Question. be in considerable danger of defeat in
the United States Senate through an intense
effort on the part of the sugar interest to prevent
the cane fields of Hawaii from remaining per-

manently inside of our tariff wall. At present, as for a long time past, Hawaiian sugar is admitted free under a reciprocity arrangement. But certain friends of the beet-sugar movement are working, first to defeat annexation, and second to repeal the reciprocity treaty. Their efforts, though doubtless well intended, are scarcely commendable. The Dingley tariff legislation, which was shaped in the interest of American beet sugar, was enacted by men who also favored the annexation of Hawaii. And the acquisition of those interesting islands by our Government would not have the effect to prevent the rapid development of a great and profitable beet-sugar industry in this country. It is at least fair to keep in mind the fact that the American people must obtain sugar somewhere during the years that will be needed for the development of the new beet industry, which at the present time is capable of supplying only a minute fraction of our ordinary consumption. When the business of making beet sugar has attained large dimensions on American soil it will not have anything to fear from the competition of Hawaiian cane sugar, and those islands will gradually. without doubt, turn their attention to the production of other tropical supplies which can never be grown on our mainland. It is said that coffee, for example, will be one of the principal future crops of Hawaii. The opposition of the beet-sugar men to Hawaiian annexation is so extremely shortsighted and is so confessedly narrow in its reasons and selfish in its spirit, that it is reacting in favor of the cause it had determined to defeat.

The acquisition of Hawaii by the Some Dif-United States is advocated upon grounds of desirability clearly set forth by American statesmen for more than half a century past; and the question concerns us today simply because circumstances have made it ripe. It is of course a question about which there can be intelligent and sincere differences of About some phases of it, however, it would seem hard to believe that diverse opinions are equally intelligent. For example, it is the overwhelming opinion in Hawaii and in Europe that annexation to the United States is the most enviable political fate that could befall the islands; and for citizens of our own republic to argue that annexation to this country would be harmful to Hawaii is to be viewed as an eccen. tric rather than an intelligent opinion. Whether, on the other hand, it would be a good thing for us to assume the responsibilities of extending our sovereignty out into the middle of the Pacific is a wholly different question, and it is one upon which men of the highest degree of intelligence

in the United States actually do differ sincerely. And although it happens to be the strong conviction of the editor of this magazine that annexation would be mutually advantageous to Hawaii and the United States, while also making in its measure for the tranquillity and good order of the world at large, it is our plain duty in the record of contemporary history to say that among our wisest leaders of public opinion the division seems to be numerically about even. The debate upon the treaty has been proceeding in the Senate chamber behind closed doors. President McKinley has been using his influence powerfully on behalf of the treaty. It has been the opinion outside that if all the Republican Senators should be persuaded to vote for the ratification of the treaty there would be enough Democratic votes to make up the necessary two-thirds.

On both sides there has been a tend-Alarmiete ency to extreme statements in the heat of argument. For example, the New York Times, which has been strenuously opposing the treaty, has formed the habit of asserting that if we allow the Hawaiian group to come under our flag we shall be compelled immediately to expend two hundred million dollars for a vast navy to defend the acquisition. annexationists have on the other hand conjured up, in the liveliest fashion, all sorts of imaginary dangers that would beset us if we failed to improve this opportunity to take possession of what they have called the porter's lodge to the Western gateway of our great national estate. The more sensible view is that the United States is powerful enough either to annex this Pacific group or to abandon it to some other fate, without incurring any appreciable peril in either case. If we should annex the islands we should neither be obliged to build a two-hundred-million-dollar navy to maintain our possession of them, nor should we be obliged to build so much as a tendollar skiff. Our possession of Hawaii would be as secure as our possession of any interior county in the State of Illinois. If at any time in the future we should have developed large naval and military ambitions it would, obviously, be a convenient thing for us to hold the Hawaiian Islands for the same reason that England finds it convenient to hold the Bermudas or her fortified posts on the Mediterranean route to India. if we should never care to expand our fighting resources, the United States flag would fly as placidly and as unmolestedly at Honolulu as over the post-office at Peoria. Excepting for the feud between France and Germany over the possession of the Rhine provinces, there is no disposition among the great powers of the earth in our day

to take away each other's territory when once possession has become clearly established; and it is as ridiculous to assert that we should be unable to keep Hawaii as to assert that England is in constant danger of losing the Isle of Man. the other hand, the annexationists go altogether too far when they try to make us believe that if we do not immediately acquire Hawaii it will be used by some other power as a base from which to menace our Pacific coast. It is indeed wholly probable that if we do not annex the Hawaiian group the British or German flag will be floating there within five years; but that would not imply any hostile designs upon California. It would, however, be a serious blow to the prospective development of our Oriental commerce.

America and The real strength of the movement for the annexation of Hawaii is to be 'Manifest Destiny.'' found in a national feeling which cannot be understood except by those who share It is a feeling that grows out of our history and that rests upon survivals of faith in the old American doctrine of our "manifest destiny." While we were still a small and struggling power, our forefathers had the largeness of view to press our boundaries further and further to the westward, until at length they acquired the splendid continental domain which was won not for any immediate benefit they could derive from it, but for a heritage to their children and for the future glory of the nation. They in their times met with precisely the same sort of opposition that confronts to-day the men of large vision and of faith in the future. Most of us to-day are glad that Jefferson made the Louisiana purchase, and even that Seward bought Alaska, while there are also well-informed men ready to say that they think President Grant was right and Senator Sumner wrong in the bitter fight over the question of the annexation of San Domingo. Pacific Ocean is to be the theater of great events in the coming century. The next two generations of Americans will insist upon playing a large part in those events, in spite of the warnings of certain gentlemen now living who shudder at a policy of expansion. If we should embrace the present opportunity to bring the Hawaiian Islands under our flag, posterity would probably be thankful to us-precisely as we are thankful to our forefathers for their acquisitions.

A Step in the Forward Policy. Hawaiian annexation is probably to be regarded as a step in the general policy which will mean the ultimate construction and control of an isthmian waterway by the United States, the gradual acquisition of a large measure of Induence

ADMIRAL SIR E. H. SEYMOUR. (Commanding the British fleet in Chinese waters.)

in the West Indies, and the firmest sort of neighborly alliance with Canada to the north of us and Mexico to the south. There is no necessity for giving any consideration in our day to a continental union that would bring the United States, Canada, and Mexico under a single federated government; but there are the amplest reasons for cultivating relationships which would make Canada and Mexico our most cordial friends, and which would bring them into an agreement for the propagation of peace, prosperity, and civilization throughout the western

hemisphere. The political attachment of Hawaii to the American system rather than to the European or Asiatic would seem to us to make positively for the symmetrical progress of the western It would certainly have a world. tendency to help in the development of our merchant marine and our seafaring interests generally; and that of itself is declared by many thoughtful men to be reason enough for the annexation not only of those islands, but also of one or more islands in the West Indies. It is to be hoped that whatever decision may be reached, the whole subject may be discussed temperately and sensibly; for, whether we annex or decline

to annex, it will neither make us nor break us. Unhappily for the Hawaiian Islands themselves, it is to be feared that if we should decline to annex them their immediate future would be involved in grave doubt and danger.

Our fleet assembled at the Dry Tor-England tugas is one of the most powerful Chinese Coast. squadrons in the world; and in comparison with it the little expedition so ostentatiously led by Prince Henry of Prussia for the reënforcement of Admiral Diederichs on the coast of China is a trifling matter. A very different affair, however, is the splendid fleet that England has assembled in Chinese waters under the command of Admiral Seymour. A part of this formidable exhibition of England's sea-power was last month concentrated at Chemulpo, near the coast of Corea. Russia's insidious hand had been shown in the dismissal by the Corean Government of an Englishman, Mr. J. McLeavy Brown, who had for some years exercised control over the Corean finances; and it was announced that his place was to be taken by Mr. Alexieff, who had been carefully selected for the purpose by the Russian Govern-Although the English official was in no wise a representative of England, but merely an employee, in his private and personal capacity, of the Corean Government, he refused to accept his discharge, clung to Corean funds deposited in his own name in banks outside of Corea, and appealed to the English Government to sustain him. As a result of the prompt diplomatic discussion that ensued, it was soon reported that the Englishman and the Russian were to act in a joint Japan of course sided with England in capacity. the controversy, and sent ships to join Admiral Seymour's great squadron. For the moment,

VICE ADMIRAL DIEDERICHS. (Commanding German fleet.)

MR. J. M'LEAVY BROWN. (Director of Corean customs.)

therefore, Russia's attempt to gain complete ascendancy in Corea is checked. But the obstacle will prove merely temporary. England will, of course and very properly, use her pretensions in Corea to trade upon; and will be ready enough to withdraw when Russia acceres to her claims and pretensions somewhere else.

The situation on the Chinese coast Chinese Partithat has followed Germany's seizure or Later. of Kiao-Chau has continued to hold the foremost place in the attention of the world. Nobody knows what will happen eventually; but it is not likely that the great game of Chinese partition is to begin at once. In due time, however, the Chinese empire bids fair to go to pieces. We have been accustomed in times past to think of the Chinese as several hundred millions of perfectly homogeneous people. As a matter of

Phinoe Henry's Placelie "Deutschlard," ....

of the water on the street beat to fami, although they belong to the great yellow. division of the human race the diversities of type in the different parts of China are greater than the diversities among white men of Europe, and there is less connection and by fariless sympathy among them than among the discordant population elements that make up the present-day ... conglomerate that we know as the Austro-Hungazian empire. There is an immense range of dia-.. lectaria: China, and it often happens that the people of sone : neighborhood: cannot talk; with those who live in another four or five miles away. national feeling or an imperial patriotism. various provincial governments are not under firm control by the central government, and such military and naval forces: as exist are provincial rather than imperial. The Chinese of different provinces and sections hate each other worse than

17

ENTRANCE TO PORT ARTHUR, OCCUPIED BY THE RUSSIAN SQUADRON.

they hate the foreigners of other races. the moment arrives for a partition of China upon a plan that would not injure European peace, the thing can be carried out as easily as was the German landing and conquest at Kiao-Chau.

What European nations are trying Placing Mortgages to accomplish just now is to get Chinese Estate. into such relationships with the existing Chinese authorities as would seem to give them preferred claims as against one another. Thus the Russians, backed financially by their allies the French, made haste to aid China in raising money at the end of the Japanese war in order to gain influence at Pekin and to be the

"! Centurion?" (British fracésie), ok the Chinà 'Station.

. . . holder of a mortgage that might some day be advantageously foreclosed. And England, having been-outwitted at that time, has within the There is no such thing in China as a pervasive past few weeks been making strentious endeavors to; regain her old-time influence in China by outbidding the continental powers and securing the much-coveted privilege of lending China a little matter of from fifty to one hundred million dollars with which to pay off the indemnity still due to Japan. Along with this loan, of course, would

go numerous concessions. For example, the Russians, in the exercise of the recently acquired influence at Pekin, were evidently on the point of dispossessing Sir Robert Hart, the distinguished Englishman who for twenty-five or thirty years has managed the whole customs service of China, and exercised a greater authority than any other man in the empire's financial affairs. Russia has also been trying to secure the dismissal of Englishmen from military positions in China,

HON. ROWIN H. CONGER, UNITED STATES MINISTER TO CHINA.

in order to replace them with Russian officers; and similarly in the Chinese railroads and other services it had been practically agree that Russians should supersede Europeans of other nationality. If, however, as seems now probable, England should succeed in the plan of making this loan to China, Sir Robert Hart would certainly be retained in his position, and the progress of Russia's plans would be retarded.

Eventually, as it now seems, nothing A maniaa n Interests in can prevent Russia from acquiring control of all the northern parts of China, while England and France are destined to advance from the south, and Germany and Japan will endeavor to secure spheres of influence in the populous provinces lying between. So far as the United States is concerned, the maintenance of the existing Chinese empire is in no wise to be desired, if only the partition of China should not be followed by the adoption of commercial policies that would be prejudicial to our trade. Our treaty ports must be kept open to us on the present terms. We have a large commerce with these

Chinese ports, and there is every reason to suppose that this profitable trade will, under normal conditions, have a very steady growth and attain in due time immense proportions. At present the great bulk of the Chinese trade is with England. English influence in China makes for the open and liberal policy that is most favorable for the So far, therefore, as our sym-United States. pathies are allowed to be governed by our interests, it is plain that we should incline toward the continuance and further development of England's influence and power everywhere in Asia. land has said plainly that she will not allow the continental powers to seize China for purposes of trade monopoly; and we must heartily join England in this righteous position. Neither England nor America could be benefited by grabbing Chinese territory; but both have an immense interest in Chinese commerce. Our acquisition of Hawaii would be directly useful in helping to keep open the Chinese ports. Hon. Edwin H. Conger, of Iowa, is to be transferred to Pekin from the Brazilian mission, while Mr. C. P. Bryan, who had been selected for Pekin, will go to Rio Janeiro.

The financial plan by which it is pro-Financing the Chinese posed that England should lend China Loan. a great sum of money is interesting on several accounts. The money of course will be supplied primarily by the great international banking houses of Europe, which will take up a new issue of British consols at the ruling low rate of interest, presumably 21 per cent. England will take the proceeds of this issue of consols, and turn the amount over to China at, say, 4 per cent. With Chinese sources of revenue under the control of English officials like Sir Robert Hart, the regular payment of interest and of installments on the loan will be reasonably certain, and the profit accruing to the British Government from the difference in the rate of interest would in any case form a sinking fund which in the course of a reasonable term of years would pay off the consols and leave the Chinese loan a matter of clear profit. The matter has peculiar interest from the fact that the arrangement is supposed to have been worked out chiefly by the great bankers who are neither English, French, nor German in their real allegiance, but must be regarded as a law unto themselves and a separate power, gradually but steadily strengthening their grip upon the destiny of nations.

The Money Power in Recent History.

It was this huge, mysterious money power that enabled the continental governments, led by Russia, to circumvent England and place the Chinese loan at the close of the Japanese war. And now it is the

same hidden but potent force that declines to allow the continental powers to make the present Chinese loan, but ordains that England shall The issues of the recent Turco-Greek war were decided, unquestionably, by this coalition of European bankers, who improved the opportunity to gain a better hold upon the revenues both of Turkey and of Greece, and cleared up millions of profit out of the hideous conflict between Moslem and Christian. Their influence has slaughtered the Armenians and wrought the discomfiture of Greece. The hand of this coalition of European bankers has been constantly felt in the affairs of Spain and Cuba. method is to secure control of great issues of public securities at heavy discounts, bearing high rates of interest, and then so to manipulate diplomacy and the course of international politics as ultimately to make certain the payment in full of interest and principal. It is not pleasant to remember that these foreign gentlemen, with their finger in every diplomatic and international affair, were invited to come to the rescue of the United States Treasury under the last administration. Our politicians, playing their game of party politics so desperately that they forgot their patriotism, had in times of peace and prosperity cut off the revenues of the United States Government until the business of the country was hopelessly deranged and the basis of the currency system seriously threatened. And then the European money power, at an immediate profit of some millions of dollars, sold us the gold that we ought not to have needed.

Even now, the very men who were Hust We Mere Another the strenuous critics of the policy pursued in the last administration, having themselves come into power, refuse to admit the acts about the continued deficiency of public Not only do they decline to provide the money with which to pay off the debt incurred two years ago, but they also refuse to perceive the real danger that their conduct may in the early future compel them in their turn to bend the knee to the coalition of European money-lenders, in order again to buy the gold that our treasury ought not to have lacked. There is probably not a Republican in either louse of Congress to-day who will not admit in private conversation that an additional tax ought at once to be placed upon beer, for the sake of increasing the revenues. Yet no step is being taken in that direction. This is partly because the brewing interest is not to be offended. chiefly, it is because it is considered bad party politics to admit that the Dingley tariff is inadequate on the side of revenue production. In

order to avoid the necessity of amending the law and increasing the sources of public income, an attempt is being made at Washington to resort to undignified and even ridiculous economies in expenditure. An instance of this is the proposed impairment of the postal service of the city of New York by reducing the daily deliveries.

The frenzy in France over the Dreyfus the Dreyfus affair, far from abating since our chron-Zola and icle was written last month, has grown steadily more fierce and uncontrollable. The accusers of Colonel Esterhazy succeeded in having the charges against him tried by military tribunal. But the trial was in secret, and the court promptly dismissed the charges and declared Esterhazy innocent. This result only made the friends of Captain Dreyfus more bold in their assertions that a terrible conspiracy existed in the army; while the supporters of the military authorities were the more bitterly determined to prevent a reopening of the Dreyfus case. Scheurer-Kestner, who has stood in the foreground as the typical good citizen who had become convinced of Captain Dreyfus' innocence, has now been lost sight of by reason of the immense prominence that M. Zola, the novelist, has assumed. Zola had begun by championing Scheurer-Kestner; and when Esterhazy was discharged he accused the military tribunal of perjury, and dared the government to prosecute The accusation included no less a personage than the minister of war, Generl Billot.

Zola's accusations were presented in an A Draopen letter to President Faure, published Situation. by the Aurore on January 13. A few days later General Billot made a formal complaint against Zola and the manager of the Aurore, and it was understood that Zola's trial would be proceeded with in a very short time. It is believed that Zola will, in his defense, succeed in having the whole Dreyfus case publicly ventilated. Meanwhile the question has led to numerous street riots, in Paris and in other Captain Dreyfus was one of the French cities. very few Jewish officers in the French army; and the feeling against him has taken the form of the most intense anti-Semitic persecution that France has ever witnessed. The Rothschilds and the great Jewish bankers have been under special police protection. The French people have for years looked upon the army as their chief source of pride, and their confidence in it has been sublime. The possibility of treachery and corruption in high military circles fills the nation with dismay, and the average Frenchman is not even willing to entertain the idea.

Some Obituary Notes.

A remarkable man whose death occurred on January 16 was the Hon. Charles Pelham Villiers, long known as the "Father of the House of Commons." He was still in active political life, and had entered upon

THE LATE BENJAMIN BUTTERWORTH.

of sixty-three years. Another eminent English personage who had attained great age was Mrs. Mary Cowden Clarke, author of the "Shakespeare Concordance" and many other books, including a delightful volume of reminiscences. If she had lived until next year she would have attained the age

of ninety. In childhood she knew Shelley and John Keats, and in later years was the intimate friend of Leigh Hunt and Charles Lamb. It will some time be universally admitted that the author of "Alice in Wonderland" was one of the most brilliantly gifted men of our day. The nom de plume under which "Alice" and several other books were written was "Lewis Carroll;" but the real name of the author was the Rev. Charles L. Dodgson. He died in England on January 14. He had for many years been a teacher of mathematics at Oxford, and wrote learned mathematical treatises under his own proper name while producing such fantasies as "Alice in Wonderland" under his pen name. Dr. Dodgson was born in 1832, and was therefore sixty-six years The foreign names in our obituary list also include those of two eminent doctors, one of England and the other of Russia. Dr. Ernest Hart, editor of the British Medical Journal, was

his ninetyseventh year.
He had represented the
same constituency in
Parliament
without a

for a revival

THE LATE MRS. MARY COWDEN CLARKE.

Marks, the English painter and academician; Lady Millais, the widow of the late president of

well known throughout the English-speaking world. He was sixty-two years of age. Dr. Zaccharin, the famous physician of the late Czar Alexander III., died in Moscow on January 5. He was an eccentric character, of whom many interesting anecdotes are related. In our American obituary list occur the names of Maj. Moses P. Handy and Hon. Benjamin Butterworth. Major Handy, who was fifty years old, had made a high place for himself in American journalism, and won a great reputation as director of the Department of Publicity and Promotion of the Columbian Exposition. At the time of his death he was a special commissioner to promote American interests in the forthcoming Paris Exposition.

tion. Benjamin Butterworth at the time of his death was United States Commissioner of Patents. He had served ten years as a Congressman from Ohio, and was a man of wide popularity. Students of art will note the fact that our obituary record includes the names of Henry S.

THE LATE DR. ZACCHARIN.

the Royal Academy; William James Linton, the eminent engraver and art authority, who died in New Haven at the advanced age of eighty-five. and John A. Frazer, who was the first academician of the Royal Canadian Academy of Fine Arts, and afterward director of the Government Art School at Toronto. Among lawyers who have recently died are to be noted the names of Judge Edmund H. Bennett, dean of the Boston University Law School, and Judge John M. Shaw, of Minneapolis, one of the most eminent lawyers of the Northwest.

### RECORD OF CURRENT EVENTS.

(From December 21, 1897, to January 20, 1898.)

#### PROCEEDINGS IN CONGRESS.

January 5.—Both branches reassemble after the holiday recess.... In the Senate the Civil Service law is debated... The House debates the Civil Service Commission salaries provision in the legislative, executive, and judicial appropriation bill.

January 6-8.—Minor bills are passed in the Senate.... In the House the Civil Service law is further debated.

January 10.—The Senate decides in executive session to debate the Hawaiian annexation treaty behind closed doors....The House continues debate of the merit system in the civil service.

January 11.—The Senate begins debate of the Hawaiian annexation treaty in executive session....The House passes the legislative, executive, and judicial appropriation bill.

January 12.—The House passes the urgent deficiency appropriation bill.

January 13.—The Senate takes up the immigration bill....The House concludes discussion of the agricultural appropriation bill in committee of the whole.

January 14.—In the Senate Mr. Hoar (Rep., Mass.) proposes a constitutional amendment changing inauguration day to April 30....The House passes the agricultural appropriation bill.

January 15.—The House considers the army appropriation bill.

January 17.—The Senate passes the Lodge immigration bill by a vote of 45 to 28....The House considers the army appropriation bill.

January 18.—The Senate passes the urgent deficiency appropriation bill....The House passes the army appropriation bill.

January 19.—The Senate confirms many nominations....The House discusses Cuban policy.

#### POLITICS AND GOVERNMENT-AMERICAN.

December 21.—Josiah Quincy is reëlected Mayor of Boston.

December 22.—The Illinois Supreme Court decides that all city employees in Chicago, excepting the five heads of departments, are amenable to the civil-service law.

December 23.—The Illinois House of Representatives [Asset the Republican Senate apportionment bill.

December 29.—President McKinley signs the bill prohibiting pelagic sealing by citizens of the United States. December 30.—Mr. Sifton, Canadian Minister of the

sterior, concludes an arrangement with the United states War Department for a joint Klondike relief expedition, in which a force of United States troops will be joined by the mounted police of Canada...The report of the board on navy personnel is submitted by Assistant Secretary Roosevelt.

December 3!.—Comptroller of the Currency Dawes and Commissioner of Internal Revenue Scott take the oath of office in Washington....Government receipts for December show a surplus of \$1,736,494 over expenditures... Governor Lowndes, or Maryland, withdraws from the contest for the Senatorship

M. JULES CAMBON.
(The new French Ambassador at Washington.)

January 1.—The city government of the Greater New York is inaugurated.

January 8.—A combination of Democrats and Republicans opposed to the election of Senator Hanna controls the organization of the Ohio Legislature.

January 4.—The jurisdiction of the federal courts over the five civilized tribes in Indian Territory goes into effect.

January 5.—The New York and Massachusetts Legislatures meet....The organization of the Maryland House is prevented by eleven Republican members who refuse to caucus.

January 7.—The Maryland House is organized by members friendly to Senator Gorman.

January 10.—Governor Bushnell, of Ohio, is inaugurated; a mass convention of Republicans is held in behalf of Mr. Hanna's election to the Senate.

January 11.—Louisiana votes at a general election to hold a constitutional convention on the question of disfranchising illiterate negroes....Philadelphia Republican primaries result in favor of the Martin faction.

January 12.—Marcus A. Hanna is elected Senator from Ohio for the short and long terms, receiving 73 votes in joint session of the Legislature....The Penrose faction in the Philadelphia Republican convention bolts and nominates a separate ticket.

January 13.—The Democrats of the Maryland Legis-

Nathan Straus, President Department of Health.

James McCartney, Street Cleaning Commissioner.

Maurice H. Holahan, President Board of Public Improvements.

#### NEW TANMANY OFFICIALS FOR THE GREATER NEW YORK.

lature renominate Senator Gorman....Governor Shaw is inaugurated in Iowa.

January 15.—The Ontario Legislature passes laws relating to the alien labor law of the United States and to the lumber duty.

January 18.—In the Maryland Legislature the first ballot is taken for United States Senator to succeed Mr. Gorman, without result.

January 19.—The standing committees of Tammany Hall are announced; Richard Croker is chairman of the finance committee.

#### NOMINATIONS BY THE PRESIDENT.

January 5.—Owen I. W. Smith, of North Carolina, Minister to Liberia.

January 12.—Edwin H. Conger, of Iowa, Minister to China (transferred from Brazil)....Charles Page Bryan, of Illinois, Minister to Brazil....Mark S. Brewer, of Michigan, a Civil Service Commissioner.

#### APPOINTMENTS BY THE MAYOR OF NEW YORK.

January 1.—The following are some of the important offices filled by Mayor Van Wyck, of New York City, with the names of the appointees: Corporation Counsel, John Whalen; Chairman of Board of Police Commissioners, Bernard J. York; President of Board of Public Improvements, Maurice F. Holahan; President of Department of Parks, George C. Clausen; Commissioner of Street Cleaning, James McCartney; President of Department of Taxes and Assessments, Thomas L. Feitner; President of Department of Health, Nathan Straus; Chief of Bureau of Municipal Statistics, John T. Nagle.

#### POLITICS AND GOVERNMENT-FOREIGN.

December 21.—The French Chamber of Deputies passes the bill providing for the annexation of the island of Tahiti by France.

December 22.—The Japanese Diet is opened.

December 23.—The Holland chamber votes to abolish the export duty on Java sugar.... A new Chilean cabinet is formed.

December 24.—The civil-marriage law is promulgated in Peru.

December 27.—Ministerial crisis in Japan.

December 30.—Emperor Francis Joseph of Austria orders the session of the Reichsrath closed.

January 1.—The provisional government of Cuba is inaugurated in Havana....Baron Banffy, Premier of Hungary, addresses the Liberal members of the Diet.

January 2.—The session of the Portuguese Cortes is opened.

January 8.—Li Hung Chang is recalled to power at Peking.

January 11.—The French court-martial acquits Count Esterhazy of charges in connection with the Dreyfus matter.

January 12.—An official report implicates Vice-President Pereira, of Brazil, and about twenty officers of the army and navy, with members of the Legislature, in the conspiracy to assassinate President Moraes....A Japanese cabinet under Marquis Ito is completed.

January 13.—Lord Charles Beresford, Conservative, is elected to the seat in the British Parliament held by the late Sir Frank Lockwood, Liberal.

January 15.—General Saussier retires under the age limit from the posts of the commander-in-chief of the French army and military governor of Paris...Queen Victoria approves the appointment of Gen. Sir Arthur Powell Palmer, K.C.B., to succeed Gen. Sir William Lockhart as commander of the Tirah field force on the northwest frontier of India.

January 18.—General Billot, French Minister of War, makes a formal complaint against Zola.

#### INTERNATIONAL RELATIONS.

December 21.—Russia notifies China of the temporary occupation of Port Arthur by the Russian squadron.

December 22.—China grants permission to the Russian squadron to winter at Port Arthur.

December 25.—Germany refuses the request of the

John Whalen, Corporation Counsel.

J. J. Scannell, Commissioner of Fire Department.

Thomas L. Feitner, President of the Department of Taxes and Assessments.

#### NEW TAMMANY OFFICIALS FOR THE GREATER NEW YORK.

United States for lower duties on animal products.... Kassala is formally ceded to Egypt.

December 27.—It is announced that Great Britain finally declines to enter into an agreement with the United States, Russia, and Japan to suspend pelagic scaling, because of Canada's objection.

December 31.—It is announced that the British and Russian agents will jointly supervise Corean customs.

January 1.—The commandant of a Chinese garrison, on demand of the German ambassador, is dismissed for using threatening language to German missionaries.

January 4.—China seeks a loan of \$80,000,000 in London, and offers concessions to the British Government.

January 5.—China and Germany come to an agreement on the terms of the cession of Kiao-Chau.

January 7.—China rejects the proposals for a Russian guaranteed loan.

January 10.—United States Minister Angell reports his inability to secure the indemnity demanded of Turkey for the destruction of American property.

January 12.—President McKinley transfers Minister Conger from Brazil to China and nominates Charles Page Bryan for Minister to Brazil.

January 14.—President McKinley sends a message to Congress urging the prompt payment of the Canadian Bering Sea claims.

George C. Clausen, President of Park Board.

John T. Nagle, Chief of Bureau of Municipal Statistics.

Bernard J. York, President of Board of Police.

NEW TAMMANY OFFICIALS FOR THE GREATER NEW YORK.

January 15.-M. Cambon, the new French Ambassador to the United States, is received by President Mc-

January 17.—President Dole, of Hawaii, arrives in the United States....The French and Russian ministers protest against the conditions made by England in the matter of the Chinese loan.

January 18.—China accedes to the indemnity demand for the killing of German missionaries.

#### INDUSTRIAL AND FINANCIAL DOINGS.

December 21.—The Fall River cotton manufacturers announce their decision to make a general reduction of wages, notwithstanding the protest of the operatives.

December 23.—The Chestnut Street National Bank and the Chestnut Street Trust and Savings Fund Company of Philadelphia close their doors.... New Chicago city bonds sell at a premium of \$3.66%.

December 27.—The ballot taken by the striking machinists in England on the compromise proposed by the conference between the employers and the men results in a rejection of the propositions by a hundred to one; the leaders' proposal of 51 hours a week, instead of 48, is also rejected....The Overman Wheel Company of Chicopee Falls, Mass., makes an assignment.

December 28.—The Eastern pottery manufacturers of the United States consent to an immediate advance in wages of 1214 per cent.

December 31.—New Bedford (Mass.) and Rhode Island cotton mills announce a reduction of wages; 45,000 hands are affected.

January 1.-A Cleveland, Ohio, firm receives an order for 4,000,000 tons of iron ore from Cardiff, Wales.

January 7.—The six leading manufacturers of steel structural material agree on an advance in price of \$1 a ton for beams....The window-glass factories of the United States resume work after being idle six months.

January 10.—Strikes against wage reductions are begun in the cotton mills of New Bedford, Mass., and Burlington, Vt.

January 13.—A syndicate with a capital of \$15,000,000 secures 150,000 acres of land in California for beet-root culture; three great sugar factories will be erected.

January 14.—It is announced that the Third Avenue Railroad of New York City has secured control of what is known as the "Huckleberry" system, which operates in the northern wards of New York and in the suburbs.

January 15.—The committee of employees in the English engineers' strike notifies the Employers' Federation of the withdrawal of the eight-hour demand.

January 17.-Strikes against wage reductions are begun in many New England cotton mills.

#### OTHER OCCURRENCES OF THE MONTH.

December 22.—The Egyptian troops arrive at Kassala.

December 23.—Fire in the business portion of Cleveland, Ohio, causes losses estimated at \$1,000,000.

December 24.—The Japanese transport steamer Nara is wrecked with the loss of about 80 lives....Secretary Sherman, by direction of President McKinley, issues an appeal in behalf of the Cuban non-combatants....The Pope issues an encyclical on the Manitoba school question.

December 25.—In the burning of the Chicago "Coliseum " 9 lives are lost.

December 28.-It is announced that military operations on the Afghan frontier are concluded.

December 29.—The water famine in Kansas becomes serious.

January 3.—The falling of a floor and gallery in a hall at London, Ontario, causes several deaths.

January 4.—John D. Rockefeller makes an additional gift of \$200,000 to the University of Chicago.

January 10.—There is a heavy fall of snow in Southern California.

January 12.—The town of Amboyus, in the Moluccas group of islands, is destroyed by earthquake; 50 persons are killed and many injured.

#### OBITUARY.

December 21.—Princess Hohenlohe, wife of the Chancellor of Germany, 68.

December 23.—Lady Millais, widow of Sir John Millais, late president of the Royal Academy, 68.... Charles E. Green, one of the trustees of Princeton University, 60....Sir Cornelius Kortright, at one time Governor of British Guiana, 80.... Ex-Congressman John Patton, of Pennsylvania, 74.

December 24.—Charles Harrison, member of the British Parliament, 62.

December 29.-William James Linton, the engraver, 85....M. Léon Carvalho (Carvaille), director of the Opéra Comique of Paris, 73.

December 30.—Sir Henry Havelock-Allan, 67.

January 1.—John A. Fraser, one of the founders of the Royal Canadian Academy of Fine Arts, 59.

January 2.-Ex-Judge Edmund H. Bennett, dean of Boston University Law School, 74.

January 3.—Robert Turner, for many years prominent in Baltimore commercial and political circles.

January 4.--Dr. Robert L. Dabney, a well-known educator in the South....Sir Edward Augustus Bond. formerly principal librarian of the British Museum, 82.

January 5.—Dr. Zaccharin, physician of Czar Alexan-

January 6.—The Rev. S. C. Adams, a well-known Unitarian clergyman of Salem, Ore., 73.

January 7.- Ernest Hart, editor of the British Medical Journal, 62.

January 8.-Maj. Moses P. Handy, American journalist, 51.

January 10.-Sir Charles Hutton Gregory, former president of the British Institution of Civil Engineers ... Henry Stacy Marks, English painter, 69.... Count Delianeff, Russian Minister of Public Instruction.

January 12.-Mrs. Mary Cowden Clarke, author of the "Concordance to Shakespeare" and other works, 89....Justice Alfred W. Newman, of the Wisconsin Supreme Court, 64.

January 14.—Rev. Charles L. Dodgson ("Lewis Carroll"), author of "Alice in Wonderland," 66.

January 15.—Sir Polydore de Keyser, Lord Mayor of London in 1887-88, 66.

January 16.-ht. Hon. Charles Pelham Villiers, known as the "Father of the British House of Commons," 96....Benjamin Butterworth, United States Commissioner of Patents, 75....Gen. Christopher Colon Augur, U. S. A, retired, 76.

January 19.—Very Rev. Henry George Liddell, Greek lexicographer, 87....Pierre Léonce Détroyat, formerly

editor of La Liberté, 68.

# CURRENT HISTORY AS TOLD BY THE CARTOONISTS.

NATIONS OF EUROPE, MAKE A GRAB FOR CHINA'S SACRED POSSESSIONS!-From Ulk.

THE EUROPEAN CARTOONISTS have made the Chinese situation their most prominent theme in the past month. Two years ago the Emperor William designed a symbolical cartoon which he entitled "Nations of Europe, Defend Your Most Sacred Possessions." It attracted great attention at the time,

and we reproduced it as the frontispiece of our January, 196 number. This cartoon, which was worked out with fine artistic effect by Professor Knackfuss, represented the concert of Europe as a group of handsome young women, with the German St. Michael standing in the foreground pointing across an abyss to certain dark clouds and mysterious symbolisms intended to represent the great non-Christian populations of Asia which, presumably under the leadership of Japan, might some day use modern military methods in an aggressive movement against Europe. Although the German cartoonists have been taught lately to be careful not to wound the susceptibilities of the Emperor, they have ventured to travesty that famous drawing of two years ago; and we reproduce on this page two such burlesques, one of them from Kladderadatsch and the other from Ulk.

It is generally regarded in Germany that the Chinese expedition has been launched primarily in the interest of the demand of the Emperor and his cabinet upon the Reichsrath for money to carry out the proposed plan of increasing the German navy. The cartoons at the top of the next page have a bearing upon that idea. The

PEOPLE OF CHINA, GUARD YOUR MOST VALUABLE POSSESSIONS!
From Kladderadatsch (Berlin).

THE HIGH FLIGHT OF THE GERMAN IMPERIAL EAGLE.

EAGLE: "I can't always carry two such loads as a big army and a big navy!"—From Simplissimus (Berlin).

globe design represents Von Tirpitz, the German imperial minister of the navy, as inciting trouble in Hayti and in Brazil, as well as in China, with a view to giving the German people an object-lesson in the desirability of owning a good navy.

The Austrian satirist whose drawings appear in *Der Floh*, Vienna, makes haste to proclaim William of Germany as the new emperor of China, having in mind,

THE NEW EMPEROR OF CHINA.-From Der Floh.

THE MORE ROWS, THE MORE SHIPS.

MINISTER TIRPITZ: "Between ourselves, my Chinese, Haytian, and Brazilian friends, I find it awfully convenient to have your help with my naval bill in the Reichstag."—From UL.

undoubtedly, Disraeli's little compliment to Queen Victoria when he created for her the titleof Empressof India. The English, on the other hand, are not so ready to defer to William in the Orient, and their point of view is well expressed in the cartoon below, which represents his German majesty as the bull in the china shop.

THE BULL IN THE CHINA SHOP.—From Black and White.

The well-known Sick Man of the Bosphorus looks on with delight while his physicians turn their attention to another (China) who is even more sickly than he.—From Kladderadatsch (Berlin).

Naturally, the Sultan of Turkey is entirely willing to have the concert of Europe turn its attention to the case of another "sick man" at a long distance from the Mediterranean; and that this idea has humorous possibilities which the cartoonists have been quick to discover, is sufficiently attested by two highly amusing drawings reproduced on this page, one from the English Punch and the other from the German Kladderadatsch. Meanwhile, the heathen Chinee, according to a Viennese humor. ist, looks upon the European

THE CHINAMAN: "It is very good of all these undertakers to give estimates for the erection of my tomb, but I have no intention of letting myself be buried yet."—From *Der Floh* (Vienna).

powers as a group of undertakers rather than as physicians; and warns them that he has no intention at present of permitting himself to be interred.

The cartoonist of the Chicago Inter-Ocean, in a most clever design, represents the European powers as offering to John Chinaman the coat of civilization, in order that he may wear a garment with pockets in it, for the convenience of their long fingers.

ANOTHER "SICK MAN."

THE SULTAN (cheerily): "Going to pieces, old man? Nonsense! All you want is a dose of 'Concert of Europe!' Why, look at me!"—From Punch (London).

THE Push: "Say, you've got to wear mething with pockets."—From the Inter-Ocean (Chicago).

THE TRIUMPH OF CULTURE.

Austrian members after a sitting of the Reichsrath—a Swiss view.—From Nebelspalter (Zurich).

Those who read the article in this magazine last month on politics in Austria-Hungary will appreciate the two cartoons on this page, one of them Swiss and the other Italian, which illustrate the practical difficulties of carrying on parliamentary government at Vienna. The Chicago Times-Herald represents John Bull as sitting on the Bank of England in splendid isolation, surrounded by a solid cordon of war-ships; but

JOHN BULL SOLILOQUIZES ON HIS OWN "SPLENDID ISOLATION."

"We don't want to fight—but, by jingo! if we do,
We've got the ships,
We've got the men,
And we've got the money, too."

From the Times-Herald (Chicago).

Mr. Carruthers Gould, the cartoonist of the Westminster Budget, very justly reminds us that so far as the Chinese question is concerned England's isolation is modified by the fact that Japan and the United States have interests identical with those of John Bull which they will not allow to be sacrificed.

PROPOSED COSTUME FOR THE PRESIDENT OF THE AUSTRIAN REICHSRATH.

From the Fischetto (Turin).

MRS. EUROPE'S CHRISTMAS PUDDING.

MRS. EUROPE: "Where shall I put these?"

JAPAN AND UNCLE JONATHAN: "You'll have to leave room
for us."—From the Westminster Budget.

JOHN BULL: "Well, Jonathan, Dingley tariff working out all right, eh?"—From Judy.

Nevertheless Uncle Sam evidently takes an entirely complacent view of the Chinese question, and believes that his interests are not in any serious peril. Uncle Sam's optimism regarding almost every conceivable question that concerns him is not always entirely warranted by the facts. In an English cartoon on this page John Bull is represented as asking Brother Jonathan some suggestive questions about the deficit under the Dingley tariff. A characteristic American answer

THE TROUBLE IN THE ORIENT.

UNCLE SAM: "I'm feeling comfortable, thanks. It isn't my china."—From the Times-Herald (Chicago).

"GOOD!"
From the Herald (New York).

happens to be provided by Mr. Neelan, of the New York Herald, who finds Uncle Sam inspecting a ledger that shows everything satisfactory at home and abroad. Mr. Bush, of the World, however, gives us a design that represents this same symbolical personage as humiliated by certain recent occurrences in our poli-

A SENATORIAL CANDIDATE THAT IS NEVER BEATEN.

tics, which indicate the power of money to control elections to the United States Senate. There is no reason why our Uncle Sam should be in despair, but there is a large assortment of reasons why he should bestir himself and take a more active part in affairs that concern his honor and his safety.

WAS IT A BATTLE OR A FOOT-RACE? From the Times-Herald (Chicago).

The contest in Ohio has naturally given the American cartoonists plenty of opportunity. The Buckeye statesmen—Senators Hanna and Foraker in particular—might, if they chose, fill up a large scrap-book with recent newspaper caricatures, as a souvenir of the memorable struggle at Columbus in the opening days of the year 1898. Mr. Davenport, of the New York Journal, who has made Mr. Hanna a specialty for two years,

HOW JOSEPH BENSON FORAKER "KEPT HANDS OFF." From the Times-Herald (Chicago).

HANNA'S SENATORIAL RACE—CAN HE KEEP HIS SEAT? From the Journal (New York).

would naturally have the first place in such a scrapbook. Two of Davenport's cartoons are reproduced on this page. The Chicago Times-Herald was the especial champion of Mr. Hanna as against Mr. Foraker and the Kurtz combination; and we have reproduced two of Mr. Morgan's caricatures from that paper. Our readers will understand that although Senator Foraker was alleged to be neutral in the contest, Mr. Hanna's friends regarded Foraker as "keeping hands off" in the peculiar manner herewith delineated.

HANNA (DISFIGURED) GIVES HIS FRIENDS THE "GLAD HAND."
From the Journal (New York).

Mr. Atwood, who continues to draw admirable political cartoons for Life, represents "Columbia" as watching the Cuban

situation, and meanwhile restraining the restless American eagle. There is something in the attitude of the old bird that suggests the notion that it cannot be held down much longer. Our Mexican contemporary, El Ahuizote, also gives its idea of the Cuban situation. It finds the insurgents, represented by General Gomez, as standing invincibly for independence, while Uncle Sam is in the very nature of the case bound to get in between Cuba and Spain. This Mexican paper, which has a humor of its own, has been devoting itself

MERICA

return, and to his utterances on recent public questions, is from the Chicago Times-Herald. On the following page we present a dozen humorous and clever designs, in which the French paper, Le Monde Illustré, presents to various sovereigns and rulers its compliments and good wishes for the year 1898.

almost exclusively to the questions that agitate the public mind in the realms of President Diaz. A cartoon on this page, which we have reduced from very large to very small dimensions, represents President Diaz as introducing to the tutelary figure of Mexico a large bunch of manikins, these being his selections for the various elective offices. A cartoon from this Mexican paper, illustrating Mr. Bryan's visit to Mexico, will be found in our "Progress of the World" department. The one on this page which calls attention to Mr. Bryan's

MEXICO'S FARCICAL ELECTIONS.—From El Ahuizote.

MR. BRYAN, OF MEXICO, COMES TO TOWN,

From the Times-Herald (Chicago).

A FRENCH NEW YEAR'S GREETING TO VARIOUS RULERS.—From Le Monde Mustré (Paris).

### A SKETCH OF ALPHONSE DAUDET.

HE present generation is so accustomed to think of "Sapho" as a classic that one is reminded with surprise by the notice of Daudet's death on December 16 last that the novelist was only fifty-seven years of age. Ever since men of middle age can remember, Daudet has been a rarely typical figure in French literature. well deserved in his methods and in his ambitions, as well as in his actual achievements, this reputation. His was the true literary life as we are fond of picturing it, and his nature was the artist's nature, in its breadth as well as in its limitations. His origin, his early life, his invasion of Paris from the seclusion of the provinces, his early struggles and privations in the great city, the brilliancy of his successes, his entire devotion to his art, his hatred of form, his sunny and sometimes fiery spirit, his great humanity and tenderness-all give him the entourage with which tradition is fond of surrounding the literary artist.

#### DAUDET'S DESCRIPTION OF HIS HOME.

Daudet was born at Nimes in 1840. His mother and father were of peasant origin; the family was poverty-stricken. Those who knew the Daudets credit the mother of Alphonse with the imagination and sensibility which came to her son. She was a delicate woman, unable to cope with the realities of the world, distressed by the narrow means of the family and the incapacity of her husband; her only pleasure in life seemed to be the wholesale perusal of the great works of fiction. Daudet himself has given in an interview, published on both sides of the water, an account of this period of his life.

"My youth at home was a lamentable one. I have no recollection of home which is not a sorrowful one, a recollection of tears. The baker who refuses bread; the servant whose wages could not be paid, and who declares that she will stay on without wages and becomes familiar in consequence, and says 'thou' to her master; the mother always in tears; the father always scolding. My country is a country of monuments. I played at marbles in the ruins of the Temple of Diana, and raced with my little comrades in the devastated Roman arena. It is a beautiful country, however, and I am proud of my relation to it. My name seems to indicate that I deseend from the Moorish settlers of Provence; for, as you know, the Provençal people is largely of Moorish extraction. Indeed, it is from that circumstance that I have drawn much of the humor of my books, such as 'Tartarin.' It is funny, you know, to hear of men with bushy black hair and flaring eyes, like bandits and wild warriors, who are, the one a peaceful baker, the other the least offensive of apothecaries. I myself have the Moorish type, and my name, Daudet, according to the version which I like best, is the Moorish for David. Half my family is called David. Others say that Daudet means 'Deodat,' which is a very common name in Provence, and, derived from Deo datus, means 'Given by God.' I know little of my predecessors, except that in 1720 there was a Chevalier Daudet, who wrote poetry and had a decade of celebrity in the south. But my brother Ernest, who used to be ambitious, in his book 'Mon Frère et Mot,' has tried to trace our genealogy from a noble family. Whatever we were at one time, we had come very low down in the world when I came into existence, and my childhood was as miserable a one as can be fancied. I have to some extent related its unhappiness in my book 'Le Petit Chose.'"

ALPHONSE DAUDET.

Alphonse Daudet showed an aptitude for literary construction even before he entered the Lycée of Lyons at the age of thirteen. He already attempted verses and read indiscriminately every work of imagination on which he could lay his hands. These no doubt formed a vastly greater and more important part of his education than did the three years at college, for the boy was of the susceptible, quick, and passionate nature which does not lend itself well to academic training. He taught in some miserably paid capacity for a year after leaving the college, and then, with his brother Ernest, went up to the

great city of Paris, resolved to make his fortune as a littérateur, and with the more specific ambition of writing the songs of the poor. boys had the conventional garret existence of the newly arrived poet for a year or so, during which Daudet composed the poems which appeared in his first volume, whose title, "Les Amoureuses," shows that the volatile meridional had quickly and easily relinquished the thought of attempting the great epic of sansculottism. The verses attracted attention and were quickly followed by another volume of poems, "Le Double Conversion." These first lyric strains had so much of music and feeling in them that the Empress Eugénie was attracted to the struggling young writer, and before long he received a position as secretary of the Comte de Morny, which he held for five years. This engagement was a godsend to Daudet, for it gave him an opportunity to devote himself to his art, and even to travel in Sardinia, Algiers, and Corsica, where his youthful and exuberant fancy seized hold of many impressions that served as groundwork for the masterpieces which were to come. In this period, too, Daudet became a contributor to Le Figaro; much, if not most, of his very greatest work appeared in this paper, and he continued to be a regular contributor of its feuilletons during his life.

#### A SUCCESS OF THE TRUE ARTIST.

Daudet flung himself into the life of Paris with the passionate enthusiasm that might be expected of a young Gascon with a nature so sensitive and so luxuriant. He grew up in his literary work with the Goncourt brothers, Turgéneff, Flaubert, The same classic ideals of perfection and Zola. in form, to be achieved by vast industry and by what Stevenson declared was "sweating blood," that made the significance of Flaubert, controlled Daudet in his slightest effort. His plan of work was to jot in his note book every impression, incident, or thought that seemed to him likely to become worthy of literary exploitation and to refer to this mine of material when the moment for creation arrived. He wrote rather slowly, with his pen, except his plays, which were dictated, and revised and re-revised with interminable patience and care. With Flaubert such a method produced but little over and above his perfection of form and style. Daudet, tingling to the tips of his fingers with rich and vivacious life, was never for a moment in danger of succumbing to the fascination of mere form, which has made Flaubert seem arid to most readers. No human passion, sorrow, joy, could fail to find a responsive chord in Daudet's nature.

Such a temperament in such a field was not likely to be held within the limits of sobriety and

prudence, and Daudet is commonly credited with a sufficiently wild life in these earlier Paris days. He had the great good fortune, however, to marry a noble, helpful woman when he was only twenty-six years old. Madame Daudet had an exquisite sensitiveness to art, and was, indeed, an authoress herself, although after her marriage she found occupation enough in the loving labor of sharing her husband's thoughts and plans, in helping to lay out schemes for stories and novels, and best of all in bringing such order to his household as gave him the easiest opportunity and invitation to regular literary work.

Notwithstanding his early success and the reputation for brilliancy which he had achieved immediately on the publication of his first prosetale, "Le Petit Chose," in 1868, it is said that Daudet's annual income from his writings did not

DAUDET AND HIS WIFE AT CHAMPROSAY.

exceed one thousand dollars until 1872. In that year appeared the novel which established his reputation—on a firmer, higher basis, "Fromont Jeune et Risler Aine." This story of marital infelicity and intrigue is generally accepted as Daudet's largest and most important performance, with "Sapho," "Le Nabab," and "Jack" arranged with it as chief examples of his more sustained efforts. Volume after volume came from his industrious pen, and it was a great though

frequent literary occasion in Paris when a new book by Daudet was to be published. These novels had an enormous sale; over one hundred thousand copies of some of them were published. Though, as has been said, Daudet was not a rapid writer and spent a great amount of time in the most painstaking revision, he was able to concentrate his attention so closely on any effort immediately before him that the bibliography we have appended to these notes on his life shows a very considerable output. When he had once applied himself to a story or a poem or a play he stopped for nothing-fearful that the working rhythm might be interrupted. Sometimes he worked for eighteen hours on a stretch, broken only by short intervals for meals; and after these he immediately returned to his work, on the ground, as he said, that the drowsiness which accompanies digestion would overtake him if he waited even a few Doubtless it would have been better for Daudet and for the world if he had allowed somewhat more drowsiness and digestion in his For he broke down when he should have been just coming into his prime, and for more than ten vears had been invalided with rheumatism and its complications.

#### DAUDET AS A DRAMATIST.

Daudet's pet ambition was to make a playwright's success and reputation, but he did not accomplish anything like so much in the field of drama as in his novels and short stories. A number of his works were put on the stage, and those that had the benefit of some experienced collaborator in their dramatization were to a certain degree successful; while Daudet's own efforts seemed to be uniformly failures or only half His latest dramatic work, "L'Arlesuccesses. sienne," was performed in Paris and in America without exciting any enthusiasm. "L' Obstacle," was virtually a failure, too, although it had the spice of the story which forms the basis of "L'Immortel," Daudet's tremendous satire on the French Academy. Of this institution the novelist was a bitter, persistent, and fiery enemy. Naturally every Frenchman of great reputation is positive to a degree in his views concerning the Academy. He is either all for it, and in it, or about to be in it, or hoping to be in it, or else all against it. Daudet was very decidedly the latter. He rebelled against its dictation in literary matters, and believed firmly that its ideals were dry formulas, unworthy and unable to aid the highest artistic effort. He announced loudly, with the characteristic candor of the meridional, that he would never under any circumstances be a member. When his brother Ernest, who also had considerable success in letters, was made a member,

Daudet said that he was heartily glad of it, because hitherto there had always been ambiguity when one spoke of "Daudet"—doubt as to

DAUDET IN HIS STUDY WITH HIS SON LEON.

whether Ernest or Alphonse was meant. But now, he said, his brother would always be Monsieur Ernest Daudet, of the French Academy, while he would be Daudet.

#### "TARTARIN" AND THE SHORT STORIES.

The Anglo-Saxon readers, of Daudet, at least, believe less in the immortality of "Sapho" and the longer novels than in the inimitable "Tartarin" and the short stories of the "Contes du Lundi" and "Lettres de Mon Moulin." These surely must be Daudet's title to genius, and we believe that long after those Parisian intrigues. deftly and brilliantly told as they are, and with great human sympathy and tenderness, have been forgotten by the world, there will still be life and freshness in the wonderful "Tartarin" and those fascinating "Letters." With no encyclopedic acquaintanceship with French fiction, one feels entirely safe in saying that "Tartarin" is the only creature of his sort in French literature. The adventures of this whimsical figure are told in three series of stories: First, "Tartarin de Tarascon," published in 1872; then "Tartarin sur les Alpes," and finally "Port-Tarascon," which appeared in Europe and America in 1890. Such gentle, even tender satire as the smiling reader finds in the exploits of this bragging hero of the Midi is not to be found anywhere but in Daudet. It was that phase of his genial spirit which led people to liken him to Dickens. But Daudet holds up his mock hero to ridicule from a more distant view and with a more elegant air of the

CHAMPROSAY, THE RESIDENCE OF THE DAUDET FAMILY.

showman than are with the creator of "Pickwick." "Tartarin" cannot be repeated, for there was something of the Tarasconian in Daudet himself, and Daudet knew it and could write about it; just as "Tartarin" would lie wonderfully and know that he was lying, and know that other people knew he was lying, and yet carry off the matter with a superb air and a background of soft heart that baffled the most impatient. In the short stories, too, the best of which appear in the "Lettres de Mon Moulin" and in "Les Contes du Lundi," Daudet is unrivaled. He cannot ramble anywhere without finding something which, when he says it, is subtle, fascinating, delicate, and yet never slight or unworthy the saying. His least observation, we feel, had been open to any

of us and that we might have found it if he had not already suggested it. But he leaves us with a sense of gladness that he did find it first and said it with such dexterous vivacity.

It is said that the little community of the Midi which furnished the model for "Tarascon" never forgave Daudet for his satire, no matter with what tenderness it was delivered and redeemed. great authors have been so constantly accused of picturing in their stories the real figures of their Daudet steadily denied that it was Gambetta whom he meant in "Numa Roumestan," but everybody understood that it was Gambetta, and Daudet could not have been less acute than his readers. So that the result was much the same as if he had intentionally portrayed the French statesman. The Comte de Morny figures most prominently in "Le Nabab," and the unfaithful wives, deceived husbands, and treacherous lovers of "Fromont Jeune" were taken closely from real life, according to Daudet's own state. The novelist's own experiences are the basis of "Trente ans de Paris," and in many other works it was not difficult for those who knew the monde of Paris to detect the originals of the figures which appeared on Daudet's canvas. Some critics find a fault resulting from this copy work, saving that there were two parts of a story by Daudet, one part that was the work of his imagination, pår et simple, and another part that was taken over from the people and scenes around him—and that the joining work was not always well done.

However this may be, no one, not even the Academy, or the Theatre Français, or the Revue des Deux Mondes—his trio of bêtes noirs—would deny that Daudet in his writings was instinct with feeling, that he devoted his best efforts to a mastery of style, and that it is difficult to find any successor with whom the marvelous resources of the French language in literature will be so safe.

#### THE WORKS OF ALPHONSE DAUDET.

"Les Amoureuses" (1858); "La Double Conversion" (1859); "La derintère idole" (1862); "Les Absents" (1863); "L'Œlilet Blane" (1864); "Entre les frîses et les rampes;" "Lettres de mon Moulin" (1866); "Le Petit Chose" (1868); "Le Frère Aîné" (1808); "Le Sacrifice" (1869); "Lettres de un Absent" (1871); "Lise Tavernier" (1872); "Caperon Rouge;" "L'Arlésienne" (1872); "Le Siège de Berlin, et outres Contes;" "Les petits Robinsons des Caves" (1872); "Aventures prodigieuses de Tartarin de Tarascon" (1872); "Contes du Lundi" (1873); "Centes et récits" (1873); "Robert Helmont" (1874); "Les femmes d'Artistes" (1874), "Froment jeune et Risler aîné" (1874); "Rose et Ninette;" "Fa Fédor;" "Le trésor d'Arlatan;" "Jack" (1876); "Le Char" (1877); "L'Obstacle;" "Conspirations Royalistes;" "L'Arrivée, Mon Tambourinaire;" "Le Nabab" (1878); "Contes choisis, la fantasie et l'histoire" (1879); "Les rois en ext" (1879); "Numa Roumestan" (1880); "Histoire d'un enfant;" "Les Cigognes" (1883); "L'Evangeliste" (1883); "Sapho" (1884); "Tartarin sur les Alpes" (1886); "La Belle Nivernaise" (1886); "Impressions de Nature et d'Art;" "Théditre;" "Trente ans de Paris, d'travers ma vie et mes

livres" (1888); "L'Immortel" (1888); "Débuts d'un Homme de lettres;" "Souvenirs d'un Homme de lettres" (1888); "Port-Tarascon;" "Dernière aventures de l'illustre Tartarin" (1890); "Défense de Tarascon;" "La Menteuse;" "La Petite Paroisse" (1895); "La Lutte pour la vie;" "Quinze ans de Marriage" (1898); "Soutien de Famille" (1898); "Ma Donleur" (unfluished).

# THE TRAVELING LIBRARY—A BOON FOR AMERICAN COUNTRY READERS.

SINCE Carlyle laid down the proposition that "the true university is a collection of books" there have been many attempts to popularize this means of education. The growth of great public libraries in our cities has been full of significance as a phase of our higher social endeavor. Outside the great centers of population this development of library facilities has been less noticeable, but perhaps not less continuous, and certainly not less deserving of attention.

At first Carlyle's university was an exclusive institution. Only the aristocracy had access to it. Then came the era of subscription libraries in the larger towns, and then the founding of libraries for the free use of the people, to be maintained Massachusetts has always been by general tax. foremost among our States in the diffusion of library privileges among her citizens, and it is probably true to-day that no other like community in the world is so well supplied with books, or at least with the opportunity to use and read books. But for various reasons the Massachusetts system of town libraries, excellent as it is, cannot be successfully adapted to the conditions of every State in the Union. At any rate, the fact is that there are many communities, even in States that have adequate laws permitting taxation for library purposes, still destitute of the advantages which so large a proportion of the rural population of Massachusetts now enjoys. There are towns, villages and cities still in this country which will not tax themselves to secure for their citizens an entrance to Carlyle's university. The problem thus becomes, not merely how many towns can be induced to start free libraries, but how can the people, particularly the growing children and youth, in towns and country districts where no public libraries exist be helped to a share in library privileges at once, without waiting for the communities themselves to take the initiative. In some States much has already been done in this direction through "traveling libraries."

#### THE NEW YORK SYSTEM.

For many years Mr. Melvil Dewey, director of the New York State Library, has advocated a scheme of State distribution of books by way of loan to institutions and to groups of taxpayers on payment of a nominal fee. His plan includes a system of central control and supervision under which small collections of popular books are to be

sent from point to point, kept in charge of responsible persons, and circulated freely among the . residents of each locality. The State of New York made an appropriation for such a system of library loaning in 1892, and has appropriated annually since. In the first year 46 libraries were sent out; in the second, 139; in the third, 212; in the fourth, 371; and in the fifth year, 447. Books have been purchased to supply the constantly increasing demand, until now there are nearly 36,000 volumes owned by the State and available for this purpose. There are 32 general libraries, some of 100 and some of only 50 volumes each. Then these are each duplicated from five to ten times. There are also nine libraries, each of which is devoted to a special subject, also duplicated. Then there are numerous collections ranging in size from 25 to 100 volumes each and used in connection with university extension lecture course and reading circles.

These libraries are all carefully chosen, by expert librarians, and are made up of the choicest and freshest publications. A large proportion of the books must necessarily be works of fiction if the interest of the average borrower is to be sustained. Care is taken to provide only the very best and most wholesome stories, and to adapt them to the age and requirements of those to whom they are In this respect the influence of the traveling libraries, if not distinctly educational, is at least uplifting and invigorating. A growing interest in biography, history, economics, science, and art has been noted and fostered by the management, and many books in these departments are continually being purchased and sent Some entire libraries are made up of these subjects, to the exclusion of fiction altogether, and the special collections sent to study clubs throughout the State are doing a real educational work.

Any local library may secure this service, to supplement its own facilities, or in places where no public library exists twenty-five taxpayers may make application for the loan of a traveling library, and if proper guarantee is furnished against loss or damage they may have the use of such a library for six months. The cost of transportation is borne by the State, but a fee of \$5 is required in each instance. The New York system is now circulating about 36,000 volumes in more than 500 separate sets, and the demand seems to be steadily increasing. The

whole work is under the supervision of the regents of the University of the State of New York, and is regarded as an important adjunct of the State's system of secondary and higher instruction. The libraries are sent to high schools and academies for use in the study of literature, and similar arrangements have been made for supplying the schools with wall pictures of artistic merit. There is abundant testimony that the New York traveling libraries are reaching corners of the State that have heretofore been destitute of library privileges, that their use is leading to the formation of permanent collections under local auspices, and that existing libraries are greatly aided and stimulated

to growth by visits from the traveling libraries. Michigan adopted the New York plan, on a smaller scale and with various modifications, in 1895, and is now circulating 100 libraries of 50 volumes each. Twenty-five of these libraries are special in character and adapted to the purposes of study clubs. Mrs. Spencer, the State librarian, declares that in no State institution has the same amount of good been done with so small an expenditure.

In Iowa a similar system, under the direction of the State librarian, was started in 1896 with an appropriation of \$4,000, which has sufficed to purchase and circulate 50 libraries, while at the present time applications are on file for 200. Within the past two years about 40 permanent libraries have been organized in places more or less remote as the direct result of visits from the traveling libraries. An effort is being made to obtain a larger appropriation from the Legislature now in session.

#### THE WISCONSIN MOVEMENT.

Michigan, Ohio, Iowa, and one or two other States have followed in New York's footsteps in establishing State systems of traveling libraries, but the more interesting developments in this direction, because the most spontaneous, have been in Wisconsin. There the work has been organized by private rather than State initiative. The Hon. J. H. Stout, a public-spirited citizen of one of the western counties, seeing that the more remote country districts in his part of the State

THE STOUT FREE TRAVELING LIBRARIES.

(A view of the first sixteen libraries in their cases before they went out from headquarters on their first trip.)

were destitute of books, undertook to supply, at his own expense, a group of libraries of 30 volumes each for circulation in Dunn County. For this purpose he purchased about 500 standard and popular works of fiction travel, history, biography, and science, in the selection of which he was aided materially by the Wisconsin Free Library Commission.

After the sixteen libraries needed to form the first consignment had been made up they were packed in strong cases, each of which had double doors, with lock, shelves, and a full equipment for the librarian in the way of record books, blanks, etc. By the time time the little libraries were ready to start on their journeys from Mr. Stout's home city of Menomonie, there were sixteen associations of farmers and villagers scattered through the county which had complied with the simple requirements announced as the conditions precedent to obtaining the use of the That is to say, they had each elected a secretary and a librarian, had promised to have the books well cared for and kept in a convenient place, freely accessible to every resident using them carefully, and had paid a fee of \$1. Stout, on his part, promised to exchange the libraries when the majority of the members of an association had read as many of the books as they wished, to pay all transportation expenses for the first library and all the expenses of furnishing the libraries and repairing the books when worn. This was certainly a generous proposition, and it seems to have met with an appreciative response from the country people. It was in May, 1896, that the first libraries went out from Menomonie, and by May, 1897, Mr. Stout had been compelled to put a full score of additional libraries "on the road," in order to supply the active demand.

#### THE BOOKS AND THE PEOPLE.

That the books so liberally provided by Mr. Stout actually get into the homes of the people for whom they were intended there can be no The rural and village population in which they circulate numbers about 16,000. special effort was made to induce the location of library "stations" in the very poorest and most destitute portions of the county. The crossroads, rather than the villages, were sought as centers of influence, and it was found that in those places the libraries were quite as highly valued as in the more populous neighborhoods. All but five of the 34 stations from which reports were received in 1897 were in farm-houses, and of these farm houses seven served also as post-offices. Four of the remaining library stations were in small stores (in two of which were post-offices) and one was in a railroad station. stations are circulating more than 10,000 volumes annually. In the first ten libraries sent out each book was drawn twelve times on an average during the first year, and it was reported that a loaned book was often read by from two to five persons before it was returned.

Mr. Frank A. Hutchins, secretary of the Wisconsin Free Library Commission, to whose recent pamphlet on the subject we are indebted for the

facts here presented, relates an incident which well illustrates the real eagerness of the people for the libraries, and the willingness of even rough men to acknowledge the value of good books. At a hamlet where he inquired about a neighboring four corners he was told, "It is useless to go there, for it's a regular hell-hole." He visited it, however, and found it included a store, saloon, railroad station, blacksmith shop, and a dozen houses. The farmers about were poor and some of them coarse and rough. storekeeper had received a scant education, but he was a prompt, reliable business man and after a time talked quite freely. He said: "My mother died when I was quite young, my father was a drunkard, and I had a hard time when I was a boy. I had a chance for a few years to get books from a public library, and they furnished me the pleasantest hours I had. I have been pretty rough and our place here is tough. Last Saturday night there was a dance, and the boys filled up with whisky and the girls stood around and made fun of them. I believe that if they would read good books it would put a stop to that kind of thing, and I will take the library and make the boys and girls read the books." He was as good as his word, and the circulation of his library was double that of the one left in his scoffing neigh-Within a few months a good bor's community. woman, who had been the main and almost the only worker for the best things in the neighborhood, took the library under her charge and has made it a constant power for good. This is only one of many like instances that have fallen within the experience of these "book missionaries."

Among the books most in demand during the first year were the following wellknown stories: Miss Alcott's "Old Fashioned Girl," Aldrich's "Story of a Bad Boy," Habberton's "Helen's Babies," Colonel King's "Colonel's Daughter," and Edward Eggleston's "Hoosier Schoolmaster." these in order of popularity came "Rudder Grange," "A Singular Life," "Prisoner of Zenda," "Old Curiosity Shop," and "Oliver Twist." American history and biography were much read, and the farmers' families took a great interest in the accounts of New York tenement-house life, "Ilow

THE VILLAGE POST-OFFICE AS A TRAVELING-LIBRARY STATION IN WISCONSIN.

the Other Half Lives" and "Children of the Poor."

A liberal supply of popular periodicals was sent out with the libraries, and the bound volumes of St. Nicholas were among the most popular of the books. At first one-third of each library was devoted to juvenile literature, but this proportion was soon increased. The most encouraging result of the experiment has been its success with the young.

Mr. Stout's enterprise is not the only one of the kind in Wisconsin. A similar work has been carried on for about the same length of time under the patronage of Mr. J. D. Witter, of Grand Rapids, and with like success. Other smaller systems are at work here and there through the forest towns and clearings of Northern Wisconsin, and the whole State is beginning to take an active interest in the matter.

In all this nothing seems more significant than the eagerness with which all classes and all grades of intelligence welcome the libraries and the zest with which they read them. In one village the local clergyman is the moving spirit, in another the village barber; often it is the district schoolmistress, not infrequently the prosperous farmer or his wife. "Of the hundred traveling libraries now at work in Wisconsin," says Mr. Hutchins, "no other seems to be doing as much good as the one in a little hamlet in Wood County, where the librarian is 'section boss' on the railroad, postmaster, clerk of the school district, and an officer of the town. The people are German and Bohemian farmers and little given to books, but the librarian and his wife have looked after all the little boys and girls and manage to get them to read the books, the papers, or at least the pictures, and through the children they are reaching the homes

and the older people." Wisconsin makes no appropriation for the purchase of traveling libraries. The Free Library Commission can help to establish and supervise them, but all the money for books thus far has come from the gifts of citizens. is the interest among the people that it seems to Mr. Hutchins "as if every intelligent man and woman in the State wanted to help us. Children in all parts of the State are keeping their Youth's Companions and other periodicals for us, and the women's club, teachers, and other citizens are sending us eight and ten cases of magazines, illustrated papers, children's periodicals, and books each week." Perhaps it is a fair question whether a legis. lative appropriation would not weaken this feeling.

#### PERMANENT LIBRARIES ENCOURAGED.

Wisconsin has one excellent provision of law which might well be copied in other States. County boards of supervisors or the governing

bodies of towns, villages, or cities may contract with the board of directors of any city or village library in the same county for the loan of books to residents. Thus any good city or village library may be made available, to a certain extent, to the people of the surrounding country. This provision points to the adoption of the traveling-library plan by important public libraries throughout the State. The Free Library Commission is opposed to the establishment of large systems of traveling libraries except in cases where they can be managed from some wellequipped central library which is in charge of a competent librarian. Public-spirited citizens have offered to buy traveling libraries to send to villages which will establish permanent public libra ries, under the law, pledging suitable incomes In the small village libraries the from taxation. slender incomes are usually eaten up by the necessary expenses of maintenance, and not enough new books are purchased to keep up the popular interest. The State Commission can now say, "Start a permanent library with a definite annual income, on a broad basis, making it really an educational institution, and the commission will send you fifty fresh books every six months to be exchanged on the traveling-library plan." stimulates local interest and encourages united effort to maintain a public library.

#### INTEREST OF THE WOMEN'S CLUBS.

In at least three Wisconsin counties the organizations of women's clubs are about to start county systems of traveling libraries. The State Federations of Women's Clubs in Georgia, New Jersey, Kansas, Nebraska, Missouri, and other States are starting systems. It seems not unlikely that these organizations will have an im-. portant part in popularizing the traveling-library idea throughout the country. They have already been influential, especially in Iowa, in securing State legislation, and they are manifesting a growing interest in the general library movement. In many places the clubs are represented on public library boards of directors, and their work naturally brings them into touch with library administration. Reference has already been made to the special traveling libraries in New York State sent out to study clubs. This important feature of the New York system suggests a wide field of usefulness, in which the particular needs of women's clubs are perhaps more fully and practically met than by any other form of publiclibrary management.

That these clubs can and do exert a marked influence in raising the standard of public libraries and in quickening the public demand for the best class of literature is well brought out in a

INTERIOR OF ONE OF THE STOUT TRAVELING-LIBRARY STATIONS IN DUNN COUNTY, WIS.

recent address by Mrs. Clara Bourland, which is quoted in the January number of the Midland Monthly:

The club woman looks to the public library for her books of reference, for standard authorities upon history, economics, sociology, and all the live questions of the day, as well as the standard works of fiction and poetry. This demand for books of permanent value and acknowledged literary excellence must surely be of inestimable value to the public library, opposing itself, as it does to the excessive call for books of an evanescent character, deteriorating in tone and influence.

#### A HINT TO THE GREAT CORPORATIONS.

We have seen that the traveling library has flourished under systems of State maintenance and control and also under the auspices of private philanthropic agencies. It has been hardly less successful as conducted by one or two of our leading railroad companies for the benefit of employes. The Boston & Albany Railroad Company opened a circulating library for its men as early as 1869, and now sends out about 3,000 volumes a vear, but from end to end this line runs through towns which for years have been well provided with free public libraries, and to send out books to those towns would seem almost like carrying coals to Newcastle. The railroad branch of the New York Young Men's Christian Association undertakes to supply the library wants of railroad men on the New York Central line, along which there are fewer public libraries than in Massachusetts. About 7,000 volumes a year are sent out from the headquarters in New York City to other association railroad branches on the Central and to individual members.

The Baltimore & Ohio Employees' Free Circulating Library, described by Mr. Samuel H. Ranck in the *Library Journal* for January, 1897, is the most important institution of the kind in the country, if not in the world. This library circu-

lates through regions comparatively destitute of free library privileges. About 40,000 volumes a year are sent out to 2,500 borrowers. Since 1885, the year when the library was founded, more than 300,000 volumes have been drawn.

"These books," says Mr. Ranck, "travel as far westward as the Mississippi River, through eight great States, and over a railroad system approximating 3,000 miles. They are delivered to borrowers through local agents, and the average time from the placing of an order for a book in the hands of an agent until the book called for is in his hands is now less than twenty-four hours for the entire system. The library uses 674 agencies, each agency serving as a delivery station for the employees of the community or department.

"Along with the increase in the number of books used there has been a decrease in the percentage of fiction. The first year 64 per cent. of the circulation was fiction; the percentage of fiction is now less than 53."

The adaptability of railroad methods to the business requirements of a well-organized library is well illustrated in the Baltimore & Ohio enterprise. The whole system of sending out and returning books is similar to that of the registry department of the post-office. Every person who handles a package receipts for it, so that it is possible to trace anything that may be lost. The company is responsible for all books in transit, and it exacts the same care in the handling of library property that is required for all other property. The books are delivered to the agents through the baggage department of the road.

The system is managed from Baltimore, where the main library is kept, under the care of a competent and enthusiastic librarian, whose salary is paid by the company. For one of the summer months each year the library is closed, and at that time the librarian visits the different agencies in the interest of the library administration.

This railroad system of book distribution differs from the typical traveling-library system in this way: the wants of individual borrowers, rather than of groups of borrowers, are met by direct consignments from a central bureau. Instead of a number of small libraries being sent to the agencies to be in turn distributed, individual works are sent from one large library. This method, of course, vastly increases the number of separate shipments required to cover a given field, and would be impracticable for almost any organization not in the transportation business. The borrower, on the other hand, has a wider range of choice.

As Mr. Ranck suggests in his article, it is not from purely philanthropic motives that corpora-

tions are coming more and more to have regard for the welfare of their employees outside of working hours. Whatever tends to raise men to higher planes of living contributes directly to the efficiency of their service. The traveling library is a good business investment for any large employer of labor, and especially for the great transportation companies.

In St. Louis a plan has been formed for the distribution of books to street-car employees and their families, to whom the ordinary public library is usually inaccessible. It is stated that an office, or agency, will be established in every power house or shed of the car line. Conductors and motormen will present tickets at these offices, and books will be delivered by wagon at their homes.

#### MERITS OF THE TRAVELING LIBRARY.

Finally, to all who are studying the advantages of the traveling library for country places we commend the summary of those advantages made by the Wisconsin Commission after an experience of nearly two years in the backwoods of their State:

1. It makes good literature easily accessible, and often a constant temptation, in communities where there are few distractions and no other similar educational forces for any but the younger children.

2. It puts the control of the reading of numbers of people in the hands of persons who have the library experience of the world at their command, while the liter-

ary tastes of the readers are forming.

3. It is economical. There is no expense for local rent, for fuel, light, or librarian's salary. Books are bought at the lowest prices, there is no wastage from worthless books or shoddy editions, and the volumes are worn out by use and not by mere shelf wear.

4. It keeps a continual interest in the books by fre-

quent exchanges, and the prospect of a near exchange keeps each family alert to learn about the best books and to get them promptly.

5. The responsibility of caring for a library and extending its usefulness makes a common bond for a high purpose and a new basis for union for the best citizens in small neighborhoods.

6. The library stations form new centers for the upbuilding of a better social and intellectual life.

To sum up briefly: The traveling library gives an abundant supply of wholesome literature to the people of small communities at a slight cost, and not only excites their interest in such literature, but confines their reading to it until their tastes are formed. It is a free day and night school which does not close on Saturdays or Sundays or for long vacations. It instructs, inspires, and amuses the old as well as the young, and its curriculum is so broad that it helps the housewife in the kitchen, the husbandman in the field, the mechanic in his shop, the teacher in her school, the invalid in the sickroom, the boy in his play, and the citizen in his civic duties. It leaves no room for bad literature and keeps it from circulating without resort to threats, by the most natural and wholesome methods.

The few experiments described in this article do not begin to exhaust the possibilities of the traveling library. Nothing has been said of the self-supporting systems, among which one of the most successful is that conducted by the London Review of Reviews which supplies literature to many remote English villages. A similar enterprise is maintained by a firm in Des Moines, Iowa, on a strictly business basis. The plan is capable of indefinite expansion and of application to a great variety of interests and conditions. new way the railroad, that great civilizing agent, may be made to serve even more effectively as the ally of the free school and the printing press in all that makes for the elevation of the race.

WILLIAM B. SHAW.

AN OUTPOST OF THE WISCONSIN FREE TRAVELING-LIBRARY MOVEMENT

## ARCTIC EXPLORATION AND THE QUEST OF THE NORTH POLE.

BY WALTER WELLMAN.

### I.—EXPEDITIONS THAT WILL START THIS YEAR.

O fewer than five arctic efforts are planned for the near future. Of these, two have as their objective point the north pole. In July, this year, Lieutenant Peary will steam up the west coast of Greenland in the Windward, taking on board at Cape York the Esquimaux men, women, children, and dogs whose services he engaged last summer. He will then push as far north as possible in his steamer. If the condition of the ice is favorable to navigation he hopes to get the ship as far as Petermann Fiord, latitude 81, or possibly to Newman Bay, latitude 82. At the ship's farthest north he will establish a station and his Esquimaux colony. As soon as possible he will throw out an advance post at or near Cape York, and when that is done will in the spring or favorable season for arctic sledging attempt a dash to the pole with dog sledges. distance from Cape Washington to the pole is about 450 statute miles. Lieutenant Peary proposes to remain in north Greenland as long as may be necessary to achieve his purpose, using

MR. WALTER WELLMAN.

LIEUT. ROBERT E. PEARY.

the Esquimaux colony as a base of operations. He has taken leave of absence for five years, but hopes to be back in much less time. His plan involves not only an effort to reach the pole, but incidental exploration of unknown lands at the north of Greenland, with scientific work of the usual character. He will be accompanied by but one white man, a physician.

The Wellman plan is quite similar to that of Lieutenant Peary, except that it uses Franz Josef Land as a base of operations and employs Norwegian seal and walrus hunters instead of Esquimaux. July 1 the arctic steamer Laura, which has been secured for the expedition, will leave Tromsoe, and after taking on board at Archangel, in the White Sea, a large pack of the best Siberian draft dogs, will steam to Cape Flora, where she will probably arrive between August 1 and Establishing there a supply station, with scientific investigators left in charge, the geographical party of six men will at once push northward, hoping to winter at or about Cape Fligely, which Payer reached in 1874. The following spring a dash will be made for the pole. From Fligely to the pole the distance is 550 statute miles. While the aim of this expedition is to reach the pole, if possible, in geographic work it hopes to determine the area and characteristics of the now unknown northern parts of Franz Josef Land, and in the scientific field to make valuable observations, particularly in gravity and magnetism, in which it will have the cooperation of well-known scientists and an equipment of the latest instruments.

CAPT. OTTO SVERDRUP.

Capt. Otto Sverdrup, who was with Nansen, will take the Fram this summer and go up Davis Strait and Smith Sound, having on board a party of European scientists who wish to make observations along the coasts of Greenland and Grinnell Land. The Fram has lately been fitted with a large cabin for the comfort of this party. No special effort is to be made to reach a high northing.

Frederick Jackson, who last autumn returned from Franz Josef Land, plans an expedition on the American side, going through Jones Sound and seeking to open up the unexplored lands which it is believed exist to the west and north.

The following interesting details have within a few days appeared in the press concerning a Swedish expedition that will do scientific work in arctic regions this summer:

It will be under the leadership of Dr. A. G. Nathorst, who accompanied Nordenskjöld in his Greenland expedition of 1883. Its main object is to examine the eastern side of Spitzbergen, Wiche's Land, and New Island; in short, the region between Spitzbergen and Franz Josef

Land. But as this area will probably not be accessible in the beginning of next summer, Dr. Nathorst intends to carry on investigations in Western Spitzbergen, Northeast Land, Bear Island, etc. He has bought the Antarctic, which in 1895 carried the whaling expedition to the south polar sea and is now being overhauled. The captain will be Emil Nilsson, who has been several times to the Yenisei, and who commanded the Sofia during Nordenskjöld's Greenland expedition in 1883. Dr. Nathorst himself will have special charge of the geological work. The zoologist will be Mr. G. Kolthoff, of Upsala, curator of the fine biological museum at Stockholm. He also was in the 1883 expedition, and has made ornithological expeditions to Iceland and the Faros. Dr. Axel Ohlen, of Lund, who will assist him, has dredged off the east coast of Greenland, has visited Baffin's Bay and Melville Bay, and was in the recent Swedish expedition to Tierra del Fuego. Dr. Gruner Andersen will be the botanist. He has studied the arctic flora on the mountains of Sweden and Norway. The hydrographer will probably be Dr. Axel Humberg, also a well-known geologist; he also was in the 1883 expedition. The cartographical work will be under the charge of Lieut. Otto Kjellström. Special attention will be given to glaciers wherever found, and the surgeon, Dr. E. T. Levin, will investigate the occurrence of bacteria in the arctic regions. It will be seen that the expedition will be completely equipped in all departments of science.

### II.—SOME IMPORTANT EXPEDITIONS SINCE 1870.

The last quarter of the nineteenth century has witnessed remarkable activity in polar exploration. In 1870 the United States Government sent Charles F. Hall, a civilian, on an expedition in the *Polaris*, and in north Greenland waters he reached the highest north then attained by ship, latitude 82:11, a record which has since been broken only by Nares in the *Alert*, 82:24, and by Sverdrup in the *Fram*, latitude 85:58.

In 1873 Weyprecht and Payer, Austrians, were fortunate enough to drift in their ice-beset ship, the *Tegethoff*, to the southern shores of a land which they not only discovered, but in part explored by means of sledge journeys, naming it Kaiser Franz Josef Land. In the spring of 1873 Payer reached 82:05, and there saw to the northward "high, mountainous land" which he estimated to extend beyond the 83d parallel.

The English were now stimulated to renewed efforts, and in 1875 the world beheld the novel spectacle of a great nation sending forth a magnificently equipped expedition with orders to go to the north pole. Captain Nares was its leader, and he took two ships, the Alert and the Discovery, to north Greenland. The expedition cost \$750,000, and although it did not bring back the pole as a prize, it did succeed in adding forty miles to the record of northerly progress.

In 1879 the New York Herald dispatched Commander DeLong, of the navy, on a quest for the pole in the Jeannette. The ship was caught in the ice north of Siberia and drifted a long distance to the westward, finally sinking in latitude 77:15. The drift of the Jeannette, together with that of relics from her found two years later on the coast of southern Greenland, gave Nansen his idea for the drifting expedition in the Fram which resulted in such a great success. The thirty-three men of the Jeannette crew attempted the Lena delta. Twenty perished, only those piloted by the gallant Melville being saved, with two others.

In 1881 the United States Government sent out an expedition under Lieut. A. W. Greely, of the army, to establish one of the international polar stations. In addition to geographic and scientific work of the greatest value, performed under the direction of the indefatigable leader, Lieutenant Lockwood and Sergeant Brainard, by means of a sledge expedition along the coast of north Greenland, established a new record in the approach to the pole. Twenty-five out of thirty-two men of this expedition perished at Cape Sabine, through no fault of their commander, but on account of failures and official inefficiency which tarnished the arctic record of this country.

These two disasters checked for a time the enthusiasm for arctic exploration. In 1888 Fridtjof Nansen effected the first crossing of Greenland, justly regarded as a brilliant feat. But it was soon afterward eclipsed by an American, Lieut.

MRS. PEARY IN HER ARCTIC COSTUME.

GEN. A. W. GREELY.

Robert E. Peary, civil engineer in the navy, who in 1892, accompanied by Astrup, a Norwegian, crossed Greenland a thousand miles north of the route of Nansen, traveling with dog teams and sledges. In 1894 he met with failure in an effort to cross again, but in 1895 succeeded in once more reaching Independence Bay, without being able, however, to explore the northern termination of Greenland, as he had hoped.

In 1894 two expeditions set out in the Old World, both with the pole as their objective point. Neither succeeded. One was that of the writer, of which General Greely says in his "Handbook of Arctic Discoveries:" "Walter Wellman, an American, endeavored to reach the pole by sledge and boat, using a ship at Spitzbergen as his base. Most improved scientific devices were employed to reduce weights and secure success, but unfortunately the Ragnvald Jarl was crushed by ice-floes at Walden Island. Although the ice was exceedingly rough, undeterred by adverse conditions Wellman pluckily continued north by sledge after the wreck, but was obliged to abandon the attempt at the 81st parallel."

The other expedition of that year was led by Frederick Jackson, an Englishman, and was liberally fitted out by Alfred C. Harmsworth, a London newspaper owner. Jackson established head-quarters at Cape Flora, Franz Josef Land, where he remained three years, exploring parts of that

ADVANCE MADE TOWARD THE NORTH POLE DURING THREE CENTURIES, WITH PROPOSED ROUTES OF PEARY AND WELLMAN.

The advance made toward the north pole during the last three centuries is marked on the above map with stars, lettered in order from "A" to "H," starting with Barentz in 1596 and ending with Nansen in 1895. These successive steps on the road to the pole may be tabulated as follows:

Year.	Explorer.	Nationality.	Lat. Reached.	from Pole.	Method.
1596	Barentz.	Dutch.	79:40	713	Sailing ship.
1607	Hudson.	English.	80:23	654	Sailing ship.
1700	Phipps.	English.	80:48	635	Sailing ship.
1806	Scoresby.	English.	81:30	587	Sailing ship.
1827	Parry.	English.	82:45	500	Small boats, sledges.
1876	Nares.*	English.	83:20	460	Small boats, sledges.
1882	Greely.†	American.	83:24	45514	Sledges.
1895	Nansen.	Norwegian.	86:14	260	Small boats, sledges.

It will be observed that the English held the honor of "the farthest north" for 265 years, during which period they advanced the mark 253 statute miles. The Americans, with an advance of 4½ miles, then held it for 13 years. Three years ago Nansen and Johansen, the Norwegians, established a new record 195½ miles nearer the pole.

<sup>\*</sup>Although Captain Nares was leader of the expedition the sledge journey was made by Markham and Parr, officers, +General Greely was the leader of the expedition, but the northern journey was made by Lockwood and Brainard, officers.

THE "FRAM" LEAVING NORWAY.

archipelago south of the 81st parallel. In June, 1896, he had a dramatic meeting with Nansen and Johansen, who had wintered eighty miles north. Nansen and Johansen returned to Norway in the Windward, which had visited the station every summer. This is the steamer which has been lent to Lieutenant Peary for his voyage this coming summer.

No expedition since that of Greely is worthy more than briefest mention in comparison with Nansen's brilliant achievement, the details of which are still fresh in the popular mind. Not only did Nansen's drift theory prove correct, but by leaving his ship in an effort to reach the pole by dog sledges he contributed one of the most fascinating chapters known to all arctic history. It Nansen and Johansen had not permitted their watches to run down, preventing them ascertaining their longitude, they would have been able to come down upon the head of Franz Josef Land, clearing up the mystery as to the area and trend of the northern parts of that archipelago,

WELLMAN'S "RAGNVALD JARL" CRUSHED BY ICE.

DR. FRIDTJOF NANSEN.

seen by Payer twenty years before, but never touched by the foot of man. As it was, Nansen's expedition discovered no new lands, but its contributions to knowledge are nevertheless of first importance.

July 11 last S. A. Andree, a Swede, accompanied by two of his countrymen, set out from Danes' Island, Spitzbergen, for the north pole in a large bal-The only information concerning their journey that has come to hand was found in a pigeon-message written by Andree himself two days after the ascension. In this dispatch he said they were then, noon, July 13, in latitude 82:2 and longitude 15:5 east, that all were well on board, and that they were making "good progress to the east, ten degrees southerly." This message indicates that Andree's plan of sailing to the pole or its vicinity by balloon resulted in failure. about one-fifth or one-sixth the time his air-ship could remain afloat he had made but small progress northward, and was then being driven south of east. If Andree and his comrades are still alive the chances are they will be found next summer at Cape Flora, Franz Josef Land, where Jackson left for them a supply of food.

### III.—HOW IS THE POLE TO BE ATTAINED?

And how can the pole be reached? By a sledging expedition over the ice which covers the polar sea, made from a base station upon the land as far north as we can establish it. It is only by sledging that any one now proposes to reach the The open polar sea and the possibility of sailing to the top of the earth in a ship are dreams of the past. Balloons are extra-hazardous, being mere toys for the winds and offering no opportunities for scientific observation. Drifting with the current which flows lazily through the Arctic Sea is a slower but more certain method, though Dr. Nansen's experience indicates that the current falls several degrees short of the pole. Dr. Nansen left his ship and sought the pole by sledging over the ocean ice.

This base station should be established upon some land which extends far to the north, which is accessible by steamer in the summer season, and which contains animal life sufficient for support of the explorers in case of need. In the opinion of some arctic authorities Greenland offers greatest advantages as a gateway to the pole. There is every probability that it extends farther north than any other land of which we have knowledge. It is believed the mainland of Greenland has its northern termination between the

MR. S. A. ANDREE.

81st and 83d parallels, but outlying islands or other land masses are known to reach as far as 83:30, and they may extend much farther.

North Greenland's disadvantages as the site of a polar base station are: First, its doubtful accessibility by ship, navigation through the narrow, ice-gorged straits—Smith Sound and Kennedy and Robeson Channels—being exceed-

ANDREE'S BALLOON.

ingly uncertain and hazardous. Second, the long sweep of the coast from southwest to northeast, involving 200 miles' travel eastward to make 100 miles northward—from Newman Bay, the highest point to which it is likely a ship could be steamed, to Cape Washington, the most northerly known point of land. Third, the improbability of finding enough game there upon which to support life, there being few seals in northern Greenland and consequently few ice bears, and the musk oxen having a wide range and therefore not to be depended upon.

Other arctic authorities believe advantage could be gained by establishing the polar base station on Franz Josef Land, which lies between the 80th and 84th parallels, its northern shores being as yet unexplored. The southern coast of this land can be reached every summer by an ice steamer from Norway. In the autumn following the arrival of the expedition winter headquarters should be established at Cape Fligely, latitude 82:05, where game in abundance could be had for men and By the time the light returns in the spring the expedition party will be found hardened through almost daily exercise and exposure. All details of the sledging equipment and methods will by this time have been thoroughly tested and mastered, and everything will be in readiness

for the dash for the pole which is to be started upon about the middle of February.

At latitude 82 degrees the sun reappears March But during two or three weeks before this date the dawn is bright enough to travel by, and the northern journey should begin about The cold will then be great—from February 15. 20 degrees to 50 degrees Fahrenheit below zero -but it is cold that keeps the surface in best condition for sledging. Hardened men, properly clad, can endure any degree of cold as long as the wind does not blow. Fortunately the arctic spring has little wind, the storms coming, for the most part, later in the year. In the latter part of March and all of April the temperature will become more moderate and travel unaccompanied by any great hardship on account of the cold. May will be warmer still and really balmy for men accustomed to the lower temperatures of February and March. But by the first of June it will be too warm. The snow will then be softening and the ice breaking up more and more. The favorable season for arctic sledging is at

The favorable season—the period in which most rapid progress may be made and for which the plan should be laid that all of it may be utilized and yet no superfluous pound be carried—is about one hundred days, or from February 15 to May 25. In this one hundred days' campaign the party should make its northerly advance and its return to land, though of course, if still out when June 1 comes, it will be able to proceed at a diminished rate of speed.

What is the length of this journey for which we must plan? From Cape Fligely to the pole in a direct line is 475 geographical miles. If we say that, on account of deviation from a straight course made necessary by hummocks, leads, the drift, etc., the total distance to the pole and back is 1,050 geographical miles, we shall be within bounds.

The road to be traveled is the frozen surface That the "pack" can be travof the polar sea. ersed at a satisfactory rate of speed, with proper equipment and in the favorable season, we know, because it has been done. As long as the temperature is low the pack remains quite closely There are a few leads or channels between the floes, even in the coldest weather, but a greater number of them as the season advances and the cold is moderated. Crossing these channels is usually easy, either by boat or upon bridges of natural ice, but a few are troublesome on account of sludge upon their surface or young ice that is not quite strong enough to bear.

The surface of the frozen sea varies widely. Here are level fields over which the sledges will

glide rapidly hour after hour, making journeys of from fifteen to twenty-five miles a day possible. Then will come fields of rubble and pressed-up blocks which give much trouble. Many pressureridges at the edges of the floes will be encountered, but these are as a rule not difficult to cross, as their sides are drifted over with snow and they are transformed from rough cliffs into hillocks varying in height from ten to twenty feet.

These known conditions of season, distance, road, and difficulties show us that our organization and outfit must be a perfectly adaptable and perfectly balanced machine. All must be planned as carefully as the building of a locomotive or a steamship. There must be power enough, but no superfluous power to waste fuel. The parts must be strong enough to endure all ordinary and extraordinary strains, but not so heavy as to drag upon the power. There must be food enough to keep men and dogs going in full strength just the time needed for accomplishment of the task, within the favorable season, but not a pound beyond to be unnecessarily dragged the whole distance.

Such a perfectly balanced, skillfully equipped and organized expedition, comprising all the latest developments and appliances for rapid travel, has never yet been placed in the field. Indeed, it is only now, after the experiences of Lieutenant Peary, Dr. Nansen, and other recent arctic travelers, that such a thoroughly modern plan and equipment have become possible.

We now know that in traversing the polar pack we must have a boat with which to cross leads, that it must be a boat with peculiar powers of resistance to injury, that it must be at all times ready to go into the water so that time need not be wasted in long detours seeking crossings upon the ice, as was the case with Dr. Nansen throughout his journey, or till a week was spent in repairing the canvas kayaks in which the ice had made many holes.

We know that dogs are the cavalry horses of the arctics, and that we must have plenty of dog-power to drag all the loads over the good ice, in order to save the strength of the men for the rougher places; and plenty of man-power to get everything quickly over the rubble, ridges, and leads—the dogs resting at these bad spots and the men resting while the dogs do the work on the long reaches of level or undulating surface.

With a party of six hardy men, with fifty draft dogs from Siberia, with a rubber pneumatic boat which has no rigid surface to receive injurious blows in ice, with specially built sledges that are drawn each by one dog and that may capsize without injury or the need of righting, so that the dogs go along practically without

attention or driving, with light weights constantly becoming lighter, with man-power and dog-power enough to keep moving straight ahead all the time with all the loads without the need of "doubling up"—that is, to divide the load into two parts and thus go three times over the road—with careful attention guided by experience to every minute detail of food and equipment, it is possible to travel an average of from thirteen to seventeen miles per day.

Notwithstanding their lack of power in proportion to their impedimenta, their loss of time in long detours seeking crossings of leads upon the ice because their kayaks were unfit to go into the water, their inability to travel more than six or seven hours per day because two men could not quickly attend to all the duties in camp, Dr. Nansen and Lieutenant Johansen made during the favorable season an average of about nine miles per day. Dr. Nansen says if he had had more dogs and men and a supply station on Franz Josef Land to fall back upon, he could have made the pole. He is also quite confident the pole can be attained in the way which is here proposed.

At an average progress of only twelve miles per day the pole could be reached and returned from in eighty-eight days. Ample time would remain for the party to make its way back to the station on the southern coast to meet the steamer sent out after it.

In this way, with a very small expenditure of money and with only a year and three months' absence from civilization, I believe the north pole can be attained without the loss of a single human life.

## IV.—WHY DO MEN STRIVE TO REACH THE POLE?

What is the use of trying to reach the north pole? What is to be gained for mankind? What will you do with the pole when you get it?

These are questions which every friend of arctic exploration is often called upon to answer. They are propounded in all seriousness and good faith, and deserve reply in kind.

Many men who applaud a Lick or a Yerkes for their liberal endowment of great telescopes with which to discover new stars in the stellar universe have fallen into the habit of sneering at the men who propose to discover the north pole and thus add to our knowledge of our own world.

Men who rejoice whenever a new fact is learned concerning the heavenly bodies or the internal structure or history of our globe have little patience with those who venture into the unknown regions of the north with a view to learning what is there. They forget, perhaps, that this earth was given man for his home, and that the desire to conquer and to know all of it is as instinctive as life itself.

The results of efforts to explore the great unknown area about the pole may be divided into two parts: One has to do with the extension of knowledge, with the ascertainment of those facts which build up and broaden and perfect the sciences; the other caters to love of adventure, to admiration for conquest of difficulties, and certainly these are not the least praiseworthy traits of human nature.

To the man who asks, "Can people live about the pole—what can be grown there?" and who thus implies impatience with exploration which does not open up either mines or farms or some productive industry, there is no answer. The same man might ask, Of what use is a poem? He must be permitted to go his way, along with the man who can see no value in dredging the depths of the sea, scaling the heights of mountains, or widening our knowledge of the stars, because in none of these places can wheat or corn be grown or precious metals be mined.

But to those who look upon the garnering of every new fact concerning our universe as a contribution to the sum of human knowledge, and therefore to human power and human happiness, the value of arctic exploration is obvious.

"Nowhere are more questions to be found for which to seek answers," wrote Prof. Georg Gerland, the physicist, "than in the polar regions.
... Man's disposition to make all the earth his home and himself at home everywhere in it is only sharpened by the problems offered there, and the tendency to go becomes irresistible.

"The explanation of the glaciation of the northern part of our temperate zone during the ice age, still unfound, is a matter of great importance, for the topography of the land at the present time was brought out and the organic life of the whole earth was modified by it; and it is the general opinion that the solution of the problem is to be found, if it is found, by a study of the polar regions.

"... Man could not refrain from inquiring into the nature and reason of these things if he would, and hence he is willingly or unwillingly led to the poles, where he is brought into the closest relations with them and where the explanation of them can be most hopefully sought."

As good an authority as Prof. Angelo Heilprin, of the Philadelphia Academy of Sciences, stoutly defends that species of exploration which has for its main object the discovery of the pole. "Arctic exploration for the attainment of scientific knowl-

edge pure and simple," he says, "is worthy all the effort that can be put to it; but none the less worthy is an exploration which has for its main object the resolution of a problem which has attracted man's attention for upward of three hundred years, and thus far baffled all his ingenuity and advances."

The question is asked: To what good? For those who identify the progress of civilization with a search after truth, it is hardly necessary to answer this question. It was fully answered a half century ago by that stern friend of knowledge, Sir John Barrow, when he wrote: "The north pole is the only thing in the world about which we know nothing, and that want of all knowledge ought to operate as a spur to adopt means of wiping away that stain of ignorance from this enlightened age."

The north pole is a great prize to win. It is worth winning, not alone because the world stands ready to applied and reward him who first sets toot at that spot where there is no north and no other direction than south, but because in the doing of it real benefits are to be gained for the human race and the cause of knowledge.

The pioneer expedition to the heart of the inner polar region—to the pole itself or its vicinity—will not only bring back a story of adventure, of hardship, of achievement which will stir the blood of all who admire courage and physical prowess and triumph over the difficulties of nature, but it will return with valuable information concerning the magnetic and electrical forces of the earth, now so little understood, concerning meteorology and geology, the forms and

extent of unknown lands, if any exist, the depth of the sea and the currents thereof, the organic life of our own and past ages, and the great problem of glaciation, which involves the history of the human race.

Simply to reach the pole for the sake of a sensational success would be a splendid play in that international game of daring and endurance which has been going on for three centuries. Having long ago set out to do this thing, nothing can be more certain than that man will go on till he has As an athletic feat, as a triumph of succeeded. preparation and combination, as a victory over the difficulties of road, distance, time, and climate, it would be at least as worthy admiration as the breaking of records upon the race-horse or bicycle track, as the winning of a baseball, football, or yachting trophy—feats to which the world properly gives its applause and its reward in rich measure. But even a mere effort to reach the pole has vastly more to commend it, since it is impossible for an expedition to approach the pole without exploring seas and lands now unknown, without gathering a multitude of facts for which every physical science awaits with eagerness.

The north pole can be and probably will be reached during the next few years. In arctic exploration as in everything else there is progress. It is only now that the combined experience of all who have ventured in this field teaches us precisely what the conditions are that must be coped with and precisely how they are to be overcome so that we are able to say we know how the pole can be attained.

## WHY SHOULD ARCTIC EXPLORATION BE CONTINUED?

[The reasons which occur to eminent scientists and explorers, Dr. Fridtjof Nansen, General Greely, Commodore Melville, U. S. N., Professor Todd, of Amherst, Professor Gore, of Columbian University, and Professor Brewer, of Yale, whose opinions Mr. Walter Wellman has obtained for the Review of Reviews, in support of the position taken by him in the foregoing pages.]

1.—THE IMAGINATIVE YEARNING FOR THE POLE MUST BE SATISFIED.

WHAT is the use of arctic exploration? One might as well ask, Of what use is science? When man ceases to wish to know and to conquer every foot of the earth which was given to him to live upon and to rule, then will the decadence of the race begin. Of itself that mathematical point

which marks the northern termination of the axis of our earth is of no more importance than any other point within the unknown polar area; but it is of much more importance that this particular point be reached, because there clings about it in the imagination of all mankind such fascination that till the pole is discovered all arctic research must be affected, if not overshadowed, by the yearning to attain it. For this reason I want the

pole discovered, and it ought to be discovered that we may get it out of the way and leave a clear field for pure scientific exploration. I believe the pole will be reached within a very few years, and that it can be attained by the methods proposed by your American explorers. I shall not be surprised if either Lieutenant Peary or Walter Wellman gains the honor of unfurling the Stars and Stripes at that spot which for centuries has been the object of man's adventurous and resolute attack.

FRIDTJOF NANSEN.

## II.—SCIENCE HOPES FOR VALUABLE ARCTIC CONTRIBUTIONS.

Arctic exploration has contributed generously to the material interests of mankind and to the sum of human knowledge. In polar lands some of the rarest secrets of nature have been disclosed to scientific voyagers. Contributions to all sciences have been levied from the air, the earth, the ocean, and even the universe. Within the arctic circle have been located and determined the poles of the triple magnetic forces. Study of the varying phases of barometric pressures in the far north has given the world a better understanding of the climates of northern America, Europe, and Asia. Soundings of the sea, serial temperatures, and hydrographic surveys in the arctics have given birth to that most satisfactory and important theory of a vertical interoceanic circulation. handful of dried arctic plants enabled a botanist to forecast the general character of unknown lands, and in fossil plants from the north another scientist has read the story of tremendous climate changes that metamorphosed the face of the earth. The peculiar tides of the arctics have added to our store of information concerning the influence exerted by the stellar worlds upon our own. the ice-clad zones science is now turning for a solution of the problem of glaciation of our lower latitudes. A. W. GREELY.

## III.—THE ARCTIC ZONE IS A SCHOOL FOR HEROIC ENDEAVOR.

I am asked the question, Why should arctic exploration be continued? For every reason that is good and noble; for the benefit of our fellow-men; that the explorer and the investigator may, through trial and suffering if need be, contribute to the world's knowledge, which is power, wealth, and happiness.

Is there a better school of heoric endeavor for our youth than the arctic zone? It is something to stand where the foot of man has never trod. It is something to do that which has defied the energy of the race for the last three hundred years. It is something to have the consciousness that you are adding your modicum of knowledge to the world's store.

It is worth a year of the life of a man with a soul larger than a turnip to see a real iceberg in all its majesty and grandeur. It is worth some sacrifice to be alone just once amid the awful silence of the arctic snows, there to commune with the God of nature, whom the thoughtful man finds best in solitude and silence, far from the haunts of men—alone with the Creator.

It is entirely different with the ice-ranger who skirts along the mere edge of the great unknown area and ekes out a precarious existence with the filthy natives that he may return to civilization and peddle out his experiences in penny lectures for his monetary profit and for the pleasure of the gaping multitude.

GEORGE W. MELVILLE.

## IV.—THE GEOGRAPHIC, COMMERCIAL, AND SCIENTIFIC PROFIT.

Surrounding the north pole, 3,000,000 square miles of our globe remain still unexplored. Addition to our knowledge of these unknown regions is of high importance in three distinct lines of human activity: (a) Geographic exploration: (b) commercial profit; (c) scientific research. Argument against polar exploitation along any of these lines often betrays simple ignorance of the facts. For the past two centuries the arctic yield of commercial products has exceeded \$5,000,000 annually, and the available wealth of this northern world is by no means exhausted.

Greely extended our knowledge to 83 degrees 24 minutes; Nansen to 86 degrees 14 minutes—only as far from the pole itself as Boston from Philadelphia or St. Louis from Chicago. Who else will help geographers to draw a complete map of the polar zone embraced between these two high parallels?

But since international circumpolar stations were first established, the wide import of scientific research in polar wilds has made it perfectly clear that the "frozen north" is a really prominent factor in solving useful problems in the physics of the globe. The meteorology of our United States to-day; perfection of theories of the earth's magnetism, requisite in conducting surveys and navigating ships; origin and development of terrestrial fauna and flora; secular variation of climate; behavior of ocean currents -all these are fields of practical investigation in which the phenomena of both arctic and antarctic worlds play a very significant rôle. Indeed, a knowledge of these phenomena, as yet far from thorough, is a prime essential to that complete unfolding of Nature, her laws and processes, which is the ultimate aim of scientific inquiry.

Within a few brief years the poles will be won—both of them. The absorbing question is no longer why reach them? but how can we best get there and safely return?

DAVID P. TODD.

# V.—DECISIVE DATA OF THE EARTH'S ELLIPTICITY ALONE MAKE A SUFFICIENT REASON.

Fortunately the day is passing when the scientist must assume an apologetic attitude while trying to extend the boundaries of knowledge, nor is he any longer discouraged by the utilitarian's question, What is the good of it? He readily calls to mind the fact that except in rare instances practice has paused for theory and that the artisan's hand has been freed by the savant's brain. His meat and drink is ofttimes the consciousness that one item of ignorance dispelled is like a grain of sand removed from the most delicate mechanism—one particle of knowledge diffused is a lubricant that may facilitate the movements in the vast cycle of sciences from the center to the periphery. And not seldom is sufficient reward found in the conviction that he who makes a contribution to science benefits the human race, furnishes a stimulus whose action is above conception, and plants a seed whose fruit may nourish coming ages.

As long as the specialist works under normal conditions no suggestion is made that his work may be useless. The chemist can spend a decade searching for a new element, and if argon be discovered his years of labor are forgotten; the navigator may strive to map the currents of the ocean, and when success crowns his efforts mariners are quick to profit thereby. But as soon as one starts into the dreary north and braves its dangers, thousands echo the cry, What is the good of it? Besides the encouragement it gives to the spirit of investigation, there are results to be achieved that are worth all the ventures our hardy men are making in pushing northward.

There is a little factor—ellipticity—that enters into every computation of earth areas or directions. With an incorrect value for this quantity, which depends upon the figure of the earth, no boundary line can be run with precision, maps will be uncertain, shoals and dangers cannot be plotted with accuracy, and navigation has another risk added to its long array. In the determination of the figure of the earth the extreme north has so far practically no voice. The single arc,

that of Lapland, is so marred by errors that its use makes the entire solution unreliable. The need for a northern arc is so keenly felt that at this time steps are taking for the measurement of a short arc in Spitzbergen. But owing to the difficulties in the way of such a large undertaking no one knows when it may be accomplished.

Thanks to the ingenuity of Mendenhall, a small pendulum about nine inches long can give us the most valuable data for the determination of the all-important ellipticity, and nowhere can such decisive data be sought as near the pole. Wherever a weight of a few hundred pounds be carried this instrument and accessories can be taken, and every station occupied in high latitudes will contribute immeasurably toward solving the problem in question.

If a polar expedition can show how a party can approach the pole and do nothing more, it will give the information which some geodesist will soon use to his profit, and if in addition it should make it possible for pendulum observations to be made as far north as Franz Joseph's Land, it will confer a lasting boon upon the geographers of the land and through them benefit all mankind.

JAMES H. GORE.

### VI.—THE INTELLECTUAL ENLIGHTEN-MENT OF THE EXPLORER IS HIS REWARD.

What is the use of trying to reach the north pole? is the question that surprises me more than any other one that I hear so frequently asked. In the Dark Ages such a question might have been expected, or rather if asked would have been in harmony with the spirit of those times. But now, so near the end of the nineteenth century and in this age of progress, it seems so foreign to the spirit of our times that it never fails to surprise me.

We, in our civilization and enlightenment, enjoy a vastly greater amount of material comforts and intellectual pleasures than our predecessors did. This is chiefly due to the increase in our knowledge of nature—to what we call science.

No one appears to question the general fact that scientific investigation and geographical exploration have been the great stimulus, if not, indeed, the chief cause, of the great intellectual activity of the present day among the peoples of our civilization. In these days of steam and electricity no one questions the fact that the growth of science has been the great factor in making our material progress possible. Science has turned the tide of intellectual activity into new channels, has given direction to new mental work, has created new tastes, and has enormously

added to our intellectual pleasures as well as to our material comforts.

Most of those who ask the question allow that if they were assured that valuable gold mines were located there or that unusually profitable investments could there be placed, the question would be answered.

But should the search for a gold mine be prosecuted with more zeal than the search for nature's laws? Scientific research and geographical exploration is a search for knowledge. The study of pure science, irrespective of its practical application, is an intellectual pleasure and a modern phase of mental culture. The brilliant and useful applications have followed, not preceded, pure research, and the research does not stop along those lines where immediate practical use is not obvious. The intellectual enlightenment of the explorer is his reward; he leads and the material applications follow as a natural result.

Through the study of nature educated people have come to love nature and to have a pleasure in natural phenomena to an extent our ancestors never dreamed of.

As an illustration of this, consider the attitude of educated people toward mountains. All down the ages to modern times educated people took no pleasure in mountain scenery. No one climbed mountains to enjoy the view from their summits. On the other hand, mountains were feared and shunned. Their dark forests were a terror, the haunts of demons, their caves the abode of dragons until science came. 'Problems

of nature could be solved amid their desolation that were imperatively hidden on the fertile plains.

The botanist, the geologist, the explorer chased the demons away and drove the dragons to their dens; and now multitudes of cultured people yearly flock to them to enjoy their beauty and absorb inspiration from their sublimity. Where our ancestors feared the mysterious terrors we seek the known beauties; where they shunned the awful we enjoy the sublime. The demonhaunted forests have become gay with summer cottages, and mountaineering has become a coveted pastime.

So it will be with the polar regions: more difficult to reach only because Nature there more strongly guards her sublimities for the few who will appreciate them. The experience of the last fifty years shows that the sublimities of the polar regions are even more fascinating than scenery of milder climes. It has become proverbial that who has beheld their grandeur always wishes to return.

May the day never come when the spirit of adventure be lost, the investigation of the unknown on our globe excite no further interest, and the contemplation of nature under aspects new to us cease to give pleasure.

Problems of nature that cannot be solved elsewhere await solution in the arctic regions. If the burning thirst for knowledge is quenched before these problems are solved, then the decadence of the race will have begun.

Wm. H. Brewer.

## THE ADVANCE OF THE PEACE MOVEMENT THROUGHOUT THE WORLD.

#### BY FREDERIC PASSY.

[Our readers are sufficiently familiar, perhaps, with the course of the movement in the United States and England for international arbitration and the substitution of legal remedies for war in the adjustment of differences between governments. But it is not so easy to keep in touch with the discussion of this great question that is going on in the very midst of the vast military encampments of the European continent. The following article, therefore, from the pen of the eminent French publicist, Frederic Passy, will be found instructive and encouraging in a high degree. M. Passy, who is a member of the Institute of France, has for some time been the president of the French Society for Arbitration between Nations (la Société Française pour l'Arbitrage entre nations), and in that capacity he is constantly observing the drift of European opinion. The article of which we present herewith the English translation is published in its original French form in the Revue des Revues of Paris. It recites the recent events of a marvelous propaganda.—The Editor.]

I N an article published in the Revue des Revues in January, 1896, I said that if I wished simply to enumerate all the events which, during the course of that year, gave evidence of the progress of pacific ideas, I should not have to write a mere review article, but a volume.

This was true eighteen months ago. It is a hundred times more true to-day, and the following pages, however full they may be, can only give an imperfect idea of what has been said, written, and done and of what is being done every day in the most widely separated parts of the globe to prepare for that better era for which humanity sighs.

I will say but little in reference to the incessant work which is still being prosecuted in every land and in every tongue, by word of mouth and by the press, by means of lecture, newspaper, book, pamphlet, and illustration, and by the arbitration and peace societies. I shall merely note the more and more rapid increase of these as well in number as in importance.

In Germany, in Switzerland, and in Italy there is now scarcely a place of any importance where there is not one of these societies, and their activity takes the most diverse forms. Sometimes there may be popular soirées such as I witnessed in the largest hall at Berne, consisting of readings, recitations, and singing, with an organ accompaniment joined by a choir of two thousand voices. Or, as at Basle and Frankfort, poetry or recitations from plays by popular actors, such as Richard Feldhaus, or the representation of a drama from the celebrated romance by Mme. la Baronne de Suttner. "A Bas Les Armes."

Elsewhere, at Gotha, the Landeslehrerversammlung, the official journal of the Association of German Teachers, discusses how the school may contribute toward the peace movement, and the address of Rector Friebel excited enthusiastic applause. "It may be presumed," adds the journal which reports this address, "that by degrees all German teachers will take that place in the pacific ranks which comes to them by right." This is perhaps a more satisfactory and more effective reply than that which La Société Française pour l'Arbitrage Entre Nations received to the programme which it had issued for competition. This society further reopens this competition for 1899, and the Bureau de Berne addresses an appeal to teachers in all countries which cannot fail to exert an influence.

On their part, the peace societies of the Grand Duchy of Baden, at Pforzheim, at Offenburg, at Constance, and at Lorrach have sent a petition to the second chamber of the States at Carlsruhe, to obtain some reform in the direction of teaching history in a more pacific spirit. At the same time the general assembly of the People's party—Volks partie—met at Manheim, and decided that all the deputies elected by this party should be asked to take the earliest opportunity of proposing in the Reichstag the calling of a conference to consider the adoption of international treaties of arbitration, with a view to a general disarmament.

At Munich Dr. Conrad excited enthusiasm by his vehement speeches against war and militarism. At Stuttgart Pastor Umfried denounced these evils in the name of the Gospel. It is true that his crusade did not please every one, and some Christians (of another school than this) were found ready to accuse him before the ecclesiastical authorities, who did not hesitate to censure him. Pharisees are always the same. But the brave pastor has not yielded to them, and the crowds which press more and more to hear him speak have forced them to keep silence.

At Gotha, to which I have just alluded, old soldiers actually applauded M. Raush in his attack on war.

In an opposite direction, in Portugal, where as yet very little had been done openly, the movement, principally instigated by the energetic perseverance of M. Magalhoes Lima, has acquired such prominence that in the programme of the fëtes which are to be held in 1898 on the occasion of the four hundredth anniversary of the discoveries of Vasco de Gama, they have given an official announcement of a meeting of a congress of peace; and further, that at present it is intended to hold the ninth meeting of the Interparliamentary Union at Lisbon. Turin, where an international meeting of students is to be held, contended and still contends with Lisbon for the preference.

In France, in addition to the circles already existing, the influence of which is increasing daily, we have witnessed the creation of a Woman's International League for Disarmament, under the auspices of which Mme. Camille Flammarion has just published a manifesto of rare beauty, entitled "Lettre au General X." It is impossible that such a spirited appeal should not be appreciated by all who are capable of understanding

and feeling.

The English societies, and the International Arbitration and Peace Association in particular, have not ceased to protest in the name of patriotism as well as in the name of humanity against British jingoism. On several occasions they have passed votes of censure against the Soudan campaign in Egypt and other military actions on the part of Great Britain. The Peace Society, through their general secretary, Mr. Evans Darby, has forwarded to the President of the French Republic and other government officials a petition coming from the Universal Alliance of Protestant Ministers in Europe, America, and Australia. M. Félix Faure, in transmitting this document to the minister of foreign affairs, has willingly given, through this minister, the assurance of his sympathy with the general sentiment expressed in this petition. The Arbitration League, in its turn, has sent its general secretary, Mr. Randal Cremer, to America on a third mission. He carries with him a memorial to the Senate and to the Government of the United States in favor of the conclusion of an arbitration treaty with Great Britain. It is known that though the treaty concluded between the two governments last year failed to secure in the Senate at Washington a majority of two-thirds of the votes which the Constitution requires, yet it wanted very little to have attained this exceptionally high requirement; and President McKinley, the mouthpiece of the general sentiment of the nation, has not

hesitated to pronounce in favor of the resumption of negotiations.

Mr. McKinley had previously stated in a letter to Mr. Alfred Love, president of the Peace Union of Pennsylvania, that "the citizens of the United States have the right to be proud that their country is in the van in the efforts which are being made for international arbitration." And England at the same time boasts that no less than thirty-three disputes have been submitted to arbitration. There is, therefore, reason to hope that on this occasion negotiations will not be fruit-

It is also known that resolutions favoring the conclusion of other treaties of this kind have been formulated by the French Chamber of Deputies, by the Austrian Chamber, and by the Scandinavian Parliament; that a petition having the same object in view has been returned to the chancellor of the German empire, and that the attention of the Government at Washington has been recently recalled to an old suggestion emanating from the federal government of Switzerland.

II.

Indeed, from day to day confidence in the efficacy of arbitration is becoming more marked, or rather I should say that facts clearly demonstrate its growing efficacy.

The year 1896, at the time it was becoming history, was described by the press as the year of arbitrations. The year 1897 will have no less

claim to the title.

To cite only some few cases of arbitration, taken haphazard, we have seen during the year the President of the French Republic authorized to decide between Costa Rica and Colombia; the King of Portugal between England and Brazil, in regard to the Island of Trinidad; President Lacheral chosen as arbitrator between a Frenchman and the republic of Venezuela; France, Sweden, and Chile referred to M. Janssen. long-standing question of contested territory between France and Brazil has been at last submitted for amicable settlement. It is hoped that the same result will be reached in the matter of the Hawaiian Islands, as also in the question of Delagoa Bay. And quite recently Professor Martens, nominated by Czar Nicholas II., has been called to preside over the court which is to meet in Paris to settle the frontier question between Great Britain and the aforesaid republic of Venezuela.

Clear-headed men, such as our friend Mr. Hodgson Pratt, have long ago pointed out that among the commonest causes of misunderstanding are incorrectness of information and the

vexatious comments to which it gives rise. In order to remedy these annoyances and these dangers, attempts have been made in several countries—in England, in France, and in Germany—to establish international committees with the object of enlightening public opinion and dissipating misunderstandings. The name of "Entente Cordiale" has been given to this movement, and in England it has been notably supported by Sir John Lubbock and Mr. Gladstone.

It was in reference to this movement that the "Grand Old Man" wrote the following significant lines: "I consider that we should give to Europe—France naturally included—a reasonable explanation on the subject on which she has an

especially strong feeling."

In Berlin the same interest appears to animate a man of strong personality, Lieutenant-Colonel von Egidy, a thinker, writer, and orator of the first rank to whom we have had the privilege of listening at Hamburg, and it is under the influence of most broad-minded impulses that he has founded a review, the title of which, La Conciliation, sufficiently explains its object. Conciliation of citizens, conciliation of peoples, by a return to justice and all the remedies which she can give.

Furthermore, the too frequent demonstrations which still take place in Germany to celebrate the souvenirs of the last war no longer excite anything but official enthusiasm, and are almost always the cause of explanations or of regret to politicians and to the press. And to come back to London, when it was a question of celebrating the anniversary of Trafalgar, on all sides one heard objections to this untimely arousing of injudicious and offensive Chauvinism. The celebrations, in fact, met with little response.

Let us inquire of the learned bodies. Everywhere we meet the same condemnation of war and the same laudation of justice and pity.

In Russia the international congress of doctors of medicine, striving to remedy the too glaring injustice of Switzerland toward that son of hers who first brought the horrors of the battle-field before the eyes of Europe, and aroused public opinion on the subject from which resulted that noble movement known as the "Red Cross," awarded to Henri Durant the prize of the city of Moscow of the value of five thousand francs.

At Paris M. Cornu, president of the Academy of Sciences, represents modern nations, "although groaning under the barbarous law of blood and iron, yet on great occasions lifting their eyes toward those serene regions which shine above hatred and jealousies, and joining together to honor those great men whose toil increases the common heritage of intelligence and

the fame of their own country as well as the general welfare of humanity."

Berthelot, addressing L'Union de la jeunesse republicaine, stated that "to-day public opinion—that is to say, the will of the people enlightened by an educating science—shows itself in Europe in imperious force and compels rulers to adopt as their fundamental principle the continual development through peace of the material welfare, the health, education, and true morality of the people they govern." A statement which had already been made in another form before the German Reichstag by Baron de Marshall, the under secretary of state for foreign affairs, who declared that "wars of aggression belonged to the past, and that in all nations, even among those that considered they had cause to be dissatisfied with their condition, there existed a profound desire for peace."

The Academy of Morals and Political Sciences, after having at one of its meetings awarded the most important of its prizes to De Brazza, that peaceful conqueror who never fired a shot and has found a way to extend French influence and civilization without ever violating the laws of justice and humanity, caused to be read at the public meeting of the five academies a special treatise on the life and works of this beneficent hero.

I cannot recall this honor without mentioning an idea, already alluded to elsewhere, at the congress at Antwerp by an American lady, Mrs. Horst, and at the congress at Hamburg by M. Haberland, president of the Berlin Peace Society, namely, the international flag, suggested by the Countess de Brazza, upon which could be read the motto, *Pro concordia labor*, and which each nation, in renouncing all acts of violence, would have the right of placing on its own particular flag.

The inventor of the greatest destructive power yet known, Nobel, after having during his life declared that his object had been not only to find fresh resources for labor, but to render the vile art of killing one another so terrible that it should become impossible to continue to exercise it, at his death consecrated his immense fortune to the advancement of industry, science, arts, letters, and every form of civilization, and especially arranged a magnificent annual bequest in favor of the crusade of the enemies of war.

Inspired by a similar sentiment, a descendant of one of the marshals of the First Empire, Madame de Blocqueville, daughter of Davout, Prince of Eckmühl, left by her will a considerable sum to erect upon the most dangerous point of the Brittany coast a light-house, called the light-house of Eckmühl, "hoping," she said, "that the lives lost through war's fatalities would be compensated by the lives snatched from the tempest."

Is it necessary to give further confirmation of these tendencies?

The Danish Parliament, imitating the Swiss Government, voted to the international peace fund at Berne a subsidy of two thousand crowns. The Norwegian Parliament, in granting also a subsidy to the same fund, records a resolution that such allotment shall each year be comprised in the regular financial bill. And one of the press agencies of Paris, in sending to the papers the autographic correspondence, asks, "When shall we see the great powers following this example and creating also side by side with their ministers of war a minister of peace?"

# III.

I cannot, you well understand, dwell long upon the annual reunions in which our principal representatives of the peace societies of the world regularly give their testimony; firstly, because their doings are recorded in the regular reports, to which it is easy to refer; secondly, because it would be difficult for me to give an account of them without putting myself too much in evi-Nevertheless, how can I pass in silence that vote of the interparliamentary conference at Brussels empowering, in case of need, those of its members to whom the administration of its permanent deputations is intrusted, to call a meeting of the delegates, to report upon affairs which are occupying public attention, and address to the governments in the name of Europe impartial memorials upon such matters? Is not the very thought that such intervention should be possible the proof of a new state of public feeling, and does it not do equal honor to the members of the interparliamentary union who conceived it and to the governments which they have judged capable of comprehending its high signification?

What, moreover, was that spontaneous intervention of the great powers in the settlement of the Græco-Turkish war if it were not an attempt at arbitration—in a far different form, doubtless, from that of which we dream, and still very imperfect, but real nevertheless?

In 1886, on the occasion of a similar complication, M. de Freycinet, replying to a question which I thought proper to ask him, did me the honor to declare from the parliamentary chair that it was "time to substitute for the brutal roar of the cannon the voice of reason, of justice, and of humanity," and supporting his words by deeds, he was fortunate enough the same day to cause the two governments interested to listen to firm and enlightened good advice. The six great powers have not been so readily listened to this time. And the public, which sees only what

passes under its very nose, have been able to ask what purpose have the representatives of the peace party served in this matter. They have the right to say that there must have been inac-The international peace office in the month of March, 1897, recalled in a public document the fundamental principles of international law, showing its application to the present conflict, and a little later the French Arbitration Society caused to be forwarded to the Turkish and Greek governments on the one side and to the six governments acting in concert on the other addresses to which the most serious attention was accorded. I know this to be a fact, and I hereby recognize and express my gratitude to those to whom it is due.

# IV.

To pass to another land. How can one ignore the welcome given to the peace lovers of all nations, and especially to those in France, by the committee of organization of the congress at Hamburg in the first place, and then by the entire population? I do not allude to the inauguration meeting of the congress—beautiful as it was -and of the addresses of welcome that were there exchanged. I say nothing of the important speech of the president, M. Richter, nor of the eloquent harangues of Dr. Lovenberg and of Senator Herz in the name of the city of Hamburg, or of M. Haberland in the name of the united societies of Germany; one can readily believe that they were not merely orthordox com-But what can be said of that great public meeting, free to all, to which crowded several thousands of persons, who during three and a half hours with patience, or rather with unflagging interest, listened to and applauded eight or ten orators, Germans like Colonel von Egidy or the Baroness Suttner, English like Mr. Hodgson Pratt, or French like myself, and who at midnight, instead of hastening to take their repose, crowded around the commissioners who had charge of enrolling new members, just as in other days volunteers pressed around the recruiting officer? What shall we say of those workmen leaving off their work, of those sailors crowding on the decks of their ships to salute the steamer on board of which we entered the harbor, and vying with one another in shouting and waving their caps, "Friede! Friede! Peace! Peace! Down with war! Down with powder!" Significant manifestations, sudden and quite spontaneous, and which, moreover, were exceeded in importance the same day by the words exchanged on the summit of Sullberg around the immense table at which Baron Suttner presided.

For an account of that meeting especially I refer not only to the official minutes to which I have already alluded and to the reports given in favorable newspapers, such as L'Independance Belge, La Paix par le droit, or L'Arbitrage entre nations, but to the whole Hamburg and German press, not excluding the Berlin press. Certain French newspapers of that class which consider it unnecessary to ascertain facts before discussing them or to admit them when they know them were pleased to denounce those unpatriotic souls who, according to their lights, had gone to humiliate the name of France on Let them read the speeches made German soil. by the general secretary of the office at Berne, M. Ducommun, and some others, "among whom I place myself," in which reference was made to that Rhine which should never have been either German or French, in which the failings and errors which have separated the nation which this river should have united are deplored, and which appealed for bloodless remedies allowing universal and beneficent reconciliation: they would then see how, without in any way hurting the patriotism of other nations, the patriotism of one's own nation may be maintained or increased. They will see also how a broader view of the real needs as well as of the true duty of those great communities calling themselves nations is gradually forming and strengthening itself above all private egoisms, blind judgments, and unjust ambitions by the blending of superior wisdom and high-mindedness, and begins to demonstrate that solidarity, so long misunderstood, which should unite them in a common respect for the right and in the common pursuit of universal progress.

V.

It may, in truth, be said that a new soul is forming and new times are preparing, as were predicted during the last century, among others by that worthy man Vincent de Gournay, whose memory has been recently brought back to mind, and referred to somewhat later by our own famous Laboulaye in those addresses in which he graciously gave us the weight of his words and showed the society of labor gradually assuming its position in driving back the party of rapine and violence; epoch already heralded by the arts, which before long will celebrate its triumph, and everywhere will raise up a new literature and change the trend of human thought.

It would really take too long to recount all that might be cited on this subject. For instance: "L'Humanité future et l'œuvre internationale," by M. Magalhoes Lima; "Vertus militaires et les bienfaits de la guerre," by M. Gabriel Monod; "L'Idee

de Patrie," by M. Louis Legrand; "La guerre telle qu'elle est," by Colonel Patry; "L' Armée nouvelle," by Urbain Gohier; "La Bataille d'Hude," by Paul Adam; "Vatenguerre," by Emile Bergerat: "L'Avenir de la race blanche," by Novicow; "Marmaduke, Emperor of Europe," published first in English and afterward adapted in German by Mme. de Suttner; "L'Arbitrage international," by Pierre Souvestre, which appeared in the "Memorial diplomatique; le Disarmement," by Leon Laffite; "Comment se fera le disarmement," by Gaston Moch, and in the same way in L'Independance Belge, a whole series of reviews of publications on war and peace. And we may also cite, what but a short time since would have been considered impossible, the formation of an association of peace-loving journalists, through whose endeavors perchance the columns of the press will no longer be systematically closed to reassuring information and conciliatory explanations, and finally, we must mention the "Fraternité par correspondence," to use the title happily hit on by the Revue des Revues, commenced in the schools through the happy inspiration of intelligent teachers and extended, thanks to the efforts of the Revue des Revues, the REVIEW of REVIEWS, and the Bureau Français de la Paix, to persons of all ages and all classes and of any language, and which society, while teaching ideas and sentiments at the same time as idioms, will gradually dissipate mutual ignorances and dissolve misunderstandings into kindly harmony, thereby demonstrating, for the happiness and through the wisdom of all, the truth of the English proverb: "All discord harmony misunderstood."

But it is well that I confine myself to the mere mention of names, for I am obliged to pass over a thousand interesting subjects, such as the excellent articles in the "Maître pratique," the course of international law and arbitration, for consular and diplomatic students, instituted in Japan through the influence of Mr. Michel Revon; the annual meetings at Lake Mohonk, in the United States; the meetings of the members of the New York bar, as well as those at Mystic, which were attended by the farmers and their families from all the surrounding neighborhood; the honor tendered at Rome to the memory of Bonghi and of Jules Simon; the congress of the Institute of International Law at Copenhagen, which was presided over by our fellow-countryman and colleague Arthur Desjardin, and the ministerial and royal addresses delivered on that occasion; the congress of the press in Sweden and the wellchosen remarks to which M. Claretie there gave utterance—I must be satisfied to leave this review incomplete, which, all incomplete as it is, contains some allusion to every part of the vast field of action to which it lays claim. There is, however,

one final matter which it is impossible to leave unnoticed, and the importance of which must strike every one.

#### VI.

A few weeks ago, at the formal opening of the Court of Appeal in Paris, a magistrate, Advocate-General Merillon, delivered the usual opening address. M. Merillon was among those who, in 1870, fought for the independence of their country, and who, since 1870, have worked with the utmost energy to arouse national sentiment. He is a patriot, but a patriot who, to use his own expression, wishes to make warfare more and more infrequent, until it is entirely suppressed by the substitution of the legal settlement for all international disputes. This is not debasing the sentiment of the country; on the contrary, it is elevating and ennobling it. For precisely as the family has its place in the state, so the nation, with its traditions, its ties, and its voluntary obligations, has its place in pacified humanity; it can only become purer and grander in the search for glory and for increased influence in the advancement of civilization.

Influenced by these sentiments and inspired by the noble words which M. Renouard, attorney-general in the Court of Appeal, used on a similar occasion twenty-five years ago, by which he exhorted France not to sacrifice to the resentment of her wounded pride the comprehension of eternal truth, and not to seek elsewhere than in the supremacy of justice for the reparation of her wrongs nor for that retaliation which others sought to obtain by force, M. Merillon took as the subject of his address: "The judicial settlement of international disputes."

I may be permitted to borrow two illustrations given by him as signs of the time. In 1887 the Marquis of Salisbury, being then, as he is now, prime minister, replying to the Marquis of Bristol, who advocated the establishment of an international court, said: "There is not one man in a hundred who would assert that such a result will be seen by us, our children, or our grandchildren." Five years later, in 1892, he was hailing the decline of international warfare before the councils of arbitration of a more advanced civilization. Still five years later, in 1897, he spoke of a federation of European powers.

Mr. Gladstone on his part was opposing, in 1873, in the House of Commons, that great apostle of international arbitration, Mr. Henry Richard, and in 1894 we find him putting to a unanimous vote the motion of Mr. Randal Cremer in favor of a permanent arbitration treaty with

the United States and actually advocating the creation of a central tribunal in Europe.

If it were necessary, after having noted all these declarations, to characterize the change which, to the confusion of skeptics and pessimists, has taken place in thought as well as in fact, I could not do better than cite, on the authority of the correspondence bi-mensuelle of the office at Berne, the inconsistent language of an Austrian newspaper, the Vienna Extrablatt. In September, 1895, this journal wrote as fol-"One cannot understand how people endowed with sense and high intelligence can allow themselves to be led astray by fancy to such a point as to compromise themselves in this question of arbitration," yet barely two years later, in 1897, we read in the same journal: "One must be heartless and insensible to all moral sentiment not to evince a profound sympathy in so noble a work and not to heartily wish it complete success."

#### VII.

Yes, a new heart is forming in the bosom of A new era is preparing, if we rightly recognize what we want and pursue it with discretion, perseverance, and moderation. Yes, it is no empty sound which is struck every day by that bell which, faithful to the inscription it bears, is commissioned by one of the most powerful monarchs of the world to sound out in France in the name of Russia, Peace and the brotherhood of nations. Yes, international justice, although imperfect as yet, shall one day be as much respected as civil justice, without which society Yes, the Utopia of vesterday, could not exist. as I demonstrated at one of the public meetings of the Société Française pour l'arbitrage, and which the members of the Interparliamentary Conference of Brussels united with me in proclaiming. is in the way of becoming the actuality of tomorrow. And as we said in 1896 at Budapest, during the fêtes of the millennium of Hungary, "who knows but that it may be permitted us to celebrate at Paris in 1900 the millennium of the human race, the millennium of peace in labor and in justice?"

Tolstoi has said, "The time is at hand," and the peoples invited to cross together that bridge which a poet has justly called "The mighty span which stretches from the closing to the opening century" do not ask anything better than to bid farewell to the vile shore where they have known the violence which destroys, and to establish themselves forever on the blissful bank where labor and peace shall forever chase away misery, ignorance, and hate.

# BRITISH PROBLEMS AND POLICIES FOR 1898.

BY W. T. STEAD.

[In our January number we presented our readers with an exceedingly instructive article on the Austro-Hungarian empire, with reference to its present problems and future outlook, from the pen of an Austrian well qualified to discuss the subject. As a second article in a series which will deal with the immediate problems—domestic, colonial, and international—that concern the great powers, we are glad to publish the present article on Great Britain and the British empire by Mr. W. T. Stead. There will follow in the near future, though not necessarily in any prescribed order, articles by writers of the most thorough preparation upon the questions that confront Russia, Germany, France, and Italy.—The Editor.]

# I.—AT THE PARTING OF THE WAYS.

'HE first conclusion that has been forced upon me by the accumulating pressure of facts is that to go on much longer as we are drifting at present is impossible. Things imperial, political, commercial, and social have reached a point when a change is inevitable. Slowly and reluctantly the conviction is being forced home upon all reflecting minds that if we are to retain and maintain our position in the world, we must promptly and decisively readjust our policy to the altered conditions of the new time. Whether it is in confronting foreign rivals or internal difficulties, one thing only is quite clear, we must apply ourselves much more seriously to consider the conditions on which we hold our empire and feed our people than we have been willing to do for years past.

# (1) THE COLLAPSE OF THE OPPOSITION.

What is the most obvious fact in the political situation at home? The one great instrument upon which the British people—Conservatives and Liberals alike, although in differing degreeshave hitherto relied for the good government of the realm has hopelessly collapsed. For sixty years at least the empire has been governed by the cooperation and rivalry of two great parties, organized and disciplined under the leadership of statesmen ready at any moment to carry on the government of the country on principles which, on the whole, were roughly but clearly defined. To-day one of these great historic parties has, for practical administrative purposes, ceased to exist. The Liberals can no longer provide an alternative cabinet. They may be, and possibly are, a majority in the electorate. But they have no longer either a leader or leaders. If the Queen sent for any member of the Opposition tomorrow, he could not form a ministry; and if, by a miracle, he succeeded in inducing the lion for a moment to lie down with the lamb, he could not draw up any statement of policy that, on its premulgation, would not blow his cabinet into the air. That is the first fact, and a very serious fact it is.

#### (2) THE BREAKDOWN OF THE ARMY.

What is the most obvious fact in the political situation abroad? The British empire stands alone in splendid isolation in the midst of a multitude of eager, not to say envious, rivals who are engaged in a scramble, as if for life and death, for the remnants of the world. thank Heaven, still supreme on the sea. But on land our military system has broken down. was constructed in 1872 to answer to the needs of an empire much smaller than that which we now possess. It has never been readjusted to the expansion, territorial and otherwise, which has taken place. It is admittedly inadequate to our needs, almost as inadequate as was the navy before 1884. We have neither allies nor armies, and but for the fleet we should long ere this have been given as a prey to the spoiler. By a series of makeshifts we have succeeded in keeping up our garrisons, but only at the cost of destroying the whole principle on which the system was To make the breeches fit the growing boy we have cut off lengths on one leg in order to stitch them on to the other. But patch and stitch as we may, the lad has outgrown his breeches.

#### (8) OUR INDUSTRIAL SUPREMACY ENDANGERED.

And in the third place, what is the most obvious fact both at home and abroad? It is that our industrial and manufacturing supremacy, the basis upon which the whole edifice of empire rests, is now for the first time seriously threatened—by the competition of Germany on the one hand and by that of the United States on the other. Those who have studied the subject most closely are the most alarmed at the significance of the omens which in the present foreshadow the course of events in the future.

If ever there was an inveterate optimist about the British empire I am that man, as my writings for the last twenty-five years sufficiently attest. But who is there, when confronted by these three admitted and indisputable facts, can pretend that they do not justify the most serious sober-thinking as to what they portend, and the most strenuous national endeavor to provide remedies before it be too late? Should they fail to arouse attention and to incite to instant and strenuous action, the historian of the future will have to summarize the causes of the decline and fall of the British empire in three pregnant words, "Suicide from imbecility."

# II.—AIDS TO REFLECTION.

The events of the last month in the parting year have had not a little to do with precipitating the convictions which for some time past have been slowly assuming definite shape in the public mind. Nothing has contributed more to this than the acts and words of the German Emperor.

When men of science are preparing microscopical specimens for exhibition they frequently stain the exhibit with some colored dye, which leaves its form intact and brings out its outline in clear A similar result has been attained on a wider arena than the slide of the microscope, by introducing a strain of German blood into the distinctly English stock of the Kaiser. and will be till he dies essentially English—a Harry Tudor of the nineteenth century. more he endeavors to repudiate or conceal his origin and essence, the more conspicuously is it revealed. But at the same time, like the aniline stain in the microscopic preparation, his German dye makes the characteristic features of his English nature much more conspicuous than they would have been had he not been German Em-We see in him our own features as in a glass darkly. The shadows are deepened, but the likeness is unmistakable. His conduct reveals the essential weakness and defects of our own policy. It would be disrespectful to allude to the Most Serene, Mighty, Beloved Emperor, King and Lord Forever and Ever, as the drunken Helot of English Jingoism; but the familiar and hackneyed phrase better than anything else illustrates the service which the Kaiser has rendered us last month.

# AN EMPIRE WITHOUT A BASE.

The Kaiser is embarking upon an enterprise of adventure the success of which depends absolutely upon a factor which, with the characteristic heedlessness of the true jingo, he has neglected to secure in advance. The foundation of all empire over sea is supremacy on the sea. Now, the dominion of the sea is vested not in the hands of Germany, but in the hands of England.

A German empire in the far East without a fleet which can secure a right of way from Kiel to Kiao-Chau is simply a hostage in the hands of the sovereign of the seas. William the Second is Englishman enough to understand that. naval programme now before the Reichstag starts from the declaration in the speech from the throne that "the development of our fleet does not correspond with the duties which Germany is compelled to impose upon her naval forces. The fleet is inadequate to guarantee the safety of our harbors and coasts"—to say nothing of protecting the ocean highway along which Prince Henry is sailing—a highway which is dominated by Portsmouth, Plymouth, Gibraltar, Malta, Aden, Ceylon, Singapore, and Hong Kong. Yet upon a fleet inadequate for the performance of its home duties he has imposed the further task of serving as the base for a campaign of partition against the Chinese empire. That is not imperialism of the sane and sober order.

# SEEING OURSELVES AS OTHERS SEE US.

What the Emperor is doing in one field we are doing in another. And his folly in beginning a transmarine empire before he has provided an adequate navy enables us to realize something of our recklessness in allowing our continental empire to expand out of all proportion to the military forces by which we can protect its frontiers and maintain its internal peace. The magnificent mediævalism of the imperial theatricality at Kiel has been ridiculed somewhat inconsistently by the people who worked themselves up into ecstasies over the pageant of the jubilee, and saw nothing to sneer at in the barbaric splendor of the scene when Lord Lytton proclaimed the Queen as Empress of India. A nation which produced the Elizabethans, the Earl of Peterborough, the Earl of Chatham, Lord Beaconsfield, and the Earl of Lytton should remember the old adage about stones and glass houses when they are lavishing their derision upon the Kaiser and his brother. They are merely staging English melodrama with German accessories. And it must be admitted that in this respect, as in their manufactures, they have bettered their instruc A performance that reminds us at once of the chivalry of the Crusades, of the ideas of the court of Charlemagne, and the magniloquence of the Byzantine empire, can certainly not be accused of lacking in all the elements of a successful sensation.

# EVANGELISTS OF EMPIRE.

It would be amusing, were the subject less serious, to see the pious horror with which some of our commentators hold up their hands over the confident way in which the Kaiser and his

brother identify themselves with God Almighty. Surely this is a distinctively English habit. Have we not in constant remembrance Milton's great phrase about "God's Englishmen"? Even so exceedingly mundane a statesman and empirebuilder as Cecil Rhodes before he undertook the conquest of Matabeleland ciphered out in his own mind the conclusion as his starting-point that God, if there were a God who cared for our poor doings, probably desired nothing so much as that the African map should be painted British red at least as far as Zambesi. We have taken possession of whole continents as the self-accredited vicegerents of the Almighty, and although we did not phrase it in just the same way as Prince Henry, the dithyrambic flattery heaped upon Queen Elizabeth by her sea-kings bore a close family resemblance to the famous vow "to declare in foreign lands the Gospel of your majesty's hallowed person" (das Evangelium Eurer Majestät geheilgter Person im Auslande zu künden), and of enforcing it if needs be on unwilling hearers by the mailed fist. It is only the German aniline dve infused into the British specimen which makes it so conspicuous. For both Kaiser and the great British public are lineal descendants of King Olaf, who long ago in the Viking age sailed up Salten Fiord, while

> In their temples, Thor and Odin Lay in dust and ashes trodden, As King Olaf onward sweeping Preached the Gospel with his sword.

# A LESSON FROM THE HILLS.

But the Kaiser and his mail-fisted apostle of a brother have not been the only schoolmasters who have taught us useful lessons. The close of the campaign in the northwestern labyrinth of hills which serves as an invaluable mural barrier of Hindostan has done much to impress upon us all some elementary truths too often forgotten. One of these, the importance of keeping faith even with hill tribes, has been emphasized by what the official apologists admit to have been the hardest and most harassing campaign known in India since the mutiny. We have had a force of 60,000 men in the field. We have marched them with incredible difficulties through an almost impassable country, and we have accomplished— The King of France, who with 40,000 men marched up a hill and then marched down again, did just what General Lockhart has done, with this difference—General Lockhart did not bring his 40,000 down. The casualties on the frontier up to December 23 were returned as 433 killed, 1,321 wounded, including 36 British officers killed and 81 wounded. Nor is the deathroll even now complete. The tribes hung upon the flanks of our retreating columns like wasps.

Their women and children in many cases had been sent into India to be safe under the protection of the British rajah. Fighting is play to them. The strength of the hills is their defense. We have spent £10,000,000 in saving the people of India from famine, and when the bills come in we shall find we have spent an equal sum in the abortive campaign occasioned by reversing the policy of Sir H. Fowler as to Chitral. The whole dreary work is to be begun again in the spring, when the stinging flies of the mountains will once more have a chance of taking it out of the lion of the plains.

#### A MORAL JAUNDICE.

The insensate policy which has landed us in Afghan war after Afghan war and which now, in face of the clearest warnings, has plunged us into this wanton and calamitous campaign of disaster, is but one of many reminders of the dangers of Asiatic dominion. Anglo-Indians in old days found India fatal to the liver. Our experience seems to show it is equally fatal to the brain and the conscience. The Russophobia which is the direct cause of all these wars in the Northwest is a kind of jaundice of the intellect and of the moral sense. hoped that the evacuation of Candahar marked the extirpation of the disease. Like a deepseated ague it seems impossible to be shaken off. It is one of the disadvantages of our position, resembling the inconvenience of living in the malaria of a marsh. Nor is it the only one. The insolent reëstablishment of the system of state-patronized prostitution in flat defiance of the express instructions of the home government is another reminder of the penalties of empire. The two things seem to go together—the intellectual malady which is responsible for the frontier campaign, and the infinitely more serious moral malady which has led the Indian Government to defy the express and implicit directions of the home government in the interests of vice. It is a very glorious thing, no doubt, to have an Indian empire, but if it can only be maintained by campaigns of arson and slaughter in carrying out a policy of violated pledges, and if the soldiers of the Queen must be provided by the empire with enslaved women for their amusemeut, the matter assumes another aspect altogether.

#### III.—GOVERNMENT BY THE CAPABLE.

The collapse of the representative system at Vienna but emphasizes the conviction that is slowly gaining ground, both in the Old World and the New, that representative government is breaking down. In an article summarized elsewhere, Madame Novikoff expresses with characteristic verve the conviction that the close of the

century has witnessed the collapse of parliamentarism and the rehabilitation of the principle of personal government. Whether we regard this with dismay or exultation, there is unfortunately no doubt as to the facts upon which she bases For years past the difficulty of her opinion. legislation at Westminster has been the nightmare of our practical men. The Parliamentary machine is so hopelessly blocked. In Greater New York New Year's Day witnessed the establishment of Mr. Croker as the veiled dictator of an English-speaking community larger, more powerful, and infinitely more wealthy than the total population of the American colonies at the time when they revolted from British rule.

#### WANING FAITH IN THE NOSE-COUNT.

We are indeed, it would seem, on the verge of a strong reaction against the old accepted formulas of democratic government. The faith of the people in the people as the agency to be used for governing the people has been rudely shaken. It is no longer assumed, even in the most radical quarters, that the millennium will be assured when every Tom, Dick, and Harry has equal voting rights with any other subjects of her majesty. The ballot-box is no longer the heaven-sent panacea which it appeared in the eyes of the multitude only twenty years There is everywhere a perceptible reaction in favor of government by the capable as opposed to government by the counting of noses. To find your capable man, to put him in power after having found him, and then, after having installed him, to give ever more and more power to his elbow, is becoming to an increasing extent the dominant instinct of the new time.

#### THE PEOPLE AND THE PEERS.

Mr. Gladstone, who last month celebrated his eighty-eighth birthday, is understood to have expressed a belief, as he passed through London, that the true policy for the Liberal party to pursue was to launch a campaign against the House Alas! such a campaign is as much out of the range of practical politics at present as a campaign against Mars. For this there are many reasons; but the chief of all is that we have no longer a chief. Our multitudinous electorate is in no mood to destroy any institution, no matter how indefensible or illogical, which may serve as a second string to its bow, if the House of Commons should utterly break down under the weight of its work. The year which opens with the rejection of Mr. Gladstone's advice about the House of Lords and the establishment of Mr. Croker as supreme ruler of New York is not a year in which a leaderless democracy will be tempted to reduce the British Constitution to consistent harmony with democratic principles.

#### THE DIVINE RIGHT OF BRAIN TO RULE.

This element of deference to capacity and a recognition of the divine right of the capable to command lies at the bottom of another great movement which is filling the careful observer The prolonged strike in the enwith alarm. gineering trade, which is playing such havoc with British industry, presents many conflicting and confusing issues to the public; but one thing stands out quite clearly upon which the British public has absolutely made up its mind. There must be no meddling and interfering by the incompetent and untrained with the capable and responsible heads of departments. Our American competitors, like those of Germany, are hampered by no restrictions upon the effective use of the best machinery at their command. If we are not to go under in the ceaseless warfare which is waged in the markets of the world, our industrial system must be under the control of the competent. The time has come when we have to recog nize that in the interests of democracy the great revolutionary formula, "The tools to those who can use them," must be supplemented by another formula not less imperative, and that is, "The direction of those who have the brains."

# IV.—THE NEW POLICY FOR THE NEW TIME.

This crisis affords a great opportunity, which in itself is an imperious summons to meet the peril which menaces us at home and abroad by proclaiming a policy adequate to the occasion. This is not a moment for twiddling our thumbs over the banalities of worn-out factions.

What policy, it will be asked, is adequate to the occasion? What new principles can be proclaimed which will prove efficient to enable us to escape from the dangers which encompass us? No new principles are required. What is needed is not the revelation of a brand-new, spick-andspan prescription, of which no one has ever heard before; the remedy for our ills comes in no such sensational fashion. What is really needed is nothing more nor less than a very practical and consistent application of universally accepted principles, which it needs no argument to enforce, but only resolution to adopt. What is wanted now more than anything else is a policy of imperialism plus common sense and the Ten Commandments. Both have been sadly left out of sight in many recent developments of imperialism. Common sense is the only guide to common safety, and for the counsels of common sense we

need not go further than a few homely precepts in which the wisdom of many has been crystallized by the wit of one.

# RULES FOR A FOREIGN POLICY.

The first of these, which should be written up in all foreign and colonial ministries, at the War Office, at the Admiralty, and especially in all editorial sanctums, is the golden precept: "Cut your coat according to your cloth." The second principle is roughly expressed by "First things first," in which simple but pregnant phrase lies the whole philosophy of political perspective. The third is, "Look well to your foundations," for it is no use gilding the statue if the pedestal is undermined. The application of these three principles to the problems which are calling for solution would result in the definition of a national and imperial policy which could be prosecuted with steadiness and irresistible force by the people.

If the thing can be done it ought to be done, and as I postulate the possibility of such an agreement, it is no act of presumption on the part of any citizen to endeavor to indicate its outlines. Let us take foreign and colonial policy first. are confronted by two divisions, the extreme wings of which are the Little Englanders on one side and the jingoes on the other. Between the two stands the great body of rational imperialists, who desire nothing so much as a definite policy, which can be continuously maintained by whichever party is intrusted with the administration of Hitherto all agreement between the our affairs. two extreme wings has been impossible for two The Little Englanders were for giving up what we have already; the jingoes were for seizing all that we had not got, so that between the two no understanding was possible.

# (1) KEEP WHAT WE HAVE.

To-day, however, the task is no longer hopeless, owing to the fact that two principles have, solely by a process of half-conscious precipitation, The first fixed themselves in the national mind. is. We are going to keep what we have got. are not going to give up anything because some people choose to say that the weary Titan is overburdened, or because of theories as to the rightness or wrongness of the method in which they came into our possession. To take up this position involves considerable sacrifice on the part of those who have consistently demanded the evacuation, for instance, of Cyprus; but for the sake of securing a practical unanimity on the subject of imperial and colonial policy, the demand for the restoration of Cyprus to the concert of Europe may fairly be postponed until we see the result of the operation of that concert in a pacified and prosperous Crete. The case of Egypt is more

difficult, but there also it might be turned by the postponement of all questions as to its evacuation until such time as civilized government has been established in Armenia. There is a general agreement among all Britons that we should keep what we have—if we can. The question of voluntarily abandoning this, that, or the other part of territory over which we have established our sovereignty may be adjourned until the end of this truce.

# (2) "WE HAVE DINED!"

The adoption of this first formula will be rendered much more simple by the proclamation of the second. This is capable of being stated very simply and tersely. The time has come when John Bull should be able to say to all his friends and neighbors, "I have dined!" In the next century, possibly in ten years, appetite may return, but for at least ten years "I have dined" must be the motto of John Bull. Such a declaration, if made, will be hailed with a chorus of derision by those who profess to believe that there are no limits to his rapacity. But no one knows better than the late and present premiers that what we need at present is not more provinces to conquer, but a period of repose in which we may digest that which we have already annexed without assimilating. The repose of repletion will not be a very heroic attitude; but even a lion sleeps after a full meal.

#### THE PARTITION OF CHINA.

The need for adopting deliberately but definitely this policy of digestion is emphasized by events which have taken place in China. are told every day in the papers on the continent that China is to be partitioned. France has seized Hainan, Germany has occupied Kaio-Chau, and Russia has established herself at Port Arthur, and every day we are asked more or less eagerly or anxiously what we are going to take. answer to this should be clear and unmistakable. On the mainland, nothing. If there is to be a partition of the yellow-skinned empire, we cannot too plainly and emphatically declare we are out of it; we are not in the running and do not mean to be. If France, Russia, and Germany please to scramble for the inheritance of the yellow man, they will not have to count with England as a fourth in that scramble. Chusan or some other island we may occupy, but if we do, it will not be a base for territorial conquest, but rather to assure ourselves of a position which will render unnecssary any need for operations on the land. But, it will be asked, are we then to have no policy in relation to the partition of the Chinese empire? By no means; if we take, as the starting-point and fundamental basis of our policy,

the determination that we will under no circumstances be driven into any annexation or occupation of Chinese territory, then there is open to us a policy which of all others is most in accordance with our imperial interest and our national genius.

#### A LEAGUE OF PEACE AND FAIR TRADE.

Our position in China and that of all other nations is secured by treaties which limit the customs to 5 per cent., with an additional 21 transit dues. The maintenance of that maximum of 7½ per cent. ad valorem duty on all goods imported or exported from China should be the object of our policy. In defending it, we should at once place ourselves at the head of all the commercial nations, and render possible, for the first time, an alliance for a specific and commercial object between Britain and the United States. A league of peace and fair trade would attract all the non-conquering powers in Europe and America which do business with China, and would enable us to enforce without difficulty the recognition of the fiscal status quo upon all the partitioning powers. England and America, with the minor powers in their train, would be amply strong enough to make it worth while for France, Russia, and Germany to respect the fiscal status quo and pledge themselves neither to raise the present duties nor to erect any customs tariff which would give their own people preference over the rest of the world in the conquests which they contemplate making. If the fiscal status quo remains unchanged, every improvement in the internal administration, which inevitably follows the extension of sovereignty, will redound to the prosperity of British trade.

# A POLICY OF HONESTY AND TRUTH.

In India there is no difficulty whatever in the adoption of the policy of repose and digestion. It might be supplemented by a law to the effect that any member of the Vice-Royal Council who proposes any extension of British sovereignty among the hills should do so with a rope round his neck, and it would not be amiss if he were suspended from the gallows before he had time to make his motion. In Egypt we are at Berber, and there we shall remain, nor should we venture to go any further than we have water under the keels of our gunboats. If we can take and hold Khartoum from the river, well and good; if not, we had better stay at Berber till we can. On the west coast of Africa the delimitation of our possessions, recognized by the French themselves when the original agreement was made, secured to us sufficient of the Hinterland of Lagos to remove any danger of further complications in In Southern Africa Sir Alfred that region.

Milner may safely be left to carry on his policy of appeasement and reconciliation. And everywhere on land and sea we should prove by word and deed that, the South African Committee notwithstanding, we believe that honesty is the best policy, and that truth has not ceased to be regarded as a virtue by the statesmen of the empire.

#### RULES FOR HOME AFFAIRS.

Turning to home affairs, there are certain simple rules which will guide us safely to sound con-The first is that in legislating we should cease persisting in trying to put a quart into a pint pot. The second, which is equally important, is, Don't swap horses when crossing a stream. The third, Let sleeping dogs lie. By acting upon these we may get something done. This is not a time when we can afford to waste our time in constitution reconstruction. in a tight place—and a very tight place; and until we see our way out of it we had better postpone all attempts to give one man one vote or one vote one value, for all votes will be valueless if the crisis is not surmounted. Disestablishment can wait; so can local option. So can and must everything that stands in the way of taking first things first.

#### WHAT ABOUT HOME RULE?

The Liberal party hitherto has not been consistent in its application of its home-rule creed. Mr. Gladstone professed to believe that the Irish ought to be allowed to govern themselves. And then, with curious inconsistency, he persisted in endeavoring to relieve them of the first and most obvious responsibility of a self-governing nation, by framing for them an instrument of government by means of an exclusively Scotch and English cabinet. The Liberal party remains true to the home-rule principle. But it will defer the consideration of its practical realization until the Irish themselves have prepared a scheme which they are ready to submit to the imperial Parliament as the expression of the national will. It is not for the likes of us Saxons and West Britons to formulate the measure which will give effect to the aspirations of our Irish fellow-sub-That is their task. We have tried twice and failed, because we put the cart before the The first step toward home rule for Ireland is for the Irish representatives to frame and submit the next home-rule bill. We shall wait for its appearance.

#### FIRST THINGS FIRST.

What are the first things? Clearly the first thing is the maintenance of the navy, without which we are merely a huge plum-pudding ready for the spoons of our hungry neighbors. Not less obvious is the necessity of readjusting our army system so as to fit it to the extended empire it must defend. It is not a time for picking it up by the roots, but rather for making the best of what is, of restoring order out of chaos, of providing the artillery with quick-firing guns which are to the existing pieces what the needle-gun was to the muzzle-loader, and of finding out what our ablest soldiers agree to be indispensable and then doing it—without any nonsense. The creation of a small Houssa or Zulu army for African service ought not to be beyond the bounds of imperial statesmanship. But these things are only measures of the frontier. The real peril lies within.

### "LOOK TO THE FOUNDATIONS!"

The real work to which the new policy for the new time summons the energies of the commonwealth is the quickening of the sluggish intelligence of our people, the concentration of attention upon the revival of British industry, and the reestablishment of our manufacturing supremacy. Education in all its branches, from the kindergarten to the university, is the one chance of success. Whether it is in agriculture, in commerce, or in manufacture, the old policy of laissez faire has broken down. To tamper with free trade is a confession of failure crowned by suicide. the time has come when the highest organs of the state must be invoked for the purpose of winning the battle, which at present is going sorely against us owing to lack of organized and directing intelligence. The report of the Irish Recess Committee has reminded us how agriculture has been revived in Denmark and manufactures in Bavaria by the energetic and sustained efforts of the intelligence department of the state. Something like that will have to be done here. Wherever any industry shows signs of going under through the stress of foreign competition, there should be prompt state inquest made to ascertain the remedy, if remedy there be. If a captain loses so much as a gunboat, there is court-martial with punishment to follow, but no national authority brands as infamous the captain of industry who allows, from ignorance or prejudice, a whole trade to fall into the hands of the foreigner.

#### THE CONDITION-OF-THE-PEOPLE QUESTION.

Whatever else seems in doubt, one thing seems certain. Our people will have to work a good deal harder and play less than they have been doing of late. And this being so, it should be a matter of national interest as well as of national pride to improve by all available means the lot of those on whom toil will press more heavily than before. Here also the state as an intelligence department might do good service by using all the means at its disposal to level up the condition of the rank and file in the army of labor to the highest standard reached in the camp of any of our competitors. Adequate provision must be made for the adjudicating of disputes which, left to themselves, breed mutinies in the camp at the very moment when the enemy thunders at our gates.

# IF NOT THIS, THEN WHAT?

This, in brief, seems to me, in rough and imperfect outline, the new policy suited to the needs of the new time in England. Whether or not I am correct in this detail or that is a matter of no importance. The one thing needful is that we should each and all of us gravely consider, and that at once, what can be done to face the dangers that confront Britain and its empire. The one unpardonable thing is to thrust our head like an ostrich into the sands and wait our doom. For in that case it would not tarry; even now it comes on apace.

# LEADING ARTICLES OF THE MONTH.

# NANSEN OUTLINES A NEW EXPEDITION.

THE February McClure's opens with an illustrated article by Dr. Nansen on "Future North Polar Exploration." Dr. Nansen treats the problem from the standpoint of the theory that the whole area between the pole and the Siberian coast is covered by a large and extended sea, with no unknown land on that side; on the other side, between the pole and the American coast, however, he thinks that there may be unknown land and islands, although the greater part of the area is also an ice-covered sea. The most part yet to be explored is that bounded by the route of his ship, the Fram, by Patrick Island and Grant Island. The northern part of Greenland, too, is yet unknown.

As to the way to get to these still unknown regions, Dr. Nansen has several methods to sug-He naturally is proud of that scheme which made such a notable and profitable journey for the Fram-that is, to get in the sea and drift He thinks the Fram exhausted the possibilities of difficulty in this kind of work; that no future polar-bound ship can encounter any obstacles greater than she did. The method of drifting in the ice offers, too, the best means of making scientific observations of all kinds, since it gives a sojourn of years, and makes, in fact, a practical floating observatory of one's ship. The explorer makes an outline for an expedition on his own plan, to go north through the Bering Sea and enter the ice in a northerly and perhaps northeasterly direction somewhere between 160 and 170 degrees west longitude. "The ship will then be closed in by the ice, and will certainly be carried across the unknown sea a great distance north of the Fram's route, across, or at any rate not far from, the pole itself, and will emerge into open water somewhere along the east coast of Greenland. The expedition will thus bring a sum of information about the polar region which will be of priceless benefit to many branches of science. But such a drift will take a longer time than ours did: I should say prob-It might, however, be that ably five years. the drift further north is more rapid than it was in the neighborhood of the Fram's route, as during Johansen's and my sledge journey I got the impression that there was more motion in the ice the further we went north."

A second means which Nansen believes feasible is by dog sledge. This would take much shorter time than the former, and the party would be more master of its movements. The disadvantage is that it must necessarily be quick and without opportunities for scientific research. The third possibility is in the balloon, which would have its best result in giving an account of the distribution of land and water. But Nansen thinks that the best way to use it would be to let it carry sledges with necessary dogs and equipment northward, so the expedition could leave the balloon and travel across the ice southward.

The rest of Dr. Nansen's article is given over to an explanation of the scientific results to be gained from polar exploration. The chief of these is the light which may be thrown by a systematic series of polar observations upon the climatic conditions of northern regions and the climatic changes which have taken place in the past history of the earth.

#### THE PARTITION OF CHINA.

MR. HOLT S. HALLETT contributes to the Nineteenth Century an article on "The Partition of China." In outlining British policy he says:

"Our objective in relation to China is mainly commercial. If through the imbecility and stupidity of the Manchu Government the empire falls to pieces and foreign nations are compelled to take action in their own behalf, it should be our aim to come to an amicable agreement with Russia, France, and Japan, the other neighbors of China, for the division of the spoil. With the basin of the Yangtse Kiang, Kuangtung, and Yunnan as our share, the remainder of Southern China might be taken by France, and Northern China might be left to Russia and Japan."

He suggests that Germany may yet have much trouble with Japan, who might make terms with her old enemy in order to check German ambition:

"In his haste to lose no opportunity he has apparently omitted to take into account the most important factor of the position, that Japan is still in occupancy of Wei-hai-wei, and is likely to object to the action of the German Emperor as elucidated by the German press. With a fleet far stronger than that of Germany, and able to put a hundred thousand or more well-equipped and capitally drilled men in China in the course of a few days, Japan is a foe who will not be terrified by the mailed fist of Germany. Japan has yet her word to say on the German views and the German action, and it would be no bad policy for her to conciliate China by forcing Prince

Henry to put his mailed fist in his pocket. A Chino-Japanese alliance would in all probability lead to the improvement of the Chinese administration and to the opening out of China to trade."

Mr. Hallett thinks that China is worth a dozen Africas, both in its natural resources, in its character, and its people. The climate also renders it highly suitable for European colonization. At present British treaty rights as to trade are thus defined by Mr. Hallett:

"Under our treaties with China we secured the right to import goods into China at certain ports on payment of a tariff duty of 5 per cent. ad valorem, and to export goods from the same ports on payment of the same duty. It was likewise agreed that British imports having paid the tariff duties should be conveyed into the interior free of all further charges, except a transit duty equal to one-half of the tariff duty. And it was agreed that native produce carried from an inland center to a point of shipment, if bona fide intended for shipment to a foreign port, might be certificated by the British subject interested, and exempted by payment of the half-duty from all charges demanded upon it en route. And it was agreed that so far as imports are concerned the nationality of the person possessing and carrying these is immaterial."

#### Mr. Henry Norman's Advice.

Mr. Henry Norman writes with first-hand knowledge of the subject in his chronicle in Cosmopolis upon the situation in the far East. He condemns very strongly, but not more strongly than is deserved, the reckless folly and injustice which characterize many English comments on the German Emperor.

#### A GOOD WORD FOR THE KAISER.

"His majesty speaks impulsively, and his enthusiasms succeed each other with almost startling rapidity. But this is part of the superficial manifestations of genius. For the German Emperor is a man of genius. More than that, he is a man of great courage, great energy, great ability, great ambition, and great confidence; and he commands the greatest fighting force that exists. He is probably, to take but one example, the best and most experienced cavalry leader in the world. His handling of 10,000 cavalry at the last maneuvers positively startled the foreign military attachés. It may well be that he yet will make history. We should hope that this will not be at our expense. Our press and people have often treated him both unfairly and vulgarly. We are entitled to resent some of his actions; we may be justified in feeling some fear

of him; merely to laugh at him is the act of a fool."

#### GERMAN WEAKNESS IN CHINESE WATERS.

This reproof is more remarkable because Mr. Norman is no great admirer of the latest development of the Kaiser's policy. He is, like every one else, much oppressed with the disproportion between the apparent policy of the Kaiser and the naval means by which he must give effect to it. He says:

"Germany will have in China: (1) In the first cruiser division, under the command of Vice Admiral von Diederichs, 1,642 men; (2) in the second cruiser division, under the command of Prince Henry, 1,364 men; (3) on board the station ship Cormoran, 160 men; (4) detachment of marines, 1,200 men; (5) coast defense artillery, 200 men; making a total of Her fleet there will consist, besides the 4,566. Deutschland and the Gefion, of the Kaiser, sister ship to the Deutschland, the first-class cruiser Kaiserin Augusta, 6,300 tons, the second-class cruiser Irene, 4,400 tons, and the Prinzess Wilhelm, her sister ship, and the third-class cruiser Arcona, 2,370 tons.

"The German squadron could not remain afloat half an hour if attacked by the far Eastern fleet of England, Russia, or Japan. England, for instance, has (or shortly will have) on the spot the Centurion, first-class battleship of 10,500 tons; the Powerful, 14,200 tons, the Grafton, 7,350 tons, the Edgar, 7,350 tons, the Immortalité, 5,600 tons, the Narcissus, 5,600 tons, the Undaunted, 5,600 tons, first-class cruisers; the Rainbow 4,360 tons, the Iphigenia, 3,600 tons, and the Pique, 3,600 tons, second-class cruisers; 7 gunboats, 4 torpedo-boat destroyers, and a number of smaller crafts. The vigorous expression, 'Fahre hinein mit gepanzerter Faust!' cannot be meant to hurl the German squadron to instant destruction against such a force as this. And the Russian and Japanese fleets would show a similar disproportion. Germany must design her ships and men for another purpose."

What that purpose is Mr. Norman does not exactly perceive, but he thinks that probably it has more to do with securing the passage of the naval bill than anything else.

#### ENGLAND'S NEED FOR CHUSAN.

Turning to the question of what England should do, Mr. Norman has a very clearly defined idea. He says she should take and occupy Chusan.

"It has long been obvious to all students of the far East that England stands in great need of a naval base at least a thousand miles north of Hong Kong, and that in Chusan, near the mouth of the Yangtse River, such a base is ready to her hand. It commands the heart of China, it has hardly any population or trade, it could be made impregnable without difficulty, it was occupied and ceded again by us, and by a convention with China in 1846 the latter is bound not to cede it to any other power and we are bound to defend it for her against attack. I have advocated this step for six years, therefore I am delighted to see that the Times is now advising it. It is a vital matter for British commerce and security in the far East, and we cannot afford to let the scale be turned against us. In China more than anywhere else trade is maintained by 'influence,' and our trade, amounting to over £32,000,000 per annum, is three and a quarter times greater than that of all other nations put together."

# AMERICAN TRADE WITH CHINA.

I N the North American Review for January Mr. Charles Denby, Jr., secretary of the United States Legation in China, writes on "America's Opportunity in Asia."

As to certain recent developments in China

and Japan, Mr. Denby says:

"The war of 1894-95 between these two powers was the most momentous event in the history of the East. It did more to startle, more to develop, China than any experience in her No victory of a European power could have had such an effect upon her. It required the triumph of an insignificant and detested rival to bring to the knowledge of Chinese statesmen the mortal weakness of their conservatism. This war has done more to open this vast field to Western commerce and civilization than five hundred years of foreign trade and one hundred years of missionary teaching. The effect has been instantly felt. The country seems to have sprung into life. Railroad lines are under construction, the beginnings of vast contemplated systems. Mines are being opened, new ports established, new lines of commerce developed. Schools for the teaching of English and of Western sciences are being founded and attended by an earnest crowd of intelligent young men who, a few years ago, would have blushed to count a foreigner among their friends. China looks to the West to learn the sources of a strength which she has long affected to despise.

#### EUROPEAN DESIGNS ON CHINA.

"This attention is reciprocated, but in a different spirit. The eyes of Europe are turned toward China and the European powers are arranging far-reaching plans dictated by territorial ambition. Their journals already openly discuss

the respective spheres of influence which they hope some day to make exclusively tributary to their commerce. France is annexing territory on her Tonquin frontier and is building railroads into Yunnan. Russia has laid her hand on Manchuria, and six hundred miles of Russian railroad in Chinese territory will shortly connect the trans-Siberian system with the port of Vladivostock on the Pacific. Germany is obtaining 'concessions' from China—small areas of ground at the treaty ports, which will be placed under the German flag and where, under their own laws, German merchants may establish houses and conduct their business. Japan, baffled in the north, has annexed Formosa and founded there a lasting basis for her commerce. has she stopped here, but she is daily adding to her military and naval strength, preparing to take her part in the coming struggle for suprem. acy on the mainland. England has opened new territories for her commerce by asserting the right of British merchants to navigate the West River, the key to the southwest of China."

Mr. Denby believes, nevertheless, that though China may be conquered and enslaved for years, yet the vitality, individuality, and exclusive cohesiveness of her people insure her an ultimately independent national existence, while inherent identity of interests makes China and Japan allies against Europe in working out their common

destiny.

#### OUR ACTUAL INTERESTS IN THE CHINESE MARKET.

Returning to present-day conditions in Chinese

commercial life, Mr. Denby says:

"Though its trade is in its infancy, China today is a great market, unable to supply itself with the very manufactured goods we have to sell. To this market we are the nearest neighbors. Some of the energy and intelligence which our manufacturers are devoting to South America would find ample compensation here. In Western America, when railroads were built they took the population with them and built up the business on which they hoped to thrive. In China the population, the business, the prosperity are there waiting for the railroads to come to them. The commercial activity which good communications will create is inconceivable. If to the empire of China, with its vast population, its vast territory, its limitless resources, the electric spark of American enterprise could be communicated, the trade that would spring into existence would surpass all the records of history. Already on the short lines in the north we have some indication of the future. The cars are crowded with passengers and freight, trade is springing up, and Chinese merchants, with ready intelligence, are planning the exten-

sion of their business. New industries are coming into existence. Certain cities are pointed out as railroad centers, and real estate is advancing in price as in the 'boom' cities of America. The station of Fengtai, eight miles southwest of Peking, now a rude building in a field of cabbages, is confidently expected by railroad experts to become the busiest railroad station in the There is no doubt that the general import and export trade of China will enormously increase. Internal taxation barriers will be broken down, and not only will new markets of great importance be reached, but old ones will become The people will become more more accessible. familiar with foreign products and inventions and will use them more freely. Increased opportunities of employment will give the lower classes more money to spend and there will be a greater demand for foreign oil, cloth, machinery, and the thousand things of foreign origin which the Chinese are only beginning to appreciate. a market which the writer candidly believes to be, for the American manufacturer, the most important in the world."

# AMERICAN SHIPS FOR THE CHINA TRADE.

Mr. Denby complains that our commerce with China has to be conducted under foreign flags:

"Means of transportation between the ports of America and those of Asia should be put upon Direct lines of cheap freight a better basis. steamers under the American flag should be established from the Atlantic ports to Shanghai and Direct communication is the surest creator of trade. Private enterprise must grapple with this problem. Arrangements can easily be made through American agents in China by which vessels sailing regularly with cargo from Philadelphia, Baltimore, or New York can be assured of cargo on their homeward journey. The steamer lines between the Pacific coast and the Orient should receive such financial support as to be able to maintain frequent communication by American-built ships of the highest class. Canadian competition should be surpassed in all particulars. The profits on the carrying and insuring of American goods should be diverted to American companies. Our people should no longer endure the humiliating necessity of sending our merchandise, our mails, and our telegrams under the protection of a foreign flag."

Mr. Denby further maintains that American manufacturers and merchants should insist on American representation of their interests in China. He says that the methods heretofore used there have been in marked contrast to the methods used to push the business of American manufacturers elsewhere.

A RISING CHINESE STATESMAN.

IN the January Forum Mr. Clarence Cary writes on "China and Chinese Railway Concessions," sketching the interesting personality of Sheng-Tajen, the director-general of the imperial Chinese railroad administration, who has been clothed with full powers as an agent to conduct negotiations with foreign capitalists for the purpose of enlisting their aid in railroad-building.

"Astute, progressive, daring, with the acquisitive tendency largely developed, Sheng-Tajen is full of aggressive force and picturesque possi-As yet of full vigor, of large wealth, and but little over fifty years of age, he may, if circumspect or if effectively guided, reach any place of ministerial power and control that China has to offer. He is already an official of metropolitan rank and a director of the Court of Sacrificial Ceremonies. For somewhat more than a year past Sheng has been in active negotiation with various foreign delegations in reference to his railroad projects, but thus far with little or no tangible result—thanks, as foreigners are disposed to say, to a too-inflated, overreaching estimate of what he and his country can offer or accomplish. It is rumored that his government is already growing restive over the delay in the fulfillment of his pledges; and he is not without jealous rivals, who are known to be intriguing against him."

It seems, however, that Sheng's powers have recently been somewhat abridged by the appointment of another imperial railroad commissioner --- "for the North," as Mr. Cary is informed.

#### SHÊNG'S WAYS WITH FOREIGNERS.

Mr. Cary, who has had experience as the legal adviser of American concession-seekers at Sheng's court, thus describes the procedure there:

"Those foreign delegates who have frequented his Yamen, or council-chamber, will not readily forget their novel and arduous experience. Long, chill audiences, in donjon-like obscurity, with struggling effort at concrete, confidential negotiation, conducted aloud, through interpreters, in languages of which the one affords no counterpart to any technical or business phrases of the other, before a mob of alert, native hangerson, who listen to one's secrets through open window and doorway—these are incidents that remain in mind. Nor will be ignored the memory of a keen-faced, courtly mandarin, with halfclosed yet always alert eyes, whose ceremonious manner and easy affability never disguised a hard, tenacious purpose. Large foreign cash advances, at trivial interest, with next to no allowance of foreign profit or of ordinary safeguard against native control of funds or native management of properties—these, when stripped of complimentary rhetoric, were always conditions precedent to his excellency's negotiations.

"Sheng-Tajen is easy of access and encouraging—especially to those of sanguine, acquiescent temperament, who are ready to regard an unsubstantial nothing as a gain. A jest, principally one of a cynical cast, seems to be to his liking, and at his table he is a charming host. His business invitations have been somewhat freely offered to foreigners, though far more circumspectly distributed than were those of Viceroy Li, who in his recent tour about the world appears to have been full of promises to mankind."

# THE COMING OF THE SLAV.

PRESIDENT GEORGE WASHBURN, of Robert College, Constantinople, contributes the opening article to the Contemporary Review for January, on "The Coming of the Slav."

Dr. Washburn's paper begins with a quotation from an enthusiastic declaration made by a young Slav as to the ambition of his race:

"We wait the coming of the Slav to regenerate Europe, establish the principle of universal brotherhood and the kingdom of Christ on earth."

Dr. Washburn himself says of the Slav: "He may be destined to overrun Europe, to revolutionize the Russian Government, and to establish a better civilization in the world. It is not impossible. The fact that he expects to do it is something. The fact that Russia is now the dominant power in Europe and that the Slavs of Austria and the Balkan Peninsula are waking to new life is something more."

It is in the Russian moujik that we find the typical Slav in whom all other Slavs believe. Dr. Washburn says:

"He is ignorant. He is superstitious. He is often immoral. But he is intensely religious. He believes in God, in Christ, and in the New Testament as firmly as he does in his own existence, and if he is orthodox he believes equally in the Church. He is ready to make any sacrifice or to die for his faith, and when he realizes that he is not living up to it he suffers bitter re-He is capable of living a pure and noble life, as we see in some of the heretical sects. his religious character at least the moujik is the most original and interesting peasant in Europe. He has grave faults and weaknesses, like other men; but his peculiar virtues, his pathetic endurance of suffering, his profound sympathy with humanity, his faith in voluntary self-sacrifice, his very dreams of destiny commend him to the sympathy of all the world."

Dr. Washburn feels certain that the Slav has triumphed over the Greek in the Balkan Penin-

sula, and that Russia will sooner or later be supreme at Constantinople. The Russian Slavs, he says, are a homogeneous race, and are likely to bring the Slavs of other countries under their influence.

"It is not an accident that it is a Slav, Goluchowski, who has brought Austria and Russia But the Slavs of other countries into alliance. are by no means so homogeneous as those of Russia. The Mohammedan Slavs are lost to the Their religion seems to have destroyed their race characteristics. They are the most fanatical of Moslems and are gradually leaving the Balkan Peninsula for Asia. The Slavs of Austria and the Balkan States are divided into so many nationalities, each with a long history of its own, that they seem to have little in common and to care far more for their nationality than their race. They are divided, too, between the Orthodox and the Catholic churches; but the conflict with the Germans and the Magyars is rapidly bringing them together in Austria, while Russia has brought Bulgaria, Servia, and Montenegro into alliance, and is preparing the way for Slavic rule in Macedonia.

#### THE PREËMINENCE OF RUSSIA.

"There is no question about the coming of the Slav in Southeastern Europe. This era of peace, so called, is working out changes more momentous than many a great war. It is clear now that the Slav, and not the Greek, is to inherit the Eastern empire. This does not necessarily imply the speedy extension of the Russian empire to the Adriatic; but when the time comes for Russia to take Constantinople the southern Slav must inevitably come under her rule—and the coming of the Slav will in the end mean the coming of What Russia may be or may do after she takes Constantinople the Czar himself could not tell us. As we have seen, the Slavic race is still in its youth. What it may be when it comes to maturity, how far it will realize its dreams and develop higher and better civilization than that of the West, the next century will show. As the race becomes more united, more enlightened, and more self-conscious, it will be less likely to yield to Western influences. This is already manifest in Russia. It is more Russian to-day than it was in the time of Alexander II., and there is nothing in the happy disappearance of Pobiedonostsef from the front or in the more liberal acts of the present Czar which is inconsistent with a still more distinctively Slavic development. Russia is every year less dependent upon the West, intellectually as well as politically and commercially, and this has gone so far that the French alliance is not likely to exert any permanent influence upon the course of Russian thought."

# THE HEAD PHYSICIAN OF EUROPE.

M ADAME NOVIKOFF contributes to the Fortnightly Review for January an article entitled "Russia and Her Patients," which is marked by the buoyant enthusiasm characteristic of the writer.

Madame Novikoff has upheld her cherished faith so dauntlessly in the years gone by, when her utterances were derided and despised, that she is entitled, if ever woman was, to exult somewhat over the altered position of affairs to-day.

In the article on "Russia and Her Patients" there is, however, very little reference to the part which she herself has played in the transformation over which she rejoices. The article is full of genial banter and pardonable complacency.

#### THE EUROPEAN HOSPITAL.

The title of the article is suggested by its first

"We have heard so much of the European concert,' why not, for a change, call it the 'European hospital?' The term would be a novelty, besides being more appropriate; for there is certainly more sickness in the hospital than there has been harmony in the concert. hospital, indeed, it is which confronts us. With the sick gentleman at Constantinople we have been long familiar, but it now seems that we shall soon become on equally intimate terms with the sick lady at Vienna. Poor Greece, with a bandaged head, needs watchful and affectionate nursing. In the time of Nicholas I., our Czar used to be described as the chief justice of Europe. Alexander III. won for himself the noble title of 'Peace-keeper of Europe.' But nowadays, if we are to adjust titles to realities, Russia could not be better ranked than as 'Head Physician of the European Hospital.' Quite seriously, that is our rôle, and we shall adhere to it."

# SOME OF RUSSIA'S PATIENTS.

Madame Novikoff passes in review the various patients in the European hospital who are undergoing the treatment. She admits that in dealing with the sick man she could wish for her own part that the physician had given place to the surgeon, but she recognizes that operations are dangerous when the atmosphere is poisoned with the gangrene of international jealousy. The sick man, or, as she somewhat whimsically prefers to describe him, "the sick gentleman," at Constantinople seems likely to lose the position he has held so long of being the most troublesome vatient in the hospital.

That unenviable distinction is about to pass to Austria, "the sick lady of Europe." France, al-

though just emerging from a tedious convalescence, is being plied with tonics and notices to take health-giving promenades on the banks of the Neva. It is easy to see how the list might be extended, especially if Madame Novikoff had not limited her survey to Europe, for the Russian physician has quite as much to do in the Chinese ward as he has either in the Austrian or Turkish.

#### THE PRINCIPLE OF AUTOCRACY.

Madame Novikoff naturally avails herself of the monarchical revival visible in England to congratulate herself upon the rehabilitation of the principle of personal government:

"In all Russia's practice as political physician, perhaps her most correct diagnosis and successful treatment have been in protecting the principle of personal government. It is particularly in this century that Russia has been witness for the truth of autocracy. She has been assiduous in her attendance upon all those who were afflicted with the malady of parliamentarism. And of all her patients these especially seem either so completely cured or so thoroughly convalescent as no longer to stand in need of a physician. Moreover, the plague of parliamentarism has now, under the Röntgen rays of political experience, been so clearly traced that any recurrence of its virulent outbreaks can be promptly dealt with. The theory of government by elective assembly is at a dis-Everywhere we find these assemblies discrediting the principles of parliamentarism, endangering States by their corruption, imperilling empires by their factions. And where are they doing good?"

After passing in review the different countries in which the principle of monarchy is in the ascendant, she says that in this particular patients may be regarded as cured and standing no longer in need of the services of the physician:

"We believe in the autocracy more than ever now that we see the principle of personal centralized power reëmerging from its long eclipse. But it is unnecessary to force an open door. The principle of monarchy no longer needs a defender. The political knight-errant of the twentieth century is more likely to find parliamentarism a fitting object for his compassionate protection."

#### THE HALLOWED PERSON OF GERMANY.

If any one doubts the extent to which the monarchical principle has gained of late years, she asks them to turn their attention to the extraordinary method in which the German Emperor asserts his lordship over the German people.

"Who is master in the German empire? There are deputies in the Reichstag as there are sheep in the fold, but the shepherd is the Kaiser. Indeed, the monarchical revival in the fatherland has latterly been proceeding to extremes, and has this week culminated in Prince Henry's apotheosis of his imperial brother, with such surprising extravagances as those of his 'crown of thorns' and 'the gospel of his hallowed person.' We believe in autocracy, it is true, but, fortunately, we have never mistaken the Czar for the Almighty!"

#### THE SOLE HOPE OF AUSTRIA.

If in Germany the monarchical principle is being carried to preposterous lengths, it is in Austria the only hope of the state. Madame Novikoff says:

"A Parliament is wrecking the dual kingdom. Who saves it from falling to pieces? The Emperor Francis Joseph! Without him, what is Austria-Hungary? Poor Francis Joseph! His task is hard enough; but how much harder will be that of his successors! Leaning upon the arm of his Russian physician, the Austrian Slav may expect from him something approaching to From a Reichsrath dominated by obiustice. structives, where pandemonium reigns, surely there can be no hope at all! Now that the Germans have killed the Reichsrath, might not Francis Joseph take its place? The provincial Diets would still exist. They might elect among themselves consultative delegates, but the Emperor's will, and not the vote of the paralytic Reichsrath, would be supreme. What spectacle more encouraging for the close of the nineteenth century than if Austria, distracted by parliamentarism, were to find a new strength and security by reverting to the principle of central autocracy and local self-government?"

# THE FUTURE OF THE SICK LADY.

Contrary to what might have been expected, Madame Novikoff does not take a very gloomy view as to the future of Austria.

"The best evidence that Austria realizes her danger is her reapprochement to St. Petershurg. The empire-kingdom, when feeling well, carried on more or less pronounced flirtations with Germany and Italy. But once let storm-clouds gather on the horizon, and Austria rushes in haste to consult her Russian mentor. old patient of ours, a very old patient, and the fact that she has been so long on our hands enables us to look calmly upon her present alarming symptoms. It is only the new practitioner, called in to a first case, who imagines that a bad fainting fit is an inevitable precursor of dissolution. We know better. Austria has had attacks of this kind before. But we have pulled

her through, and thus the sick lady expects us to do so again."

#### THE OLD CATHOLICS.

Having thus disposed of two of her patients, Madame Novikoff turns to the Old Catholics, who have long been favorites of hers. She reports that there has been an Old Catholic outburst in Chicago, of all places in the world, and a bishop has been duly consecrated in order to supply the spiritual needs of some 30,000 Polish and Bohemian ex-papists who have revolted against the Pope. This naturally seems to Madame Novikoff an event of great omen, and she quotes a letter from her brother in which he expresses some sanguine expectation that the reunion of Christendom may be brought about in the Slavonic world by the agency of the Old Catholics:

"The way is Old-Catholicism—that is to say, a wiping out of popish infallibility and the influence of the Jesuits, thus purifying Catholicism; or, in other words, the same orthodoxy which prevailed before the parting of the churches in the West, and which was one with us in dogma, in spite of the difference of ritual and theological views. My brother believes that the reëstablishment of this orthodoxy of the West in the Slavonic world is quite possible."

# THE "LIBERUM VETO" IN THE EUROPEAN CONCERT.

Madame Novikoff touches very briefly upon the Eastern question proper, but drops a few words as to the necessity for substituting the principle of majority voting for that of absolute unanimity for the decision of the European continent. She says:

"Russia, better than any other power, can realize the mischief that comes from insistence upon absolute unanimity. What is it but the old 'liberum veto' that has wrecked the Polish kingdom? That will be the fate of Europe also if the change is not made which Lord Salisbury suggested, with a foresight which does credit to his judgment. Besides, decisions by unanimity are only practicable when, as with a British jury, they can be enforced by starvation, or, as Count von Moltke has reminded us, was once the case in Poland, where unanimity was secured by stabbing the dissidents. Alas! neither method of securing unanimity is available in the case of the European concert."

### MAKING THE BLIND TO SEE.

Finally, the chief and last great triumph of the Russian physician has been the making the blind to see:

"As an oculist, his success has been so re-

markable that there is no need for me to do more than briefly allude to it. For nearly a whole generation the real Russia seems to have been invisible to the eyes of the European public. Now we have taught Europe to see. We have removed the scales from her eyes. Europe now not only perceives Russia, but has to admit, also, that Russia is the greatest and most powerful state in Europe and Asia. The responsibilities of the physician render more pressing the duty of keeping the peace."

# ARE THE JEWS SUPERIOR TO THE ENGLISH?

M. JOHN A. DYCHE, a Russian Jewish tailor, now working in Leeds, contributes to the Contemporary Review one of the most interesting articles that have appeared in the magazines this month. Mr. Dyche declares that he is a typical alien emigrant:

"I am a Jew, born in Russia, landed in this country some nine years ago with threepence in my pocket. I learned the trade of a tailors' machinist, and have worked in the ready-made, bespoke, and ladies' mantle trades, mostly in Leeds."

Mr. Dyche is a gentleman with the courage of his opinions, and, what is more, he seems to have a vast array of facts at his finger-ends, which make him a very formidable antagonist to those who have been reading the outcry against the importation of Jewish paupers. Mr. Dyche first proves from his statistics that the number of the Jews in England is immensely exaggerated, and then proceeds to maintain that so far from their underselling the British workmen and so playing the blackleg to British labor, the Jewish workmen earn better money than their English companions. The union price for English tailors in Leeds is fivepence per hour, while competent Jewish tailors in Leeds seldom make less than sixpence, and sometimes more than eightpence, an hour. Surely it is absurd, says Mr. Dyche, to speak of their taking away the Englishman's work when they get higher wages than he does. That Jewish employers do work cheaper than their English rivals, no one will deny; but Mr. Dyche maintains that they do not do this by paying their men lower wages. As for sweating, he stoutly asserts that in the Jewish shops at Leeds there is far less sweating and bullying than in the English shops. So far from the Jews having come in as parasites to prey upon English industry and ruin English workmen, he says:

"The Jewish trade unions claim to have created, besides the second-class made-to-order tailoring, wholesale clothing and ladies' mantle trades,

also waterproof clothing, cap, slipper, and cheap shoe trades."

#### SUPERIORITY IN BRAIN POWER.

How is this miracle achieved? When we reduce Mr. Dyche's statements to the last analysis, it comes to this, that the Jew has more brain than the Englishman, and that in the long run it is brain that tells. Mr. Dyche says:

"The Jewish workman possesses the quality of his race—he is an artist, and if his work sometimes lacks strength and durability, it is never wanting in taste or finish. The English workman is in this respect a mere laborer. His work is like his temperament. drink, and diet-strong, solid, and durable, but at the same time rough, coarse, and tasteless. In matters of style and taste the English workman can only follow the foreigner. the tailoring trade we have created a method of work for which the English tailor is too clumsy or too conservative in his ways, and for which the English woman has not enough technical skill. By doing that we have cheapened clothing, so that a laborer or artisan can to-day get a well-made suit at the same price he formerly had to pay for the cast-off, and this advantage is eagerly seized by those trade unionists who are never tired of denouncing the alien immigrant and sweated goods."

#### EXCELLENCE OF CHARACTER.

But it is not brain only. It is also character. Mr. Dyche declares that, tried by any test you please, the Jew is superior to the Englishman. He is much more considerate to his women. A Jewish wife is never sent to the factory to earn wages for her husband. He is much more mindful of his children. On this point he gives some very remarkable statistics. In New York in 1890 there were 180,000 Jews, practically all emigrants:

"The annual death-rate per 1,000 for the six years ending May of the same year was 6.2, as compared with Irish, 28; colored, 23; English, 20.6; Germans, 17; Americans, 16."

Although their birth-rate is lower, their deathrate is still lower, owing to the great care of their children. The superiority of the Jews is shown in their children in the public schools. At Leeds, he says, "they are always best in drawing, and the teachers are unanimously of opinion that they have a quicker perception and better memories than the English children."

#### IMPROVEMENT IN LONDON'S EAST END.

But what will perhaps impress the ordinary Englishman most is the statement which he makes, on the authority of personal residents in the districts concerned, as to the immense improvement that has been wrought by the substitution of a Jewish for a British population. He says:

"Some of what were the most dangerous places in the east of London, such as Flower and Dean Streets, Brady Street, and others, have become, since the foreign Jews have settled there, the quietest, peacefulest places in London, where one can go to bed at any time and not be kept awake all night by the drunken orgies of English men and women. In Whitechapel the contrast between the native and foreign population is most On one hand you find people who are striking. at as low a grade of drunkenness and vice as it is possible for human beings to come to. other, sober, peaceful, and industrious people, from whose lips will never fall an expression that can offend the most sensitive lady."

Clearly it is time that Christian England began to learn the elementary lessons of morality, intelligence, and industry from the despised Hebrews.

# DEFECTS IN THE BRITISH ARMY.

"THE War Office and Its Sham Army" is the general title of four articles contributed to the Nineteenth Century by Colonel Brookfield, Major Rasch, Major-General Russell, and Lord Alwyne Compton. Major-General Russell reminds us that the rank and file of the British army in 1896 consisted of 194,524 men, the total strength being 220,742:

"Of this force 76,937 of all ranks are quartered in England, Wales, and the Channel Islands, 3,630 in Scotland, and 25,841 in Ireland, being a total of 106,408 at home; while in Egypt and the colonies 38,884 are quartered and in India 75,450, or a total of 114,334 abroad."

Major-General Russell contrasts the complacent assertions of the optimist who assumes that everything is as it ought to be in the army with such facts as the following:

"Under such 'best, best' management up to October last not a man had been recruited for the two new battalions of Guards, while of the 3,000 men voted for the garrison artillery last session the department had only got hold of 245; that of our recruits 30 per cent. are specials (i.e., un. der five foot three and a half inches and less than thirty-two around the chest, under age and under size); that in the home battalions one has only 290 effectives and 40 per cent. of specials among the recruits—I am, of course, speaking of war strength—and requires 700 men to complete; another wants 600; another 650; and after filling them up where is the reserve of which Sir Arthur Haliburton and Lord Wantage are so proud?—that reserve which has been the one ewe lamb of successive representatives of the War Office in Parliament, and which, according to the answer given before the late commission by Lord Wolseley, is 'somewhat of a sham!' As to the artillery, the public are aware of the fiasco in the spring, when twenty batteries were torn to pieces in order to send three out to the Cape, but what they are ignorant of is that the condition of the artillery is worse than that of the line at home. To start with, the proportion of guns to infantry is lower in the British army than in foreign forces, and they cannot be improvised. army of the southeast under Bourbaki in 1871 failed because Gambetta and De Freycinet ignored this salient fact; and in our army we have some 200,000 auxiliaries with only one effective battery among them. Besides this, a considerable number of the home batteries have been reduced to four guns, as they paraded at the jubilee review with 42 men and 48 horses—by the way, what has become of the 68 horse-artillery and 282 field-battery guns promised to Lord Lansdowne, at Salisbury, two years ago? As for the cavalry, we have 13,000 dragoons at home and only 3,000 horses, while the regiments are cut up and separated in a way fatal to efficiency."

All the writers appear to believe that the War Office needs reorganization. They are all dissatisfied with the reserve, and then make a few suggestions as to what should be done. Lord Alwyne Compton proposes to double the militia at a cost of \$600,000 a year; to found a voluntary reserve. to which 30,000 additional men would be secured at a cost of \$1,050,000. He would also increase the number of battalions at home so as to balance the number of those required abroad.

"In order to raise these battalions and to promote recruiting—

"(a) The territorial, the sentimental, the county attractions should be fostered and encouraged, not repressed.

"(b) Mature soldiers should receive one shilling a day clear.

"(c) Every government office should be compelled to give the preference to old soldiers when making appointments.

"(d) Reserve pay should be entirely done away with. The policy of inducing men to leave the army should be reversed. They should be encouraged to continue in it, to make a career of it, and moderate pensions should be given only after the completion of twenty-one years' service.

"(e) Reservists should be allowed to reengage in their own regiments within a limited time, if they wish to do so, subject to the commanding officers' consent.

"(f) Powers should be taken to call reservists to the colors for small wars if necessary for the first twelve months of their reserve service."

# NATIONAL DEFENSE.

A PRIZE essay on the raising and equipment of volunteer armies for future wars is published in the January number of the Journal of the Military Service Institution. The author, Lieut. S. M. Foote, of the Fourth United States Artillery, has evolved an elaborate plan of militia organization and mobilization. It is impossible to give a digest of his paper in our limited space, but a few paragraphs may be quoted as embodying an expert's opinion as to the needs and possibilities which seem to justify an immediate strengthening of our means of defense.

# NUMBER OF TROOPS REQUIRED TO DEFEND OUR FRONTIERS.

Lieutenant Foote's estimate of the number of troops required to defend our frontiers from foreign invasion is based on the following considerations:

"Owing to the great length of our frontiers and the uncertainty as to where and in what strength an enemy may strike, it will be necessary to have several armies of observation ready to move promptly to any point attacked in force. It is possible to transport across the ocean at one time an army of 50,000 to 60,000 men with their horses, ammunition, etc. Therefore the armies made up of the available militia and regular army will never be large enough to carry on a defensive war against any power likely to go to war with us. It is to be hoped that we shall never have a domestic disturbance that the regular army and militia will not be able to handle, but if we should have one of great extent it is probable that about all the militia would have to be held to quell possible outbreaks in their own States.

"In any case, therefore, of a serious war we should have to rely upon volunteers. But how many?

Of all the powers with which there is a possibility of our going to war, Great Britain is the most formidable on account of her sea power, her naval and military stations in close proximity to our coasts, and her means of access across her own territory to our entire northern frontier. We should in fact have to fight both Canada and Great Britain. It is not possible to figure beforehand with accuracy how many troops would be needed in any case, but as Canada has no regular army and her organized militia is but 35,000 strong, it would seem safe to rely on about 100,000 more men to defend ourselves against Great Britain than against any other power.

"It will require about 85,000 heavy artillery soldiers to man the fortifications of our principal harbors in time of war.

"Suppose, however, an army of 50,000 to 60,000 regular troops to have made a landing under cover of its fleet in an unfortified harbor. We should require an army of at least 100,000 volunteers to prevent their advance, and certainly 200,000 to dislodge them before they could be reënforced.

"So, without going into further calculations, it would seem that we should need about

85,000 volunteers for fortifications.

75,000 volunteers for army of observation for North Atlantic coast

75,000 volunteers for army of observation for Middle Atlantic coast.

75,000 volunteers for army of observation for South Atlantic coast.

75,000 volunteers for army of observation for Gulf coast.

75,000 volunteers for army of observation for Pacific coast.

460,000 total.

"It is believed that at least this number would be required in the case of any war in which we might be engaged. Such an army would require between 20,000 and 25,000 officers."

Lieutenant Foote then discusses the length of time required for the preparation of such bodies of raw troops for a campaign, and concludes, from our past experience, that if former methods should be retained, a period of three months would be needed to equip an efficient body of infantry for the field. He then proceeds to consider in how short a time a foreign nation could make an attack upon us, as that would be a measure of the time allowed us for preparation to meet the attack.

# TIME REQUIRED BY A FOREIGN NATION FOR ATTACK.

"Any one of the great powers has a navy much stronger than ours, and a standing army ready for a campaign as soon as transports could be gotten ready for it. Allow fifteen to eighteen days for embarkation of troops and supplies. To cross the ocean would require, for a great fleet under convoy, twelve to fifteen days. A month, therefore, is believed to be about the shortest time in which a large army could reach our shores after war had been decided upon. Knowing our lack of preparation for war, a nation would make every effort to strike us as soon as possible after a determination once made to do so. It would seem, then, that a month would or might be the longest time allowed us. But that is a shorter time than we have ever been able to get raw troops even tolerably ready for a campaign at the beginning of a war. Any system that will enable us to do so now must therefore be materially

different from any system that we have hereto fore pursued. It is intolerable to think of permitting a devastation of our coasts such as occurred in 1812 while we are getting ready to defend ourselves. How can we prepare our forces to meet the enemy when he may first arrive—in one month's time?

"The vital question before us, then, is not only how can our volunteers be raised and prepared for war, but how can they be raised and prepared for a defensive campaign in one month's time?"

#### MOBILIZATION OF TROOPS.

Lieutenant Foote believes that the only way to equip volunteers in so short a time is to have a volunteer system fully worked out in time of peace, with skeleton regiments named, located, and fully officered, ready to be filled with men on the shortest notice. To show how such a scheme can be evolved under present conditions is the main purpose of his paper. We shall not attempt to follow Lieutenant Foote through the details of his plan, but assuming that the organization has been perfected in accordance with his ideas, the distribution of heavy artillery to man fortifications and of infantry and cavalry in the interior would be as follows:

Portland, Maine, 4 regiments—First, Second, Third, Fourth Maine.

(The ordinal numbers indicate Congressional districts.)
Penobscot River, 1 battalion; Kennebec River, 1 battalion; Portsmouth, N. H., 1 battalion—1 regiment,
First New Hampshire.

Boston, 7 regiments—Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Twelfth Massachusetts.

New Bedford, 1 regiment—Thirteenth Massachusetts.
Narragansett Bay, 3 regiments—First and Second
Rhode Island, Eleventh Massachusetts.

New London, 1 regiment—Third Connecticut.

East end Long Island Sound, 2 regiments—Fourth Connecticut, First New York.

New Haven, Conn., 1 regiment—Second Connecticut. New York harbor, 9 regiments—7 from Greater New York, Sixth and Seventh New Jersey.

Philadelphia, 2 regiments—from the city. Baltimore, 2 regiments—from the city. Washington, 1 regiment—from the city.

Hampton Roads, 2 regiments—First and Second Virginia.

Wilmington, 1 regiment—Sixth North Carolina. Charleston, 2 regiments—First and Seventh South Carolina.

Savannah, 1 regiment-First Georgia.

Fort Clinch and Pensacola, 1 regiment—Eleventh

Key West, 2 regiments—First and Second Florida. Mobile, 2 regiments—First and Second Alabama. New Orleans, 1 regiment—First Louisiana. Galveston, 1 regiment—Tenth Texas.

San Francisco and San Diego, 9 regiments—Seven from California, one from Nevada, one from Utah.

Portland, Ore., 2 regiments—First and Second Oregon.

Puget Sound, 1 regiment—First Washington
Lake ports, 2 regiments—Thirty-second New York
(Buffalo) and First Michigan (Detroit).

Total, 61 regiments of heavy artillery.

Dividing the rest of the territory up into five nearly equal parts, according to population, we have the following:

Army of the North.—New Hampshire, Vermont, Massachusetts, Connecticut, New York, New Jersey, Michigan, Wisconsin; 62 regiments, rendezvous in the vicinity of Albany.

Army of the East.—Pennsylvania, Ohio, Indiana; 62 regiments, rendezvous in the vicinity of Harrisburg.

Army of the South.—Delaware, Maryland, Virginia, North Carolina, West Virginia, Kentucky, Illinois; 57 regiments, rendezvous in the vicinity of Washington and Richmond.

Army of the Gulf.—South Carolina, Georgia, Alabama, Mississippi, Tennessee, Arkansas, Louisiana, Texas; 62 regiments, rendezvous in the vicinity of Atlanta and Vicksburg.

Army of the West.—All the States and Territories west of the Mississippi except Arkansas, Louisiana, and Texas; 57 regiments.

Total, 300 field regiments.

#### WHY THE UNITED STATES NEEDS A NAVY.

A SSISTANT SECRETARY ROOSEVELT contributes to Gunton's Magazine for January a brief article entitled "The Need of a Navy."

Mr. Roosevelt's argument is chiefly concerned with the assertion of an American foreign policy.

and particularly the Monroe doctrine:

"One of the penalties of desiring to speak one's mind is that the man so speaking it must be ready to back up his words by acts, unless he is willing to find himself in a peculiarly humiliating position. This applies just as much to a nation as to an individual. Therefore, if a nation desires any weight in foreign policy of any kind -that is, even if it desires only a guarantee that no foreign nation will adopt toward it a hostile policy—then it must possess the means to make its words good by deeds. In the case of a nation whose interests in foreign affairs are concerned primarily with powers touching it by land, this means that it must be ready to face invasion by land, or, in case of necessity, itself to invade by If, as in the case of the United States, there is no great military empire abutting on the country in question, then it must look primarily to its navy as the means for carrying out any policy on which it has resolved. The United States has on one side Mexico, on the other Canada, it is true, is part of one of the greatest empires in the world; but the British empire, though it has ever been fertile in able generals and gallant soldiers, nevertheless owes its high standing primarily to its navy; and in the very unlikely event of any trouble

between England and the United States, the British forces in Canada and the American navy on the ocean would be almost equally at a disadvantage. Aside from Great Britain, however, practically every other nation which could by any possibility have trouble with us would have to meet us at sea. This of course means that if the United States is to have any foreign policy whatsoever it must possess a thoroughly efficient navy."

Mr. Roosevelt takes the ground that objections to a vigorous naval policy come either from those who are so ignorant as to suppose that no nation will ever fight us because we are so big, and that even if we should be challenged we could fight without preparation, or from men who lack patriotism more than they lack knowledge, and who believe that we ought not to have any foreign policy at all.

#### THE MONROE DOCTRINE.

Concerning the Monroe doctrine Mr. Roosevelt says:

"Either kind of sentiment, either the belief that we can dare anybody to fight, without preparation, or the belief that we ought never to fight or adopt a policy which might lead to fighting, is bad enough, but the result of a mixture of both is even worse; and it is this mixture in our foreign policy which offers a perpetual menare to our welfare and honor. If we build and maintain an adequate navy and let it be understood that while we haven't the slightest intention to bluster or to commit any wrong, yet that we are perfectly ready and willing to fight for our rights, then the chances of war will become infinitesimal, and no power will dream of protesting against the Monroe doctrine. If, on the other hand, we announce in the beginning that we do not class ourselves among the really great peoples who are willing to fight for their greatness, that we intend to remain defenseless, hoping thereby to escape the anger of any one, and that we shall of course refrain from pushing any policy, whether that embodied in the Monroe doctrine or any other, if it can possibly be distasteful to nations who actually will fight—why, under such circumstances we doubtless can remain at peace, although it will not be the kind of peace which tends to exalt the national name or to make the individual citizen self-respecting. But if together with a policy of refusing to fight at need we allow the policy of blustering self-assertion to go hand in hand, we may at any time find ourselves in a very awkward position. We asserted the Monroe doctrine as against Great Britain in the Venezuelan case. Personally I am very glad we so asserted it, but it would be a cause for bitter humiliation if, having once taken this position, we failed again to assert it against any other power, no matter what it might be, which should attempt a policy of territorial aggrandizement at the expense of any State in America."

# THE QUESTION OF AN ISTHMIAN CANAL.

'HE February Harper's has an article by the Hon. David Turpie, entitled "Projects for an Isthmian Canal," in which a succinct but complete history is given of the various attempts to make a waterway across the narrow strip of land between North and South America. All of these projects have had one and the same main design; that is, to make the longest part of the transisthmian voyage through the navigable portion of Lake Nicaragua and the San Juan River, and then to use and control the waters of the lake and the adjacent streams so that they may be safely and permanently navigated as a canal for the remaining distance, westward to the Pacific and eastward to the Atlantic. The Hon. Mr. Turpie has most to say of the last attempt to exploit the canal scheme—that by the corporation styled the Maritime Canal Company of Nicaragua. In 1887 it got concessions from Costa Rica and Nicaragua, and attempted to obtain subscriptions to its capital. In spite of extensive advertising in London, Paris, and New York, there were no subscriptions, as the project, considered as a financial investment, had been black-listed upon every exchange and market in both Europe and America for fifty years before. This company then tried to obtain a charter from Congress, and last year a bill was introduced to subsidize the Maritime Canal Company to the amount of \$100,000,000.

#### THE MARITIME CANAL COMPANY.

At this point the writer calls attention to certain very important and suspicious differences between the estimates of the Maritime Canal Company on the whole and on particular divisions of the work, and the estimates made by the government board of engineers. stance, the Maritime Canal Company says that it can complete what is known as the San Juan River division, of about 69 miles, in which the channel of the San Juan River is to be used as a part of the canal, for \$1,975,000. The estimate of the entirely disinterested government board was \$14,866,000. Taking the whole work, the Canal Company put in an estimate for its completion of \$66,466,880; while the government board put the figure at \$133,472,893, just about 100 per cent. more. The Suez Canal cost \$1,000, 000 a mile, as did the Corinth; the one 100 miles in length and the other 4 miles. engineering problems of the Nicaragua Canal

are easily equal to those of the two above-mentioned works. Hence, since the Nicaragua route is 169½ miles long, it would certainly seem that the government engineers had not suggested an inflated figure. It was these large discrepancies that prevented the last Congress from taking any action on the subsidy bill. And Congress was evidently none too cautious.

#### NO PRIVATE CORPORATION IS NECESSARY.

The Hon. Mr. Turpie considers that there is no reason why the United States should treat with any private corporation, "whose only claim to consideration rests in the total discredit and disaster which have accompanied its attempt in the execution of the work." The Maritime Canal Company has been charged with serious violations of the concessions made by the government in Nicaragua, and still more serious breaches of contract, but neither of the Central American republics involved has made any opposition to the canal enterprise itself or to the general idea of construction of a canal by our Government. "A condition quite fortunate is thus shown," says Mr. Turpie, "because it is not possible that any power could build or operate this ship canal in the country of an unfriendly population. This work is not like that of Suez or Corinth. Those are canals built by excavation on the sea level, as before stated. To destroy them would require the slow process of the excavation of another channel to drain away their water or the filling up of the present one in use. But the Nicaragua Canal, with its double system of locks and dams, would be peculiarly sensitive and liable to injury, by either public or private enemies, as there are many places along the line at which an hour's work with pick and shovel, to say nothing of the use of explosives, would let the water rapidly escape, and so wreck the whole system."

#### THE THREE ESSENTIALS.

The REVIEW OF REVIEWS told last summer of the appointment of the new commission of engineers by Congress, to make another survey and estimate of the cost of construction, to further examine as to the route, and also to report on the whole feasibility of the Nicaragua Canal. The Government is still awaiting the report from these three gentlemen. "Three things," says Mr. Turpie, "are necessary to the consummation of this enterprise: First, funds to be furnished by the Government of the United States. Second, the perfect amity and friendly cooperation of Nicaragua and Costa Rica in the work. a reasonable assurance of its feasibility and of the amount of money needed to construct and complete it."

#### "OUR LATE WAR WITH SPAIN."

THE February Cosmopolitan contains the conclusion of "A Brief History of Our Late War with Spain," which has endeavored to tell what would probably happen if we had come to blows over the question of Cuba. The imaginary historian has described how the German and English nations had combined against the United States, with the final result of the annexation of Canada. As to how this final step came about, the writer says that the President appointed a commission with the task of concluding a treaty of peace that should permit the Canadian provinces to enter the States of our Union.

#### THE ANNEXATION OF CANADA.

"The United States was now in a strongly advantageous position. With an army that numbered more than half a million, rapidly perfecting itself in drill and equipment, with the prestige of the greatest victory of modern times at its back, it might well have assumed a tone of arrogance. But its commissioners went with very different instructions. They were authorized to sue for the independence of Canada and make the offer of one thousand millions of dollars in exchange for the release of the Canadian states from British suzerainty. What would a thousand millions of dollars be to a rich country like the United States in comparison with a longcontinued or even a short contest by force of arms?

"To Spain the sum of two hundred and fifty millions was offered for the release of all claims on the island of Cuba—Cuba itself to become an independent republic and guarantee return payment of the sum advanced as the price of its liberty.

"An argument was made to the British people based on the logical realignment of the frontiers of nations. North and South America must all be within the limits of the American republics; Asia and Africa left to do with as the peoples of those countries and Europe might desire. For the United States of America, no Hawaii, none of China, none of Africa, but all of North America; and South America for the South American republics.

"The details of the negotiation are familiar to all readers. England had her hands full with Chinese and Indian problems. One thousand millions of dollars appeals to the imagination of the public. Our ambassadors came home crowned with laurels. When the news reached Canada, there was rejoicing almost greater than in the United States. From one end of the country to the other Americans rose up and pronounced for union."

CUBA AS A MODEL REPUBLIC.

As to Cuba, no annexation takes place, but the United States guarantees its independence and that island begins a new and very noteworthy life under a regime in which social, industrial, and political conditions can be organized anew by the light of the world's whole experience.

"Unhappy Cuba, decimated by the heroic struggles through which it had achieved freedom, was now to begin a new life. The blood of martyrs was to prove an enduring cement for the archway opening to progress and prosperity.

"With its wonderful resources of climate, soil, and mine, the Gem of the Antilles was sought as a nome by the intelligent of all countries. Especially from the United States, now that order was assured, came an immigration of the most desirable character. England, Ireland, Germany, Switzerland, and Norway contributed of their best to the making of this new republic. iar-off Australia and New Zealand sent their quota, and to these last and to the Swiss we may ascribe the leavening that has made the Cuban Government already an example to the rest of the globe. For it was a curious fact that before the year 1900 New Zealand, which Macaulay at the beginning of the nineteenth century had designated as the land to furnish that civilized man who was some day to sit in meditation over the ruins of London-that this New Zealand, in Macaulay's time a wilderness in the possession of the most barbarous of tribes, had become the foremost of the nations of the earth in its conception of the functions of democratic government.

"The best ideas of all lands were carried by their intelligent sons and built into the laws of the new Cuban republic. It should, they declared, be that government for which Abraham Lincoln hoped—truly a government by, of, and for the people.

"With wise laws and peace, prosperity flowed in upon the land. The indebtedness of two hundred and fifty millions to Spain was quickly paid off.

"It is the fashion in this new nation not only to look with suspicion upon the 'grabber,' but specifically to discourage him. He is regarded as the wolf of society, to be hunted to his lair and either tamed or destroyed. Even in the churches of Cuba greediness has taken its place as the deadliest of sins, inasmuch as it works most harm to one's neighbor.

"How few years have elapsed since the 'late war with Spain' and what changes have taken place! Already the peoples of the earth turn-their eyes for an object-lesson in the highest form of intellectual and scientific government to 'Cuba, the model republic.'"

#### THE NEW YORK PUBLIC LIBRARY.

DR. JOHN S. BILLINGS, director of the New York Public Library, gives in the Outlook a brief sketch of the plans now maturing for the rapid development of that institution.

Work will be begun at once on the proposed building, which is to occupy the old reservoir site adjacent to Bryant Park. This structure will be a modern fireproof library building equipped with the latest improvements and conveniences for readers and having a capacity for the shelving of more than a million volumes. It is hoped that the library may be opened to the public at the beginning of the twentieth century.

#### THE BASIS OF A GREAT COLLECTION.

When the Astor, Lenox, and Tilden foundations were consolidated, two years ago, to form the New York Public Library, there were in all about 365,000 volumes; at present the number is over 400,000, excluding duplicates, the whole forming an excellent general reference library especially rich in American history, Egyptology, English and American government publications, periodicals, transactions of societies, and the literature of the industrial arts for the last thirty years. There are several very valuable special collections on various subjects. Dr. Billings says of the library as a whole that it contains "comparatively little fiction and an unusually small amount of rubbish, and while it does not contain so many volumes as the Congressional Library or the Boston Public Library, it is probable that the three libraries are about equal in value to the scholar and the investigator."

The main purpose of the library is and must continue to be educational. "At present it provides more especially for high-school, college, and university graduates, for advanced students, authors, and teachers, for the historian, the statistician, the scientific investigator, and the scholar. All this it must continue to do, and in its new building arrangements are made to secure ample access to books and quiet for this class of readers, by means of special reading-rooms in which collections of books on special subjects may be freely used, while the users are not annoyed by sightseers or those who come for amusement only.

#### NEW FUNCTIONS OF THE LIBRARY.

"In its new field-of work the library is to provide also for instruction in the lower grades for the great mass of the people. It is to be a common school and a high school as well as a university. It is to circulate books as well as to offer them in its reading-rooms; it is to provide for the children as well as for the adults; it is

practically to become a part, and a very important part, of the free public-school system of the city.

"For a very large part of the community it is also to furnish the means of recreation and amusement; and a very considerable part of its educational work must be done through these means. In the new building these means include the large room for children, well supplied with the most interesting books; the periodical-room, with its 2,000 current journals; the picture gallery and the other art collections on the upper floor; and they must form an important and carefully considered part of the lending department, so that the pleasure may extend to the homes of the users."

Dr. Billings is fully aware that the mere establishment of the library in a great central building will not in itself accomplish the great end in view—the circulation of the books among the people. He recognizes the need of branches, and as each branch can properly supply with books only those living within half a mile of it, he estimates that between thirty and forty such branches will be required in New York City.

#### THE IDEAL PUBLIC LIBRARY.

Dr. Billings outlines his views as to what such an institution should be in the following paragraphs:

"A great library like this must be omnivorous; it should have the rare and costly books which are otherwise inaccessible to scholars, and it should also have the ephemeral pamphlets of the day which have no commercial value when they appear, but which ultimately become historical documents, to be sought for by some anxious inquirer.

"It should be a huge encyclopedia, kept always up to date; it should have a special newspaper fund like that recently given to the Boston Public Library; it should have the published reports and documents of every country and great municipality and of every corporation and association in the city of New York; it should have the latest records of science, technology, and art, as given in journals and transactions of societies; and it should have the means to have all these things rapidly catalogued, indexed, classified, and made promptly and fully accessible to all inquirers.

"Moreover, it should not wait passively for inquirers, but should strive to create them, to educate the coming generations in the desire for and use of the best books which contain the best thoughts of the wisest and best writers of all countries and of all times."

It is surely to be hoped that Dr. Billings' ideas will take on a material form in New York.

# DAUDET THE MERIDIONAL.

THE February Bookman publishes a critical sketch of the late Alphonse Daudet written by Adolphe Cohn, to whom the novelist appeals first and strongest in his character of méridional—the one genuine méridional among the men of letters of his country.

"The course of history has given France such a strong, compact, national unity that we easily forget how discordant the elements were out of which French nationality has been formed. That there once was a Northern France and a Southern France which harbored none but feelings of enmity toward each other; that these two countries, wholly dissimilar in language, in institutions, in religious and ethical views, once fiercely rushed upon each other; that the Northern Frenchman was in the South hated as a ruthless conqueror, an ignorant and contemptuous destroyer of everything that was held dear and beautiful in the conquered country, is now all but forgotten, save by the close student of historical records. The South, it need hardly be said, gave to France afterward many a brilliant intellect, more, perhaps, than the North. the sons of the South were taken hold of by the new nationality that resulted from the blending of the two halves, and are thought of simply as Who thinks of the méridional in Frenchmen. Thiers and Mignet, in Montaigne, in Montesquieu, in Guizot? Even Gambetta's exuberance is ascribed, and not unjustly, to his Italian father's more than to his Southern French mother's blood. In Daudet the Southerner, the Provençal, is discernible nearly in every line that he It is the sunshine of his native Provence that illumines his works and gives them the peculiar warmth which is one of their most attractive features. Oh, to be sure, he is a Southerner of a peculiar kind! He is not a Gascon; he does not, as the hero of the popular story, wonder that the river Garonne, or the Rhone, even, could give out enough water to fill all the seas The Provençal that was in him had and oceans. become a Parisian too, endowed with that keen sense of the ridiculous which is carried on the banks of the Seine farther than anywhere else, and sometimes altogether too far. The Parisianized Daudet could look from outside at the natives of his dear Provence, or else Tartarin never would have appeared. But his conception, if not of life itself, at least of that which makes life worth living, which makes it beautiful, remained Southern to the last; to the last his favorite music must have been the scraping of the cigales' wings, his favorite library that Bibliothèque des Cigales of which he speaks in one of his most charming stories."

# THE FIRST OF FRENCH HUMORISTS.

" Clearness and completeness of vision, perfect accuracy of statement, and sympathy-these are the qualities that made Daudet, perhaps, not only the novelist and story-writer that he is, but also the first of French humorists. It has been said not seldom that the French have wit, but no humor. While true in general, we doubt whether an exception ought not to be made in favor of a few quite modern authors, at the head of whom Daudet stands preëminent. Who would realize the difference between humor and wit need only pass from the perusal of the Tartarin volumes to almost any of Edmond About's short stories. About's wit is simply irresistible, and laughter comes up to our lips and eyes whether we wish it With Daudet it is simply an amused and kindly smile. We see this big Southern, funloving, bragging Tartarin uttering lies as big as houses, first among his own townspeople, whom he does not expect to believe him any more than he believes himself, then among other people, who first take him at his word, and whose contempt he cannot understand after they have found that his heroism is all Southern froth, and no more; all his ethical vagaries amuse us like the gambols of some big fishes. We do not want him to hurt himself; but we feel he is not exactly a man after our own likeness. Daudet knows all that and tells us: 'Look at him, all the same. He is not useless; he'll bring into your life a ray of his Southern sunshine, provided you do not take him au sérieux.' No wonder the Tarasconese never forgave him for making their small town the special home of this peculiar branch of the genus man!"

# DAUDET'S FINAL SIGNIFICANCE.

He remains, then, first of all, perhaps, a master of French prose, of a highly musical prose, lighted up with a dash of poetical radiance; a careful and interested observer and describer of life, of that inner life which is called fancy, as well as of the outer life by which we are uninterruptedly surrounded; a kindly and sincere humorist and in many respects a creator of types. Posterity will lull itself in the mirth and poetry of his light sketches, read one or two, perhaps three, of his novels, and once in a while gaze with some wonder upon the features of the illustrious Tartarin de Tarascon's father.

Let us add here—for in forming an estimate of the man these facts ought not to be forgottenthat Duudet was not one of Fortune's enfants gates. His beginnings were as humble as well could be. It took him years of the hardest work so to master his natural gifts as to be able to turn them into agents of literary production. His first really

great success he won when already thirty-four years of age, and ten years later he felt the first painful symptoms of the terrible ailment which has just carried him off. And yet he was a happy man, because he carried in himself, in his loving heart, and in his sympathy for everything that has received the inseparable gifts of life and suffering the source of his own and of his associates' happiness.

#### HEINRICH HEINE.

#### Centenary of the Poet's Birth.

IN December all the world celebrated the centenary of the birth of Heine, and, it need scarcely be added, many new additions to Heine literature are the outcome of this event. In June and July Dr. Ernst Elster contributed to the Deutsche Rundschau an article with a number of unpublished Heine letters, and these were translated at great length in the Revue des Revues; and in the Deutsche Revue of August Herr Gustav Karpeles had another article with a number of letters. A French view of the poet and his influence in France, by M. Edouard Rod, appeared in the Bibliothèque Universelle in July.

### WHEN WAS HEINE BORN?

This may seem rather an odd question at the time of the centenary celebration of Heine's birth, but in the minds of some there is still some doubt as to the real birth-date. Prof. Hermann Hüffer, who writes in the December number of the Deutsche Rundschau, entitles his article "When was Heine Born?" and endeavors to solve the problem.

The year varies from 1797 to 1799. The register of Jewish children born in Düsseldorf between 1797 and 1808 contains only thirty names, and those of the Heine family are so incomplete as to warrant the conclusion that the entries were simply made from memory. Heine's baptismal register (1825) the date of birth appears as December 13, 1799; and in the marriage certificate (1841) the birth-date becomes December 31, but the latter is generally regarded as a mere writer's error, in which the figures have been transposed. Dr. Elster, Heine's biographer, gives 1797 the preference, the baptismal register and marriage certificate notwithstanding; but Maximilian Heine, Proelss, and others abide by 1799. After all, the exact date of birth is not the most vital question, and Heine himself says in reference to this very matter, "The most important thing is that I have been born."

# HEINE IN GERMANY.

Another absurd controversy has raged round the question of a monument to Heine at Düsseldorf, his native town. This is refused because Heine scoffed at German politics and showed partiality to the French—surely a very pardonable sin, since France was good to him, translated his works which were prohibited in Germany even before they were published, and did not taunt him with his Jewish origin. The most "patriotic" of the Germans who will have none of the monument would probably be the first to admit the loss Heine would be to German literature could his writings and his influence be taken away.

In all collections of German lyrics Heine occupies a foremost place, and in Germany scarcely any poet is more sincerely worshiped. The numerous editions of his poems afford ample testimony of this. Among the new contributions to Heine literature is the "Heinrich Heine Breviarum," or Heine's life in his songs, edited by Herr Richard Schaukal, and published by Herrn Fischer & Franke, at Berlin. In this collection the editor has followed Dr. Elster's famous edition of Heine's Collected Works, and has arranged in chronological order the poems selected, so as to present through them a faithful picture of the poet's life.

#### PROFESSOR DOWDEN'S ESTIMATE.

The December number of Cosmopolis was almost a Heine number. Besides Mr. Israel Zangwill's imaginary dialogue, entitled "From a Mattress Grave," there are three centenary retrospects, and Heine is criticised from English, French, and German standpoints by Prof. Edward Dowden, M. Edouard Rod, and Herr Karl Frenzel respectively.

Professor Dowden's article is a character sketch of Heine the man, and the following brief quota-

tions are taken from his pages:

"To be born with diverse souls is embarrassing, but it was Heine's distinction. It signifies that life is to be no steadfast progress, directed by some guiding light, but a wavering advance through a countless series of attractions passing into repulsions, and of repulsions transformed into attractions. . . . With Heine, unity did not underlie diversity, but, as far as it existed, rose out of diversity as a last result. When his parents named him 'Harry,' one is surprised that the baby did not smile ironically and protest, 'My name is Legion, for we are many.'"

There were times when Heine revolted against Judaism, and there were times when he revolted against Christianity, yet he maintained that the Christian religion had been a blessing to the

human race. Professor Dowden adds:

"Heine was cosmopolitan; he had tried to persuade himself that there are no longer nations in Europe, but only two great parties—the party of progress and the party of retrogression. The great cosmopolitan, he thought, was Jesus Christ.

"He belongs to the race of skeptics, but he is a skeptic who inquires, a skeptic who hopes. He felt the need of a religion of joy and also of a religion of sorrow, and he states the case on behalf of each. He felt that the political future belongs to the populace—they have fortunately, or unfortunately, a right to eat, but he would preserve the higher rights of an aristocracy of intellect.

"One feeling rich in virtue, and perhaps only one, lay during all his life in Heine's heart pure and unmingled. His one unmingled felicity was in his affection for his mother. It was for her he wrote in youth those sonnets which tell how he had wandered far and fruitlessly in search of love, and had found it at last in her dear eyes. It was for her sake long afterward that he concealed the terrible ravages of his malady, and wrote those letters, cheering and caressing, which brought her bright news of Paris and her son."

#### TRANSLATIONS AND MUSICAL SETTINGS.

Germany may well be proud of the prominent place in world-literature which Heine occupies. No poet has been more translated, and no poet, perhaps, was ever so untranslatable. Among the well-known translators who have tried their hands at rendering Heine in English may be mentioned Mrs. Kate Freiligrath Kroeker, Miss Alma Strettell, Sir Theodore Martin, Charles Godfrey Leland ("Hans Breitmann"), John Todhunter, George Macdonald, Ernest Radford, Dr. Richard Garnett, Emma Lazarus, the late Lord Houghton, Mrs. Emily Pfeiffer, Francis Hueffer, James Thomson ("B. V."), Lady Duff Gordon, and many others.

In No. 3 of the Quarto, the only number issued in 1897, is a translation of Heine's "Neuer

Frühling" by Mr. T. Staats.

With regard to the musical settings of Heine's songs, it is interesting to learn that a bibliography of them has been compiled by Challier (1885-86) showing over 3,000 compositions. Goethe comes far behind with 1,700; and the other German lyric poets are nowhere beside these two. settings of "Du bist wie eine Blume" number 160; "Ich hab im Traum geweinet" and "Leise zieht durch mein Gemüth," each 83; "Ein Fichtenbaum steht einsam," 76; "Ich weiss nicht was soll es bedeuten," 37; and this was more than ten years ago. And who are the composers who have been inspired by Heine's beautiful words? Schubert, Mendelssohn, Schumann, Brahms, Robert Franz, to name only a few who at once recur to the memory.

# THE LATE JUSTIN WINSOR.

In the January number of the American Historical Review the place of honor is given to an article on Justin Winsor, Harvard's librarian, who died in October last, and whom the writer, Prof. Edward Channing, characterizes as the foremost student of American history and the foremost American librarian.

Professor Channing was on terms of intimate friendship and constant association with Mr. Winsor, and was familiar with that historical scholar's methods of work. The following passages from his article are of special interest:

#### HOW WINSOR GATHERED HISTORICAL MATERIALS.

"Even before entering college Winsor began the serious study of history, and during his freshman year saw his first book through the press-a 'History of Duxbury,' his ancestral town. His taste for this class of pursuits grew rapidly and he determined to devote his life to them. soon thought out a scheme of note-taking and continued to accumulate memoranda, on the lines thus early laid down, for a period of nearly forty years—until within ten days of his sudden and untimely death. Ordinary antiquarian inquiries, the study of constitutional topics, and the elucidation of important problems in our political history had slight interest for him. On the other hand, bibliographical and cartographical details which bewildered most students only charmed him. Whenever a book having anything to do with American history passed through his hands he carefully noted everything new in it, and especially any reference to new material; whenever he handled a map of America or any portion of it he remarked its peculiar features and illustrated his notes by a sketch. Once a week he arranged a memoranda collected during the week and filed them away in portfolios or in boxes; in later years he used many of them to annotate interleaved copies of his own works. All this he did by personal labor, for he always maintained that a historical student to accomplish anything of value must handle all the books and papers with his own hands. This method, persistently pursued through a long series of years, brought together a mass of information not only unequaled in the annals of American historical labor, but already in suitable form for easy use."

Much of this material was made available to students and general readers in Winsor's "Memorial History of Boston," "Narrative and Critical History of America," and "Columbus," which Professor Channing declares to be "the three best books of their classes yet produced in this country or elsewhere," and in the series of volumes devoted to special epochs in American

history, the last of which, "The Westward Movement," has been published since the author's death and is noticed elsewhere in this number of the Review.

#### PERSONAL QUALITIES.

Mr. Winsor was always ready to open his stores of knowledge for the benefit of all who could make use of them.

"Although an exceedingly industrious man he was a most sociable man; he liked to see other persons and to talk with them or, when this was not possible, to correspond with them. While at the Boston Public Library he trained himself to interruption, stopping his pen in the middle of a sentence instead of at the end. In this way he was able to take up the unfinished thought at once upon the departure of his visitor. It happened, therefore, that one no sooner appeared within the door of his room than his pen was laid aside and the inquisitor, whom many men would have dreaded, greeted with a cheery 'Sit down.' Whatever Winsor knew of American bibliography or of library methods was at his questioner's disposal; if the desired information could not be given at the library he looked up the point at his house, where his memoranda were kept, and at once sent a note to his questioner. Unknown inquirers from a distance received the same cordial attention, and an enormous amount of time was devoted to answering them. He also had the reputation of a wide acquaintance with men and of being an excellent judge of them. His advice was constantly sought in the selection of librarians, authors, editors, secretaries, and teachers, and it was always cheerfully given; the number of persons who owe their present positions in part at least to his friendly counsel is very large."

#### THE CHOICE OF A PROFESSION.

N the February Cosmopolitan President E. Benjamin Andrews has an essay on "The Selection of One's Life-Work." In general he has no advice to give except "Follow your bent. If the subject possesses various species of ability, but is peculiarly brilliant in some one, this, his main forte, is the thing to give him his cue." President Andrews is inclined to give a good deal of weight to the judgment of acquaintances, especially when a young man inclines to a profession through some whim and not from any kind of rational consideration. These acquaintances might be better advisers than one's parents, who may devoutly wish their son to be a minister, and therefore take it for granted that this was his appointed destiny. But where there is one young man who is foolishly bent on a particular calling, President Andrews thinks there are a great many who are hesitant and timid, and willing to believe themselves incapable of following a particular profession which they would take had they the courage. Taking the chief professions in detail, President Andrews has a great deal of good to say of the ministry as a distinct profession. He says that some young men evidently think that to secure ordination or retention in the ministry after ordination he must slavishly follow some creed. This may have been so, says President Andrews, "but the danger is rapidly lessening, being now rare, local, and ready to disappear."

#### THE LAW AND BUSINESS.

Of the lawyer's mission, this writer has a strong word of defense as against those people who fasten the sins of a few unscrupulous men on the whole profession. "Perhaps one in a. thousand real criminals would secure fair treatment if undefended; but the vast majority, were there no friendly scrutiny of the evidence against them, were they left to be dealt with, free from all check, by the average jury or judge, liable to prejudice, passion, or both, would inevitably receive sentences undeservedly severe. And taking a great many cases together, it is probably best that the guilty man's counsel should not only plead all palliating circumstances, but should go further and place the client in the most favorable light which can be thrown upon him. way justice is sometimes foiled, it almost certainly gains on the whole." Nor does President Andrews think that it is right to make a sweeping condemnation of business life on the ground, often maintained, that to assure success in business as it is now conducted, it is necessary to resort to immoral and dishonorable practices. "Fraud and underhandedness are doubtless common in most businesses, yet we can see, looking in any direction, respectable competences built up, no dollar of which is in any wise tainted."

President Andrews seems inclined to engineering professions as, generally speaking, most attractive in the present outlook on future demand and supply.

#### ENGINEERING IS A GOOD FIELD.

"If there is a profession which more safely than any other can be recommended as peculiarly enticing in itself, vastly and directly useful to mankind, and not as yet overcrowded, it is engineering in its various phases and branches—civil, chemical, mechanical, electrical, mining, sanitary, hydraulic. Engineers' work, the subjection of man's material environment to man's service, is only well begun. It must and will go on, and it will go far very soon. Probably no man liv-

ing has more than the faintest foregleam of the development which even the next fifty years have in store for this feature of our civilization. force working here will have to be vastly enlarged. Only, be it observed, numbers are here as elsewhere of much less consequence than quality. If thorough preparation for one's profession is always important, as is certainly true, it is specially vital to success in engineering, where so much depends on exact knowledgewhere mathematics and acquaintance with physical laws figure so conspicuously. Besides being in a high degree both useful and intellectual, engineering is a form of activity in which, if you are thoroughly qualified for it and unremittingly industrious, excellent remuneration may be expected, and that without resort to doubtful de-

# POLITICS AS A PROFESSION.

"At the risk of offending some readers and surprising more, we venture, lastly, to speak of politics as in itself a highly desirable profession. Good citizens who are so situated that they can compete for public office ought to be encouraged to do so. No more useful career is possible in this age than is presented by politics conscientiously prepared for and pursued. The common thought that it is mean to seek office or to accept an office unless it has sought the man is wholly perverse. We need that hosts of thoroughly able and moral young men, well trained in political and social science, including ethics, should set politics before themselves as their lifework. Do not sneer at professional politics if only it is of the right kind. Politics ought to be Rightly followed, it would be a a profession. noble one."

# THE CAMBRIDGE UNDERGRADUATE.

A N OXONIAN" describes Cambridge University in Blackwood's Magazine for January. What he says about undergraduate life at that ancient seat of learning is not without interest to the American university student:

"The average undergraduate loathes eccentricity as much as he loathes affectation; he is thoroughly healthy both in mind and body and 'perfectly normal.' He reads just as much or just as little as is necessary to get him through the schools; prefers talking to working; smokes perhaps rather more than is good for him; has a splendid appetite, but drinks very little wine except on rare occasions; plays 'footer' with immense energy; bikes, practices at Fenner's, or takes a spin on the upper river; plays a little billiards, and perhaps runs over to Newmarket now and then; belongs to the Athenseum or the

Pitt, where he pays a guinea a term for the privilege of spoiling six-pennyworth of note-paper; and goes occasionally to the New Theater to see 'Niobe' or the 'Geisha' or perhaps appears himself as an Argive elder or as one of the chorus in the 'Wasps.' Or, again, he may patronize with good-humored tolerance and contempt the meetings got up by faddists and reformers; though he is sometimes a little hazy as to the antecedents of some of these fin-de-siècle apostles and prophets, and has been known to be under the impression that Mrs. Ormiston Chant founded Newnham, that Mr. Ben Tillett was once a famous pugilist, and that General Booth either kept a public-house in his youth or—if not that -was a celebrated actor. On the whole, in spite of deans, proctors, college by-laws, and November fogs, an undergraduate's life is wholesome and healthy like himself, and he enjoys himself amazingly."

# IS PHOTOGRAPHY AN ART?

"IS Photography an Art?" is the question which M. Robert de la Sizeranne puts in the first December number of the Revue des Deux Mondes. He means, of course, is it a fine art? for no one would be found to deny that photography is an art in the sense in which acting or carpentry is an art.

#### THE OLD AND THE NEW PHOTOGRAPHY.

M. de la Sizeranne begins with an amusing description of the astonishment and indignation with which an old-fashioned photographer would regard the goings-on of his modern successors. We have abolished the frosted glass roof, the elaborate arrangement of curtains, the clawshaped machine for holding the victim's head in position, the rustic bank, the broken column, the talustrade, the cardboard rocks, the painted cascade, and all the other "properties" which figure a) largely in family photographic albums. photographer, too, is changed. He no longer terrifies squads of children or newly married couples clasping hands convulsively to the great danger of far too tight gloves, with his peremptory order to keep still. The mysterious black shroud in which the old-fashioned operator enveloped both himself and his machine has also disappeared. The modern photographer no longer shuns artists, or condescendingly instructs them in the attitudes really taken up by a man walking or a horse trotting. He mixes with them with the humility of a disciple anxious to profit by the experience of his masters. visitor to the recent exhibitions of the Photo Club. the Link Ring, the Camera Club, or

the Société Belge de Photographie comes out with the feeling that he has been in the presence of an art modest enough, but only half-created, babbling the first words of an unknown tongue. But there are the art critics who prove conclusively, at least to their own satisfaction, that photography could never give results equal to those of etching or charcoal-drawing. How, then, can we solve this problem?

#### DEFECTS OF THE SUN-PICTURE.

In the first place, let us admit the faults which have caused photography to be despised by artistic minds. It exaggerates perspective, is blind to delicate shades of color, and passes over effects of capital importance, yet enumerates details with the irritating exactitude of a Blue One might as well, one thinks, hope to realize the beauty of a landscape from a mere enumeration of the owners of the land. But let us candidly admit that these faults were largely due to the erroneous ideas of the old-fashioned photographers. They turned their backs on the sun, aimed before all else at clear definition, and even sought by mechanical devices to put on the plate more detail than the naked eye could possibly see from the position of the camera. moment that men of taste came and took photographs, they produced fine, delicate, and harmonious work. The photographer ceased to be a maker of inventories, determined to spare us not a single leaf, blade of grass, brick, or hair. He no longer wished to define everything clearly; he felt the charm of the undefined or the halfdefined as giving scope to the spectator's imagination. But is that enough to make photography a fine art? It is well, certainly, to have got rid of certain defects; but does not a fine art demand in addition certain positive qualities—above all, the presence, not of a machine, but of the worker's hand?

#### MIND VERSUS MACHINE.

Of course it is not fair to compare photographs with oil-paintings or water-colors. They must be compared only with pictures in black and white, or in one color almost black shading off into another almost white. In short, we must only think of drawings in chalk, India ink, sepia or charcoal, etchings, engravings, and perhaps certain cameos. The question then is this: Is the part played by the photographer sufficiently great to make his work a "production" and not a "reproduction?"

The photographer "comes in," so to speak, at three different moments. First, and most important of all, he chooses the moment for exposing his plate. This apparently simple act is really that first step which proverbially costs so

It means that he has posed his figure or figures to his satisfaction, or that he has at last caught that conjunction of light and shade which in his opinion will best enable him to render the beauties of a landscape. M. de la Sizeranne quotes copiously from Mrs. Cameron's "Annals of My Glass House"—how, in photographing such men as Thomas Carlyle, she always sought to render not only the external body, but the great mind within, to such an extent that, as she herself says, every photograph taken in that way was almost the personification of a prayer. not all the scornful art critics themselves judge pictures and statues by the choice of subject and the arrangement of the object or objects represented? The second point at which the personal intervention of the photographer counts is in the development of the plate, and there the difference between a good and a bad photographer is perhaps most clearly exhibited. And when the plate is developed, the merely professional photographer hands it over to his assistants that they may pull proofs from it. Not so the artistic photographer. He "comes in" a third time and devotes himself to making a finished picture of the proof which he is about to pull. The plate is the work of the machine, but the proof, like style, is the M. de la Sizeranne tells a story of two photographs which he saw by M. J. H. Gear called "Étude" and "Matin Argenté," country landscapes. A superficial inspection showed the incomparable superiority of the second, but a closer examination revealed the astonishing fact that they both represented the same scene and were in fact taken from the same plate!

It is evident that the mind plays an increasing part in the production of artistic photographs. "Why," asks M. de la Sizeranne, "should we call a man an artist who produces pictures with a bit of charcoal, and deny the title to another who produces pictures by intelligently availing himself of a ray of the sun?" We have no space to follow M. de la Sizeranne through his interesting descriptions of not a few modern photographs, in which imagination, romantic perception, in fact all the qualities understood by the term "fine art," are discernible. The important point to note is that the photographer is, at least, as much or as little under the dominion of his mechanical apparatus as the etcher or the engraver.

#### THE NEW SCHOOL.

The new school of photographers expressly disclaim any intention of setting up a separate æsthetic of photography; they insist on submitting to the recognized rules of the graphic arts. They study nature with the devotion of the Barbizon school; they aim at breadth of effect, at large

masses—in short, at the supremely artistic presentation of whatever they choose to portray. How is it, then, that in France there are only ten or twelve, and outside of France only some thirty, photographers whose work deserves to be compared with acknowledged works of art? M. de la Sizeranne's conclusion seems to be that photography is yet in its infancy, and that if it is not an art to-day it will be to-morrow.

# ELECTRICAL ADVANCE IN THE PAST TEN YEARS.

M. ELIHU THOMSON, the electrician, endeavors to sum up, in the January Forum, the more important items in the electrical development of the past decade.

One of the most conspicuous applications of electricity to-day is the electric motor in use so generally on street railroads. It is hard to realize that in a convention of street-railroad men held so recently as 1887 a discussion of electric traction was vigorously criticised as a waste of time which might have been better applied to "practical" subjects! Yet Mr. Thomson assures us that such was the fact:

"In fact, the contention was that the care and feeding of horses should take precedence of so unimportant a subject as electricity considered as the motive power of a car system. Yet in less than five years from that time the horse question had everywhere become an exploded one. A convention of the same association in the present year assumed in its papers and discussions the universal application of electricity to street-car propulsion. Had the advent of the electric railroad marked the only great advance within the ten years just passed, that period might still be well characterized as one of great technical progress in electricity. Had the decadence of horsetraction occupied a much longer period than it did, the advance could justly be deemed rapid.

"Many of the largest street-railroad systems were transformed in a few months' or in a year's time. The advance still goes on by extensions of existing lines, by the establishment of additional interurban and suburban traffic facilities, by the increase of equipment, and by the steady improvement in the quality of that equipment."

# ELECTRIC LIGHTING AND THE ALTERNATING CURRENT.

"The period since 1887 has been marked by great extension in electric lighting by both arc and incandescent lamps. Prior to that year only the largest cities, broadly speaking, possessed any electric-lighting service. Now, however, even the smaller towns have their electric stations, their arc lamps for street lighting, and the smaller incandescents for general use. The same wires or mains frequently supply both kinds of lights. The incandescent lamps in use in the United States are numbered by millions; and there are several hundred thousand arc lamps besides. There are in operation nearly 3,000 electric-light-supply stations, and these, together with isolated electric plants, represent a capital of about \$500,000,000.

"One of the chief factors in this great extension has been the application of alternating electric currents, or currents of wave-like nature, reversing their direction many times in each second. The direct or continuous current had previously occupied the field alone." But the alternating current possessed the advantage of readily permitting the sending out over a long distance of a high-pressure current with but little loss and by means of comparatively small and inexpensive lines. This current, relatively dangerous, could then be exchanged for a safe low-pressure current on the house mains for working the lights.

"The device which makes the exchange is called a transformer. It is in reality a modified induction coil—a simple structure of copper wire, sheet iron, and insulating materials, with no moving parts to need attention or to get out of order. The properties and use of the transformer in an alternating-current system were comparatively unknown before 1887; but since that time it has played a part in electric development the importance of which cannot easily be overestimated. It has been furthermore brought to a high degree of perfection by the persistent and painstaking effort of numerous workers."

# DEVELOPMENTS AT NIAGARA.

At Niagara Falls we find a remarkable instance of the varied uses of electric energy.

"We find the power of huge water-wheels delivered to the massive dynamos for giving out electric energy. This energy is variously employed. The electric lighting of the city of Niagara and surroundings and the electric railroads naturally depend upon the water-power. Besides these, which may be termed the ordinary applications of electricity, there are clustered at Viagara a number of unique industrial establishlents, the importance of which will undoubtedly icrease rapidly. In the carborundum factory w find huge furnaces heated by the passage of eletric current, and attaining temperatures far beand those of the ordinary combustion of fuel. The electric furnaces produce carborundum a nw abrasive, nearly as hard as the diamond, whit is a combination of carbon and silicon, unknwn before the electric furnace gave it birth.

Sand and coke are the raw substances for its production; and these are acted upon by the excessive high heat necessary to form the new product, already in extensive use for grinding hard materials.

"The metal aluminum, which not many years ago cost \$2 an ounce, is now produced on a large scale at Niagara, and sold at a price which makes it, bulk for bulk, cheaper than brass. again, electricity is the agent; but in this case its power of electrolyzing or breaking up strong chemical unions is employed. Great vats containing fused compounds, such as fluorides of certain metals in which the aluminum ore is dissolved, are arranged so that a powerful electric current sent through the fused mass separates out the metallic aluminum. The metal is then collected and cast into ingots for shipment, or is rolled into sheets or rods, or drawn into tubes or wire."

# THE "STEP-UP" TRANSFORMER.

The long-distance transmission of electric power is accomplished by means of transformation of the current. The high-pressure line extending from Niagara to Buffalo affords an example.

"In this case, 'step-up' transformers, as they are called, are employed at the Niagara power plant to step up or raise the electrical pressure or potential from that given by the dynamos to that required for the transmission to Buffalo. transformation is from about 2,500 up to 10,000 At the Buffalo end the reverse process is carried on by 'step-down' transformers, and the energy is delivered to the trolley lines at about 500 volts. At Buffalo the 'step-down' in pressure is accompanied by a conversion of the alternating current into a continuous current in one direction or a direct current. It would require too much space to explain the meaning of these technical designations of the kinds of current, and they are referred to here solely to illustrate the extreme flexibility of electrical work as lately The whole Niagara plant has grown developed. into existence within the past five years and as a consequence of the technical advances within the period of the past ten years. There are, however, in active operation, besides the Niagara power plant, several other water-power transmissions, some of them far exceeding in distance that between Niagara and Buffalo, and some in which the amount of power conveyed, as well as the pressure of the current used upon the line, is much greater than is yet to be found at Niagara."

### EMPLOYMENT OF ELECTRIC HEAT.

Mr. Thomson mentions several industries in which the part played by electricity, although vitally important, is not evident in the finished

The heating power of the electric current is utilized in many ways. Electric welding machinery has worked great changes in various manufactures.

"As an instance, it may be mentioned that the solid rubber tires of carriages are held in place by wires welded into bands by electric welding machines built for the purpose. Similarly, carriage hardware, axles, wheel-tires, parts of bicycles, parts of machines, tools, and innumerable other articles are made. Metal bands for pails, tubs, and barrels are now largely made by electric welding. Even steel tubes for bicycle and vehicle frames are formed by the same means, and new industries are based upon it. ous and instructive instance of the adaptability of electric methods to new uses is seen in the annealing of armor for war-vessels. A serious difficulty arose in the application of armor-plate having a hardened face and known as harveyized armor. It was found almost impossible to drill or cut holes in the face—an operation frequently rendered necessary in the construction of an ar-Various methods of annealing or mored ship. softening the spots where the plate was to be drilled were tried, with indifferent results. construction of some of our battleships was delayed on account of this difficulty. It was overcome by a special electric method, with appropriate machinery somewhat resembling that used for electric welding, capable of heating to redness the desired spots in the face of the heaviest armor-plate, and of automatically reducing the heat of the spots so as to anneal them. heating and control of the cooling is perfectly brought about, in spite of the enormous mass of cold metal surrounding the portion under treat-Together with electric welding work, ment. this armor annealing is a striking instance of the extreme localization of heating in metal, possible only by the delivery of electrical energy and its conversion into heat at the desired point. electric welding the electric heat is sharply localized at the weld itself, softening and uniting the pieces, the operation being under the same perfect control as in the armor annealing referred Before the advent of the electric process iron and platinum only were known as the weldable metals. Afterward all metals became capable of welding under electric treatment."

" Electric heating is now applied in many ways. There are electric cooking-utensils, sad-irons, soldering-tools, etc., while many street-cars are provided with electric heat in winter. The chief bar to the employment of electricity for general heating is the fact that in using coal to develop power by steam-engines 85 to 90 per cent. of the heating value is lost in the boiler and engine."

# MUNICIPAL LIGHTING IN SMALL CITIES.

HE current number of Municipal Affairs contains two valuable articles on municipal electric lighting, contributed by Mr. R. R. Bowker and Prof. John R. Commons.

Professor Commons, who is an advocate of municipal ownership, gives the following explanation of the comparatively rapid success of municipal electric lighting in the smaller cities:

"In electric lighting the process of municipalization is as yet mainly in the small places. While but three cities over 100,000, according to the census of 1890, have municipal electric plants, it appears from the list of 64 cities with municipal plants, as given by Mr. Francisco, that 29 have less than 5,000 population, 19 from 5,000 to 10,000, making a total of 48 or three-fourths under 10,000; and 14 range from 10,000 to The fact that the preponderance lies so largely on the side of the small cities and villages is sometimes advanced as showing that large cities are not competent to undertake this func-While such a conclusion is of course not logically warranted, there are patent reasons why municipal ownership should achieve its first success in the smaller municipalities. Here, as I have already said, government lies close to the The officials are known to every one. They cannot retire under the shield of their They are acfriends and party councilors. cessible to the personal complaints of every one. In large cities newspapers do the complaining, and everybody discounts these as the organs of partisanship or corporate jobbery. The people do not come in contact with their But it is otherwise in the small cities, officials. and the result is a constant effort on the part of officials to meet the demand for efficiency and economy.

"The voting constituency, too, has a preponderance of small property owners, the thrifty and independent middle class, who have always been the bulwark of popular government. There are no multi-millionaires on the one hand and no overwhelming array of wage-workers dependent upon them upon the other. This relieves the community both from the machinations of a few rich men who in every city use their power to ex ploit their neighbors, and whose interests ar, therefore, against honest government; and alo from the blind struggles of the working classesto secure through politics those advantages ad liberties which they are unable to obtain in industry. This makes both the administratic of the civil service a simple matter, and the burs and wages of labor in public employment conform to the most exacting conditions that btain in private industry."

# THE INDUSTRIAL ADVANCE OF GERMANY.

R. MICHAEL G. MULHALL, the statistician, contributes to the North American Review for January an account of the industrial progress made by Germany since the formation of the empire in 1871.

Germany's development, especially in the last twenty years, Mr. Mulhall regards as relatively greater than that of any other country in Europe, notwithstanding the burden of an immense military establishment and a geographical position inferior to that of England, France, Spain, Portugal, Belgium, Holland, Italy, or Turkey.

From 1875 to 1895 the natural increase of population was nearly 12,500,000, or about 30 per cent. About one-fourth of this increase emigrated, leaving a net gain of 9,500,000. The population of cities almost doubled, while the gain in the rural districts was only 13 per cent. It seems, too, that the large cities have grown much faster than the smaller ones, as is shown in the following table:

			Increase.
	1875.	1895.	Per Cent.
Berlin	830,000	1,680,000	102
Hamburg	240,000	630,000	162
Munich	170,000	410,000	140
Leipzig	110,000	400,000	263
Fifty-six other cities	3,320,000	6,060,000	80
Urban population	4,670,000	9,180,000	96

#### AGRICULTURE.

The area of land under cultivation in Germany is only 48 per cent. of the whole, and the production of food is insufficient for the population, although the number of hands employed in farming is nearly the same as in the United States. Still the area under crops has risen 12 per cent. in fifteen years, and the average weight of crop (excluding hay) is now thirty-one hundred-weight per acre, as against twenty-four hundred-weight in 1880-82—an improvement of 30 per cent.

"The consumption of potatoes reaches almost 4 pounds daily per inhabitant, being the highest ratio on the European continent. The production of grain and meat is short of requirements. net imports of grain in the last three years averaging 3,500,000 tons yearly, from which it appears that Germany subsists on imported grain during two months of the year. As regards pastoral industry there has been an increase of live-stock, except sheep."

The production of meat has risen only 13 per cent. in twenty years, the average per inhabitant being now only 66 pounds, as against 73 pounds in 1873. The supply is now supplemented by 200,000 tons of imported meat. There is also a deficiency of dairy products in Germany. There are not enough milch-cows for the population,

and although butter is exported to the amount of 8,000 tons yearly, margarine has to be imported to meet the deficit.

In 1895 the total value of Germany's rural products of all descriptions reached \$2,002,.000,000.

"The sum total is \$50,000,000 less than the value of farm products of the 23 Western States of the Union, but the number of hands in Germany is two and a half times as great, while the improved area of the Western States is three times that of German farms. In Germany the productive area is equal to no more than 8 acres per farming hand; in the Western States it is 62 acres. The value of product per acre is, of course, higher in Germany—namely, \$31—as compared with \$10 in the Western States; but the product per farming hand is \$620 in the latter, against \$250 in Germany."

Mr. Mulhall mentions only two causes of the backward condition of German agriculture—the small size of the farms (averaging only twelve acres and not permitting the use of improved machinery) and the military system which takes from agriculture the flower of the peasantry. While 35 per cent. of the population is agricultural, each of the 8,200,000 farm hands raises hardly enough food to support six persons. "Thus it comes to pass that the German people subsist on imported food during two months in the year, while 52 per cent. of the area of the empire is uncultivated."

# MANUFACTURES.

In textile manufactures Germany consumes more than twice as much fiber as in 1875, taking 30,000 tons more than France. Germany has distanced all other continental nations in cotton manufactures, counting at present 4,700,000 spindles, of which one-third belong to Alsace-Lorraine and were formerly French. Germany comes next after France in silk manufactures, and as regards woolens the two countries are about equal.

While textile industry rose 110 per cent. in twenty years, metal manufactures rose 180 per cent. Germany now holds third place among the nations of the world as a producer of steel, the output having risen from 35,000 tons in 1875 to 2,500,000 tons in 1895.

"There are 750 first-class machine factories in Germany, of which Prussia has 300, turning out everything requisite for railroads, agriculture, mining, etc. Krupp's covers 1,000 acres, employing 310 steam engines and 20,000 workmen and consuming 1,000,000 tons of steel yearly. The rapidity with which the manufacture of hardware has grown in Germany may be judged from

the fact that it compared with that of France in 1875 as 4 to 3 and in 1895 as 5 to 2. Its present position as compared with that of Great Britain is as 3 to 4."

The manufacture of beet sugar is also in a thriving condition. Germany now produces 40 per cent. of all the beet sugar made in Europe, having quadrupled her output in twenty years.

#### OTHER LINES OF PROGRESS.

Mr. Mulhall also shows that in mining, commerce, and shipping, Germany has made wonderful strides. Thus in her merchant marine, while the nominal tonnage has increased only 40 per cent., steamers have so far taken the place of sailing vessels that the carrying power has risen 156 per cent.

Railroad mileage has increased 62 per cent. since 1875. The government owns 90 per cent. of the lines, and the low freight rates have stimulated all industries. The ordinary charge for carrying one ton 100 miles is \$1.50—less than half what it is in Great Britain, but more than twice what it is in the United States. state railroads earn \$25,000,000 a year above the interest on the bonds.

Savings banks have made great progress. Prussia the number of depositors was trebled, and the amount of deposits raised 500 per cent. between 1872 and 1892.

Wealth seems to have increased in Germany twice as fast as population, the number of persons having annual incomes of over \$750 having risen from five per thousand in 1875 to ten per thousand in 1893. The earnings of the nation as estimated in 1894 show an apparent average income of \$119; the average expenditure was reckoned as about \$109, the accumulation thus averaging annually \$10 a head. The total wealth of the empire in 1895 averages \$750 per inhabitant, as compared with about \$1,120 in the United States.

#### A NATIONAL DISGRACE.

## The United States Jail at Muscogee.

THE description of the jail for United States prisoners at Muscogee, I. T., given by Dr. Frederick Howard Wines in the Charities Review for December, reads like the war-time stories of Andersonville and Libby. Two classes of offenders are punished by the Federal Government—those who offend against its sovereignty and those who commit crimes of any sort within its jurisdiction. For the latter class it is necessary to maintain prisons, or jails, in Indian Territory, where the Government has jurisdiction, and one of these is at Muscogee. The plan of this jail-credit for which is sometimes assigned to the Department of Justice at Washington—is described by Dr. Wines as follows:

"From the floor to the eaves is a distance of There is no ceiling, but the space is open to the roof, which is hipped, four-square. and of corrugated iron. There are two open ventilators in the roof, unprotected in any way. Forty feet square (or two-thirds of the building) are used as a common prison, where prisoners associate in idleness by day and by night; a heterogeneous mass of convicted and unconvicted felons and misdemeanants, whites, Indians, and negroes, of all ages, with no attempt at classification or separation. In the 20 feet at the west end of the building is a central passage leading to the 'bull-pen,' with cells on each side. total number of cells is 8, of which those on the south side are 10 feet square, but those on the north side about half as large again. Those on the south side are simply iron cages with grated fronts, but the north cells have wooden walls, sheathed with iron, and grated cell doors. of these cells are on a level with the floor of the common prison, and the other four immediately above them. One of the upper cells is totally dark and is used as a dungeon for punishment as an aid to discipline. The space over the upper tier of cells is open to the roof, and it affords an opportunity to place an armed guard, at all hours of the day and night, where he can overlook the prisoners in the 'bull-pen.'

## A VERITABLE "BLACK HOLE."

"What does this armed guard see, and what would the reader see, could he stand at his side? Looking down, his eyes would rest upon a barnlike room, with iron walls and floor and roof, unfurnished, and lighted by seven barred openings, without sashes or glass, the sills of which are eight feet from the floor, so that no prisoner can look out, and no air circulates in the well beneath. in which they are compelled to live. No guard is required to breathe this atmosphere for more than one hour at a time. In the center of the room is an upright soft-coal stove. Around three sides, next the wall, are low iron bunks, 15 in all. 5 on each side, about as wide as a 'threequarter' bedstead, in each of which three men sleep (in their clothes) at night. Except an unpainted home-made barber chair, there is no other furniture in the room; no tables and no

The room has neither ventilation, sewerage, nor water supply. When visited at night by Dr. Wines there were crowded into this black hole nearly 150 men, or about one to every 10 square feet of floor space.

"When they lie down there is not room

mough for them upon the floor without those the are next to the bunks thrusting their feet mider them. Their bodies carpet the entire floor rom wall to wall. When, in stormy or very add weather, the swinging wooden shutters outside the windows are closed, there is neither light nor ventilation in this prison; and in the long summer, when the sun beats with almost project fervor upon the corrugated iron roof, the heat must be almost unendurable and the suffering of the prisoners intense. To complete this puture, it need only be said that the jail is alive with vermin of every description."

#### HOW THE PRISONERS BUSY THEMSELVES.

The inmates pass much of their time in gambling. A man may be sentenced to the jail for gambling, and then may be free to gamble as much as he pleases while under confinement. The principal recreation of the inmates. however, coasists in the proceedings of the "Kangaroo Court," a self-constituted body which assumes, without authority of law, to govern the prison. The officers in charge recognize a certain utility even in this form of discipline; for the prison is so insecure that were it not for the fear of being shot by the guards, prisoners would escape continually. Only 16 of these guards are employed, and some such voluntary organization as the "Kangaroo Court" seems necessary to enforce discipline within the walls. The Government does not even supply these guards with arms and ammunition, but requires them to arm them-Seives.

Dr. Wines has not fully decided who is at fault for the disgraceful conditions at Muscogee, but believes that it is at Washington, and not with the local authorities. He has learned that the amounts paid by the Government to contractors for the maintenance of the jail reach a total of \$30.687.50 a year, or more than \$150 per capita—as much, he says, as it costs to keep a prison properly equipped and managed. He says:

Not long since, Mr. Ruggles-Brise, the official head of the English prison system, visited this country, to learn how we treat our prisoners. What would he have said had he gone to the Indian Territory? There he would have found prisons bearing a close family resemblance to the convict camps maintained by irresponsible lessees in the Southern States, worse than those described by Mr. George Kennan as a disgrace to Russia and fully as bad as any in Mexico or Cuba. It is an inexpressible mortification to me to write what I have here written, knowing as I do that it will be commented upon in every journal of penology and criminal jurisprudence throughout the civilized world, including Japan; but with-

out complete exposure there is no hope of remedial action."

Dr. Wines intends to have Congress thoroughly informed on the condition of the Muscogee jail, and to this end photographs of the place have been taken. If Congress cannot be induced to take suitable action in the premises, he proposes to begin a popular agitation to reform the present unsatisfactory methods of dealing with Federal prisoners, not only in Indian Territory, but elsewhere.

# AMERICAN VERSUS BRITISH INDUSTRIAL ENTERPRISE.

A N editorial article in Cassier's Magazine contrasts English and American methods in the management of capital for manufacturing purposes, asserting that the American has a distinct superiority over the Briton in "enterprise and audacity."

"The American, speaking generally, manufactures his product ahead of demand, while the Briton waits for orders. The American who makes money uses his surplus capital to increase his output in order that, by manufacturing on the largest scale, he may decrease the cost per unit of product, while the Briton uses his surplus capital to buy lands and houses or to make secure investments by which he can leave his children independent of the fluctuations of his The American, in his fierce competition with his neighbors to command a market, tears down his plant at the end of a few years if he finds that he can substitute a new and improved one which will enable him to make his product more economically, while the Briton is disposed to let well enough alone.

"In America, capital flows toward the successful man and he avails himself of it; in Great Britain, a man similarly situated is apt to consider that handling the capital of others is an added burden to life without any compensating advantages except the chance of making more money, of which he has already enough. The character of the American king of industry has been formed by the vastness of his country, its marvelous opportunities for development, its incomparable material progress in so short a span of time, its isolation from competitors, and, above all, its unbroken record of increasing wealth. For men trained under such auspices no task is too difficult, no risk is too great, no amalgamation of interests is too large, while the British kings of industry, 'cabined, cribbed, confined' on a small island, opposed on every side by hostile tariffs, hampered by the conditions of former successes achieved through caution, accustomed

to work on the orders of middlemen instead of seeking markets direct, have, in their turn, been molded so that they have come to prefer security to enterprise, steady returns to enormous risks, personal supervision to corporate management of combined interests on a vast scale. Such is the contrast, though it is not altogether as one-sided as it seems. If the American watchword is 'audacity,' the British watchword is 'stability.' If the American is dependent on prosperous times to make a fortune, the Briton is equal to meeting prolonged bad times without losing one. The product of the velocity of the one and the mass of the other would be a momentum strong enough to transform the world."

## THE MAD RUSH TO THE KLONDIKE.

MR. T. C. DOWN contributes to the Cornhill Magazine for January a very interesting article, in which he lets the outside world understand somewhat of the frightful waste of life, of health, and means that was involved in the insensate rush to the Klondike which began at the end of last summer. Everybody who knew anything at all about the Klondike and the way thither, including the representatives of the governments of the United States and of Canada, issued the most peremptory warnings against any attempt to force the passes in the autumn of the But the gold fever was upon the people, and no fewer than 6,000 men and women, taking with them 3,000 horses and immense quantities of stores, steamed northward as fast as they could find steamers to carry them, in the hope that they might be able to pierce the mountain barrier that shuts off the New Eldorado from the rest of the world. Mr. Down now tells us that of these 6,000 gold maniacs 5,800 never reached the Klondike. He says:

"Of the 6.000 people who went in this fall, 200 at the most got over to the Dawson route by the White Pass, and perhaps 700 by the Chilcoot. There were probably 1,000 camped at Lake Bennett, and all the rest, except the 1,500 remaining on the coast, had returned home to wait till midwinter or the spring before venturing up By actual count 3,200 horses were put on the trail during the autumn, and not more than 200 remained by the middle of October. As to the crowds who had gone to St. Michael's, it is doubtful whether any of them got through to Dawson City, since the lower Yukon is impassable by the end of September, and, at any rate, in view of the prospects of short rations it would have been rash to try. The consequence would be that they would have to remain on that desolate island during nine months of almost arctic winter, for the river does not open up

again till the end of June. Here they would be absolutely without employment, unless they chose to stack wood for the steamboat companies."

#### THE HORRORS OF THE MOUNTAIN TRAILS.

Although this is a disastrous showing, it is probably a merciful deliverance, for had the multitude been able to reach the gold region, they would probably have died of starvation or have lived on each other. Mr. Down's account of the difficulties of the trails across the mountains is not calculated to encourage visitors.

"The so-called trail was of the most elementary character, a mere track intended for a few men with supplies to pass over for the survey purposes of a railroad which it was proposed to lay down on the other side, and not for the passage of thousands of men with heavily laden At critical points it was only a couple of feet wide, and at one place led up a steep incline, over which logs had been laid like a ladder. At the second hill the track wound round it, and for horses the walking was execrable, being over a soft and slippery slate rock, with a fall of five hundred feet sheer to the river. Numbers of animals were lost over these precipices, one team of seventeen horses having lost eight of them on the first trip. After some miles of this character a great bog a couple of miles long had to be crossed, which was cruel work for the horses as they painfully floundered through the mud, for they would either die from exhaustion or break a leg and have to be killed. Numbers of men gave in and camped along this morass, waiting for winter to freeze the ground so that they could cross on the ice. If you get beyond this, for two and a half miles a hill rising six hundred and fifty feet is followed, with a trail going up one in four in places, a terrible ascent, owing to the rock slides along the face of it. The descent on the farther side, down the face of the rocks, is sometimes one in three, where the animals sometimes slip on the left side over a drop of three or four hundred feet.

"The difficulties of bringing heavy loads over such a trail as I have roughly described, with the ground trampled into mud after the heavy rains by the passage of thousands of men and pack animals struggling for a foothold, the delays and blocks which occurred when accidents happened or returning trains met those coming up, the coarse and ill-cooked food, the long hours of incessant labor from daylight till dusk, the nights in the open air when men would snatch a few hours' sleep on the moss, sometimes in a freezing atmosphere or wet to the skin, the stench from the bodies of dead horses left to lie where they had fallen, are only some among the miseries and

horrors endured by the wretched people who attempted the passage of the White Pass during the mad rush."

## THE COWBOYS' PATRON SAINT.

"A LADY'S Life on a Ranch" is the subject of a bright contribution by Moira O'Neill to Blackwood's Magazine for January. The particular ranch from which this article is written is situated in Northwestern Canada, a region as yet comparatively immune from the exploitations of authors in search of "local color." One of the interesting passages in the article is the paragraph in which the writer undertakes to establish Jacob's claims to be canonized as the patron saint of the Canadian herdman.

"Among all the worthies of the Old Testament, Jacob is that one who enjoys least popu-His trickiness is invariably larity at home. objected to, his trials go unpitied, and his talents are disparaged. Now here, having enjoyed the advantage of hearing an experienced cowboy explain the career of our father Israel, I see what injustice has been done to his memory. was, in fact, a herdman, or cowboy, 'from away back, an undeniably smart hand. His guiding principle in life was to forego no advantage; and this is the essence of smartness. To outwit his simple brother was an easy matter to him in his youth; in later life his wily old uncle Laban was no match for him, though for twenty years the underhand struggle went on between the two. It is easy for the superficial to say that Jacob lacked a conscience. Nothing of the kind. Like a born herdman as he was, he put so much conscience into his herding that there was none left over for the less important affairs of life. exieties and hardships of a Western herdman to-day were Jacob's too at the date B.C. cir. 1745: 'Thus I was; in the day the drought consumed me, and the frost by night; and my sleep departed from mine eyes.

"He was no ordinary hand who could say to Laban: 'It was little which thou hadst before I came, and it is now increased unto a multitude.' It may be observed, too, that Jacob made good all losses to his employer, even loss from wild animals; and this was pointed out with admiring reprobation by the man who imparted to me the true sense of the narrative. How, he asked, did Jacob make out to replace all losses from the herd of Laban at a time when he had no herd of his own and was not worth a cent anyhow? The interence is plain. There were other herds on that range, and Jacob must have 'rustled' what he wanted from them."

#### TOURNAMENTS IN THE SOUTH.

N the January Outing Mr. Hanson Hiss, of Baltimore, gives a pleasant description of the charming Southern custom of holding tournaments on the country places of Maryland and The custom has obtained since the seventeenth century, and Mr. Hiss thinks it is entitled to be called the national sport of the South. The requirements for success in these modern tourneys are very much the same as those which made the successful knight of the Middle Ages: that is, faultless horsemanship, a firm seat in the saddle, and an unerring aim with the lance. But instead of tilting at each other, the knights of the American tourneys ride down a straight course at a full gallop, and with their lances attempt to capture rings suspended from cross-bars. Mr. Hiss says:

"Long before the hour set for the tourney to begin the parade adjacent to the course is crowded with the society of the surrounding country, on horseback, in carriages, T-carts, drags, surreys, on the grand stand, and covering every possible point of vantage. As a rule many carriages and wagons, gayly decorated and festooned, are left along the course from two to three days ahead of the entertainment in order to secure good positions.

"Everywhere there is a feeling of suppressed excitement, especially on the part of the scores of possible fair queens and maids of honor, who in vain attempt to hide a flutter of coy anticipation and possible triumph under a thin cloak of assumed indifference. It goes without saying that every knight, whether he stands a chance of coming off victorious or not, has mentally selected the fair one who he feels confident would most becomingly wear the much-coveted crown as the fair queen of love and beauty.

"The knights form in an adjoining wood, where they give their names and titles to the knight marshal of the tourney. The riders choose all sorts of titles, such as the Knight of Maryland, Knight of Rose Lawn, Knight of the Last Chance, or Knight of the Lost Cause, but the rule which seems to be the most popular is to assume the name of their town or ancestral estate."

The tournament grounds are 120 yards in length and are selected for a level course. The rings are 1½ inches in diameter and are suspended 6½ feet from the ground. The lances are light, straight poles, 8 feet in length, and sharpened to a fine point at one end. The speed requirements call for the 120 yards in 8 seconds, and the riders are ruled off if slower time is made. Before the tourney begins a knight marshal makes what generally turns out to be a rather

flowery address, known as a charge, the heralds announce a particular knight, and calling him by

name tell him to prepare to charge.

"There is a blast from the trumpet, the flag in the hands of another herald drops to the ground, and the rider is flying down the course at a break-neck speed, with his lance poised at the suspended rings, and, if successful in capturing all three of them, is greeted with a hearty burst of grateful applause.

"To the casual observer it may appear an easy matter to capture the rings in a dash down the course, but it is by no means easy. There is always a rise and fall of at least three inches in the gait of the horse, and this the rider must absorb by standing in his stirrups. In nine cases out of ten, an error in aim of a thirty-second part of an inch one way or the other will prove fatal. Not only that, but the rider must take the stab at the downward motion of the horse."

## THE CENTENARY OF 1798.

A N article in the Contemporary Review by Mr. William O'Brien reminds us of the approaching centennial anniversary of the uprising of 1798 in Ireland, in the celebration of which thousands of Irish-Americans will take part. In introducing his paper Mr. O'Brien says:

"The celebrations of the centenary of the great insurrection will give easy-going Englishmen one of those awakenings as to the real state of Irish feeling which have usually to be administered, once in every generation at least, in the shape of some armed rising, Clerkenwell explosion, or Mitchelstown massacre."

The blame for the insurrection Mr. O'Brien lays at the door of William Pitt.

"It was Mr. Pitt who paved the way for it, it was Mr. Pitt who gave the signal for it, it was Mr. Pitt who turned all its horrors to account for the accomplishment of a union which could never have been effected by fair means, nor even by the foul means of pecuniary corruption, without it. Nothing is clearer now to the informed than that the English Parliament, in unanimously passing their famous Act of Renunciation in 1782, enacting that 'the right claimed by the people of Ireland to be bound only by laws enacted by his majesty and the Parliament of that kingdom is hereby declared to be established and ascertained forever, and shall at no time hereafter be questioned or questionable,' were not setting their seal to a sacred act of national reconciliation, but were enacting a living lie, with the firm intention of unsaying their words whenever their terror of the French and American arms should be

abated or the eighty thousand muskets coaxed out of the hands of the Irish Volunteers."

Washington's army at its best, says Mr. O'Brien, was never equal in numbers, material, or armament to the Irish volunteer army of 1782, and in 1782, after the surrenders of Burgoyne and Cornwallis, and repeated humiliations, even at sea, at the hands of France and Spain, the power of England was at its lowest ebb.

"The first object of the Unionists was to make reform impossible. The next was to terrorize the country gentlemen by forcing an insurrection. In this work again Pitt and his castle imps played a more important part than the drill-masters of the United Irish Society or the emissaries of France. The insurrection of 1798 was confined almost wholly to the provinces of Leinster and Connaught."

The insurrection, in short, was a manufactured article, fomented for a Unionist purpose by Unionist crime. Mr. O'Brien says:

"Let us see what were the 'well-timed measures' by which Lord Castlereagh afterward boasted he forced on the rebellion, and produced a bloody civil war, costing at least thirty thousand lives, in a county where, three months before the rising, the United Irish organization was shunned wherever its existence was even known by the peasantry. The 'well-timed measures' aimed at two main objects of policy: First, to destroy the growing union of Catholics and Protestants, by deliberately kindling the flames of sectarian savagery through the lodges of the Orange Society; and, second, to inflame the terrors of the country gentlemen by fabricated rumors of a general massacre after the French fashion, and then let them loose, in all the unbridled fury of an ascendancy party, armed with plenary powers to flog, torture, kill, violate, burn, as their terrors or their lusts might prompt them."

The infernal atrocities practiced by these worthy predecessors of the Kurds and bashi-bazouks drove the peasantry of Wexford into revolt, which was hailed to justify the suppression of Irish According to Mr. O'Brien, self-government. the Irish insurgents were only guilty of three distinct acts of inexcusable atrocities, and he prints in brilliantly worded passages the admission of historians as to the astounding contrasts between the regard shown by the insurgents to the honor of the women of their enemy compared with the wholesale violation practiced literally at the bayonet's point on the Catholic women by the Terrorists of Protestant ascendancy. Mr. O'Brien reminds us that these ruffians were as cowardly as they were ferocious:

"I have, perhaps, sufficiently shown that the insurrection was wholly of official making; that

it was characterized by extraordinary intrepidity on the part of the peasantry when they were forced to set their backs to the wall, and by disgraceful poltroonery on the part of those whose burnings and scourgings had provoked the storm. There is nothing in the history of British arms more humiliating than the series of ignominious thrashings large bodies of troops received at the hands of leaderless and half-armed peasants in Wexford, unless it was the hesitation with which an army of 25,000 troops, including the Guards of England, hung for weeks on the flanks of a single French battalion subsequently in the west, before they plucked up courage to demand their surrender.

"The Colonel Saundersons of the County Wexford and their Orange levies were broken, hunted, walked over, and frightened out of their wits in battle after battle, until they could not be got to stand in sight of a corps of pikemen without a regiment of English regulars between them, and it was not until the brigade of Guards was ordered across and the country ringed around with regiments of German mercenaries and English fencibles that the intrepid peasantry of this one not very large county, without leaders, artillery, or even gunpowder, were got under.

"Within a fortnight the rebels, without the help of a single military leader, had cleared the entire county of its immense horde of yeomanry and militia, with the exception of Ross. Here their attack was defeated, after they had twice captured the town and twice lost it in the liquor shops. But this was the only instance in which they were worsted in open fight until, after three weeks' preparation, General Lake at last surrounded their camp at Vinegar Hill with an army of 20,000 strong and broke them, fighting stubbornly to the last, without gunpowder, without leaders, the women holding their ground in the midst of the shells and grapeshot as stoutly as the men.

"The campaign against Humbert in the west was scarcely more glorious to the British arms. Six weeks after the total suppession of the Wexford insurrection, and while the island was (according to the estimate of the sober Plowden) filled with 150,000 troops of all arms, a French detachment of 1,038 men, all told, landed at Killala, and for nearly three weeks marched through a whole province and kept this vast host in a state of perturbation.

"It was not until Humbert's little band had marched more than half their way to Dublin, in the hope of raising the country, that they at last—844 men being their total muster—capitulated, at Ballinamuck, to the host that encompassed them."

## THE FACE OF CHRIST. History of the Likeness.

T is long since anything so interesting in connection with religious art has appeared as the history of the face of Christ in art contributed by Sir Wyke Bayliss to the Magazine of Art for January. The painter takes us back to apostolic times, and endeavors to show us that the conventional likeness which the painters have handed on to us from century to century is historic and no delusion. He argues that the portrait was drawn by men who had seen Christ, for men who had seen Christ, for the art of portraiture was a common practice of the age; and though it might be imperfect from the point of view of artists of to-day, the likeness of Christ was sufficiently trustworthy to be generally accepted at the time.

But it is held that Christ being God cannot have given to the world an image of himself. To this view Sir Wyke Bayliss replies:

"In the first place, it ignores the dual nature of Christ. These pictures of our Lord do not pretend to be representations of his divinity, but only of his humanity.

Secondly, the direct teaching of the story of the Cross was—at least for the first millennium of the Church's history—committed to art rather than to letters. Forty generations had lived and died and the world had become Christian before the sacred text was in the hands of the people and the people were educated to read it for themselves. . . . The frescoes of the catacombs have an advantage over the Bible of nearly a thousand years.

"In the third place, if the argument means anything, it means the total prohibition of all pictorial representations of our Lord. If all are forbidden, it matters not whether they are true or false."

## DEAN FARRAR'S RECENT BOOK.

Sir Wyke Bayliss would now gladly leave theology altogether to consider the question as it affects art alone; but since he last discussed this subject (in the English Illustrated Magazine, April, 1893) Dean Farrar has published a book, "The Life of Christ as Represented in Art," in which he thus closes the controversy on the authenticity of the likeness:

"Whatever may be written to the contrary, it is absolutely certain that the world and the Church have lost forever all vestige of trustworthy tradition concerning the aspect of Jesus on earth."

The painter considers the dean's statement nothing but a pessimistic view of the case, not based on any solid argument. He rejoins:

"One notices, first, that, beginning with the assurance that the likeness is fictitious. Dr. Farrar follows it through the long centuries into every ramification of time and place, style and material, with an affection and reverence and appreciation difficult to conceive in one who all the while believes it to be a fraud. One then perceives that the authorities he quotes against it are not historical or archæological or artistic; they are solely theological.

"Moreover, they do not touch the question of verisimilitude; they deal only with the question whether any representation, true or false, should be permitted by the Church. And on that question Dr. Farrar does not himself accept the authorities he cites. On the contrary, he gathers together in his beautiful book nearly two hundred of the forbidden things, which he says invaded the Church at a very early date, and publishes them for the edification of the Church of the nineteenth century."

#### ART AND DOGMA.

And what are the authorities thus set aside? Certain of the Church fathers of the second, third, and fourth centuries—Tertullian and others. And why did the Church fathers prefer to destroy art altogether? Because art was in conflict with dog-For instance, the early artists who in their humble way taught Christianity by means of art in the catacombs would frequently depict Christ as the Good Shepherd, bearing on his shoulder, be it noted, not always a lamb, but sometimes a kid of the goats. Epiphanius, one of the saintliest and most orthodox of the bishops of his time, tells us himself that he tore down with his own hands a picture of Christ painted on a curtain in a church. What had happened?

"The simple likeness, drawn by the contemporaries of Christ and the apostles and cherished by their immediate friends and followers, conflicted with the subtle definitions which were being formulated by the growing Church. Theology was

stronger than art, and art perished in the conflict. But not before it had left records which are unchangeable and imperishable."

## THE CHRIST OF THE RENAISSANCE.

So much for the Church fathers who considered it unlawful to preserve the likeness of Christ. Sir Wyke Bayliss now points out to us the portraits in the catacombs, and tells us it is inconceivable that the artists should have had no authentic knowledge of the likeness of Christ. Untrue representations could never have been sanctioned or perpetuated.

From the catacombs the writer conducts us to the mosaics of the basilicas, but the original likeness came from the catacombs. It had never changed, but now it became stereotyped. These early artists were able to delineate the features, but to their art the soul was an unknown quantity. Then came a period of transition from the simple portraiture of the catacombs and the mosaics of The dawn of the Renaissance was the basilicas. breaking, and the artist was no longer content to paint the likeness of Christ apart from expression. Expression came with the Renaissance, and we owe the finest interpretations of the face of Christ which the world has ever seen to Leonardo da Vinci, Michelangelo, Titian, Raphael, and Correggio. We have the same features, with changed expression of countenance under different circumstances:

"As da Vinci shows us the Comforter, as Angelo shows us the Avenger, as Raphael shows us the Son communing with the Father, as Titian shows us the Man Christ Jesus reasoning with his opponents, so Correggio shows us the Christ 'made flesh' and suffering."

Of the likeness of Christ in modern art it is scarcely necessary to speak. As the writer says, creeds have differed and churches have separated, but art remains the only common ground on which there is no strife. All churches and nations and artists tell the old story afresh, but all retain the original likeness of Christ.

## THE PERIODICALS REVIEWED.

#### HARPER'S.

IN the February number Mr. George P. Upton writes under the title "Recent Development of Musical Culture in Chicago," to say that "the city is not altogether occupied with its board of trade or its stockyards, and that it is not wholly absorbed in stocks, grain, lumber, provisions, and politics, but finds leisure for the higher things which are 'better than meat.'" It is indeed very true that Chicago is a musical center now, so far as we have in this country musical centers. That this is true is due chiefly to Mr. Theodore Thomas, of course, and Mr. Upton's article is largely a description of what Mr. Thomas has done since he removed from New York to Chicago in 1877. Chicago's chief musical education has come from the remarkable series of summer-night concerts given by Mr. Thomas in the old Exposition building between the years 1877 and 1890.

Mr. Kirk Munroe tells of "Some Americans from Oversea," especially of the Russians who have recently come to the Dakotas, Minnesota, and Montana, and of the Icelandic colony in the Red River Valley. Mr. Munroe says that while it costs the American farmer about thirty-five cents to raise a bushel of wheat and deliver it to an elevator within a mile of his field, the Russian can raise wheat on poorer soil, haul it fifty miles, and place it on board the cars for several cents per bushel less money. "When the latter goes to town he carries provisions with him and sleeps in his wagon; the American puts up at a hotel. The Russian rarely eats fresh meat, but his more civilized neighbor must have it three times a day."

The chief contribution in literature and art to this number of *Harper's* is the opening essay by the late George Du Maurier, on a "Social Pictorial Satire," illustrated with some exceedingly well-selected bits of humor from *Punch* and a magnificent full-length picture of John Leech. Mr. Du Maurier says of Leech:

"The keynote of his character, socially, seemed to be self-effacement, high-bred courtesy, never-failing consideration for others. He was the most charming companion conceivable, having intimately known so many important and celebrated people and liking to speak of them: but one would never have guessed from anything he ever looked or said that he had made a whole nation, male and female, gentle and simple, old and young, laugh as it had never laughed before or since, for a quarter of a century.

"He was tall, thin, and graceful, extremely handsome, of the higher Irish type; with dark hair and
whiskers and complexion, and very light grayish-blue
eyes; but the expression of his face was habitually sad,
even when he smiled. In dress, bearing, manner, and
aspect he was the very type of the well-bred English
gentleman and man of the world and good society; I
never met any one to beat him in that peculiar distinction of form, which, I think, has reached its highest
European development in this country."

Thackersy and Sir John Millais, not bad judges and men, with many friends, have both said that they personally loved John Leech better than any man they ever knew.

## THE CENTURY.

HE February Century opens with a delightful article by Jacob A. Riis, the author of "How the Other Half Lives," on "Heroes Who Fight Fire." Mr. Riis tells, with that rare sympathy which enables him to enter so wholly into the life of the "other half," of the courageous deeds that our city firemen perform every year and every month in rescuing life and property from burning buildings. He gives some of the most notable feats. He says that firemen are athletes in matter of course; they could not hold their places if they were not. The mere handling of the scaling-ladders, which, light though they seem, weigh from 16 to 40 pounds, requires unusual strength, though no particular skill is needed. In fact, about 5 per cent. of the appointees are eliminated by the ladder test and never get beyond their probation service. To show the economic significance of the constantly increasing efficiency of the fire department, Mr. Riis says that in the 796 fires that New York had in 1866 there was an average loss of \$8,075.38 per fire; in the 3,890 fires of the year 1896 there was an average loss of only \$878.81.

Mr. H. P. Whitmarsh has made good journalistic capital out of his personal experience in the steerage. He contributes an article on "The Steerage of To-day," which tells from the inside of the accommodations and scenes of the emigrant portions of our great liners, as witnessed by him in a trip not long ago.

Mr. R. Talbot Kelly, the artist, has exploited to charming advantage, too, his experience in the Egyptian desert, which he writes of under the title, "My Bedouin Friends," and illustrates with pictures made from sketches in the very midst of the wildest desert.

Capt. H. D. Smith describes the present working of "The United States Revenue Cutter Service," and especially that part of the service which is detailed to cruise up and down the coast during the winter months for the purpose of relieving vessels in distress. The hardships and dangers involved in rendering assistance to distressed vessels in the winter time are tremendous. In spite of them the service annually saves from destruction and peril of the sea, on an average, property valued at three million dollars—about three times the total cost of maintaining the corps.

Mr. James Manning Bruce writes on "Ruskin as an Oxford Lecturer," from the standpoint of a student at Oxford some twenty years ago, at a time when Ruskin was addressing his class in the position of Slade professor of art.

#### SCRIBNER'S.

EX-POLICE COMMISSIONER AVERY D. ANDREWS, of New York City, begins the February Scribner's with an article on "The Police Control of a Great Election," handsomely illustrated with drawings of the scenes in the great city on that thrilling occasion. Incidentally Mr. Andrews says that the first election for Mayor of Greater New York brought forth as many different kinds and classes of voters as any election for governor in any State of the Union could possibly produce, and in numbers more than any State excepting

nine. Uptown the millionaire and his butler voted in the same booth, and possibly with successively numbered ballots for opposing candidates. Down on the East Side, where the population is more dense than any other place in the world, the Russian, the Pole, the Italian, Hungarian, Bohemian, and occasionally a Turk, Armenian, or Greek, may be seen struggling with the mysteries and difficulties of the blanket ballot.

The Hon. Henry Cabot Lodge continues his "Story of the Revolution," and tells in this number of the "Second Congress and the Siege of Boston."

Another historical contribution appears in Captain Mahan's recital of "The Naval Campaign of 1776 on Lake Champlain," a chapter writen by Captain Mahan for "The History of the Royal Navy of Great Britain," to be published in England and America.

Ernest Seton Thompson makes a feature somewhat out of the ordinary in his nature study of "Silverspot," a story of a crow, illustrated in Mr. Thompson's own excellent drawings, and his exact notes of the crow's musical attainments.

#### THE COSMOPOLITAN.

THE February Cosmopolitan contains the conclusion of "A Brief History of Our Late War with Spain" and an essay by President E. Benjamin Andrews on "The Selection of One's Life-Work," both of which we have quoted from among the "Leading Articles of the Month."

Col. George E. Waring, in the series "Great Business Operations," tells of the utilization of city garbage, which he has studied and developed during his occupancy of the position of Street Cleaning Commissioner of New York. He does not believe in the crematory theory of the disposal of garbage, but argues for the system which he has inaugurated at Barren Island, by which a great amount of ammonia and glue could be recovered, as well as the more important recovery of the grease contained in the garbage and the conversion of the residuum into a fertilizer. The works on Barren Island for the reduction of New York's garbage are the largest in the world and are making a fair profit. Colonel Waring has been experimenting with the recovery of valuable materials from the ashes of the metropolis also, and has come to the conclusion that by a mechanical process the unburned coal and fine ashes can be separated, leaving unburned coal at the disposal of the city of New York to the value of \$325,000 a year. He thinks this would be an entirely feasible scheme, too, for cities of very much smaller size. Even for a city of 50,000 inhabitants there would be an income of \$8,000 a year.

A brief but very beautifully illustrated and interesting article is contributed by Frederick S. Lyman, telling "How the Banana is Grown." Mr. Lyman describes the growth of the fruit in Costa Rica particularly. The planter there gets about 30 cents for one of the huge bunches that retail in New York for about \$10. On the other hand, the planter runs but very little risk; his crop is as regular as clock-work, and the trees are exceedingly prolific. The shipper, however, has serious risks in the decay of the fruit on the voyage and in the stormy passages. Some of the bunches grow to an enormous size, weighing frequently 80 pounds. The trees rise to a height of 10 or 15 feet, and the leaves are not infrequently 10 feet long and 2 feet wide. The stem bearing the bunches of fruit is cut down, or dies natu-

rally after the fruit is matured. Two or three bunches grow on a single stem. Within a few weeks after cutting or dying another stem starts up to bear more clusters, and so on.

In a department Mr. Zangwill has a good deal of fun with Sarah Grand and the "Beth Book." "Sarah Grand no doubt cherishes high ideals—in common with all the better spirits of her time—but a novelist is not made out of copy-book maxims, even when they are those of the selectest academy for young ladies. Not that she desires to be a novelist so much as to do good; writing books is her way of keeping school, and it is man whom she itches most to castigate.

#### McCLURE'S.

THE February McClurc's contains an article by Dr.
Nansen on "Future North Polar Exploration,"
from which we have quoted in another department.

Mr. Hamlin Garland reviews Henry George's last book, "The Science of Political Economy." Mr. Garland is of course in immediate and deep sympathy with George, and he predicts that "The Science of Political Economy" will be no less captivating in its clearness, eloquence, and lofty spirit than was "Progress and Poverty." He tells us that the book is less of a fragment than has been supposed, and that, taken in connection with "Progress and. Poverty," the omissions will scarcely be observable to the reader.

There is an interesting bit of personal history in the selections from the manuscript diary of George Washington's private secretary, published under the title, "The Last Days of George Washington." His private secretary was Col. Tobias Lear. The entries bring us somewhat closer to the Father of our Country than anything else we have seen published. Everything is put down, even to the details of measuring the body of the dead general for the coffin, and in this rather ghastly bit of detail one notices that Washington was six feet three and a half inches tall.

Stephen Crane has a short story which is slight in many ways, and yet we are inclined to believe the best short story he has ever written, under the characteristic title, "The Bride Comes to Yellow Sky." In the hackneyed word "strong," which is nowadays applied to the short stories one likes, there is a meaning, or was originally, and the tremendous suggestion which Mr. Crane gives with most artistic indirection in this little tale certainly deserves that adjective.

#### THE LADIES' HOME JOURNAL.

In the February Ladies' Home Journal Inez Merrill tells of "A Private Audience with the Pope." After describing the various ceremonials which accompanied this audience and the not very noteworthy conversation of his holiness and his American visitors, she says:

"He looks very old, very feeble, with that pallor peculiar to age; his eyes are black and shining, but withal kindly; his thin, white hair and noble brow would incline one to a feeling of reverence even if he were not Pope Leo XIII. He is of medium height, and his shoulders are a little rounded, as might be in one who looks down from such an elevation as his. His smile—that very-much-talked-of smile—is benign.

"He wore a bright red cloth robe of the most beautiful texture. This was closely buttoned to his feet.

Over this was a pure white garment made of some soft material, and it is in this that most of his photographs are taken.

"On his head he wore the small skull-cap called the zucchetta. It, too, is pure white. There is a tassel hanging down to one side. The thought that popes for centuries had been wearing garments precisely similar to these lent an added interest to this quiet person, moving unobtrusively around among his guests.

"On his hands he wore mitts. They are like those that old ladies used to wear, except that they are made of white wool. He needed to be warmly dressed in that room."

The editor of the Ladies' Home Journal tells us that "one of the greatest physicians in England" has condemned the small matters of personal habit which go toward the consummation of what is known as good form. "Beginning with recommending talking as one of the greatest modes of exercise possible to the human body, he goes right on and strongly advocates crying, sighing, yawning, shouting, and singing as absolutely essential to the best health. Talking, says this eminent authority, is stimulating to the body and rouses every one of our senses from lethargy. So excellent is talking that a good talker needs not half the bodily exercise as does a quiet person, statistics showing that in England lawyers and orators feel that they can dispense largely with exercise as ordinarily understood. It is, too, says this Dr. Campbell, distinctly conducive to long life, and one of the best of all exercises in cases of heart disease. From shouting, too, the very best results are obtained: the development of the lungs and increased circulation of the blood. Especially does this eminent doctor recommend shouting as healthful for children. Singing likewise, is commended, and most strongly, for its healthful influence on the emotions, on the respiratory movements, as a developer of the lungs, and especially assful in defective chest development and in chronic heart disease. Of laughter this man of health can scarcely say too much in commendation. Every part of the body feels the stimulating effect of a hearty Laugh."

In this number Mrs. Burton Harrison tells of the senes and manners in the time of the first inaugural facin her article, "With Washington in the Minuet," there are some more "Inner Experiences of a Cabinet Member's Wife," and a number of very pretty pictures of "The Flower Fètes of California."

### MUNSEY'S.

N the February Munscy's there is a brief prophecy I of the "Political Future of the Great West" by Senator John M. Thurston, of Nebraska. The idea of a "combination" of the West and South against the East is an impossible one, argues Senator Thurston, "unless it is a union on the lines of a depreciated currency and in favor of dollars in which debtors may compel their creditors to accept payment at half price." Such a scheme would be defeated, in Senator Thurston's opinion, by the foreign-born voters. The tide of silver enthusiasm "will never rise again as high as it did in 1896. Two good crops in the West, sold at greatly increased prices, will go far to put our farmers out of debt. Many of them will be creditors rather than debtors; and to all it is becoming more and more apparent that prosperity must come from national union for the national welfare, and that sectionalism means disaster to every class and to every interest in the land."

Senator Hernando de Soto Money, writing on the Nicaragua Canal problem, thinks that even if the operation of the canal may be a loss, "the advantage to American commerce may be so great and our wealth so increased that the expense may be amply compensated.

"The grain, lumber, fruit, wine, and ore production of the Pacific coast would be stimulated and greatly enlarged. The manufacturers of the East would find a cheaper route to their consumers and could expect larger orders. The lumber and iron trade of the South would find new markets, and New Orleans be put into a position to compete successfully for a business she has not heretofore enjoyed. Among other benefits would be a lowering of through rates on transcontinental railroads, and the pools which now control those charges would be broken."

### LIPPINCOTT'S.

R. R. G. ROBINSON tells in the February Lippincott's of "The Land of the Winter Cucumber," the region situated far down on the west coast of Florida, near the broad mouth of the beautiful Caloosahatchee. There are some curious monuments of an extinct people on this coast, people whose origin is utterly unknown, and the modern truck-grower irreverently seizes on these mounds, which are rich with plant-food and gray with shells, and make them grow potatoes, and spinach, and squash, and cucumbers. It is the best garden land in the world, its value being quadrupled by a climate which knows neither killing frost nor withering heat, and where a day in December is exactly like a day in June. These fortunate farmers plant in September, and in December, January, and February are shipping early vegetables to the markets of Philadelphia, New York, and Boston. Even in the present poor state of transportation, which makes it necessary for the farmers to send their truck to Key West and change it to the steamers it is said that they earn from five hundred to fifteen hundred dollars an acre net.

Mr. Samuel M. Warns gives a pleasant little essay on "Odors," and attempts to trace the suggestion of the mellow fragrances that are so full of fillips to our memories.

Theodore F. Wolfe begins a series, "Some Literary Shrines of Manhattan," and describes this month the Latin Quarter of New York, which lies in and about Washington Square, according to Mr. Wolfe.

The dashing Capt. Charles King contributes the novel of the month, "A Trooper Galahad."

## THE CHAUTAUQUAN.

In the February Chautauquan Prof. John W. Perrin gives the status of the Social Democratic party in Germany, which had in the election of 1876, 47 Deputies in the Reichstag and a popular vote of 2,250,-000. Professor Perrin takes the situation very seriously:

"The fact that the party's representation in the Reichstag does not correspond proportionately with its popular vote prevents its being a very important factor in the enactment of legislation, except as it may by combination with other parties block proceedings. Even though it is unable to put its pernicious programme into the laws of the land, it must be regarded as a constant danger to social order. While its two leaders, Liebknecht and Bebel, are of lower intellectual rank than Lassalle and Marx, they are both able. Both

are skilled in debate and the art of party management. The party is without doubt not only the largest, but the most thoroughly organized and efficiently led revolutionary body the world has ever seen. It is a constant menace, not only to Germany, but to the entire world. Its programme of democratic communism and the radical utterances of its leaders give ample justification to the remark of the second chancellor of the empire that 'It is the greatest danger which threatens the close of the nineteenth century and the opening of the twentieth.'"

The Chautauquan translates an article from the Italian Nuova Antologia on "Telegraphy Without Wires," written by Ernesto Macini. There is no probability, he says, of an immediate revolution in modern telegraphy from the discoveries of Marconi, which have recently been talked about so much. "The present system still has a long life before it. But it may receive from the wireless method a great and useful aid, while it is not improbable that also in the field of science the new experiments may lead to a more complete study of the nature of Hertz' waves. It is certain, too, that in communications between one ship and another, or between ships and the land, Marconi's system must be of excellent service; the more so that the state of the atmosphere does not show any influence on the transmission of signals. The future will tell us to what limits of distance these signals may reach."

#### THE BOOKMAN.

THE February Bookman contains an article on Alphonse Daudet by Adolphe Cohn, which we quote from in another department. Mr. Austin Dobson has never been interviewed until a few weeks ago, but a correspondent of the Bookman recently broke this record. Mr. Dobson was forty-eight years old on January 18.

"For the last thirty-one years he has spent his days at the board of trade, and for nearly thirty of them has devoted his evenings to literary work. On returning from Whitehall, his usual habit after dinner is to read or listen to music until about 10 o'clock, when he retires to his study and works until midnight. A government office is not precisely a bed of roses, and he regards his literary work as recreation. One would imagine, from Mr. Dobson's poetry, that such prosaic work as that of the board of trade would be altogether foreign to his taste, and on inquiring whether he had never been tempted to relinquish his position there and devote himself entirely to literature he responded: 'No: the one occupation balances the other in a very satisfactory and agreeable manner. Business habits are usefuleven to a literary man."

The Bookman has an article by Coulson-Kernahan on Mr. Theodore Watts-Dunton, the leading critic and chief attraction of the Athenaum.

"Mr. Watts-Dunton was the intimate friend of Tennyson, Browning, William Morris, Meredith, and the house-mate of Rossetti and Swinburne. He was born in 1836 and received his education from private tutors at Cambridge. He was literary and artistic critic on the Examiner, under the editorship of Professor Minto, before his association with the Athenœum. He is the author of 'Aylwin: A Poetic Romance,' and has contributed a number of thoughtful essays—especially interesting being the last one on poetry—to the 'Encyclopædia Britannica,' which many of his friends

would like to see collected in a volume of criticisms. Mr. Coulson Kernahan, who contributes an article to the present number on Mr. Watts-Dunton and his poems, is perhaps the only one of the younger generation who knows him intimately, and this intimacy makes his article all the more interesting because of its special knowledge and insight. Mr. Watts-Dunton is something of a recluse and has never sought fame. He is a stanch friend, and has been a kind helper to many struggling young men of letters. He and Swinburne live together at 'The Pines,' Putney, a suburb of London. Mr. Watts-Dunton is the shyest of men, and has never allowed his portrait to appear in public until

The Athenœum critic is just publishing a "long-expected" volume of poems, an event doubtless awaited with breathless anticipation by many "minors" who have been dished up in the Athenœum.

#### THE ATLANTIC MONTHLY.

HE February Atlantic opens with an article entitled "The Capture of Government by Commercialism," by John Jay Chapman. Mr. Chapman means by his title the state of affairs which, for instance, comes to a small town when a railroad is to be run through it, when the railroad employs a local attorney, the best one in the place, of course, who finds it considerably easier to bribe the proper officials of the town than to rely solely on popular demand. This causes a steady degradation in public life, a steady failure of character, and a steady decline of decency. "Only quite recently has the control of money become complete, and there are reasons for believing that the climax is past." This is the reason and the point of Mr. Chapman's article: to show that bribery and the boss have come to their full heritage and must now probably decline. The chief reason for this is that the great commercial ventures which needed the boss and bribery have arrived, so to speak, and the privileges for which they must pay by bribing are no longer necessary. Business is growing more settled, and what Mr. Chapman calls "sacking of the country's natural resources" goes on at a slower pace. It might have been necessary, from the economic point of view, for the New York Central Railroad to own the State Legislature during its early years of construction and consolidation, but the necessity no longer exists. Nor will public opinion stand the abuses. In many places the old system is still being continued out of habit, and at a loss. Corporations can get what they want more cheaply by legal methods, and they are discovering this. "Moreover, time fights for reform. The old voters die off, and the young men care little about party shibboleths. Hence these nonpartisan movements."

Mr. John Stephens Durham complains in his article, "The Labor Unions and the Negro," of the restraint that is still exercised over our negro population in any attempts it may make to rise and broaden out in its usefulness, and especially in the lack of recognition which the trade unions give to colored workmen. This writer instances a number of occasions which show that the labor unions utterly and persistently refuse to admit negroes to their organizations, and it is a problem worthy of serious thought that about one-tenth of the population are denied the opportunity to grow, as the other nine-tenths are invited, encouraged, forced by open competition to grow. This abridgement of oppor-

tunity affects the character of the whole class. The public conscience in regarding the matter becomes benumbed.

Mr. Russell Sturgis, the eminent architect, writes on "The True Education of an Architect." The net essentials of a young architect's education as an architect, he says, are sound and ready knowledge of building, dexterous readiness and some approach to excellence as a freehand draughtsman, and some skill as a modeler. All else is a part of his higher education and training as a man rather than as an architect.

#### THE NORTH AMERICAN REVIEW.

I Nour department of "Leading Articles" we have quoted from the article by Mr. Charles Denby, Jr., on "America's Opportunity in Asia" and from Mr. Mulhall's statistical summary of Germany's industrial progress.

Professor Lombroso's second paper on the increase of homicide in America offers some encouragement to those who believe that the evil is abating. Among contributory causes, the tendency of the rural population to crowd into the cities will, in his opinion, be counteracted by various reforms calculated to make life in the small towns and farming communities more attractive. He thinks, too, that influences are at work for the diminution of intemperance among us, and that the general outlook is favorable.

Writing on "The Passing of the People's Party," ex-Senator Peffer says:

"Two things may be taken as facts: First, that as long as Mr. Bryan is in the field as the Democratic candidate for the Presidency, fusion Populists will cooperate with the Democracy. Second, that the antinusion, or middle-of-the-road, Populists will not again ally themselves either individually or as a body with the Democratic party, no matter who is its candidate."

Mr. Peffer proceeds to show that no final merging of the elements that make up the Populist party can take place except in a new body including Democrats of the Altgeld stripe and silver Republicans.

Prof. Fabian Franklin's chief contention in his paper on "The Intellectual Powers of Woman" is that "the facts of history are not only not conclusive, but cannot properly be regarded as establishing even a presumption concerning the limitations of the intellectual powers of woman." "Whether or not any woman can be as great as the greatest men, it is quite certain that some women can be as great as very great men; for some women have been."

Mr. Worthington C. Ford finds the commercial superiority of the United States to lie not only in agriculture, but in the fact that in manufactures our highpriced labor is able to produce a lower-priced article of equal or better quality than can be obtained elsewhere.

The Hon. Horace Plunkett gives an interesting account of the important economic movement in Ireland which made possible the agricultural report so generally discussed in Great Britain last year. The Irish Agricultural Organization Society, of which Mr. Plunkett is president, has 170 branches scattered over 31 of the 32 counties, with an aggregate membership of about 17,000. This society has some of the features of the Patrons of Husbandry in this country.

Gen. A. W. Greely writes on "The Speaker and the Committees of the House of Representatives," Max O'Rell gives an interesting description of what he terms "A Paradise of Good Government"—the Island of Jersey—Mr. J. Thomas Scharf exposes "The Farce of the Chinese Exclusion Laws," and Lieut. R. C. Smith, U.S.N., explains "Conditions Governing Torpedo-Boat Design."

In the department of "Notes and Comments" Mr. Eben Brewer advocates the bill now before Congress for a civil-service retirement fund.

#### THE FORUM.

I N another department we have quoted from Mr. Elihu Thomson's account of "Electrical Advance in the Past Ten Years," and from Mr. Clarence Cary's article on Chinese railroad concessions, both of which appear in the January Forum.

General Miles contributes the opening article of the number, on the subject of American coast defense. General Miles does not believe that the nations of the earth have decided to give up war and adopt arbitration as a method of settling differences, nor is he unmindful of the danger that war may come on short notice. He advocates a thoroughly modern system of fortifications for the great seaports.

Senator Vest declares that the failure of the Wolcott Commission, so far from killing the cause of bimetallism, "has immeasurably strengthened it in the United States," and that the lines are sharply drawn for the next contest between bimetallism and gold monometallism.

Mr. Jacob Schoenhof has no difficulty in producing abundant evidence to show that the products of wellpaid American labor can compete successfully in the world's markets with the products of underpaid foreign labor.

Mr. Simon Sterne, reviewing "The Reconquest of New York by Tammany," finds several reasons for the defeat of Mr. Low in the increased tax-rate and other unpopular features of the last administration. Mr. Sterne seems to have scant knowledge or appreciation of the work that had to be done to put the schools of the city on a respectable basis, or of the magnitude of the reforms undertaken in other departments, a hint of which was given in the article by Dr. Tolman in the January number of this Review.

Mr. Henry Watterson writes with accustomed vigor on "The Political Outlook," hazarding the prediction of a quadrilated contest for the Presidency in 1900, similar to the Greater New York election in 1897.

Mr. Hugh McGregor has an article on the trade union, entitled "The Incorporation of the Working Class," in which he traces the history of the labor movement from the earliest times. He states that the sum spent in strikes is not more than 10 per cent. of the total expenditure of the unions, the care of their sick costs the unions half as much again as do strikes, and the support of unemployed members considerably more than twice as much.

Mr. Harwood Huntington raises the question whether it is worth an inventor's while to take out a patent, and considering the many difficulties, delays, and items of expense involved, one is tempted to reply that it is not. At any rate, Mr. Huntington mentions two successful inventions of the day which seem to find better protection in secrecy than in a government patent.

Mr. Henry S. Townsend, inspector-general of Hawaiian schools, writes on "Education in Hawaii;" Mr. J. Gennadias continues his account of American excavations in Greece, treating in this installment of Sparta and Corinth, and Prof. Brander Matthews discusses "The Relation of the Drama to Literature."

# REVIEWS OF POLITICAL AND SOCIAL SCIENCE.

THE December and January issues of six of the leading American journals of sociology, economics, and politics afford an opportunity to take a brief survey of this interesting type of literature. The quarterlies and bi-monthlies are growing more numerous in this field year by year. The two oldest were established in 1886, and prior to that time there were no scientific periodicals devoted exclusively to these special subjects.

#### THE AMERICAN JOURNAL OF SOCIOLOGY.

One of the youngest of these periodicals is the American Journal of Sociology (bi-monthly, January), published at the University of Chicago and now in its third volume. The editors of the Journal have adopted the expedient (new for this kind of publication) of illustrating certain articles from photographs. In this number the illustrated article is the second installment of Prof. John R. Commons' study of the Junior Republic. The pictures are not remarkable for artistic merit, but they contribute to the interest of the text, which is probably the most complete account of the working of Mr. George's experiment yet published.

Mrs. Florence Kelley writes in this number on the Illinois Child Labor Law; Prof. Lester F. Ward contributes a paper on "Utilitarian Economics," and there is a valuable bibliography of the scientific study of philanthropy by Miss Isabel E. Lord, with an introduction by Mrs. Salome Cutler Fairchild.

## THE JOURNAL OF POLITICAL ECONOMY.

Another publication of the University of Chicago is the Journal of Political Economy (quarterly, December), just entering on its sixth volume. In this number Mr. Edward S. Meade writes on "The Production of Gold Since 1850," and Mr. W. P. Sterns discusses "The International Indebtedness of the United States in 1789." There is also an elaborate paper by Georges Vacher de Lapouge on "Fundamental Laws of Anthropo-Sociology," and several important topics are treated in editorial notes and book reviews.

## THE QUARTERLY JOURNAL OF ECONOMICS.

From Harvard University comes the Quarterly Journal of Economics (January), with articles on "Canada and the Silver Question," "Monetary Changes in Japan," "The Coal Miners' Strike of 1897," and "The Lease of the Philadelphia Gas Works"—all very concrete and practical topics, and a philosophical study of "Cournot and Mathematical Economics" by Prof. Irving Fisher, of Yale University. It is significant of the present tendencies in university economics that only one of the five contributed articles in this number of Harvard's exponent of the science is devoted to theory, while the other four discuss important phases of current economic history.

#### POLITICAL SCIENCE QUARTERLY.

The last remark applies quite as aptly to the Political Science Quarterly (December) of Columbia University, in which Mr. A. D. Noyes, of the New York Evening Post, concludes an able review of "The National Finances, 1893-97;" Prof. J. B. Clark outlines "The

Scholar's Political Opportunity; "Mr. J. C. Harrison writes on "The Silver Situation in India;" Mr. W. A. King discusses "The Decrease in the Proportion of Children;" Mr. C. F. Randolph analyzes "Federal Trust Legislation;" and Mr. Edward Porritt describes the relations between government and press in England These articles are followed by signed book reviews and by Prof. William A. Dunning's excellent half-yearly "Record of Political Events."

## ANNALS OF THE AMERICAN ACADEMY.

The bi-monthly publication of the American Academy of Political and Social Science (Philadelphia, January) contains several important papers, of which that on "The Study of the Negro Problems," by Dr. W. E. B. Du Bois, is perhaps the most noteworthy. The writer is himself a negro who has for some years pursued historical and statistical inquiries relative to his race.

There are also articles in this number on "The Relation of Postal Savings Banks to Commercial Banks," "The Economic Effects of Ship Canals," and "Administrative Centralization and Decentralization in France."

#### MUNICIPAL AFFAIRS.

Youngest of all the journals of this class, the New York Reform Club's periodical known as Municipal Affairs (quarterly, December) has just completed its first volume. This publication is devoted exclusively to the social, political, and economic interests connected with city life. In this number the municipalization of electric lighting is discussed by Mr. R. R. Bowker and Prof. John R. Commons; Prof. F. J. Goodnow writes on "The Relations of the City and the State;" Col. Geo. E. Waring, Jr., on "Greater New York a Century Hence;" and G. A. Weber on "Improved Tenement Homes for American Cities." The Philadelphia gas question is treated by Dr. F. W. Speirs and Col. John I. Rogers. Mr. J. Richard Freud describes the "Civic Service of the Merchants' Association of San Francisco." and there is a paper on "Municipal Art" by Frederick S. Lamb.

A valuable bibliography of municipal administration and city conditions is published in each number.

#### THE AMERICAN HISTORICAL REVIEW.

I N our department of "Leading Articles" we have quoted from Professor Channing's tribute to the late Justin Winsor in the January number of the American Historical Review.

Prof. Charles H. Haskins contributes an extremely interesting study of "The Life of Mediæval Students as Illustrated by Their Letters," from which it would appear that the student's request for money was often the burden of his song—surely not a marked variation from modern usage.

This number of the Review contains the second and final installment of the posthumous chapter, recently discovered, of the late Professor Tuttle's "History of Prussia," which deals with "The Prussian Campaign of 1758."

Prof. Herbert L. Osgood concludes his series of articles on "The Proprietary Province as a Form of Colonial Government:" Prof. Max Farrand writes on "The Taxation of Tea, 1767-1773," and Arthur M. Mowry contributes a sketch of the Dorr Rebellion in Rhode Island, in which Tammany Hall and the New York Evening Post figure as cordial and enthusiastic allies of the Dorrites. In its department of "Documents"

the Review publishes the notes of Maj. William Pierce on the convention of 1787—apparently a valuable historical find.

The American Historical Association has wisely given substantial support to this excellent quarterly, which should be read by every American interested in historical research.

#### THE SEWANEE REVIEW.

THIS is the only one of the American quarterlies devoted to general literature. Book reviews occupy a large proportion of each issue. In the October, 1897, number, Prof. B. W. Wells publishes a study of Chateaubriand's novels, Charles J. Goodwin contributes the second of a series of papers on "Romance Writing Among the Greeks," and W. N. Guthrie writes on the mysticism of William Blake.

In an interesting article on the vernacular of Christ, Willis H. Hazard reviews the evidence recently brought forward in Germany by Meyer, and concludes that the Aramaic dialect, presumably of the Jerusalem type, was probably employed by Christ, rather than Greek.

The historical study of this number is a review of the Paston letters by Charles W. Turner.

#### THE NINETEENTH CENTURY.

THE articles on the British army in the Nineteenth Century for January, which occupy thirty-five pages or more than one-fifth of the whole number, are noticed elsewhere; so also is the article on the partition of China.

#### MEMORIES OF OLD LONDON.

Sir Algernon West contributes a dozen pages to "Reminiscences" describing the associations and memories which throng upon him as he walks from Somerset House to Hyde Park Corner. For instance, here is his version of the miller's story of the refuge at the top of St. James' Street:

"I paused awhile on what Disraeli called that celebratedeminence at the top of St. James' Street by the refuge, opposite the famous bay-window of White's, meditating on the uncertainty of human ambitions and human life; for on the pillar I spelled out the name of its founder, Mr. Pierrepont, who was in the habit of frequenting White's and the Turf Club, which formerly was in Arlington Street. With advancing years and increasing traffic he became alive to the danger of the crossing, and begged the vestry to erect a place of refuge in the middle of the street; this they declined, but expressed their readiness to meet his views provided he paid the cost, which he consented to do. One day, when the refuge was complete and his name embossed on it, he was proudly showing it off to a friend, and had stepped on one side to admire it the better, when he was knocked down by a passing coach and killed. 'We call these coincidences. I wonder what God calls them !"

#### THE EDUCATION OF WOMEN IN RUSSIA.

Princess Kropotkin writes an article on the higher education of the women in Russia, which is interesting rading. It is curious to note that as the modern American women's movement may have been said to be dated from the demonstration of the capacity of women to render service to the state in the sanitary commission so it was not until the Russo-Turkish war that women in Russia were allowed to bear the title of doc-

tor. Although they were taught in exactly the same way as men and the examinations were exactly the same, they were denied the degree. They were only allowed to call themselves learned midwives, without right to sign prescriptions or to hold any responsible position in civil or hospital service. Notwithstanding these restrictions they accepted the position, and when the war broke out with Turkey the learned midwives rendered incalculable service to the sick and wounded. At the close of the war the medical department expressed its regret that the military cross of St. John could only be awarded to men, otherwise several of the lady doctors with the army in Bulgaria would have been recommended for decoration. After this not even the jealous spirit of male monopoly could stand up against the recognition of the lady doctor, and since 1880 women in Russia can receive the medical degree and hold posts in public service. In 1887, when the medical academy was closed, there were 698 fully qualifled women doctors in Russia, of whom 178 held official positions in hospitals and schools. The academy is going to be reopened next year.

#### OTHER ARTICLES.

There are several other articles which are more interesting to read than they are capable of being summarized. One is Mr. Prothero's paper on "The Childhood and School-Days of Byron." Another is Mr. Yeats' charming collection of fairy stories and spiritual beliefs of the Irish peasantry. Mr. Yeats says that the Irish peasants believe in their ancient gods, whom they call by such vague terms as "the gentry," or "the royal gentry," or "the army," or "the spirits," or "the others," and that they believe that most of the best of their dead are the prisoners of the gods. Mr. T. Arnold contributes a pleasant sketch, full of personal reminiscences, of Arthur Hugh Clough.

#### THE CONTEMPORARY REVIEW.

ELSEWHERE we have quoted from President Washburn's article on "The Coming of the Slav," from Mr. William O'Brien's paper on the Irish centenary of 1798, and from Mr. John A. Dyche's comparison between Jews and English, all appearing in the January Contemporary.

In an article on "The Fall of the Roman Empire and Its Lessons for Us," Dr. Thomas Hodgkin sums up his characterization of the British people as follows:

"We are not easily understood nor easily loved. We do not, like the Roman, the Frenchman, and the Russian, fascinate the peoples of lesser civilization with whom we are brought into contact. We are selfish, as I fear most nations are selfish, and our neighbors, not always justly, think us to be grasping. But deep down in the national heart there is, I think, an instinctive love of fair play, which is capable at times of rising into an enthusiastic love of righteousness. We have been hitherto patient, truthful, and I think we may say courageous. The character of a nation, as the character of an individual, may change and there are many influences at work which may tend to enervate and to degrade us, to destroy our love of truth, to poison the fountains of family life.

"But so long as we successfully resist these influences and keep the fiber of our national character undissolved, I believe the world will not witness the downfall of the British empire." Mr. W. T. Stead traces the genesis of Mr. Joseph Arch's dissent from the Established Church, concluding

with the following words of admonition:

"If the Church of England wishes in the future to avoid losing men like Joseph Arch, she will have to regard the putting on of 'side' as the very devil, to treat the abuse of charity as a means of social and religious influence as malversation of funds, to interest herself with all lawful movements for removal of admitted evils, and to develop a lay ministry."

### THE TEACHING OF COOKERY.

Mrs. Mary Davies, late government inspector of cookery, describes what has been done in attempting to teach the English common people how to cook their food. The cookery classes have been far over their heads, both as to means and as to methods, while the provisions made for teaching cookery in schools are hopelessly inadequate. Mrs. Davies, among other practical suggestions, makes one that ought not to be difficult to carry out. Speaking of the qualifications of those who are sent out to teach cookery, she asks whether it should not be required that "the examinee should give proof of her ability to cook, under the same disadvantages of stoves and utensils, dishes most suitable for working people; that she should be tested in giving a demonstration of these dishes to a class of children, and practically instruct a class of eighteen; still further, that she should be able to pass an examination in the principles of cookery and in the elementary chemistry of food and cookery."

#### A MEXICAN INTOXICANT.

Mr. Havelock Ellis writes on "Mescal: A New Arti-

ficial Paradise"—a paradise of color:

"Mescal intoxication may be described as chiefly a saturnalia of the specific senses, and, above all, an orgy of vision. It reveals an optical fairyland, where all the senses now and again join the play, but the mind itself remains a self-possessed spectator. Mescal intoxication thus differs from the other artificial paradises which drugs procure. Under the influence of alcohol, for instance, as in normal dreaming, the intellect is impaired, although there may be a consciousness of unusual brilliance; hasheesh, again, produces an uncontrollable tendency to movement, and bathes its victim in a sea of emotion. The mescal drinker remains calm and collected amid the sensory turmoil around him; his judgment is as clear as in the normal state; he falls into no Oriental condition of vague and voluptuous reverie. On all these grounds it may be claimed that the artificial paradise of mescal, though less seductive, is safe and dignified beyond its peers."

#### THE FORTNIGHTLY REVIEW.

N the January Fortnightly Mr. H. L. Braekstad writes on the Norwegian-Swedish controversy, replying to Miss Sutcliffe's recent paper. Mr. Braekstad

is a Norwegian of the Norwegians. He says:

"Surely by this time it ought to be well known to all students of Norwegian politics, and especially of the present conflict, that what the Norwegian Liberals want is their own consuls and their own responsible foreign minister. The Liberal party has never proposed, or even touched upon, the dissolution of the union. It is simply the cry of timid Conservatives in Norway and Sweden, which is occasionally raised for the purpose of

frightening the electors—a piece of strategy not alto gether unknown to politicians on this side of the North Sea. To state, therefore, that the Norwegian Liberal desire the dissolution of the union with Sweden is absolutely untrue, and such an assertion ought to be avoided by every honest and fair-minded writer."

#### A FRENCH MALADY.

Mr. Ch. Bastide, writing on "Cacoethes Literarum" deplores the excessive influence possessed by literary

men in France. He says:

"It is among this élite, who live chiefly in the capital that we may study the ravages of the littératuritie. The first stage of this dangerous illness is an undue attention paid to the mere manner of a speech or writing. The second stage is romanticism. To the esprit de finesse are now joined fine sentiments. Though as a school of literature romanticism is a thing of the past it survives and still flourishes as a frame of mind. Yet many, thinking romanticism ont of date, leave it to the Philistine, and prefer the third and most virulent stage of the disease—criticism. Here is no place for fine sentiments; the brain works alone. With the most intransigeant criticism becomes skepticism and inaction."

He suggests as palliatives for this malady, first, that those in power ought rarely to listen to public opinion because public opinion almost always means that of the morbid romancists or critics. As to the latter, he suggests that the dilettanti of literature might at least make their experiments on the vile bodies of foreign nations instead of insisting upon putting everything to the test themselves in their own country.

#### RACES IN RELIGION.

Dr. E. J. Dillon, writing under this title, explains with some care how it is that the Russian Orthodor Church recruits the number of its adherents. So steadily is this policy pursued that Dr. Dillon declares that the dissenters of all kinds are gradually ceasing to exist.

"To sum up, the Russian people, who now number 129,211,114 souls, have, with one exception in each case. the highest birth-rate and the highest death-rate of all other peoples of Europe. The Russian empire is made up of a vast number of different races which generally profess different religious faiths, and among all these by far the most fruitful is the Jewish element, the members of which are increasing in the cities and towns of Southern Russia four times more rapidly than their Christian fellow-subjects, and would, within a measurable distance of time, absorb all the others. The general impression produced by these statistics is that the Russian people is not merely increasing in numbers, but is rapidly being kneaded into a compact homogeneous mass, speaking one and the same language, worshiping according to the same rites, and pursuing, more or less the same political ideals."

The chief element which conduces to the recruiting of the ranks of the Greek Orthodox is the severe law which punishes with fine or imprisonment all those who bring up a child of a mixed marriage otherwise than in the faith of the Orthodox Church. One of the most remarkable facts which Dr. Dillon brings to light is that Roman Catholics and Lutherans are both dying out while the Jews alone are struggling to compete with the Orthodox.

#### OTHER ARTICLES.

Mr. Lucien Wolf, writing on Anti-Semitism and the Dreyfus case, maintains very strongly that Dreyfus was

convicted on flagrantly insufficient testimony, and that his trial was prejudiced in the most scandalous fashion by the authorities. If this flagrant judicial irregularity is allowed to pass undenounced and uncorrected, the liberties of all Frenchmen will be endangered. The Norton case, which was built up on bogus documents alleged to have been stolen from the British embassy, forms a curiously close parallel to that of Dreyfus, but, fortunately, in that case it was the English and not the Jews who were the objects of French suspicions. Mr. Percy Osborn contributes a translation of some of the epistles of Philostratus under the title of "Rose Leaves." They are verse adaptations from the Greek. The Hon. G. Coleridge gossips pleasantly about a robin redbreast with which he has made friends, and Mr. A. Filon continues his most entertaining and luminous papers on the modern French drama.

#### THE WESTMINSTER REVIEW.

HE Westminster Review for January opens with a comparison, suggested by the case of Captain Dreyfus, between the procedure of English and French courts-martial. The writer says that to any one accustomed to the fair and open procedure of English courts of justice, the whole inquiry seems a most lamentable example of distorted ingenuity in the way of prison

A writer, signing himself "Mr. V. S. Yarreo," discusses the freedom of teaching in American universities. It is suggested by the failure to turn President Andrews out of Brown University on account of his ideas about free silver.

A writer calling himself "An ex-M. P." makes an article on "Parnellism and Practical Politics" the vehicle for a somewhat severe criticism of the easygoing parliamentarism of Mr. John Redmond. The writer thinks that Redmond should revert to the methods of Biggar and Parnell.

Mr. Lionel Ashburner, who has been thirty-six years in the Indian civil service, declares that the recent political disturbances in India are chiefly due to England's endeavoring to reform the Hindoo against his will. The discontent, he says, is due to depriving the Hindoo of his and and violating in the interest of sanitation the privacy of female apartments and the sanctity of the shrine. He is also much opposed to any attempt to interfere with child marriage, and he thinks that the present Afridi war is largely a war waged by the Afridis for the recovery of the fugitive women slaves who have bolted into British territory.

Mr. Samuel Fothergill, writing on trade-union tactics, maintains that the employers should wage war against trade unionism by declaring that they would refuse to employ any unionist. The blacklegs themselves would be protected if the magistrates would do their duty, aided by the competent police force and, if needful, by the military.

## BLACKWOOD'S MAGAZINE.

WE have quoted elsewhere from "A Lady's Life on a Ranch" and "Cambridge: By an Oxonian," in Blackwood's for January.

There is a brief paper on the frontier war in India, which pleads for the appointment of a foreign minister and member of the council in place of the present secretary for foreign affairs, who has neither the standing nor the experience adequate for the performance of his duties. "A Looker-On," in his description of the reigning Hohenzollern, says:

The Kaiser's mind is obviously a facile mind in many ways; but the last thing he is likely to learn in this world is that his failings are unkingly. Be the demonstration of that fact what it may, there is no avenue to his conceptions by which it can reach him. But unkingly is the true word all the same, and in small things and in great it describes a large part of his nimble, loquacious, overdressed, and theatrical performances."

A writer on "The New Humanitarianism" says:

"Civilization is making it much too easy to live; humanitarianism is turning approval of easiness of living into the one standard of virtue. A wiser civilization would look, not to the indiscriminate preservation of life, but to the quality of life preserved. A wiser humanitarianism would make it easy for the lower quality of life to die. Avoid immediate pain-no matter at what cost hereafter. The idea that pain is the worst of evils destroys many virtues which we cannot afford to lose; it fosters many vices which we could gratefully spare; it is a bloodless, unfruitful basis for morality. We talk of our age as spiritual, but what is this but gross materialism? Pain is no longer to be considered unless it can be felt with the body. So, while we shudder at the pains of a small war and would go to almost any humiliation to avert a great one, we are every year more in bondage to industrial strife—to the blind selfishness of the locker-out and the malignant factiousness of the trade unionist."

#### CORNHILL MAGAZINE.

ORNHILL" opens splendidly with Mr. Fitchett's admirable sketch of Sir John Moore at Corunna, which is the first of the series of "The Fights for the Flag." These papers of Mr. Fitchett's, which are to be continued in the course of the year, will be the leading feature of the new volume.

Mr. Stephen Phillips discourses on Byron, who was born on January 22, 1788. He says he attains not unto the first three English poets-Chaucer, Shakespeare, and Milton-but he is the highest among the poets of the second order by virtue of his elemental force, his satire, and his width of range.

There is a good deal of miscellaneous matter in the shape of stories, short and serial; but the only other notable novelty is a long letter written by the daughter of the first Lord Alvanley, who was at Brussels when the battle of Waterloo was fought, and who wrote a letter to her aunt on July 9, describing the emotions with which she had waited for news of the issue of the great fight. It is too long to summarize, but a couple of passages may be quoted. Before the final battle the long procession of the wounded began to file through Brussels. The writer says:

"Our house being unfortunately near the gate where they were brought in, most of them passed our door; their wounds were none of them dressed and barely bound up; the wagons were piled up to a degree almost incredible, and numbers for whom there was no room were obliged, faint and bleeding, to follow on foot; their heads, being what had most suffered, having been engaged with cavalry, were often so much bound up that they were unable to see, and therefore held by the wagons in order to know their road."

After the battle she pays the following tribute to the

Duke of Wellington:

"The Duke of Wellington has since said that he never exerted himself in his life as he did on that day, but that notwithstanding the battle was lost three times; he exposed himself in every part of the line, often threw himself into the squares when they were about to be attacked, and did what it is said he never had done before—talked to the soldiers and told them to stand firm; in fact, I believe, without his having behaved as he did, the English would never have stood their ground so long, till the arrival of thirty thousand fresh Prussians under Bulow finished the day, for as soon as the French saw them they ran."

Dr. Conan Doyle contributes a ballad of the Irish Brigade, who defended the fort of Cremona against

Prince Eugène in 1702.

#### THE NATIONAL REVIEW.

THE National Review is chiefly notable because of the suggestion made by the editor for remodeling the British Cabinet.

#### A NEW TORY CABINET.

Considering the close relations that exist between the editor and the family of the prime minister, it is interesting to note that Mr. Maxse thinks the time has come for Lord Salisbury to rid himself of the hideous drudgery of the Foreign Office. He would have Lord Salisbury stick to the business of the premiership, and call Lord Cromer from Egypt in order to make him foreign secretary. He would make Sir Edward Clarke home secretary, Mr. Arnold Forster secretary for war, and Sir William Houldsworth secretary for India. This is equivalent to an intimation that in the opinion of Mr. Maxse, at least, Lord Lansdowne, Lord George Hamilton, and Sir Matthew White Ridley can be relegated with advantage to private life.

#### THE SUGAR BOUNTIES AND THE WEST INDIES.

Mr. Nevile Lubbock publishes an article called "The Test of Loyalty" which deals with this question. The test is not the test of the loyalty of the colonies, but the loyalty of the British empire to its West Indian colonies. Mr. Lubbock says plainly that he thinks England will lose the West Indies if she does not adopt the countervailing duty. He says:

"At the eleventh hour there is time to save these colonies, and there are signs that the British public will insist pretty strongly that they shall be saved. Hitherto they have been told by those to whom they look for guidance that the West Indies are asking for protection, and that to give them what they ask would perhaps double the price of sugar. Now they are learning the truth, viz., that the West Indies are demanding the restoration of true free trade in sugar, and that to give them what they ask may cost us one-ninth of a penny per pound more than we are now paying. The question is one of far-reaching importance, not, perhaps, intrinsically, but as a crucial test of the mother country's loyalty toward her colonies. If her policy is to be that of abandoning them to their fate directly there is some small money gain to be got by doing so, then good-by to the grand ideal of a united Britannic empire as an idle dream."

#### TRADES UNION TRIUMPH.

Sir Godfrey Lushington, late permanent under secretary at the Home Office, comments at considerable length upon the significance of the much-contested legal question as to the right of trade unions to call out their members, which is known under the name of Allen rs. Flood. The article is much too legal to be popular, nor is there indeed much worth quoting, excepting, indeed, the last paragraph. Sir Godfrey Lushington says:

"I think that the public have no cause to apprehend that this decision will deprive them of any important safeguard for order that they before possessed. It is to be remembered that though what was done in this case has proved not to be a tort, the other torts remain—assault, slander, deceit, trespass, etc. In short, trade unions have to carry on their operations subject to the civil law and also the criminal law. What is wanted, it appears, is not to introduce a vague civil liability for announcing strikes or for striking for an immediate object which the judges may afterward think fit to disapprove, but the vigorous enforcement by the police and the magistrates of the criminal law, so as to put down the real terrorism-criminal coercion and criminal intimidation-which often, under specious forms, is found prevalent when a strike or lock-out is actually going on."

#### COSMOPOLIS.

THE most important paper in Cosmopolis for January is Mr. Hyndman's jubilant exposition of the coming triumph of socialism in England. To ordinary men socialism in Mr. Hyndman's sense seems to have been rapidly retrograding; but Mr. Hyndman is not an ordinary man, and he is quite sure it has been triumphing all along the line. He says:

"The whole of English society is permeated with socialist ideas, and the liquefied theories, so to say, might at any moment crystallize into a really powerful socialist party in response to a shock from without."

If this be so, it is, of course, a matter of the first importance. Let us therefore see what measures this really powerful socialist party would endeavor to enforce. Mr. Hyndman has, by way of beginning, set forth a four-headed programme:

"1. State maintenance of the children in all board schools up to the age of sixteen, and the removal of the schools as far as possible into the country.

"2. The suppression by law of all half-time work, or work for wages, by children up to the age of sixteen,

"3. Improved homes for the people, built at public cost and outside the present city areas, with plenty of air, parks, gardens, and pleasure grounds.

"4. Improved education, which shall not be mere book instruction, with a material diminution of the numbers of the children to be taught by one master or one mistress."

M. Jean Jaures writes a companion paper upon French socialism, while, from the German point of view, the whole subject is elaborately treated by Herr Liebknecht. Taken all in all, modern socialism has not had so much space accorded it in any of the reviews for some years as it gets in the January Cosmopolis.

## THE FRENCH AND ITALIAN REVIEWS.

#### REVUE DES DEUX MONDES.

DE LA SIZERANNE'S interesting paper on pho-M DE LA SIZERAMED INC. The tography is noticed elsewhere, and the rest of the Revue for December quite maintains its usual high standard.

#### IS IT THE DOCTOR'S FAULT?

Dr. Brouardel, the distinguished doyen of the Paris Faculty of Medicine, discusses the important question of medical responsibility. In spite of the numerous references in satirical writers to the "license to kill" supposed to be enjoyed by every son of Æsculapius, Dr. Brouardel has no difficulty in showing that the idea of medical responsibility is practically contemporaneous with civilization. Of course, attempts have been made to get rid of the doctrine in the interest of the incompetent practitioner. For example, in 1696 the Parliament of Paris declared that the responsibility for the effects of medical treatment rested with the sick person who chose the doctor, but some years later the same Parliament condemned certain therapeutic methods, notably the transfusion of blood. They even issued a decree against the use of emetics; but this they had to rescind, for it was Louis XIV.'s favorite remedy for his frequent attacks of indigestion. In 1760 the Parliament of Bordeaux gave the enormous damages of fifteen thousand livres for a broken limb which had been badly attended to and had had to be amputated. In England, in 1886, a doctor was acquitted, although he had given a purgative to a patient suffering from heart disease, who had died in consequence. Not to multiply instances, it is clear that legislators have failed to establish a firm basis of medical responsibility, and consequently the application of it has greatly varied according to the existing trend of public opinion.

#### THE GAMBLING VICE IN FRANCE.

In the second December number M. Anatole Leroy-Beaulieu continues his series of papers on the reign of money with an article on Bourse gambling and company promoting. The methods of the financial trickster are much the same in all countries, and M. Leroy-Beaulieu's account of the various ways in which the book is baited in France, interesting as it is, does not strike the reader as being particularly novel. The tone of the article is pessimistic, and the description given of the French turf shows the lamentable extent to which the vice of gambling has eaten into the heart of the people. There is, however, the consolation that the cause of charity benefits to the extent of about four million francs yearly by the taxation of bets made through the pari mutuel. M. Leroy-Beaulieu sees clearly enough that a policy of rigorous suppression would probably only enhance, and would certainly not mitigate, the evil. So, too, with stock-exchange gambling. It is practically impossible to draw the line between legitimate commercial risks and that reckless kind of speculation which is on all fours with gambling at Monte Carlo. But in a future article M. Leroy-Beaulieu promises to grapple with the problem of finding really effective remedies.

#### REVUE DE PARIS.

N the December numbers of the Revue de Paris are given two installments of the correspondence which passed between Ernest and Henriette Renan and M. Marcellin Berthelot. These letters cover the period from September 5, 1860, to September 26, 1861. They give altogether charming glimpses of Renan's family life and how the old family friend shared in it. For example, there is a great deal of delightful baby-worship expended on little Ary Renan, who is always referred to as "Baby" with the capital B which his importance demands, and the little fellow's affection for his "pauvre petit Berthelot" is very prettily indicated in these intimate letters.

#### THE WOES OF AUSTRIA-HUNGARY.

There is an able anonymous article on the Austro-Hungarian crisis, in which the modern history of this singular state, or rather combination of states, is lucidly summarized. The writer apprehends that the evident uneasiness of Germany will bring about a return to the most objectionable form of centralization in the domestic politics of Austria. He says gloomily that anything is possible except the only reasonable solution, namely, to put an end to the parody of a constitutional Liberal regime which exists in Austria. This should, he thinks, be accomplished not, as might be expected, by a frank return to absolutism, but by rushing to the opposite extreme. A radical democratic transformation would, he believes, save Austria, at least for a time. True liberty, true equality, decentralization, the abolition of electoral privileges, and the establishment of universal suffrage pure and simple—these are the panaceas which he prescribes, but which, he sorrowfully admits, are extremely unlikely to be realized. The Emperor Francis Joseph will celebrate on December 2 next his jubilee as a sovereign. Will his throne then be tottering, as it tottered when he ascended it? It is significant that the communes of Bohemia have suspended their preparations to celebrate the anniversary. The old Austria is dead, and the Emperor has been trying for the past fifty years to create a new and modern Austria, but it has not come. Evidently the writer of this article thinks that Austria can neither remain under an absolute régime nor transform herself into a modern state.

## OTHER ARTICLES.

Mr. Sidney Webb has an informing article on the industrial crisis in England. He cites the instructive example of the cotton trade in Lancashire, where the operatives fully admit the right of the employer to decide the questions of material, methods of manufacture, machinery, and so on. The joint boards of employers and workmen, which work so smoothly, seem worthy of imitation in the engineering trade; but perhaps Mr. Webb forgets that in the cotton trade large numbers of the operatives are themselves in the position of capitalists owing to their holdings in the various "limiteds" which are so numerous, particularly in the Oldham district. Probably if some system could be devised for giving the machinists a more direct interest in the welfare of the firms which employ them, these suicidal strikes and lock-outs would become far less common. M. Bérard has two papers on Cretan affairs. Like Mr. Curzon and the Indian frontier, he has "been there," and gives a fairly good map of the island.

#### NOUVELLE REVUE.

ME. ADAM'S periodical for December is perhaps hardly so attractive as usual, though the two numbers contain, nevertheless, a good deal of interesting and even important matter.

### ARNOLD BŒCKLIN.

If any one could succeed in arousing some public interest in Bœcklin, the painter whose jubilee Basle has recently been celebrating, it would, we imagine, be Count Robert de Montesquiou. Bœcklin is certainly a great painter, who has succeeded in realizing on his canvas, all palpitating with life and reality, those myths of the ancient world which we are accustomed to see pictured as frigid allegories, treated with all the lifeless correctness of the schools. It is said that the great cattle-painter, Sidney Cooper, has never been able to portray to his satisfaction the hoofs of his sheep and oxen, and it is undoubtedly something more than a coincidence that he almost invariably paints the animals with their feet concealed in lush grass or water or snow. It may be for a similar reason that Bœcklin has not usually chosen to paint absolutely nude figures, which he is accustomed to half conceal with the flowing lines of some gauzy drapery.

#### OTHER ARTICLES.

Biography is a notable feature of Mme. Adam's periodical. Thus we have an account of the childhood of the great savant Champollion. He seems to have been a delightful little boy. He describes with all the gusto of an English schoolboy a revolt at his lycée, when the pupils filled their pockets with stones and smashed all the windows in the place. The head of the school actually brought in a number of soldiers and stationed them in the dormitory! Then we have two articles professing to represent Captain Coignet, a well-known figure in the military history of the Second Empire, as he really was; and a paper on the great feminine artistes of Italy, a great part of which is devoted to the study of Eleanora Duse. M. Muteau's two papers describing his experiences in accompanying M. André Lebon, the French colonial minister, on the latter's recent hurried tour through Senegal and the Soudan, are evidence of the sudden revival of interest on the part of Frenchmen in their colonial expansion. M. D'Abartiague has a curious paper on Atlantis, the vanquished continent, frequently alluded to in classical literature.

## THE ITALIAN MAGAZINES.

UNDER the title, "The Good Samaritan of Wörishofen," the Civiltà Cattolica publishes some interesting details concerning the career of the late Pastor

Kneipp. In the year 1891 over fourteen thousand persons came to Wörishofen to consult him. Of his first large medical work, "My Hydropathic Cure," four hundred thousand copies were sold in eight years. He declined to accept any payment for his medical advice, and the vast sums he received from his books and as thank-offerings from grateful patients were all devoted to charitable purposes. His so-called "Kneipp coffee." a drink compounded of barley and flavored with coffee from which all the caffeine had been extracted, still sells at the rate of twenty-five million pounds a year. Of Pastor Kneipp's method of treatment the writer says:

"Probably Kneipp himself could not always have given the reason of all the modifications in his various prescriptions. Endowed as he was with an extraordinary faculty of observation, he could discover minute symptoms and indications which would escape every one else, but it is probable that not infrequently he guessed intuitively from half-developed signs both the causes of the disease and the best method of combating it. Hence it is very doubtful whether the methods of the "good Samaritan," when carried out by others, will produce the same marvelous results."

"May priests bicycle?" is a question which is still agitating many parishes in Italy and which is discussed by "A Country Priest" in the Rassegna Nazionale (December 16). Roughly speaking, the younger and more energetic of the clergy are in favor of it, and the bishops and older priests are opposed. The Roman authorities have been applied to for a definite ruling, but so far have only given evasive replies, so there is still hope that the Italian priesthood will be permitted the freedom in the matter already accorded to their English and American confrères.

A cause of regret among cultivated Italians is the ever-diminishing use of the Italian language throughout the world. In the Middle Ages Italian was the commercial language of the whole Mediterranean coast, and in the time of the Renaissance it was the accepted language of gallantry and love. To-day it is less studied in any country than English, French, or even German. In the hope of stemming the evil, the Dante Alighieri Society was founded a few years ago, and both the Rassegna Nazionale and the Nuova Antologia for last month contain articles on the operations of the society. That in the Antologia is from the pen of the distinguished president of the society, Prof. Pasquale Villari, who specially urges, among other remedies, the endowment of Italian schools in all foreign cities where large numbers of Italian immigrants are to be found. The same number contains a lengthy and appreciative study of Sheridan by Professor Segrè, who criticises the recent "Life" of the dramatist published by W. Fraser Rae, and all admirers of d'Annunzio will turn to his weird romantic paraphrase of the Parable of the Ten Virgins, which reads, from his pen, like some pagan legend.

## THE NEW BOOKS.

## I.—SOME FICTION FROM OVER-SEAS.\*

## BY HENRY WYSHAM LANIER.

DLACE AUX DAMES! and certainly anything so "advanced" as the work of Madame "Sarah Grand " would be out of place anywhere except in the front rank. It must be confessed, however, that The Beth Book is chiefly deserving of attention because it is by the author of The Heavenly Twins. When that unusual book descended upon us some years ago it was received in the most diverse ways, the opinions concerning it running the whole gamut from outraged decency to groveling and awed worship. No matter what was said or thought of it, though, it had a verve and an ingenious brilliancy which, despite its lack of reality, made it uncommonly interesting reading. It is a somewhat temerarious assertion after the author's recent ravening attack upon her newspaper critics, but a careful reading of The Beth Book leaves one with the conclusion that it has all of the nastiness and all the artificiality of its predecessor, with scarcely any redeeming cleverness. There is hardly a character in the book which has flesh and blood except the little slavey, Gwendolen, in the brief half-dozen pages of her existence. The keynote of the author's work, the feeling most vivid when the book is finished, is the newness of "Madame Grand's" world. There is reference after reference to the time when women were domestic slaves. to the day "before woman began to question the wisdom and goodness of man, his justice and generosity, his right to make a virtue of wallowing when he chose to wallow," etc., all indicating the dizzy heights to which "the new order which Ideala had founded" (and into which Beth is initiated) has attained. Yet there are evidences that woman by her long contact with degenerate man has not herself been able to remain quite perfect, for Ideala complains that altruistic reform is not a bed of roses: "Women who work for women in the present period of our progress-I mean the women who bring about the changes which benefit their sexmust resign themselves to martyrdom. Only the martyr spirit will carry them through. Men will often help and respect them; but other women, especially the workers with methods of their own, will make their lives a burden to them with pin-pricks of criticism and every petty hindrance they can put in their way. There is little union between women workers, and less tolerance. Each leader thinks her own idea the only good one and disapproves of every other. They seldom see that many must be working in many ways to complete the work. And as to the bulk of women, those who will benefit by our devotion! they bespatter us with mud, stone us, slander us, calumniate us; and, even in the very act of taking advantage of the changes we have brought about, iguore us, slight us, push us under, and step upon our bodies to secure the benefits which

our endeavors have made it possible for them to enjoy. I know! I have worked for women these many years, and could I show you my heart you would find it covered with scars—the scars of the wounds with which they reward me." It is fairly indicative of the iconoclastic zeal which possesses the author that the only decent man in the book (with the exception of a couple of minor characters)—the one in whom Beth, the genius, at last finds her fitting mate—is an American!

#### A NOVELIST OF INDIAN NATIVE LIFE.

It is something of a relief to turn from the distinctly unpleasant "social problems" which the new women aforesaid feel it their duty and mission to discuss and to "test by experiment," to Mrs. Flora Annie Steel's pictures of the inner native life in India. These patient drudges are still fettered and blind. Their duty is to bear children and to do their lord and master's work; and if they are not blessed with children they either accept the new and younger wife resignedlyor poison her or her child. Perhaps it is because of their benighted condition that despicable man will find them more attractive than the goddesses who discuss and experiment. At any rate, they afford "good material," which the author of On the Face of the Waters has handled interestingly, often ably, in her new book. It is inevitable that her short stories should at first be compared with Mr. Kipling's, and they are in too different a class to stand the test very well. Yet there are times when Mrs. Steel gives us something which Kipling, even with his infinitely greater force and genius, has never disclosed in his wonderful pictures of the British soldier and civilian in India: in her portrayal of the real Hindoo, the stoical peasant, the mad fanatic, the jealously loving wife patiently submitting to the customs of her country; in a word, when she is the mouthpiece of the native, Mrs. Steel is at her best-which is more than good. In the Permanent Way is the second volume of hers which has appeared since On the Face of the Waters made its signal success a little over a year ago, In the Tideway-a collection of Scotch tales-having been given to the public last summer. It seems to me, however, that Mrs. Steel's individuality finds freer scope in the novel than in the short story, and since she declares she will not publish another book for some time, it may be hoped that her next production will be more on a level with her stirring tale of the Great Mutiny.

THE LAST STORIES BY THE AUTHOR OF "QUO VADIS."

Mr. Henryk Sienkiewicz seems to suit the literary wants of a vast number of Americans. For several months Quo Vadis has headed the list of "best-selling books" in this country. Even the newspaper jokesters have found their little profit in its universal popularity, and there are many bitter controversies between the im-

<sup>\*</sup>A list of the books mentioned in this article, with the names of publishers and prices, will be found on page 248.

presarios of authorized and unauthorized editions. Moreover, there have been promptly put upon the market at least nine other new volumes (some of them new editions) by the famous Pole, including Hania, With Fire and Sword, The Deluge, Children of the Soil, etc. The latest of these is a collection of short stories. Let Us Follow Him, taking name from the initial tale of the noble Roman lady who is cured of "a cruel and unknown disease" (in which she wastes away from the continual vision of "a dry corpse-like face looking on her with its brown eyes") by being present at Christ's crucifixion. Without the slightest desire to impute irreverence to the author, it must be said that so far from improving upon the biblical account, his description of that scene seems utterly trivial and unnecessary; indeed, the whole story is weak and commonplace—the last qualities one would expect to find in a volume over his name had not we had so many doleful examples of the results which attend the efforts to supply the public demand for "more" from a popular author. Of the five other stories in the book "Sielanka" and "Orso" are perhaps the best, exhibiting well the author's feeling for nature and his strength in describing the animal man.

## THE BROKEN SWAN SONG OF STEVENSON.

The last-published romance of that well-beloved author who, since it was written, has passed for the last time along the "road of the loving hearts," is sure of the widest attention. Indeed, without taking sides in the dispute as to whether or no Robert Louis Stevenson was a great novelist whose works will "live," it can be said with no fear of contradiction that his audience was always attentive; and it was a very large and heterogeneous audience that followed him into those pleasant fields and seas of dashing careless, unspeculative romance. St. Ives, the "Adventures of a French Prisoner in England," is frequently mentioned in the Vailima Letters, and a reference to the accounts which Stevenson sent his friend Sidney Colvin of its progress explains much of the curious fluctuations it presents. The opening scenes are equal to anything he ever wrote. There is a vigor and a continuity of interest, yet withal a restraint and a mastery of the unfolding plot, which is quite irresistible. And as for the style-it is doubtful if even the author's own exquisite word-sense and hard work ever achieved a more notable triumph than in the first chapters of St. Ives. Crisp yet fluent, full of individuality and unusual and inimitable phrases which make an observant reader fairly gasp with appreciation, yet fitting the sense as the "skin of an athlete fits his muscles"-this is the real Stevenson. After the hero's arrival at his uncle's, however, there is a falling off, both in manner and matter, which would be incomprehensible without the explanation of ill-health and discouragement afforded by the letters above mentioned. The plot becomes more mechanical, the various adventures are jerky and disconnected, and the "Adventure of the Attorney's Clerk" is the sort of failure which makes a sensitive person turn his head. The claret-colored chaise, too, drags somewhat spiritlessly and Rowley is not worthy of the mind which created Mackellar in The Master of Ballantrae. Even the buoyancy and certitude of the style exhibit clipped wings, and despite a few flashes of the true Stevenson the tale never again reaches the high level of its inception. The latter part of the story has been written by Mr. Quiller-Couch from the outlines given by the author to his stepdaughter and amanuensis, Mrs. Strong. It must be said that the former has attempted the impossible, with results highly creditable to his native gifts and his powers of imitation.

#### BENJAMIN SWIFT'S UNPLEASANT BOOK.

Mr. "Benjamin Swift" in The Tormentor succeeds in convincing the reader that his Mrs. Crippen is right: "The world is quite full of devils," indeed, when in a typical little Scotch village one finds a crippled old woman who has poisoned her sister and repeats the operation on her niece that the deceased sister's property may not pass from her control; a doctor who has assisted in some degree in making the widow he afterward marries, and has "wickedly rejoiced" at his success; a drunken and dissolute lord who is a little worse openly than his sister is in secret; a neighboring lady who is hardly as good as she should be; and, by no means least, the Tormentor himself, who is a regular Beelzebub, chief of the devils! The kail-yard school will have to watch out for its public if such strong drink as this shall become popular. This is hardly probable, however, for The Tormentor is as disagreeable a story as can be found in a long day's reading, and although it exhibits the same tremendous force, the same intense, surcharged emotion that made Nancy Noon one of the literary sensations a year ago, it is even less restrained than that remarkable tale, and is in this respect a disappointment to those who prophesied a great future for this meteoric apparition. It is a thousand pities that Mr. "Swift" has not yet learned to turn the tremendous strength he has into the channels of true artistic endeavor. His next work will help much to decide the question as to whether or no he is capable of this, for it seems hardly possible that the literary artist in any man can survive a third such story as these

## "HIS EXCELLENCY," BY ZOLA.

In his preface to the recently published translation of Zola's His Excellency (Son Excellence Eugène Rougon), M. Vizetelly assures the reader, from his own personal knowledge, of the remarkable accuracy of both the personages and scenes described. Napoleon III. and the Empress Eugénie are here without any disguise; Rougon himself is not altogether Rouher, but a composite, with Rouher's face, build, and gestures, yet with the actions, opinions, and characters of half a dozen others combined. Marsy is the Duke de Morny, Rusconi the Sardinian Minister, Chevalier Nigra, etc. M. Vizetelly says of the baptism scene: "I have an account of the day's proceedings written for the Illustrated Times by my uncle, the late Frank Vizetelly, who was killed in the Soudan; and I find him laying stress on the very points which M. Zola brings into prominence, often indeed using almost the same words. However, this is but one of the curious coincidences on which malicious critics found ridiculous charges of plagiarism, for I am convinced that M. Zola never saw the Illustrated Times in his life, and moreover, he knows no English"-all of which is admirably calculated to make every reader thirst greatly for knowledge as to the precise source from which M. Zola did get his data. As for the book itself, it is not very satisfactory. It has little of the brutality which is inextricably connected in English minds with the author's name, but it has almost as little of his astonishing vigor, his overwhelming presentation of conditions or emotions through the medium of his characters. Rougon symbolizes "a certain form of the principle of authority," and one gets too much vital hold upon the man, too much interest in his great, gross, power-loving nature to be contented with the nebulous ending, in which, "to satisfy his rageful craving for power," he "gives the lie to all his previous political life." There is no climax about that. One feels Rougon would have changed his political convictions just as often as he deemed desirable. He and Clorinde are curiously analogous, and she, with feminine subtlety, at once refor domination by ruining him and setting up in his place the husband he had picked out for her.

#### LOTI AMONG THE BASQUES.

Pierre Loti has made a double use of his sojourn in the Basque country. His novel, Ramuntcho, has been supplemented by a volume of note-book scraps, Figures et Choses qui Passaient, describing scenes in that unique region. In truth, Ramuntcho itself has but a slender thread of fiction; its charm lies in the sensitively poetic apprehension and appreciation and expression of the forms which nature takes in these Pyreneean lands, and which are so plainly reflected in the simple peasant-folk. The languorous south wind, the pelota and the fandango, the grave and serious following of immutable tradition through all their daily lives, the half-sad sentiment—all these blend together in the story and create an atmosphere of peculiar and seductive charm. It is nature and innocence seen through great sophistication, yet none the less real for all that.

#### THE CLEVER MRS. PEARL CRAIGIE.

"John Oliver Hobbes" (Mrs. Pearl Craigie) presents what is decidedly her most ambitious literary venture thus far in her last book, The School for Saints. Five bundred pages, with the threat of a sequel, are required to carry her hero through his checkered career of politician, idealist, literary worker, and society wit. The scene is laid in the time of Disraeli's ministry, and the author expends all her powers in placing a vitalized portrait of that brilliant author-politician before the reader. The Carlist outbreak of 1868 and the flamboyancy of the Second Empire also figure prominently in the book, and the hero's conversion to the Roman Church is the cause of much insistence upon the virtues and efficacies of that fold. Indeed, there are parts of the volume so persistently proselytizing in nature that we may not unreasonably expect to hear from the A. P. A. upon the subject. The book is, of course, exceedingly clever, as is everything the author has done, and although the effort to be epigrammatic is still occasionally discernible, this is less of a blemish than in some of her former stories. Brigit, the heroine, is perhaps the least convincing character of all, exhibiting a knowledge of the world and a savoir faire which are difficult to accept in a girl of fifteen fresh from a convent.

#### DAUDET'S EARTHLY REWARDS.

There are few names for whose elision the year 1897 is responsible which we could not better spare than that of Alphonse Daudet. For thirty years, ever since the publication of Le Petit Chose, his fame has been firmly established, and it is pleasant to think that the last two decades of his life were crowned with financial success as well. Sapho ran to 170,000 copies, Le Nabab 160,000, Le Petit Chose 150,000, Tartarin was worth some \$30,000 to his creator, and the receipts from

his plays and novels were never less than \$20,000 a year from 1878 to the time of his death, last Decem-Rarely indeed has any literary artist who so revered his art and who was such a consummate master of both thought and expression, received at the same time the popular appreciation and the whole-hearted admiration of his co-workers which fell to the lot of this draper's son, leaving his sixteen brothers and sisters in the parental nest at Nimes and plunging into the whirl of Paris life at the age of seventeen. Two of his works are just to be issued, Quinze Ans de Marriage and his last story, Soutien de Famille, which has concluded its course as a feuilleton in L'Illustration. When all is said, it is doubtful if Daudet ever achieved anything more permanent, more utterly delightful. than that irresistible Tartarin, who, as has been so often declared, ranks along with Falstaff and Don Quixote as one of the world's lasting possessions.

#### THE NEW ROMANCE BY GEORG EBERS.

Barbara Blomberg is the rotund title of Georg Ebers' last romance, which is translated by Mary J. Safford. It is as different from An Egyptian Princess or Uarda as Egyptian history is different from German history, and it is evident that the inspiration which served the famous Egyptologist so well in those delightful tales is somewhat hampered by the change of scene. Barbara Blomberg was the mother of the Emperor Charles V.'s illegitimate son, that famous Don John of Austria who broke the power of the Moors in Granada in 1569 and gloriously defeated the Turkish fleet at Lepanto two years later. The story lacks the entertainment, the facility, and the charm of some of Mr. Ebers' earlier works, but it exhibits the sterling qualities of careful unity and conscientiousness which are characteristic of all that he writes.

#### A SUCCESSOR TO "LORNA DOONE."

There is something truly pathetic about a tremendous literary success too early in life. The inducements to keep on writing are practically irresistible, yet the more lofty the first triumph the more numbing is the shadow which hangs over all subsequent work. All the rest of his life Sheridan was afraid of the author of A School for Scandal; Du Maurier's last work was undoubtedly tinged with some bitterness, however little perceptible in the book itself, by the realization that, be what it might, the popular acclaim that greeted Trilby could not again be evoked; and-perhaps most signal instance of all—the author of Lorna Doone has been patiently putting forth his novels for over a quarter of a century, since the appearance of that famous tale, only to fall as unnoticed in the crowd as is possible for the work of one who has produced such a masterpiece. Now, in his seventy-second year, comes Dartel: A Romance of Surrey, in which the heroine is a dark foreign girl, the hero a blunt, stupid, strong Englishman-all cast in the same mold as Lorna Doone despite the difference of detail. Yet if even then we were to get another version of that fascinating tale! But instead of that we have a very mediocre romance, indeed, alternating between Surrey and certain Caucasian wilds, where dwell Lesghians and Ossets and Svans and other tribes with peculiar names. Now, Mr. Blackmore knows his own part of England about as well as any writer alive, and is at his very best when he is with his farmers and shepherds and laborers. These people of his have the very breath of life and are a part of the landscape he

knows and loves so well; but "Marva" and "Sûr Imar" and the wilds of the Caucasus, where there are mysterious underground dungeons with massive bronze doors—all these have a smack of the cyclopedia and Rider Haggard. It is too much like the old-time plays where the audience must be told that the curtain before them represents a noble castle standing on the jutting rocks. Mr. Blackmore does himself less than justice in the attempt to handle scenery and adventures so far from his proper field, and Daricl falls far short even of those other books of his which have not equaled Lorna Doonc, but which have at least been faithful renderings of people and conditions intimately known to the author.

### MORE FUN FROM "F. ANSTEY."

One might apply the beginning of the above paragraph to another author whose latest book, Baboo Hurry Bungsho Jabberjee, B.A., has just appeared. It seems improbable that Mr. Guthrie ("F. Anstey") will ever be able to equal his high-water mark reached in Vice Versa sixteen years ago. It is rash to prophesy, though, and Mr. "Anstey" is only forty, so he may surprise us yet. Were it not for the remembrance of Vice Versa and The Tinted Venus, this caricature of the anglicised Indian gentleman would probably be considered very amusing, and it certainly is good in places. Mr. Jabberjee relates his experiences through his contributions to Punch, and besides the humor of the presentation the book is interesting in a side way as showing the boundless contempt of the Briton for the "civilized" Bengali. The illustrations, by J. Bernard Partridge, are exceptionally clever.

#### MAX NORDAU AS A NOVELIST.

The Shackles of Fate, by Max Nordau, will probably surprise those who have read that gentleman's previously translated works. No one could accuse him of any weak truckling to the desire for happy endings in any of the other books, and the opening scenes of The Shackles of Fate do not seem to promise any particularly agreeable outlook. But lo! the thief, seducer, coach man's-son-determined-to-rise-in-the-world, who is engaged to be married to a lady of noble birth when all his rascality comes tumbling down on him at once; this exposed scoundrel, who has hidden away his mother, the ex-cook, because she might disgrace him, turns out in the last scene a Man, and, accepting the consequences of his misdoings, grapples with the world again on an honester basis. May Dr. Nordau think it worth while to try his hand at optimism again! It is a relief to have done with degeneration for a time.

# THE DIFFERENCE BETWEEN THE GIRLS OF EUROPE AND THOSE OF AMERICA.

The author of American Nobility, who writes under the name of "Pierre de Coulevain," presents a very careful study of French and American character. The American heiress who marries the French marquis is well drawn in many ways, and it is quite unusual to find a foreigner capable of getting at the inner feelings of so complex a product. Complex as we think her, however, the author assures us that Annie, the heroine, was "the simple and prosaic Eve of the New World, and as different from the complex Eve of the Old World as two creatures of the same species can be;" and it is to this essential difference between the nations that most of the troubles of international marriages may be traced. The book has many shrewd sayings, some of them epigrammatic to a degree: "She gave him the sensation

of biting some beautiful fruit, sound and not yet ripe, the slight sourness of which was nevertheless agreeable;" and again: "A European girl would relate what she has felt; an American girl relates what she has seen;" "the American girl has found out the way to play with fire without burning herself. She takes of love what is the best and most exquisite, and leaves the rest to women of a lower stamp." American Nobility is crude enough in places, it is business-like and almost mechanical at times in its endeavor to map accurately the exact differences between French and American women, but it is distinctly out of the common and well worth reading.

## NEW BOOKS FROM THREE INDUSTRIOUS NOVELISTS.

Besides the dedication to Brichanteau, Actor, in which M. Jules Claretie does not fail to inform the uninstructed reader of his importance and positions, the volume contains a prefatory notice of the author in the shape of a lengthy review by "Francisque Sarcey, staff contributor to Arts and Letters Department in the Cosmopolitan Magazine." It is surely more than obliging of the publishers to put this most laudatory notice of the volume where the reader will get it in time to know what to think of the work itself when he comes to it. We are told that M. Claretie is "what is called a polygraph," that one of his novels has reached the seventieth edition, that the present work is witty and sprightly, that M. Sarcey thinks it will be as much appreciated in this country as it "has been in Paris," and that the author's "ease and felicity of expression" does not exclude "habits of precise observation and profound reflection." Undoubtedly one of the most exact and profound passages is to be found on page 33: "I have always found, in my provincial tours, an authorized critic who was called, according to the time, sometimes the Janin, sometimes the Sarcey of the town. Somebody would say to me when I arrived: 'You must leave your card on Richardin or Verdinet; he's the Sarcey of the town.' Thus there is a Sarcey at Lyons, a Sarcey at Bordeaux, a Sarcey at Lille. Formerly it was a Janin." In Brichanteau the author has endeavored to depict the typical French actor of yesterday, with all his lovable vanities, his artless importance, and his deep love for his art beneath the crust of harmless affectation.

For the Cause, a volume of five short stories by Mr. Stanley J. Weyman, presents a rather sudden transition in its subject-matter which has been most ingeniously obviated by the author. The titular story is of Paris and the persecuted Huguenots in 1589, adapting French history quite after Mr. Weyman's usual pattern. All the rest of the stories are of England and to-day, and the beautifully simple expedient for bridging the three centuries and the channel, for hitching the Dean of Bicester to Henry of Orleans, is to give the hero of the second story the nickname of "King Pepin" and call the tale "King Pepin and Sweet Clive," conducting the reader's mind thus gradually to modernity. Mr. Weyman's modern English stories are decidedly below his French historical ones.

It is not necessary to characterize Mr. Clark Russell's books. Each new installment has the flavor we know so well, and it is a flavor hard to replace by any other brand. The Two Captains is different from a good many of the sea stories in its details. It is a tale of piracy in 1820, a piratical cruise which ends most unhappily for the two captains themselves, one first killing the

other and then making away with himself when captured by a government corvette. The book is thin compared with *The Wreck of the Grosvenor* or *The* Frozen Pirate, but it has the feeling in places of those absorbing yarns, and that is all one can reasonably expect in these days of shocking overproduction.

It is an ungrateful saying, but the title of Sir Walter Besant's new book is one that his admirers will hardly fail to apply. A Fountain Scaled is apparently only too close to the condition of Sir Walter's great abilities. It is much pity that the man who gave us, if not genius, such eminently sane ability and grasp of his subject in at least half a dozen of the earlier books should be constrained to put out such watery and eminently unnecessary stuff as this is. One can read it, but surely it is not worthy to come as a riper product than All Sorts and Conditions of Man.

#### A SCOTCH ROMANCE AND A GREEK ROMANCE.

There is no end to the historical novel. Scotch history of three hundred years ago is the background which Lord Emest Hamilton has chosen for The Outlaws of the Marches, and an increase of reality and verisimilitude is obtained by illustrating the book with photographs of the places described. "Romance revives!" has sung one of our poetesses recently; but somewhat strangely accoutered in many of her incarnations. Real photographs and a "glossary" which informs us that cuttie means "a short girl" and that for "kail-yard" the English reader should substitute "kitchen garden" are somewhat heavy burdens for a romance still rather dizzy from a long swoon. His lordship tells of the wild days when the bloody feuds of the Armstrongs and the Elliotts kept the Middle Marches in an uproar. Plenty of fighting, plenty of love-making, perils passed, and a retrospect of forty happy years with Joan to leave a sweet taste in the reader's mouth—the tale does not violate any of the traditions of its class.

Andronike, the Heroine of the Greek Revolution, by Stephanos Theodoros Xenos, is a most ambitious example of the school just under discussion. Romance must needs thrive in the atmosphere of the Greek struggle and in the companionship of Byron, Markos Botsaris, Mavrocordatos, Odysseus, and Trelawney. translator, Prof. Edward A. Grosvenor, declares that "no other book in so realistic manner describes the birth-throes of modern Greece. No other portrays more vividly the political and moral medley and chaos of the East." In addition to his excellent translation, the reader owes Professor Grosvenor a weighty debt of gratitude for withstanding the temptation to explain and annotate. "I have judged it better," he says, "to let the tale in the gradual unwinding be its own interpreter." Which example should be held up before every translator of fiction.

## OTHER STORIES FROM ABROAD.

Mr. Charles Benham goes history one better, and places The Fourth Napoleon (up to the opening of the romance a briefless barrister, known as Walter Sadler) in the year 189—. After some truly remarkable and ingenious history-making (nearly six hundred pages of it) the unfortunate Bonaparte comes face to face with the brother of the young lady whose ruin he has had to follow by her murder. There is some unusual dialogue, the Emperor refusing to fight his accuser. It may be worth while to give Mr. Benham's rendering of the imperial demeanor when Mendul insists upon immediate explanations: "'I won't be ordered about in this way,' shouted poor

Bonaparte, flinging both feet in the air and bringing them down with a whack upon the springs. 'I will have both you young men thrown into prison. . . . ' " The sister is lying dead in the next room, but the Emperor struggles bravely to extricate himself from the corner. "'Or look here, Mendul,' that potentate goes on, 'why can't you get some decent fellow to marry her and set up a happy home for her? There must be a heap of men over in dear old England who would only be too glad. Some one a leetle bit her social inferior, I mean. In a month or two she will be just as pretty as ever she was. Poor girl! we all want her to have a little peace. She's been through so much. . . . ' " And then the avengers discover the dead body of the missing girl-and the "Fourth Napoleon" is no more. And when the premier and the palace servants pour in De Morin mutters: "'Poor nephew Louis! The best way out of it, I think."

To continue the peregrination—An Imperial Lover, by M. Imlay Taylor, deals with Russia two centuries back. The "imperial lover" is Peter the Great, and he proves his right to the title by renouncing his passion when the object of it marries some one else. "'Love and hate cannot touch my heart,' he added with supreme bitterness. 'I am not a man-I am the Czar !" The tale is full of intrigues and typical complications at the Moscow court, with a full complement of duels and escapades in which various well-known personages, including the great Mentchikof, are involved. A still earlier romance is Mr. Joseph Hatton's The Dagger and the Cross, which deals with the middle of the seventeenth century, and brings together the little English village of Eyam and the complex life of the Italian cities, of Verona and Venice and Florence. When Giovanni Ziletto and Reuben Clegg are rivals for the hand of Mary Talbot one may expect sharp contrasts, and the author does not spare his colors.

George Malcolm, by Gabriel Setoun, is a story of Scottish life and character which emphasizes by its own differences the tendencies of the modern Scottish school. George Malcolm is distinctly along the lines of the novel of forty years ago rather than of the school of humorous minutize which has been so largely exploited during the last decade. Certain exponents of the latter have brought it into some discredit, but compared with the rather turgid, long-drawn-out, and uninteresting studies in the present volume, the most trivial and vapid attempts at humorous sketches are welcome.

Mr. S. R. Crockett seems to write his stories in the same spirit of precision and continuity with which he plays golf. Lochinvar will satisfy all those who like the author's methods; and without having any "inside" data, it may be confidently predicted that there will be another volume to take its place without too long an interval of loneliness for his admirers.

Edna Lyall's latest book, Wayfaring Men, is much in the same style as those which have already made her so well known; and it is doubtful if a much more definite description could well be given of two other volumes from the pens of a couple of English women novelists: Other People's Lives, by Rosa Nouchette Carey, and At the Cross Roads, by F. F. Montrésor. These are writers who strike certain chords quite unerringly—and it makes so little real difference whether the notes are evoked in Surrey or in London that the details are quite unessential. One picks up volume atter volume with the certainty of getting a particular mental taste, no matter how diverse the food may appear at first sight.

Of the thirty-odd books already bestowed by Mr. Silas K. Hocking upon a breathlessly expectant world, "over one million copies have now been sold," and yet Mr. Hocking is not yet allowed to retire into that peaceful tranquillity of which such arduous labors have surely made him deserving. In Spite of Fate will have to attain wide circulation to be worthy of its predecessors, from the latest, For Such is Life (which has only had time to run into three editions, aggregating sixteen thousand copies), up to Her Benny, the last edition of which brought its record up to one hundred and fifteen thousand. There was a good deal of fate to contend with, as is evident from even a few of the chapter headings-"The Hand of Fate," "Never Again," "A Fruitless Quest," "A Dangerous Enterprise," "Adrift," "In the Shadow," "The Darkness Deepens," "Foiled," "Flight," "Vendetta," "Nemesis," and still two chapters to come -and yet on page 408, facing the list and the "thousands" of "Silas K. Hocking's works," "He looked her full in the face and their eyes met in one swift revealing glance. He saw the color mount to her cheeks; he felt it mount to his own. 'I will always call you Pearl,' he said in a voice that was scarcely above a whisper. 'And I,' she answered sweetly, 'will always call you Jack.'"

Defant Hearts is translated from the German of W. Heimburg. It is a love-story and ends happily—and one would think we had enough native literary stupidity without importing anything so absolutely dull.

Mr. W. J. Dawson dedicates his series of English character sketches, Thro' Lattice Windows, to that indefatigable discoverer of genius, W. Robertson Nicoll, "to whom many writers besides myself owe a debt not easily computed and but inadequately acknowledged in honest admiration, true respect, and warm affection." Mr. Dawson describes the moors admirably and seems to feel much of their strange charm to which many

writers have testified. If one must give an opinion of the book, however, it cannot be said to be particularly compelling; a little has been made to go a long way to result even in so unpretentious a volume, and one hungers for more nutritious diet even after reaching "The Gate of Heaven."

Of the half a dozen tales in G. S. Godkin's Stories from Italy, the first, "The Soldier and the Monk," takes up nearly half the volume. The book ends with an amusing little fantasy called "The Bodkin Letter," in which an Irish and an Italian descendant of the Bodkin family quarrel at the Florence post-office over the letter which announces a fortune coming to both of them. Naturally the Irishman falls in love with and marries out of hand the sister of his Italian cousin. An interesting side light on Florentine manners is afforded by the Italian's walking in the middle of the street because of "the fatal tendency people have to throw themselves down from third-story windows."

Paul Carus is represented by two unusual-looking volumes—a third edition of Karma: A Story of Early Buddhism, and a new book called Nirvana: A Story of Buddhist Philosophy, both printed on Japanese crêpe paper, tied with silk, and with illustrations whose fascinating delicacy and subtlety of coloring more than compensate for the lack of perspective. What is here given of Buddha's teaching can be taken by every Christian with advantage, as for instance: "Purity and impurity belong to one's self; no one can purify an other;" "He who hurts others injures himself-he who helps others advances his own interests. Let the illu sion of self disappear, and you will naturally walk in the path of truth." This is a recognition of the sacred claims of personality and of the equally inevitable interdependence of personalities which is simple enough to be divine.

## II.—RECENT AMERICAN PUBLICATIONS.

### SOCIOLOGY AND POLITICS.

Progress and Poverty: An Inquiry into the Cause of Industrial Depression and of Increase of Want with Increase of Wealth. The Remedy. By Henry George. 12mo, pp. 575. New York: Doubleday & McClure Company. \$1. (Paper, 25 cents.)

It is believed that the sale of Henry George's unique work has been as great in the eighteen years since it was first put on the market as that of all other books on economics combined. Messrs. Doubleday & McClure have brought out a new edition, printed from new plates, and it is announced that the same publishers have acquired the copyrights of all of Mr. George's works.

Inequality and Progress. By George Harris. 12mo, pp. 164. Boston: Houghton, Mifflin & Co. \$1.25.

This book was written to combat the very generally accepted notion—held by many as an axiom—that inequality of social, economic, or political condition is always and necessarily an evil, and to show that inequality is in fact a condition of true progress. The author's method is empirical rather than theoretical.

The Workers: An Experiment in Reality. By Walter A. Wyckoff. 12mo, pp. 280. New York: Charles Scribner's Sons. \$1.25.

In this book are recorded the experiences and impressions of a young college graduate starting out to earn a living as an unskilled laborer, passing from one employment to

another, and remaining long enough in each to catch something of the spirit and disposition of the toilers, as well as a knowledge of the hard conditions of their toil. He begins as common day laborer, and becomes in turn a hotel porter, s "hired man" at an asylum, a farm hand, and a worker in a logging-camp. In the present volume, the chapters of which have already appeared in successive numbers of Scrübner's Magazine, Mr. Wyckoff concludes the story of his journeyings in the Atlantic seaboard States. During the present year the narrative is to be continued in the pages of Scribner's, the scene being shifted to Chicago and the middle West.

Social Facts and Forces: The Factory—the Labor Union—the Corporation—the Railway—the City—the Church. By Washington Gladden. 12mo, pp. 235.

New York: G. P. Putnam's Sons. \$1.25.

This volume contains the course of six lectures given by Dr. Gladden in Chicago on the Ryder foundation and repeated before the students of Iowa College. As the preface states, "the interest of all these studies is primarily ethical." "To discover in what manner the well-being of the people is affected by the changes which are taking place in our industrial and social life" is the author's chief aim in this series of lectures.

Tendencies in American Economic Thought. By Sidney Sherwood, Ph.D. Paper, 8vo, pp. 48. Baltimore: The Johns Hopkins Press. 25 cents.

In this paper Professor Sherwood summarizes the economic speculation of the first century of our republic. During

that period, as the writer points out, our political economists were less influenced than now by the work of foreign schools. In a sense there was an American political economy, though the national contribution to the world's economic life far exceeded all that American scholars did for economic acience.

The Finances of New York City. By Edward Dana Durand, Ph.D. 12mo, pp. 409. New York: The Macmillan Company.

At the beginning of Greater New York's career it is well to take an inventory of the old city's assets and liabilities and to review her business record. This is what Dr. Durand has done in his compact and well-digested treatise. The financial experience of old New York must strongly influence the fiscal operations of the consolidated city, whose yearly expenditures will be more than five times greater than those of New York State, nearly two-thirds as great as those of all the States in the Union combined, and more than a seventh as great as those of the Federal Government, while the gross municipal debt will exceed that of all the States. The subject has even a broader interest as affording a field for an inrestigation that may serve as the basis of a more comprehensive discussion of municipal finance in general. From either point of view Dr. Durand's rigidly scientific study and clear presentation of the facts and problems involved in New York's financial history cannot fail to prove in the highest degree profitable.

Street-Cleaning, and the Disposal of a City's Wastes. By George E. Waring, Jr. 12mo, pp. 230. New York: Doubleday & McClure Company. \$1.25.

Colonel Waring's qualifications for writing such a book as this are so obvious as hardly to require mention. Whoever wishes to inform himself about the approved methods of cleaning city streets will assuredly seek first as an authority the man who has cleaned them. What Colonel Waring has done for New York's streets in the past three years has rescued the city's good name, and, better still, it has lowered the death-rate. Colonel Waring telis very frankly and concisely in this volume how he has accomplished these results. The ex-commissioner's literary style, like his administrative methods, is direct, vigorous, and pointed. The comment on street-cleaning methods in foreign cities is also suggestive.

Partisan Politics: The Evil and the Remedy. By James Sayles Brown. 12mo, pp. 221. Philadelphia: J. B. Lippincott Company. 50 cents.

Mr. Brown uses up 170 pages of his book in describing the crils of partisanship, while a scant eight pages suffices for his outline of a remedy for these evils. His readers, we imagine, would have preferred that this proportion of space sould be reversed. The evils are obvious; what we need at this stage is a rational discussion and weighing of proposed remedies. Mr. Brown proposes a law declaring any candidate nominated by a political party ineligible to office. It goes without saying that so radical a proposition as this will find few adherents in this country. Mr. Brown's book is of value, nevertheless, in bringing to public attention the crying need of reform in our nominating methods.

Outlines of Elementary Economics. By Herbert J. Davenport. 16mo, pp. 294. New York: The Macmillan Company. 80 cents.

The Social Mind and Education. By George Edgar Vincent. 12mo, pp. 155. New York: The Macmillan Company. \$1.25.

Recent Centralizing Tendencies in State Educational Administration. By William Clarence Webster, Ph.D. Paper, 8vo, pp. 78. New York: Columbia University. 75 cents.

State Tax Commissions in the United States. By James Wilkinson Chapman, Jr. Paper, 8vo, pp. 114. Baltimore: The Johns Hopkins Press. 50 cents. The New Era: Presenting the Plans for the New Era Union to Help and Utilize the Best Resources of this Country. 4to, pp. 192. Denver: The New Era Union.

A Government Class-Book of the State of Michigan. By Charles W. Nichols. 16mo, pp. 308. Syracuse: C. W. Bardeen. \$1.

Essays on Social Topics. By Lady Cook. 12mo, pp. 126. London: The Roxburghe Press.

American Democracy. By Charles P. Robinson, A.B. 8vo, pp. 26. Pittsburg: Published by the author.

Ours is the Rule of Dead Men; or, The Vote of the Masses, the Support and Check of the Classes. By J. H. Boozer. Paper, 12mo, pp. 178. Atlanta, Ga.: Progressive Publishing Company. 50 cents.

Bi-Metallism as Social Evolution at the Tri-Millennial,
 1900. By J. M. Milne. Paper, 8vo, pp. 89. Columbus, Ohio: Champlin Printing Company.

The Real Trouble and the Way Out. By Jasper Earle. Paper, 12mo, pp. 75. Kansas City: Hudson-Kimberly Publishing Company.

An Essay on Value. With a Short Account of American Currency. By John Borden. 12mo, pp. 282. Chicago: Rand, McNally & Co.

Principles of Insurance Legislation. By Miles Menander Dawson. 12mo, pp. 139. New York: The Humboldt Library.

Twenty-first Year Book of the New York State Reformatory, for the Fiscal Year ending September 80, 1897. 8vo, pp. 150. Printed at the Reformatory.

Free Banking a Natural Right. By James A. B. Dilworth. 16mo, pp. 212. New York: Continental Publishing Company. \$1.

Industrial Freedom. By David MacGregor Means. 12mo, pp. 256. New York: D. Appleton & Co. \$1.50.

Anarchism: A Criticism and History of the Anarchist Theory. By E. V. Zenker. 12mo, pp. 336. New York: G. P. Putnam's Sons. \$1.50.

American Railway Management: Addresses Delivered Before the American Railway Association and Miscellaneous Addresses and Papers. By Henry S. Haines. 12mo, pp. 368. New York: John Wiley & Sons. \$2.50.

#### AMERICAN HISTORY.

The Westward Movement: The Colonies and the Republic West of the Alleghanies, 1763-1798. By Justin Winsor. 8vo, pp. 603. Boston: Houghton, Mifflin & Co. \$4.

The last volume in Mr. Winsor's valuable series of historical works, completed only a few months before his death, has just made its appearance. Like its predecessors it is a solid, serious piece of work, devoted to matter-of-fact statement and comparatively free from generalization. Mr. Winsor's studies, as is well known, were made from the sources and were exhaustive. It would seem, however, that the eloquence of the long succession of eulogizers of the famous Ordinance of 1787 has been wasted on Mr. Winsor, for he rather summarily dismisses it with the remark that it "introduces us to nothing new in human progress." The cartographic illustration of the volume is remarkably full and interesting.

The Story of the Palatines: An Episode in Colonial History. By Sanford H. Cobb. 12mo, pp. 328. New York: G. P. Putnam's Sons. \$2.

The record of the Palatine German migrations and settlements in New York and Pennsylvania has been either slighted or falsified by most American historians. The Palatines, indeed, contributed a unique element to our national stock, and it is quite fitting that the story of their early hardships and resolute endurance should be told for the benefit of the present generation. The Rev. Mr. Cobb has described in this volume the exodus of the Palatines from their native land, their wanderings in the American colonies, and their final dispersion and settlements on the Hudson, the Mohawk, and the Schoharie, in New York State, and in Lehigh, Berks, and Lebanon counties, Pa.

Nullification and Secession in the United States: A History of the Six Attempts During the First Century of the Republic. By Edward Payson Powell. 12mo, pp. 461. New York: G. P. Putnam's Sons. \$2.

The "six attempts" in the direction of nullification and secession described by Mr. Powell are the Virginia Resolutions of 1798, the plot for a Northern confederacy in 1886-04. Burr's conspiracy, the Hartford Convention in 1814, the South Carolina nullification measures of 1832, and the final secession of the Southern Confederacy in 1861. Mr. Powell, though a Northern man by birth and education, is not at all disposed to take the customary Northern view of Southern secession. In fact, the tone of his book is distinctly favorable to the defense made by Southern leaders just prior to the civil war.

Historic New York: Being the First Series of the Half Moon Papers. Edited by Maud Wilder Goodwin, Alice Carrington Royce, and Ruth Putnam. 12mo, pp. 476. New York: G. P. Putnam's Sons. \$2.50.

Many of the monthly issues of the "Half Moon Papers" have been separately noticed in the REVIEW. The completed volume of twelve numbers for 1897 has been illustrated and annotated, forming a valuable collection of monographs on the history of Manhattan Island. There are two interesting papers on "Old Wells and Water-Courses," by George Everett Hill and Col. Geo. E. Waring, Jr. "Old Greenwich" is described by Elizabeth Bisland, "The Fourteen Miles Round" by Alfred Bishop Mason and Mary Murdoch Mason, "King's College" by John B. Pine, "The Bowery" by Edward R. Hewitt and Mary Ashley Hewitt, and "Governor's Island" by Blanche Wilder Bellamy. All of these papers are most entertaining and instructive, especially to dwellers in New York.

Historical Sketches of New Haven. By Ellen Strong Bartlett. 4to, pp. 98. Published by the author, Stamford, Conn. \$1.50.

Persons who for any reason have a special interest in New Haven local history and others who have followed Miss Bartlett's charming sketches in the New England Magazine and elsewhere will be glad that those sketches, some of which had gone out of print, have been brought together and republished in a handsomely printed volume, beautifully illustrated and tastefully bound. The concluding paper in the series, on "John Trumbull, the Patriot Painter," is of far more than local interest.

## REFERENCE AND MISCELLANY.

Commercial Nomenclature. Published by Recommendation of the International American Conference. 4to, pp. 670. Bureau of American Republics. Washington: Government Printing Office.

This elaborate work has been prepared in accordance with a resolution adopted by the Pan American Congress in 1890 calling for the publication of a code of equivalent terms, in English, Spanish, and Portuguese, to designate the articles on which import duties are levied by American countries and to be used in all customs documents. The code now issued, after six years of labor on the part of the compilers, includes more than twenty-eight thousand commercial terms employed in the Latin-American trade. These are arranged alphabetically, in three columns, the Spanish and Portuguese editions appearing separately, so that the whole

work embraces three volumes. The code as thus published should prove a great convenience in Central and South American commerce.

Hawaiian Almanac and Annual for 1898: A Handbook of Information on Matters Relating to the Hawaiian Islands. Paper, 8vo, pp. 199. New York: Baker & Taylor Company.

This popular encyclopedia of Hawaii contains an abundance of data that must be "interesting reading" just now in Washington. In addition to the ordinary statistical tables, there are numerous special articles on important industrial and political topics. Almost every question about Hawaii that is likely to occur to the intelligent American in considering the annexation problem is answered, directly or indirectly, by this annual.

Maryland Geological Survey. Vol. 1. 4to, pp. 539. Baltimore: The Johns Hopkins Press.

A book quite out of the ordinary line of stale scientific publications has been published at Baltimore as the first volume of the report of the Maryland Geological Survey. The work on this survey has had close relations with advanced university instruction. The commission in charge consists of the Governor of Maryland, the comptroller, the president of the Johns Hopkins University at Baltimore, and the president of the Maryland Agricultural College; William B. Clark, professor of geology in the Johns Hopkins University, was appointed State geologist, and the survey has been prosecuted under his direction. The present volume gives a preliminary account of the physiography, geology, and mineral resources of the State. Professor Clark contributes an admirable historical sketch of previous surveys and a summary of existing knowledge. Perhaps the most important feature of the present survey is its new line of magnetic investigation, the first report of which is included in this volume.

Magic, Stage Illusions, and Scientific Diversions, Including Trick Photography. Compiled by Albert A. Hopkins. With an introduction by Henry R. Evans. 8vo, pp. 566. New York: Munn & Co. \$2.50. This work is remarkable for the thoroughness with which the author has gone into the subject of modern stage illusions. No other books on magic with which we are acquainted have attempted so exhaustive a treatment of this modern development of the magician's art. Mr. Hopkins' exposé of the various illusions, especially of those in which photography is employed, have a scientific as well as a

Curiosities of Popular Customs and of Rites, Ceremonies, Observances, and Miscellaneous Antiquities. By William S. Walsh. 8vo, pp. 1018. Philadelphia: J. B. Lippincott Company. \$3.50.

merely curious interest.

Mr. Walsh announces as his modest and useful function in the compiling of this and other books the supplying of supplements to the existing cyclopedias, rather than attempting to bring out works of an encyclopedic character in themselves. In other words, Mr. Walsh deals with the odds and ends of information—the things that are often sought for in books of reference and seldom found. The present volume contains some very striking and interesting illustrations, many of which are reproduced from Picart's "Religious Ceremonies and Customs" (1723).

The Century Illustrated Monthly Magazine. Vol. LIV. May, 1897, to October, 1897. New York: The Century Company. \$3.

Generous portions of a number of this season's successful books are bound up in the last completed volume of the Century Magazine. For example, Gen. Horace Porter's "Campaigning with Grant," Gen. John M. Schofield's reminiscences, and Miss Scidmore's sketch of Java and the Javanese are among the noteworthy contributions to this volume, while in fiction the last part of Dr. Mitchell's great historical novel, "Hugh Wynne," runs through the six monthly numbers, together with Mrs. Catherwood's "The

Days of Jeanne d'Arc." The other noteworthy features of the volume are too numerous to admit of mention here, but have received attention, at the time of first appearance, in our monthly comment on the *Century's* contents in our department of "Periodicals Reviewed."

St. Nicholas: An Illustrated Magazine for Young Folks. Conducted by Mary Mapes Dodge. Vol. XXIV., in two parts. November, 1896, to October, 1897. New York: The Century Company. \$4.

Among the interesting features of the last volume of St. Nicholas are Laurence Hatton's glimpses of boy life in New York City at the middle of the century in his reminiscences of "A Boy I Knew;" an article on "The Birthplace of Lincoln," by George H. Yenowine; several papers on adventure in Siberia, by George Kennan, and the usual complement of delightful and wholesome serial stories.

Uncle Henry's Letters to the Farm Boy. By Henry Wallace. 16mo, pp. 218. Des Moines, Iowa: Wallace Publishing Company. 55 cents.

In writing this series of letters Mr. Wallace had in mind the needs of that large element in our American population from which are recruited the ranks of almost every profession and industry. The letters give the best of advice to the farm boy, and give it in such a way that the boy can hardly refuse the proffered guidance. The author's sense of humor, united with a rich fund of common sense, has saved his book from many of the ordinary faults of didactic discourse. From prosiness and cant the letters are refreshingly free. Their frank discussion of matters vitally important in the life of every farmer's son has a basis of experience, for Mr. Wallace has been both a farm boy and a father of boys.

What Dress Makes of Us. By Dorothy Quigley. 16mo, pp. 144. New York: E. P. Dutton & Co. \$1.25.

In this little book the author has been effectively aided in making her points by the illustrator, Annie Blakeslee, whose drawings appeal irresistibly to one's sense of the ludicrous and serve to drive home the common-sense suggestions made in the text. Hardly any one, young or old, can fail to get a useful hint or two from the perusal of these pages. The book is not addressed to the ultra-fashionable, nor does it laydown a great number of positive dicta as to the detail of dress, but it amplifies and emphasizes certain principles by which all may be guided in the choice and adaptation of dress.

#### EDUCATION AND TEXT-BOOKS.

National Educational Association: Journal of Proceedings and Addresses of the Thirty-sixth Annual Meeting, Held at Milwaukee, Wis., July 6-9, 1897. 8vo, pp. 1132. Chicago: Published by the association.

The proceedings and papers of the Milwaukee meeting of the National Educational Association are especially interesting. The volume just issued includes the now celebrated report of the Committee of Twelve on Rural Schools presented at that meeting and much discussed then and since among American educationists.

University of the State of New York: Extension Bulletin, No. 21, November, 1897. Study Clubs. 8vo, pp. 92. Albany: University of the State of New York. 10 cents.

The last bulletin descriptive of the work carried on by study clubs in New York State is full of encouragement to all interested in the progress of the university extension movement. Mr. Melvil Dewey, who represents the State's paternal interest in this work, declares that a larger constituency is reached and more practical good done through these study clubs, aided by the traveling libraries sent out from Albany, than through the system of extension lecture courses. Students making their preparation in these clubs are encouraged to take the academic examinations set by the State.

Stepping Stones to Literature: A Series of Graded Readers for Primary and Grammar Schools. By Sarah Louise Arnold and Charles B. Gilbert. A First Reader, 8vo, pp. 128; A Second Reader, 8vo, pp. 160; A Third Reader, 8vo, pp. 224. Boston: Silver, Burdett & Co.

This new series of school readers has several points of excellence. The aim of the compilers has been to secure genuine literary quality throughout the eight books (corresponding to the eight public-school grades) which make up the series. In the first and second readers they have certainly been unusually successful. Furthermore, the educational experience of the compilers (Miss Arnold is the supervisor of schools for the city of Boston and Mr. Gilbert is superintendent of the Newark, N. J., schools) has enabled them to prepare a scheme of instruction in reading which has practical merits and is adapted to school work. Finally, the books have been artistically made. The typography is clear and large and the illustration is of the best quality for the purpose. Several of the pictures are reproductions from famous works of art. These books will do more than provide mere practice lessons in reading. They cannot fail to stimulate a thirst for true culture, in the broadest sense.

Specimens of the Pre-Shakespearean Drama. With an introduction, notes, and glossary, by John Matthews Manley. Two vols., 12mo, pp. 655—590. Boston: Ginn & Co.

Poems of William Wordsworth. A Selection Edited by Edward Dowden. 12mo, pp. 619. Boston: Ginn & Co. \$1.25.

Selections from Sir Thomas Malory's Morte Darthur. Edited, with notes, by William E. Mead, Ph.D. 12mo, pp. 410. Boston: Ginn & Co.

Burke's Speech on Conciliation with America. Edited, with notes, by Hammond Lamont. 12mo, pp. 224. Boston: Ginn & Co. 60 cents.

Stories of Insect Life. By Clarence Moores Weed. 8vo, pp. 54. Boston: Ginn & Co.

The Story of Jean Valjean, from Victor Hugo's "Les Misérables." Edited by Sara E. Wiltse. 12mo, pp. 1022. Boston: Ginn & Co. 90 cents.

Carlyle's Essay on Burns. Edited by Charles L. Hanson. 12mo, pp. 109. Boston: Ginn & Co.

Enoch Arden, and the Two Locksley Halls. By Alfred Tennyson. Edited by Calvin S. Brown. 16mo, pp. 169. Boston: D. C. Heath & Co. 35 cents.

The Ancient Mariner. By Samuel Taylor Coleridge. Edited, with notes, by Andrew J. George. 16mo, pp. 93. Boston: D. C. Heath & Co. 35 cents.

De Quincey's Flight of a Tartar. With introduction and notes by George A. Wauchope. 16mo, pp. 111. Boston: D. C. Heath & Co. 35 cents.

Standard Literature Series: "The Sketch Book," by Washington Irving; "Knickerbocker Stories," by Washington Irving; "Enoch Arden, and Other Poems," by Alfred Lord Tennyson; "Robinson Crusoe," by Daniel Defoe; "Evangeline, a Tale of Acadie," by Henry W. Longfellow—each 12½ cents; "Ivanhoe," by Sir Walter Scott, 20 cents; "The Lady of the Lake," by Sir Walter Scott, 30 cents. Paper, 12mo. New York: University Publishing Company.

Tennyson's The Princess. Edited, with notes, by Albert S. Cook. 12mo, pp. 283. Boston: Ginn & Co. 50 cents.

## III.—NEW TITLES IN FOREIGN FICTION.

- The Beth Book. By Sarah Grand. 12mo, pp. 573. New York: D. Appleton & Co. \$1.50.
- In the Permanent Way. By Flora Annie Steel. 12mo, pp. 400. New York: The Macmillan Company. \$1.50.
- Let Us Follow Him, and Other Stories. By the author of "Quo Vadis." Translated by V. A. Hlasko and T. H. Bullick. 12mo, pp. 241. New York: R. F. Fenno & Co. \$1.

### TOILET ARTICLES

With Packer's Tar Soap

Young Americans who do not wish to lose their hair before they are forty must begin to look after their scalps before they are twenty.—New York Medical Record.

Systematic shampooing with Packer's Tar Soap means healthy hair and scalp—and you cannot begin too early. Send for our leaflet on shampooing at home.

The Packer Mfg. Co. (Suite 87B), 81 Fulton Street, New York.

"When you wish the latest styles write to us."

### Tailor-Made Suits, \$5.

We have prepared for the Spring season a most fashionable line of Ladies' Suits, Skirts, Coats, Capes and Bicycle Costumes. To the lady who wishes to dress well at moderate cost we will mail free our Spring catalogue illustrating all of the latest styles, together with samples of the newest materials from which we make these garments. We keep no ready-made goods, but make every garment to order, thus insuring the perfection of fit and finish. Our styles are exclusive and are shown by no other firm. We pay express charges everywhere.

Tailor-Made Suits, \$5 up.

(In Serges, Cheviots, Broadcloths, Covert Cloths, Whipcords, Wool Poplins, etc.)

Separate Skirts, \$4 up.

Capes and Jackets.

(For Spring and Summer wear.) Outing and Blazer Suits, \$4 up.

(In Duck, Crash and Linen Suitings.)

Bicycle Suits, \$4 up.

(In Mohair, Corduroys, English Tweeds, Covert Cloths, Serges, Crashes, Duck, etc.)

Bicycle Skirts, \$2.50 up.

Our line of samples includes the newest materials, many of them being exclusive novelties. We also have special lines of black goods and fabrics for second mourning. Write to-day for catalogue and samples. Be sure to say you wish the new Spring issue.

THE NATIONAL CLOAK CO., 119 and 121 West 23d St., New York City.

# The World of Thrift and Money Matters.

Exports During 1897.—The figures already in hand for the eleven months ending with November indicate that the total exports for 1897 will reach \$1,050,000,000, or \$44,148,646 more than in 1896. They will certainly be ahead of any year's record since 1892 and probably the largest ever known. As the table below shows, nearly all the increase is to be found in agricultural products, manufactures, and forest productions:

#### FOR THE ELEVEN MONTHS ENDING NOVEMBER, 1897.

Products of—	1896.	1897.
Agriculture	<b>\$</b> 578,692,078	\$635,782,489
Manufacturing	229,915,258	256, 256, 812
Mining	19,638,218	18,233,839
Porestry	33,142,795	37,868,468
Fishery	5,975,007	5,223,838
Miscellaneous	3,379,566	8,310,428

For November alone the agricultural exports were \$87,743,044, an increase of more than \$7,000,000 over the corresponding month in 1896. Strangely enough, the total exports and the agricultural products have increased at exactly the same ratio, so that the latter is exactly the same percentage of the whole as in the previous year, 66.46. The manufactures show an increase in percentage from 26.41 to 26.78. From January to September the exports of manufactures increased at the rate of a little over \$3,000,000 a month when compared with 1896, but this tendency was completely checked in October and November, the former month showing a net loss of \$1,200,000 from the preceding year. It is interesting to note, in spite of this slight retrogression, the steady growth of our manufactured exports. The total for 1895 was \$201,153,663, for 1896 \$253,688,527, and for 1897 (December estimated) \$280,256,812.

Capital in England.—The applications for capital in England during the past year reached a total of £157,289,000, as against £152,807,000 in 1896, £104,690,000 in 1895, £90,000,000 in 1894, and about £50,000,000 in 1893. The very large proportion of this that was requested for industrial enterprises is taken to indicate that joint-stock business was on a much sounder basis

than during the preceding year. Of the totals given, £18,000,000 was for breweries and distilleries and about £15,000,000 for manufacturing companies.

South African Electrical Development. -There is a great deal of activity in electrical lines in South Africa just at present, and American firms are getting a very fair share of the contracts for supplying machinery, either directly or through export commission firms. The Harbor Board of Table Bay, Cape Colony, is said to be considering the purchase of a pair of heavy electric cranes for use at Cape Town. Durban has recently had an electric plant installed, additions to which have already been recommended by the borough engineer, and it is expected that the Town Council will shortly take steps for a still further extension of the city's electrical The General Electric Company has facilities. recently filled a large order for the De Beers Mine, including three tandem compound engines, each of 175 horse-power, two 50-kilowatt six-pole compound dynamos of 220 volts and 115 volts, a large switchboard, and 12,000 feet of large copper The Gould Manufacturing Company, too, has supplied two pumps, each with a capacity of 35,000 gallons an hour, to the Knight Central Mine.

Business Failures in 1897.—The annual statement in Dun's Review of the failures during the past year shows a most satisfactory state of affairs as compared with 1896. The commercial and banking failures amounted to 13,522, a decrease of 11.5 per cent., while the liabilities dropped off 34 per cent. to \$182,581,771. banking failures numbered 171, with liabilities of \$28,249,700, an average of \$165,203, as against \$256, 156. The average for all commercial failures during the year was only \$11,559, the lowest for twenty-three years, except in 1892, when the average dropped to \$11,025. Liabilities decreased as follows compared with 1896: In manufacturing, 31.1 per cent.; in trading, 31.7 per cent; in brokerage, 36 per cent; and in banking, 44.4 per cent.

Russia's Currency Reform.—M. De Routkousky, the financial agent of the Russian Government, has given out an authoritative statement of the reform in the finances of that country during the past year. The imperial ukases of January 3, August 26, and November 14, 1897, he says, have definitely settled the currency question in Russia.

In consequence of constant fluctuations in the price of silver and the practically unlimited amount of that metal which can be produced at low cost with improved methods, silver was considered by the imperial government as entirely unfit to be used as the monetary unit, and therefore gold was accepted—it being regarded as the only metal least subject to fluctuations of value and recognized as such by the leading commercial nations of the world. It was decided at the same time to take silver only as a subsidiary metal for the minor coins. In redeeming the credit note it was decided to give it the value in gold which it had in the average during the last three years in commercial transactions; that is, 662 kopecks, making it two-thirds of the value of the former gold ruble. If the credit notes had been made exchangeable for gold at the value of silver rubles (45 kopecks in gold), which the government had a perfect right to do, there would have been a great loss to creditors. If the notes had been made exchangeable for gold at the value of former gold rubles (100 kopecks) there would have been a great loss to debtors, besides a disturbance in the productive powers of the country. Gold will henceforth be the sole standard of value, and the new unit of currency will be a ruble containing 0.7742 gram of pure gold, equal in value to 51.45 cents in United States gold. Silver will be issued for subsidiary coins only, and one ruble will contain 18.02 grams of pure silver, as heretofore. The State Bank of Russia will be, as heretofore, the only credit institution which will have the right to issue State credit notes, exchangeable at par with gold in the State Bank and all its branches. It may issue such notes to an unlimited amount. and credit notes are made legal tender to an unlimited amount.

The issues of the credit notes by the State Bank, if needed by the expansion of commerce,

The location, near Tryon, is not surpassed on this continent for healthfulness and charming scenery, and there is a preponderance of Northerners among the landowners who have been attracted by the fertility and beauty of the region.

Fuller particulars gladly sent. The owner refers to Dr. William Hayes Ward, editor of the Independent, and to A. Foster Higgins, 54 Exchange Place.

Address S. L., care "Review of Reviews," 13 Astor Place, New York.

YOU owe it to your family, who are dependent upon you, to give them the certain protection which only Life Insurance affords. . . . . . .

### THE PRUDENTIAL

THE PRUDENTIAL INSURANCE CO. OF AMERICA.

Home Office: NEWARK, N. J. JOHN F. DRYDEN, President.

will be so regulated that the amount of outstanding notes will not be allowed to exceed by more than 300,000,000 rubles the value of gold coin and gold bars deposited in the State Bank for their redemption. The amount of outstanding State credit notes December 5 last in bank and in circulation was 1,068,000,000 rubles, and the amount of gold in coin and in bars in the bank was 1,160,000,000 rubles. The exchange of . State credit notes at par with gold is guaranteed, in addition to the gold reserve, by the whole State property (about 600,000,000 acres of forest and 15,000 miles of railroads, besides government lands, etc.). Silver in the State Bank will not be included in the metallic reserve of the bank for the purpose of redemption.

Silver has been coined to the amount of 40,000,000 rubles, and the character of the legal tender of the silver rubles has not been changed in the recent laws. Until it shall be decreed otherwise, silver coins will be a legal tender for all taxes and dues to the government in an unlimited amount, but not so between private individuals.

The plan of currency reform adopted does not concern in the least the creditors of the imperial Russian Government, as all loans and interest will be paid, as usual, in the money in which they were contracted—that is, in francs, pounds sterling, dollars, marks, florins, etc.

Tin Plate in England and the United States.—After a number of exceptionally sudden ups and downs the tin-plate industry in Great Britain closed in a depressed condition, with a total exportation of 250,736 tons for eleven months, against 248,737 tons in 1896 and 332,547 tons in 1895 for the corresponding periods. In the United States, on the contrary, there was an increased production for the fiscal year ending June 30, 1897, of more than 45 per cent. from 307,226,621 pounds to 446,982,063, although there were but 50 firms instead of 53 in the business. Only one of these firms used foreign-made plates, and that for only a portion of one quarter, the amount brought in being about one-fourth of the company's total production. Following is a table of imports and exports:

	Pounds.
Total exports during fiscal year ending June	
30, 1897	
Total exports during same period	139,246,130
Net imports	105,161,471
Total domestic production	446,982,063
Approximate consumption in United States	552,143,534
Average annual capacity of mills completed	
June 30, 1897, say	600,000,000
Same of mills completed and in process of	
construction at that date	650,000,000

# The First Edition for February of the REVIEW OF REVIEWS was 130,000 COPIES.

EVERY COPY WAS SOLD.

The Hon. THEODORE ROOSEVELT says (in a letter just received):

"The Review of Reviews does really important work, because it gives not merely an epitome of what is going on in the world, but a chance to every man of whatever political creed, who writes seriously and deeply, to reach the classes of our people most interested in the vital government and social problems of our time. I know that through its columns, views have been presented to me that I could not otherwise have had access to; because all earnest and thoughtful men, no matter how widely their ideas diverge, are given free utterance in its columns."

REDUCED

MRS. J. KINSEY. Of an old Chicago family.

#### SAMPLE OF EACH FREE

Free advice about Obesity or any disease at LORING & CO.'S New York or Chicago Medical Department. Call or write. Our Lady Physicians open and answer letters addressed to Mrs. Dr. A. Henry, who has charge of our Woman's Department.

MRS. J. KINSEY. 9040 Mackinaw Ave., Chicago, Ill., Jan. 20, '97.

MRS. J. KINSKY.

9040 Mackinaw Ave., Chicago, Ill., Jan. 20, '97.
Loring & Co., 115 State St., Chicago.

Gentlemen: I have secured a reduction of sixty-five pounds in flesh and weight by the use of Dr. Edison's Obesity Pills and Salt, and a reduction of nine inches around the abdomen by wearing Dr. Edison's Obesity Band. This reduction was effected quickly and with perfect safety, without one day's illness on account of the treatment and with no inconvenience or disagreeable effects. I wish all too fat men and women would take Dr. Edison's Obesity Pills and Salt. I will gladly reply to any questions that may be asked of me by correspondents investigating this treatment.

Yours respectfully (signed), MRS. J. KINSEY.

No "tonics," "nervines," "sarsaparillas" or other medicines required. Dr. Edison's Pills and Salt are perfectly harmless, and a bottle. Obesity Pills, \$1.50 a bottle. Obesity Bands, \$2.50 and up. We send free "How To CURE OBESITY," with free sample boxes of Dr. Edison's Obesity Pills and Salt. Ladies should send for a free copy of our great special book for women, which tells how to be healthy and beautiful.

Special Remedies for BIG FAT MEN.

" B. & H." Banquet Lamps are preferred before all others for their intrinsic worth of design, their preeminently superior construction, their acute niceness of finish, and because they give the most powerful, whitest, most brilliant light. They last for generations. A "B, & H." will always outshine all your lamp ideals.

They have that striking individuality, that select appearance so important in a lamp for drawing room or library. When you choose a "B. & H." you exercise threefold economy, and every one will acquiesce in the wisdom of your cap choice.

Send for free book on "B, & H." Lamps, Gas and Electric Fixtures, Fireplace Furniture, Art Metal Goods, Oil Heaters, Critil Work, etc., and secure the latest information about the household essentials,

### COMPLAINT.

TRADE-MARK.

Mr. CHARLES B. KNOX, Johnstown, N. Y .-

Dear Sir: I have tried your "Sparkling Calves'-foot Gelatine," and find it has one fault so serious that I fear I cannot order any more. Its granules dissolve just as fast as you say, and it certainly is most convenient as well as beautifully clear and pure; but whenever I make one of the dishes in your "Dainty Desserts for Dainty People," the family seems to find it out, and I have to serve my dinner on the Chinese plan—dessert first!

Haven't you something not quite so nice?

A WORRIED HOUSEKEEPER.

#### ONLY ONE KIND AND THAT'S THE BEST.

15c. A PACKAGE, TWO FOR 25c.

<sup>46</sup> Dainty Desserts for Dainty People" will be sent free with every order of Gelatine. Send 5 cents in stamps for a sample of Acidulated Gelatine, which requires only water, extract and sugar, and a pint of jelly is made.

HIGHEST AWARD AT WORLD'S FAIR.

Knox's Gelatine is indorsed by every leading teacher of cooking.

C. B. KNOX, Johnstown, N. Y.

represent all that's good in soups, made in nineteen varieties from best buyable materials carefully prepared in cleanly kitchens.

If you cannot find these goods with your grocer we will send you, charges prepaid, upon receipt of ten a-cent stamps, a full-size pint can of any one of the following varieties:

Beef, Bouillon, Chicken Gumbo,

Consomme, Chicken, Clam Broth, Clam Chowder, Julienne, Mock Turtle, Mutton Broth, Mullagatawny, Ox-Tail, Pea, Printanier, Tomato, Tapioca Crecy, Vegetable.

Address Department "E,"

#### LARGER AND MORE INTERESTING THAN EVER.

HAT our Manual for 1898 is larger than ever we know. That it will be found more interesting than usual we believe, because of the many new and novel features with which it may fairly be said to bristle. It is not a mere catalogue, but a book of 200 pages, size 9x11 inches, it con-tains over 500 engravings, mostly new, these are supplemented by six full-sized colored plates of the choicest novelties of the ason, all bound in a cover that is both pleasing and original. It costs us 30 cents each to place a copy in your hands, but to give it the widest possible distribution, we will send this magnificent manual

#### FREE

To all who will send to cents (in stamps) to cover postage. To customers who bought of us direct in either '96 or '97 it will be sent free without application, before January 15th.

We will also send the Manual, without charge, to those who have bought our Seeds during the past two seasons, provided they apply by letter, and give the name of the local dealer from whom they purchased. To all others, as first stated, on receipt of 10 cents (in stamps) to cover postage.

#### WE NO LONGER SUPPLY OUR SEEDS TO DEALERS

and thus having no longer to protect a wholesale trade, our new business slogan,

#### "FROM OUR GROUNDS TO YOURS"

has a special significance, as it enables us not only to sell the

#### ★ BEST SEEDS IN THE WORLD ★

at lower prices than ever, but also in most cases deliver them Pres to any part of the United States. Finally, we would like our friends to remember that from now on Peter Henderson & Co.'s Seeds can only be obtained by ordering direct from their Manual, or by direct purchase at their stores in New York. Send for the Manual in any of the ways suggested and see for yourself whether we have exaggerated in the slightest detail, finally

will also be sent without charge to all applicants sending to cents for the Catalogue who will state where they saw this advertisement.

Postal Card Applications will Receive No Attention.

#### A New Form of Personalities

The old style of portraying famous peo-ple through a "sketch" or "biography" is to be modernized in THE LADIES' HOME JOURNAL during 1898. Five of the most prominent Americans have been chosen for the departure: President McKinley, Mrs. Cleveland, Mark Twain, Joseph Jefferson, and Thomas A. Edison. Each will have a special article which will consist of about fifteen or twenty fresh, unpublished stories and anecdotes strung together, each anecdote showing some characteristic trait or presenting a different side of the subject.

> MANY OTHER NEW FEATURES FOR 1898. \$1.00 PER YEAR

For 25 Cents we will send The Ladies' Home Journal on trial for three months

ALSO, a handsome illustrated booklet containing our Prospectus for 1888, with por-traits of famous writers and small repro-ductions of some of the illustrations that are to appear in the fournal in future numbers.

No. 29. Lost Man's Lane. By Anna Katharing Green, author of "The Leavenworth Case," "That Affair Next Door," etc.

No. 30. The Chase of an Heiress. By Christian Reid, author of "Morton House," "Valerie Aylmer," etc.

# Exceptional Advantage To Readers of THE REVIEW OF

Among the readers of the American Monthly Review of Reviews there are many of the more intelligent and thoughtful persons who are deeply interested in the important questions of social and economic science. We feel justified, therefore, in making to them the following unusual offer, that has not been made to any one else :

The Great New

# ENCYCLOPEDIA REFORMS

Delivered at once for \$1.50 Balance to be paid \$1 per month

ALBERT SHAW, editor of the American Monthly Review of Reviews, says: It will stand in years to come as an epitome of social and economic conditions and the state of human progress in the last decade of the nineteenth century. Mr. Bliss has earned the hearty thanks of all students of economics and social questions, as well as of all journalists, clergymen, and hosts of other intelligent readers, who will find in this volume, from time to time, the sufficient answer to some question upon which they are seeking light.

### FEATURES THAT MAKE THE WORK INDISPENSABLE.

This work sweeps the entire horizon of sociology and all topics directly or indirectly allied or involved by social questions. It contains the latest opinions, statistics, and other information on Political Economy, Political Science, Wealth and Wages, Industrial Institutions, and all the great problems with which modern civilization is confronted. It is abundant in statistical and explanatory information. The most eminent authorities in the various schools of economy and social thought have set forth their claims. Thus the reader is able to compare, weigh, and judge their respective wants. Its arrangement is cyclopedic, and every facility for ready consultation has been afforded.

ITS WIDE SCOPE It puts side by side in authoritative statements the views, theories, and utterances of all schools of sociological and economic thought. Thus the reader is enabled to closely and clearly analyze both sides of all the important topics treated.

HIGHEST AUTHORITIES It is large-ly the work of the highest authorities, and thus brings together a wider collection of accurate facts than has ever before been concentrated on questions of social reform. Biographical portions are limited to authorities having national recognition. APPENDIX FEATURES Its appendix complete chronology of Social Reforms by subjects and countries; charts showing distribution of wealth in the United States; wages and hours of labor in Great Britain; rise and fall of wages in the United States; Platforms of Political Parties, etc.

### How it is Regarded by High Authorities.

Edward Atkinson: "Very useful to every student of social science."

Carroll D. Wright, Washington, D. C.: "I find it to be a work that must prove of very great value to all students of social matters."

Gen. William Booth, Salvation Army, London: "The Encyclopedia of Social Reforms is an invaluable contribution to the literature of social science. I cannot very well imagine how a better service could have been rendered to the subject than has been done by its publication." publication.

Sydney Webb, London: "I am amazed at the enterprise and ability which have been put into this useful book. It cannot fail to be of great use."

### Auld Lang Syne. By the Right Hon. Prof. F. Max Muller,

Professor of Comparative Philology at Oxford, author of "The Science of Language," etc. 8vo, \$2.00.

### Contents: Musical Recollections—Literary Recollections—Recollections of Royalties—Beggars.

These "Recollections" are the memories of a man who has known every one and seen everything in the course of a remarkable career covering the greater part of the present century. The reader of these pages meets such celebrated persons as Liszt, Mendelssohn, the Schumanns, Jenny Lind, Heine, Lamartine, various members of the Royal Families of England and Prussia, Kingsley, Matthew Arnold, Tennyson, Browning, Carlyle, Froude, Ruskin, Macaulay, Faraday, Darwin, Huxley, and a host of others. Of these Professor Muller writes with intimate geniality, yet incisively and critically, and with reference to their true place in public life, art and letters, as well as to their own personalities.

### What is Good Music?

Suggestions to Persons Desiring to Cultivate a Taste in Musical Art. By W. J. HENDERSON. 12mo,

CONTENTS: THE QUALITIES OF GOOD MUSIC: Rhythm, Melody, and Harmony, Vocal Forms: Church Counterpoint—Simple Song Forms—Operatic Forms. The Content of Music: The Sensuous—The Intellectual—The Emotional. THE PERFORMANCE OF MUSIC. Instrumental Performance: The Orchestra—Chamber Music—The Piano—The Violin. Vocal Performance: The Work of a Chorus—Solo Singing.

To present in popular style the fundamental qualities and basic principles of good music has been the author's aim in this valuable little book. In his discussion of Instrumental Performance he refers specially to M. Paderewski as an embodiment of the correct principles of piano playing, and his instruction throughout is pointed with illuminating reference and autotion. out is pointed with illuminating reference and quotation.

### Music.

How It Came to Be What It Is. By HANNAH SMITH. Illustrated. 12mo, \$1.25, net.

Miss Smith is a teacher of music and a lecturer on musical topics, and this volume is the fruit of her professional experience, embodying a mass of facts constantly asked for by her pupils. It rives clearly and compactly the story of the origin and gives clearly and compactly the story of the origin and given we the various forms of music, as we know them to-day, with an account of the development of the principal musical instruments—supplemented admirably by the many illustrations.

### How to Listen to Music.

By HENRY E. KREHBIEL. Seventh Edition. 12mo, \$1.25, net.

"It must bring to all who read it carefully a large increase in the enjoyment of the best music."—The Times, London.

### Young Blood. By E. W. Hornung,

Author of "The Rogue's March," "My Lord Duke," etc. 12mo, \$1.25.

"Mr. Hornung has certainly earned the right to be called the Bret Harte of Australia."—Boston Herald.

Mr. Hornung's readers have learned to count upon a "good story" whenever a new book by him is announced. In "Young Blood" there is, as usual, a mystery apparently inexplicable, but finally discovered to be wonderfully simple. Mr. Hornung's "good stories" have the rare quality of being literature as well.

Other books by Mr. Hornung are: My Lord Duke, 12mo, \$1.25; The Rogue's March, a romance, 12mo, \$1.50; and in the Ivory Series, each 16mo, 75 cents, Irralie's Bushranger and A Bride From the

"Mr. Hornung's books are stories pure and simple, excellently constructed, well written, cleanly humorous, kindly. The plot is always well managed, the telling of it lively, with no waste of irrelevant episode, and the untying is sure to be left to the last."—New York Evening Post.

### For Love of Country.

A Story of Land and Sea in the Days of the Revolution. By CYRUS TOWNSEND BRADY, Archdeacon of Pennsylvania. 12mo, \$1.25.

The author is a graduate of the Naval Academy, and has seen sea service, so that his pictures of the sea in those troublous days are full of reality. Not less interesting than his vivid description of the fight of the Randolph and Varmouth is the portion of his romance which carries the reader through the famous Treatment of the search when the search of the search and Princeton campaign, presenting a portrait of General Washington from quite a new standpoint.

### The Later Renaissance.

By DAVID HANNAY. (Periods of European Literature.) Crown 8vo, pp. 381, \$1.50, net.

This is the second volume to be published in a series of twelve designed to cover all the great "periods" into which European literature naturally divides itself, from the Dark Ages to the Later Nineteenth Century. Mr. Hannay's "period" extends from about the end of the fifteenth century to the latter part of the seveneenth, and deals with the Learned Poets, the Drama, Prose Romance, Historians, and Mystics of Spain; with Elizabethan Poetry and Prose and the dramatists among whom Shakespeare towers; with the Poetry and Prose of France; and with Italian Literature from Tasso to Guarini.

## Emerson and Other Essays. By John Jay Chapman.

12mo, \$1.25.

Mr. Chapman's essay on Emerson, published in magazine form a year ago, revealed a critic of notable force and incisiveness. With this catholic and searching appreciation of the American poet and philosopher par excellence, the author has grouped essays on Browning, Whitman, Stevenson, Michael Angelo's sonnets, and other subjects, the Stevenson paper, not before published, being particularly radical and iconoclastic.

CHARLES SCRIBNER'S SONS, 153-157 Fifth Avenue, N. Y.

### NEW BOOKS IACMILLAN COMPA ISSUED BY THE

## FRANCE.

By John Edward Courtenay Bod-ley, H.A.

Mr. Bodley aims to give a concise description of the country, its people and institutions, comparable to that invaluable work known as "Bryce's American Commonwealth."

Just Ready. Cloth, Demy 8vo. \$4.00 net.

### The American Commonwealth.

By the Right Hon. JAMES'BRYCE, D.C.L., author of "The Holy Roman Empire," etc., etc. Revised and enlarged edition, of '95. Two volumes in a box.

Large 12mo, Cloth, \$4.00 net.

Four new chapters in the later editions discuss The Tammany Ring in New York City, The Present and Future, The South Since the Ir'ar, and The Home of the Nation.

### A Students' Edition of "The American Commonwealth."

Revised by the author with the assistance of Prof. JESSE MACY, of Iowa College.

Cloth, One Volume, \$1.75 net.

This is not a mere condensation of the larger work, but a restatement, briefer, and in a form more carefully adapted to students use of Mr. Bryce's valuable "American Commonwealth," a knowledge of which is conceded to be indispensable to any one who would acquire a just estimate of American institutions.

### American Histories as Told by Contemporaries.

### MACMILLAN COMPAN **NEW NOVELS** FROM THE

Just Ready or to be Issued Very Shortly.

PARIS. By M. Zola.

The last volume of the famous Trilogy of the Three Cities.

### LOURDES. ROME.

Each 2 Vols., Price, \$2.00.

PARIS.

Studies of the different ways in which the most vital questions of life and religion are regarded by the blindly superstitious in Lourdes, by the contemplative priest in Rome, and by men of the most brilliant city in Europe, Paris. It is brimful of life and incident, and through its power one may realize something of the force of its author's recent attack on the military bureau.

Stories Full of Local Color.

### WHERE THE TRADE WIND BLOWS.

Tales of the West Indies. By Mrs. Schuyler Crowninshield. Cloth, 12mo, \$1.50.

"Lucidity of style, keenness of observation, originality of motive, and strength of treatment are the happy gifts which go to its making. . . . The stories seem eager to tell themselves."-The New York Herald.

### OLD TIMES IN MIDDLE GEORGIA.

By R. Malcolm Johnston, author of "Old Dukesboro' Tales," etc. Cloth, 12mo, \$1.50.

### A FOREST ORCHID.

respondence, together with many hitherto unpublished poems, and chapters which embody the personal recollections of some of his almost equally famous friends. Portraits and views of places most closely associated with Lord Tennyson's life fitly complete the memoir, which is the

Fifth Edition.

most notable publication of its season.

"The chief worth of the book, of course, is its minute and illuminating portrayal of Tennyson himself. Its value is only less for the glimpses it affords of other men of his time. Both make it a biography that is likely to be more than the book of one year or of two. "The Evening Transcript, Boston, Mass.

# The Letters of Elizabeth Barrett Browning.

Edited by Frederic G. Kenyon.

Two Volumes. Price, \$4.00. The letters cover the whole of her life from her early girlhood, and contain interesting references to many important events and persons with whom the Brownings ware associated. Brief biographical notes by FREDERIC G. KENYON are added occasionally simply as connecting links, and the work as a whole gives an excellent picture of the life of one, more truly of two, of the noblest poets of our day.

# The Open Court.

### A Monthly Magazine Devoted to the Science of Religion, the Religion of Science and the Extension of the Religious Parliament Idea.

The Open Court contains numerous illustrated articles on Comparative Religion, on scientific and literary subjects, mathematical recreations, etc., lives of great thinkers, with large fine half-tone portraits and translations of the best contemporary European literature. Every issue contains as a frontispiece a portrait of a distinguished thinker and writer in the field of philosophy and religion.

Single copies, 10 cents. Annually, \$1 00. In the U. P. U., 5s. 6d.

"THE OPEN COURT seems to me more admirable than ever, if that were possible."—Prof. R. M. Wenley, Univ. of Michigan.
"THE OPEN COURT is certainly to be numbered among the most progressive magazines of the century."—Boston Courier. Send for catalogue and illustrated circulars of biological and other publications.

### THE OPEN COURT PUBLISHING COMPANY. 324 DEARBORN STREET, CHICAGO.

UFFER EXTRAURDINARY TO READERS OF THE "REVIEW OF REVIEWS."

BY AN ESPECIAL AGREEMENT, WE CONTINUE OFFER TO READERS OF THE "REVIEW OF REVIEWS" TO SUPPLY THE FEW REMAINING COPIES OF WHAT IS UNIVERSALLY CONCEDED TO BE THE MOST MAGNIFICENT WORK EVER ATTEMPTED IN AMERICA AND NOT EXCELLED ELSEWHERE AT LESS THAN ONE-THIRD THE REGULAR PRICE.

# MIZRAIM, or ANCIENT EGYPT.

EGYPT! Whose civilization is the oldest known and yet whose architecture is the wonder and admiration of modern times, and which "for nobility of conception, vastness of detail, and majesty of the highest order exceeds anything ever reared by human hands," has now for the first time been adequately shown forth in these superb volumes. Whether specially interested in Egypt or not, no one who is a lover of good things in art or literature can fail to be fascinated by the beauty, grace, and grandeur of Egyptian art as exhibited in these plates.

I regard MIZRAIM as a masterpiece in pictorial education for all who need to be inspired with appreciation for Old Egypt and for exploration after its marvels and secrets.

Its exquisite and eloquent plates will refresh those who have seen the monuments or studied their history.

Its letter-press admirably expounds what its grand plates so fascinatingly

ent.
The book is a wise and satisfying investment.
(Signed)

WM. COPLEY WINSLOW,
Hon. Secretary Egypt Exploration Society.

Of this work MISS AMELIA B. EDwards, the Queen of Egyptology, words, the unit wards, the Queen of Egyptology, words "I wish to tell you how much I am pleased with the specimen plates of your great work."

"A series of illustrations that for beauty of execution have absolutely no parallel."—Illustrated American.

PROF. OTIS T. MASON, of the Smith-

sonian Institution, said: "I am proud to see such creditable work done in our country.

"We have found the text very accurate and up to date."—Biblia (official organ of Egypt Exploration Society).
"A most vivid pen-and-brush pictorial history of the wonders of ancient Egypt."—The Evangelist, New York.

The work has been indorsed by purchase after thorough examination, and at the regular price, by the British Museum, Metropolitan Museum of Art, Boston Library, and the leading libraries of this country.

## THE ENTIRE EDITION WAS LIMITED TO 800 COPIES AND THE PLATES HAVE BEEN DESTROYED. : : :

## OUR OFFER

### THE CREATEST FAVOR EVER EXTENDED TO THE REVIEW OF REVIEWS" READERS.

The work is published in twelve parts, each containing six plates with their accompanying letter-press, and these are inclosed in four handsome half morocco portfolios—regular price \$1.50. To the first 95 subscribers who shall send \$3 we will send the entire work, and the balance can be paid in fourteen monthly payments of \$3 each. We can also supply it in two volumes, bound elegantly in half morocco, by adding 50 cents to each of these payments. If you care to add to your library the most superb work concerning the most fascinating country in all the world, fill out or copy the following acceptance blank.

### HENRY G. ALLEN & CO., 156 Fifth Ave., New York-

Gentlemen: I accept your offer of the edition de luxe of MIZRAIM. or ANCIENT EGYPT, and inclose \$3 as first payment, balance to be in 14 monthly payments of \$8 each, beginning 80 days after I have received the set. I reserve the privilege of RETURNING THE WORK WITHIN THREE DAYS AFTER RECEIVING IT IF NOT FOUND SAT-ISFACTORY, in which case you are to return the \$8 paid.

If further information is desired, send for descriptive pamphlet.

HENRY G. ALLEN & COMPANY, Publishers, 156 Fifth Avenue, New York.

# History Repeats Itself

Last autumn we took an entire edition of RIDPATH'S HISTORY OF THE WORLD, and secured concessions from the publishers that enabled us to sell this greatest of histories at one-half the lowest price ever made before. To bring this great work for study, reference, and entertainment within the reach of every man and woman of honest purpose, we undertook to form

# The Wanamaker History Club

each member to receive the complete set, in eight massive volumes, on payment of membership fee, One Dollar. The balance to be paid in small monthly installments.

The acceptances of this remarkable offer were so many that the Club was quickly filled, and thousands would have been disappointed at being shut out had not Dr. Ridpath generously consented to our being supplied with another small edition. These, too, are being subscribed for rapidly, and we are assured by the publishers that this History will never again be sold at the price we now offer. There will not be another edition at these prices.

ONE DOLLAR secures immediate delivery of the whole eight-volume set, in any binding, you agreeing to make 15 monthly payments—first payment thirty days after joining—for the cloth bound, \$1.50 a month; for the half-Russia—by far the more durable and attractive—\$2 a month; for sumptuous full morocco, \$2.50 a month.

Members may resign and return their books within ten days and Club fee will be returned. Books delivered free where our wagons run. We pay no freight or express charges.

John Clark Ridpath, LL.D., the eminent scholar, writer, and thinker, put a lifetime of study and labor in preparing his History of the World. The publishers invested a fortune in the illustrations and plates.

History of the World. The publishers invested a fortune in the illustrations and plates.

There are EIGHT MASSIVE VOLUMES, 6,500 large double-column pages, the equivalent of 30 ordinary octave books of 500 pages. Nearly 4,000 maps, chronological and genealogical charts, race plates and race charts, in 12 colors, engravings and reproductions from originals by the great masters of European and American art, illustrate and enforce the text, and form the greatest gallery of historical pictures ever brought together.

together.

Every important name and event since the world began is adequately treated. Every nation and every race, existing or extinct, ancient, mediæval, and modern, receive due description. Remarkably complete indices bring every name and fact within ready finding.

Equal space is given to describing the real life of the plain people. The makers of history are portrayed as fully as their public achievements. Part one is Mankind: Part two, Nations. No other general history covers the former at all; none treats the latter as fully or successfully.

Dr. Ridpath's literary style is peculiarly graphic, graceful, and fascinating. Open a volume at random, your interest is immediately enlisted, and other days live again in the author's moving word-pictures.

This is not an old edition, but is fresh from the printers, and down to date, including such recent events as the wars between China and Japan, Greece and Turkey, Spain and Cuba, the Queen's Jubilee, etc.

The plays of Shakespeare do not surpass other dramas more than Ridpath's History of the World overtops all general histories.

President McKinley and ex-President Harrison heartily indorse and recommend Ridpath's History of the World. So do more than 500 college presidents and professors, thinkers, statesmen, and critics.

Large open type, careful printing, heavy super-calendered paper, and strong and beautiful binding, make the books mechanically just right.

Sample pages with colored plate, illustrations, testimonials, and full information free on request. Send or bring your dollar to either store.

Philadelphia JOHN WANAMAKER New York

# Doubleday & McClure Co.'s New Books.

# Henry George's New Book

Entitled "THE SCIENCE OF POLITICAL ECONOMY" is just ready, the work on which Mr. George devoted the last six years Mr. George terms Political Economy "The Science of Getting a Living." Octavo, with superb photogravure portrait, \$2.50.

### Edited by Little Masterpieces PROF. BLISS PERRY.

Three new volumes devoted to the best and most characteristic work of FRANKLIN, LINCOLN, and WEBSTER. 30,000 of these books already printed. Price 30 cents each cloth, 60 cents full leather. The three former volumes are devoted to IRVING, POE, and HAWTHORNE.

being 10 per cent, off regular price.

INCLUDING A YEAR'S.. SUBSCRIPTION FREE TO

McCLURE'S MAGAZINE.

BOOKS TO BE RETURNED IF UNSATISFACTORY. THE MAGAZINE MAY BE SENT TO A DIFFERENT ADDRESS IF DESIRED. SHAKESPEAREAN LIBRARY IS:

THIS SET includes not only the PLAYS AND SONNETS, but nearly 2,000 pages of ADDITIONAL MATTER, giving the text of old histories, stories, ballads, etc., which it is believed by the best scholars Shakespeare used. These extracts, while most interesting and important, are not accessible in other usual editions except at a great price. The set is edited by PROF. HENRY MORLEY, LLD., who has written a valuable INTRODUCTION to each play. THE FRONTISPIECES are from the most famous of all Skakespearean pictures—the Boydell Gallery. The binding is in a new flexible style, which allows the book to lie open in the hand or be carried comfortably in the pocket.

We are prepared to help form Shakespearean clubs, and shall be glad to send free to any one a pamphlet, just ready, entitled "How to Form a Shakespeare Club." Address

DOUBLEDAY & McCLURE CO., PUBLISHERS.

141-155 EAST 25th STREET, NEW YORK.

## REMEMBER, you have one whole week STOCK=TAKING for careful examination, with privilege of returning if not entirely satisfactory, and your money will be promptly refunded.

Very few of these special sets now remain. Every reader knows that the work is not only an Encyclopædia, treating over 50,000 laptes, but the most exhaustive Dictionary published, defining over 250,000 words, which is 25,000 more than any other. They also know that they are securing the work for LESS THAN ONE-THIRD THE REGULAR PRICE, and as a consequence orders are being received daily from all sections of the country.

In taking stock at the close of our business year, we find a few sets of The Encyclopædic Dictionary (in cloth and half-Russia bindings only), of which the sides of some of the volumes are slightly rubbed—not enough to impair their real value or appearance in your library, but sufficient to prevent their shipment as perfect stock at our regular prices of \$42 to \$70 a set. There being only a limited number of these sets, we shall not go to the trouble of rebinding them, but have decided to let them go on easy payments of \$1 down and \$1 per month until paid for—less than one-third the regular price.

price.

### BY PROMPT ACTION NOW

therefore, a number of ambitious readers of the REVIEW OF REVIEWS who desire an up-to-date reference library may now secure these special sets at about cost of paper, ink, and binding.

JUST NOW THEY ARE YOURS FOR A LIFE-TIME THIS EASY WAY.

### 81 DOWN

### SECURES IMMEDIATE POSSESSION

of the entire set of four volumes. Balance payable \$1 monthly.

Readers must not think that these sets are in any way incomplete or out of date. They are from the regular stock, the prices of sets ranging from \$42 to \$70, according to binding.

### **WE GUARANTEE**

that these sets, except for slight rubs or abrasions on the sides of some of the vol-umes, are precisely the same as those sold at full prices: yet we cannot offer them as perfect stock, and our loss shall be your gain. This is

Positively the Greatest Bargain ever offered in a strictly high-class standard publication.

### WHAT THE ENCYCLOPÆDIC DICTIONARY IS.

WHAT THE ENCYCLOPÆDIC DICTIONARY IS.

It contains over 250,000 defined words—nearly twice as many as the largest "unabridged"—and is now accepted as a N UNQUESTIONED AUTHORITY wherever the English language is spoken.

It is one of the best of all Encyclopædias, treating over 5,000 encyclopædic subjects—the Britannica has about 27,000. JUST THINK OF IT! The whole range of human knowledge condensed for your INSTANT USE by such world-famous scientists as Huxley, Proctor, and a hundred other educators of hardly less renown! It easily takes the place of any half-dozen other reference books that could be named.

It is an ornament to any Library: beautifully printed, substantially bound, profusely illustrated, COSTING MORE THAN \$750,000 TO PRODUCE, the regular price being from \$42 to \$70 a set.

to \$70 a set.

### WHAT THE ABLEST CRITICS SAY.

"Not only are more words defined in this New Dictionary than in any other, but its definitions are more exhaustive."
—Chicago Tribune.

A standard reference book, treating every branch of knowl-"A standard research in a masterly manner."

-Philadelphia Press.

"It forms in itself a library for the busy man of affairs, the merchant ambitious to advance himself in his line, or the student 

"At the very head of all contemporary publications of its kind, and firmly established as one of the fewgreat reference books of the world."—Christian Herald, N. Y.

REMEMBER These se's are as good for all practical purposes and look as well in your bookcase as those for which we are getting regular prices. We guarantee that the interiors are not injured and the bindings of our standard grade. The most serious harm to any set is no greater than might occur in a few days' use in your own home or office. As absolute proof of this statement, you may retain the set for careful examination for one whole week. If not entirely satisfactory you may return the volumes and money will be promptly and cheerfully refunded. This is positively the chance of a lifetime.

How to Secure This Great Bargain Bring or send \$1.00 to the New York Newspaper Syndicate, 93 Fifth Ave., New York, and entire set of four superb volumes, bound in cloth, will be forwarded. The balance is to be paid at rate of \$1.00 monthly for one year. The first payment for either binding is only \$1. In sending your first payment please designate the style of binding you desire, and indicate how you wish the volumes sent, as the charges for delivery must be paid by the purchaser. Remittances received after this special lot is exhausted will be immediately returned. The limited stock at our disposal cannot last long. To protect ourselves against book dealers, etc., we must decline to send more than 2 sets to any one party, and in every case we must require the full name and address of each person receiving a set. We have only two styles of binding in this lot—cloth and half-Russia—about an equal quantity of each. Order at once, to make sure. The absolute confidence of the Syndicate that the work will be thoroughly appreciated, highly valued, and cheerfully paid for, is clearly shown by sending such a valuable set of books, the subscription price of which is from \$42 to \$70, on an advance payment of only \$1. We refer to any newspaper in New York, Boston, Chicago or San Francisco.

The Haif-Russia Binding will be supplied for 25c. additional per month.

New York Newspaper Syndicate, 91 & 93 Fifth Avenue, New York.

# BOOKS

# The American Monthly Review of Reviews

# Bind the Semi-Annual Volumes.

THE December number of 1897 rounded out the sixteenth volume of the American Monthly Review of Reviews.

Complete unbound volumes delivered to us, postage or express prepaid, and in good condition, with covers on, will be exchanged for bound volumes and returned, charges prepaid by us, for 75 cents a volume. School for girls. Begins October 1.

NEW YORK, New York City, 6-8 East 53d Street.

Sisters of the Church. Boarding and day school. Primary, secondary, collegiate departments. Especial courses. College preparatory. Address SISTER IN CHARGE.

· Correspondence.

Correspondence.

M any a man has made a mistake in thinking that he could be a successful lawyer. No man, however, ever made a mistake in studying law, because no study has so great a tendency to broaden the mind, elevate and cultivate thought, sharpen the reason as the study of law. A young man versed in the law has a better chance for success in any direction in which he may turn his talents. A man is a better preacher, a better teacher, a better statesman, a better workman in any department of physical or mental activity for having studied the law. The law is a great stepping-stone to preferment. A law school is the best place in which to study law. It is not the only place. The men whose portraits appear in this advertisement, and countless others, have made great successes without law school instruction. They became great lawyers not because they never attended the law school, but despite the fact that they did not. The opportunities open to these men for study were inferior in number and in character to those open to any young man nowadays. man nowadays.

The correspondence system of study which claims to be second only to study

The correspondence system of study which claims to be second only to study in a resident school and infinitely better than study in an office or alone, comes near bringing the law school to the home of the student. Certainly what young men have done, young men can do again under more favorable conditions. We want you to write us for our handsome catalogue of particulars with reference to the correspondence system of the study of the law, and our book of testimonials from hundreds of students, many of whom have become successful practising lawyers in every State in the Union and in some foreign countries. countries.

These are furnished you free of charge. They will interest you and may lead to something of great advantage to you.

### A Klondike Outfit.

The stampede toward the most isolated and picturesque goldfield ever known has begun much earlier than had been expected. The experts have been prophesying that anywhere from fifty to a hundred thousand gold-seekers would make the attempt to reach Dawson City during the spring and summer, but it was believed that the movement would hardly begin before March anyhow. But the last week of January saw a congestion of traffic from Portland, Seattle, Tacoma, and other coast cities almost incredible when one realizes how difficult, how practically impossible, the Chilkoot trail still is, with no Indian packers (they scuttle to cover at the first breath of winter) and only a few dozen Norwegians, who make pretty much any rates they choose.

Of course, though, there is no use to hold up these obstacles in the face of any one who has the fever. Tell him that he can't get passage or that, as some returning prospectors declare, the available claims around Dawson are all taken up, and he will merely dislike you and determine to go see for himself. Indeed, this seems to be the only way to get at the real truth, for the sensational newspapers must have fresh news even if there isn't any, and the ingenious reportorial "descriptions" are useful largely as studies in imagination. So, supposing the adventurer is determined to try his luck, let us see what the experience of a number of travelers has pronounced to be necessary in the way of outfit. The first requisite to success is to take along what you will need and nothing more; the second is to push through, cau-

"One of the necessities of á Klondike expedition is a revolver."

If yours bears the trade-mark

you will know it can be relied upon.

Our heavy calibers are specially adapted for rough work, and will stand an amount of wear and tear that would cripple any ordinary revolver.

Catalogues describing our different models will be supplied on application.

### Travel and Recreation

Send for time-table folders and illustrated pamphlet of winter resorts of California,

O. W. Ruggles, General Passenger and Ticket Agent, Chicago.

W. H. Underwood, General Eastern Passenger Agent, 219 Main St., tiously yet with absolute determination, no matter what the faint-hearts along the way tell you.

One of the first questions to be decided for anybody not living on the coast is whether to purchase the requisite clothing at home or wait until he gets to Seattle, Tacoma, or Portland. This depends somewhat upon the individual's chances for getting reasonable rates in his own town, but unless upon inquiring he finds he can come well below the following prices after adding on the freight to his objective point, he will do well to defer his buying. Certainly much time and trouble can thus be saved, and it is unquestionably true, as the Seattle cutfitters claim, that their goods are more apt to give satisfaction, since they have been prepared with that special end in view. Naturally, anything that is manufactured out there can more than compete with the Eastern products, and the mere question of having one's supplies put up by packers who understand the treatment to which they will be subjected is no unimportant item; for baking powder is not serviceable when mixed either with sugar or smoking tobaccoand stranger combinations than that may occur long before the traveler is even afloat on Lake Lindemann. Still, this is a matter to be decided by each one for himself. Get the best you can at the cheapest place. The prices given below will be found approximately correct (f. o. b. at Seattle), so that comparison will not be difficult, and this list is what one man will need for a year. It may as well be stated at the beginning that the list can be duplicated for a great deal less, but one must remember that the best is none too good in such a hazardous trip-and there are no chances to correct mistakes.

To begin with shelter: one man alone will need an Sx12 tent (tenounce duck), which will cost \$10; for a party of two the tent should be 12x14, and for three or four the next size larger, which comes at \$15. Tent-pegs and guys should be carried along, the former securely tied together and attached to the latter, which should be fastened around the canvas. A little order and careful arranging beforehand will count for a great deal when you are trying to camp

This cut shows

# GOING TO ALASKA?

### Looking for Grand Scenery? Want to Got Rich? Yes?

Then write to the Pacific Coast Steamship Company, San Francisco, for "How to Reach the Gold Fields of Alaska;" "Answers to Every-day Oueries;" "Map of Alaska;" "Alaska Excursions," and other publications, all free. Total postage, 10 cents.

Remember that this company operates over 20 steamships-has been running to Alaska the year round for over 20 years-is the U.S. Mail and Alaska express carrier-has steamers especially built for the Alaska route-has the experienced pilots and officers who are familiar with the intricate navigation of the inland route-runs steamers to all principal Pacific coast ports from Mexico to Alaska, inclusive. Travelers who regard their time and their safety as of value will see to it that their tickets read over the Pacific Coast Steamship Company's line.

GOODALL, PERKINS & CO., GEN. AGTS. SAN FRANCISCO, CAL.

# IF YOU ARE GOING

# TO THE KLONDIKE

Travel via the

# LEHIGH VALLEY RAILROAD.

Solid Vestibule Train Service. without change, between New York, Philadelphia and Chicago, via Buffalo and Niagara Falls, making close connection at Chicago for Pacific Coast trains.

For information, rates of fare, etc., apply to or write any of the following offices:

NEW YORK OFFICE, No. 355 Broadway, New York City.

BUFFALO OFFICE, cor. Main and Seneca Sts., Buffalo, N. Y.

CHICAGO OFFICE, No. Clark Street, Chicago, Ill.

CHARLES S. LEE. General Passenger Agent, Philadelphia. in a howling storm with the darkness ahead of you. Tentpoles are a useless burden, as they can always be obtained on the spot. Next in importance is one's clothing, of which enough of the right sort is indispensable, while too much is a perpetual hindrance. The men who have come back declare that the best rig for travel through the snow is a Mackinaw suit with overalls, a jumper with trousers over it, deerskin moccasins or felt slippers, and heavy rubber boots. The year's clothing supplies would run about as follows:

2 nairs of blankets

2 pairs of blankets	\$2U.UU
8 suits woolen underwear	10.00
8 sweaters	4.50
1 pair rubber boots	5.00
1 " high shoes	
1 suit mackinaws	8.00
1 pair corduroy pants	4.50
1 reversible leather coat, corduroy	
lined	
2 pairs German socks	2.00
4 " medium-weight socks	
1 cowboy felt hat	
1 heavy cap	
1 flannel-lined hood	
3 pairs wool mittens	
1 " unlined gloves	
1 " rubber mittens	
1 " wristlets	.50
2 " overalls	1.25
2 jumpers	1.00
1 pair leather suspenders	
1 " snow goggles	
1 " moose-skin moccasins	2.50
1 pack strap	2.00
6 towels	
1 money belt	1.00
1 sleeping bag	
• - •	
₹	129.25

Personal preference and habits will enter largely into this as everything else; but if you leave out any of these items you will need the equivalent. In the snow you will need a pair of creepers unless you know how to fasten a rope or a piece of bagging so as to accomplish the same end; and if you are going through in bad weather the snow goggles, necessary as they seem, will be found impracticable, since those of isinglass or colored glass blur so badly as to become quite useless.

THE NECESSARY PROVISIONS.

In the way of provisions the following will be found a full estimate:

400	pound	s flour	\$9.50
20	**	corn meal	.30
36	"	rolled oats	1.00
25	44	hard tack	.75
10	"	baking powder	4.00

## A Perfect : : : Sleeping-Bag.

Various kinds of fur and woolen sleepingbags have been tried in Alaska, but none of them proved adequate to the requirements until the

### Goose-down Bags

manufactured by us were placed on the market. Men have slept in them on the snow with the thermometer 68 degrees below snow with the thermometer 88 degrees below zero—when horses were frozen to death—and slept comfortably. This Bag weighs only 20 pounds; has a thoroughly water-proof cover; is provided with an inner sheet bag which can be taken out at will and a clean one substituted. If it becomes wet it can be dried in a few hours. It will freeze dry, whereas wool and fur bags when they become wet are rendered useless because of the difficulty of drying them out. J. W. KRNDALL, writing from Lake Lindemann, Alaska, January 2. says: "Your sleeping-bags are the finest on the trail."
Don't buy a sleeping-bag until you have seen ours. It is unquestionably the only thoroughly satisfactory sleeping-bag manufactured for Alaska. It is the warmest, lightest, cleanest, dryest, and cheapest.

lightest, cleanest, dryest, and cheapest.

From these lists it will appear that a good outfit will cost complete in Seattle about \$330. If a boat is taken along this will add \$35, in Seattle, and \$60 to get it to Lake Lindemann. If the boat is thus shipped it should be sent "knocked down;" if not, the traveler will save his hundred dollars, but he must remember that the construction of a flatbottomed boat on the lake shore will require two men's hard work for at least ten or twelve days.

Freight from Seattle to Dyea for the 1,500 pounds above mentioned should be reckoned at about \$10, passage for one's self costing \$50 first class or \$35 second class. Going by any of the passes, the transportation to the lakes would come to at least \$150; by St. Michael's \$300 would cover the entire passage and freight to Dawson. The latter route would land one in Dawson not before August, whereas with fair luck the trip down the Yukon should not stretch beyond the middle of June.

It appears, therefore, that the gold-hunter reaching Seattle will need at least \$600 or \$700 to land him equipped in the vicinity of the recent "strikes." After that he needs a good constitution -and luck! For there is no question but that lots of men are going to miss it, and after grit and good health chance seems to be the most prominent factor in the alluring search.

# How can I make my book money go farthest?

This is a question that every book lover is constantly grappling with. The Union Library Association solves this perplexing question in an ideal manner, for the Association was organized for the distinct purpose of supplying direct to the people all books, of every description whatsoever that are sold in the trade, at wholesale prices. We cannot better demonstrate what we can do for our members than to make public the following letter from Mr. George H. Warner, associate editor of that magnificent work, "A Library of the World's Best Literature," of which his brother, Mr. Charles Dudley Warner, is editor-in-chief. Mr. Warner writes as follows:

New York, December 30, 1897.

Regular Membership

THE UNION LIBRARY ASSOCIATION, NEW YORK CITY-

Gentlemen: In the course of the past two years I have had frequent occasion to buy books of your

Gentlemen: In the course of the past two years I have had frequent occasion to buy books of your Association, and I wish to say that I have been very much surprised at the low prices at which you sell books. Some of the discounts from the regular prices which I have obtained are really startling in amount. In order to fully test your prices, I recently selected a dozen standard publications and submitted a list of them to four of the largest book-selling establishments in New York, including a department store, a second-hand establishment, and two regular bookstores. My list aggregated at retail prices \$53.75, and the best offer I got from any of the four sources was \$47.75, more than double your price, for I bought them of your Association for \$22.47. My list was selected from different departments of literature, and I regard it as a good test of the saving that may be made by buying of the Association.

Knowing the management and workings of the Association as I do, I fully recommend book buyers to become members of it.

Very truly yours,

GEORGE H. WARNER.

In order to introduce the Association into every section of the country, we have concluded to offer, for a limited time, a MEMBERSHIP FREE to all who will order from us any one of the following standard and well-known books. They are in all cases the regular copyright editions, and are published by such leading publishers as The Century Co., D. Appleton & Co., Charles Scribner's Sons, The Macmillan Co., Dodd, Mead & Co., Little, Brown & Co., Houghton, Mifflin & Co., etc.

	Regular	membership	noun

The books in all cases to be sent postage or expressage paid by the Association. It will readily be seen how liberal is our proposition—you simply purchase one of the above-named works at retail price and obtain a membership, when you will be enabled to purchase any of the thousands of other books at wholesale price. By wholesale we mean at discounts averaging from 30 to 60 per cent., depending upon the book, the publisher, and the conditions of purchase. The Association has inaugurated a series of

### SPECIAL SALES

and issues several special sale catalogues every year, which are sent free to members. Special Sale No. 14 was issued recently and contains hundreds of standard books from the best publishers at discounts ranging all the way up to 75 per cent. It will, therefore, be readily seen how important it is that you should become a member without delay and obtain this catalogue.

The Association also does a very large business in Stationery, and furnishes all kinds of fine writing papers and engraved work at wholesale rates. Moreover, orders for all the leading Periodicals are taken, our prices being lower than can be obtained elsewhere.

The Association is NOT AN EXPERIMENT, having been in existence for nearly fifteen years. The proprietors and managers are old and experienced publishers and booksellers who have exceptional facilities for buying, so that the Association is in a position to fully carry out its agreement with its members; in short, to sell books at lower prices than any concern in the United States. Our members receive prompt, careful, and intelligent attention in all cases, and our establishment is one of the busiest in all of busy Greater New York.

All orders and communications should be addressed to

## THE UNION LIBRARY ASSOCIATION.

References: COMMERCIAL AGENCIES.

91 and 93 Fifth Avenue, NEW YORK.

P. S. - Last month we offered to the first 500 "Review of Reviews" readers who sent in their orders a fully paid-up membership for three years. These were so quickly taken by near-by readers that many of those residing at a distance were disappointed. We have concluded to again offer a three-year membership to the first 500 applicants THIS month, but these will be allotted according to date and postmark of letters, so that distant readers may have an equal opportunity with those living near New York. Please bear in mind that a membership is not issued except in connection with one of the above-named books, and that we deal only with members of the Association.-The U. L. A.

# BIBLE CLUB CLOSES

# THIS MONTH LAST CHANCE

YOUR OPPORTUNITY TO SECURE THE

Beautiful ART VOLUMES, a complete and magnificently illustrated BIBLICAL LIBRARY, for less than the price of an ordinary family Bible, is passing

The publishers having declined to furnish the Club with any more sets of this remarkable Library at the present low Club prices, it becomes necessary for us to ustify our readers that the Club will close on March 81, at which time our exceptionally low price and easy terms of payment will be withdrawn.

# CONCEDED TO BE THE MOST WONDERFUL BIBLICAL PRODUCTION OF THE CENTURY.

### A GREAT LIBRARY.

It is beautifully bound in four sumptuous volumes; the text, printed in large clear type, comprises the Authorized Version of the Scriptures, a Bible Dictionary, Bible Atlas, Helps to Bible Study, Bible History, Harmony of the Gospels, a most complete Concordance, and a score of other new and reliable acceptoned in features together with thousands and valuable encyclopedic features, together with thousands and valuable encyclopedic features, together with thousands of helpful and illuminative notes, commentaries, explanations, and reflections which make this remarkable Library indispensable to every Bible teacher or Bible scholar, and because it stimulates Bible-reading, especially among the young, it is likewise indispensable in every Christian home.

### A SUPERB WORK OF ART.

Not only is this magnificent work printed in the highest style, on super paper and in beautiful bindings, but it includes the most remarkable series of Bible illustrations ever brought the most remarkable series of Bible illustrations ever brought together. They comprise over four hundred full-page photographs of the actual scenes and places of the great events of Bible history. They are the only truthful Bible illustrations ever obtained. They lend a new and striking interest to the Scriptural narrative and make its events vivid and real. They are as fascinating as a personal journey through the Holy Land.

The Club has received thousands of letters from readers who have become members. These letters, without exception, speak of this great Library with unqualified praise. We believe it would be impossible to give greater satisfaction in any way than our Club members have derived from the possession of this great Library.

Our readers are well aware that this great work was originally sold at a high price, far beyond the means of many, and it was only possible for our Bible Club to offer readers the present low price on account of having secured an entire edition on extremely favorable terms.

UNTIL MARCH 31, all readers who join our Club will secure this splendid Biblical Library at less than the cost of an ordinary family Bible. We advise you to write at once for complete particulars regarding our present Club price and the comfortable terms upon which the Library is being offered for the month of March only.

SPECIAL.

In order to assist readers of the Review to an understanding of what a truly wonderful work this is, so that no one may miss this great opportunity, the Club will send, postage paid, to any viewa, selected from the remarkable series of 440 full-page plates which so beautifully illustrate this new work. These are 8 x 10 inches in size, printed from the original plates on heavy enameled paper, and are suitable for framing and home decoration. They were secured for this work at an expense of \$25,000 by a special experition sent to Palestine and the East for this sole purpose, and constitute the most remarkable collection of Biblical photographs the world possesses.

McCLURE'S MAGAZINE BIBLE CLUB. 141 E. 25th St.. NEW YORK.  general production of the contraction of the contra 

Club to close—regular subscription canvass to begin.

History Club's

Special Offerto Be Withdrawn

*ჀჀჀჀჀჀჀჀჀჀჀჀჀჀჀ*ჀჀႯႯႯႯႯႯႯႯႯႯႯႯႯႯ

When the History Club was organized for the introductory distribution of the

the publishers conceded an exceptionally low price and extended the privileges of easy monthly payments, for the sole purpose of acquainting the people throughout the country with the exceptional character and value of the Library. This distribution was arranged to be finished before the regular subscription canvass at the full publishers' price should commence.

The publishers have notified us that they now feel the work is thoroughly introduced and so highly thought of that it is time for the Club price to be withdrawn, and for them to begin their canvass at

full prices.

We therefore give fair warning that our entire available stock is less than four hundred sets, and that when these are exhausted the Club must close. We urge every one who is interested in History to investigate our liberal Club plan and the low Club price at once, as the Library upon the regular subscription canvass will be sold for double what the Club can furnish the Library for to its members.

WHAT THIS

HISTORICAL

LIBRARY IS

abundant and accurate the works of such great reports, and the principal point of the Library, but Recent History also receives the attention its importance and interest demand, and the record of events is brought right down to the present year. The History of Civilization and The Philosophy of History are more fully treated than in any other work ever published in this country. The III natrations, from the works of such great artists as Meisson, the Philosophy of History are more fully treated than in any other work are nearly not of them marking the turning points of history, and The Historical Maps (there are nearly not of them) are more and brillian, in the principal maps of the World, the Library is simply incomparable. It is the Largest, Latest, Best.

p252525252525252525252525252525252525

What the Head of the Educational System of the United States,

DR. WM. T. HARRIS.

National Commissioner of Education,

says of the Library and the Club plan:

"I write in the name of the Bureau of Education to state that I appreciate highly the purpose of the McClure's Magazine History Club, which is to extend the study of history more, the first which is to extend the study of history more than this will have all the good results claimed for it. History seems to me well described as the study of man's larger self, his social self. This knowledge is evidently the most important kind of self knowledge. "I wish the Club all success in extending the sale of such a valuable work on this subject."

*IF YOU* DO NOT KNOW

about this wonderful work, and if you desire to possess a splendid Library of History, telling you the entire story of the human race, the Club will send you, postage paid, an interesting set of illustrations from the Library itself, including reproductions of many of the great historical paintings of the world and portraits of many famous makers of history. We will also send you detailed information regarding the Club plan and the Club terms, showing you how you can secure the greatest work of Universal History ever published, at half the publishers' regular subscription price, and on the little at a time Club payment plan.

# THE WARNER LIBRARY COMPLETED.

A CROWNING ACHIEVEMENT IN THE HISTORY OF AMERI-CAN BOOK-MAKING.

WITHDRAWAL OF THE SPECIAL CLUB OFFER WHICH HAS RESULTED IN AN ADVANCE SALE
OF NEARLY ONE MILLION VOLUMES,

### BY RUSSELL STONE.

THE long, arduous labor of preparation of the CHARLES DUDLEY WARNER LIBRARY has come to a successful and a brilliant close. The final volumes are on the presses.

It is difficult to rightly measure the event. I do not think, however, I overstep the fact when I describe it as the greatest achievement in the history of American book-making. The briefest glance suffices to reveal that neither in magitude, in cost, nor in breadth of

design has there ever been an approach to it. It stands alone.

But the completion of this LIBRARY, deeply significant as it is to American letters, is not less of importance to those who have in contemplation the placing of this epochal work in their homes. The remarkable introductory terms and prices which have been offered through Harper's Weekly Club will, when the final volumes are issued, be with-

drawn. The regular subscripton prices will then prevail. It is for this reason that a consideration of the character and the singularly varied utility of the LIBRARY becomes of especial interest.

### THE WORK OF FAMOUS MEN.

That the LIBRARY has at once taken rank as the one great work of its kind in the world is a truth that must have impressed itself upon ture have placed him in the front rank of the younger generation of American writers; and among those who have acted in an advisory capacity or as contributors to the brilliant introductory studies which are the LIBRARY's crowning feature, I find such eminent Americans as Mr. Howells, our greatest novelist; Carl Schurz, a statesman turned author; Henry James, now of London; Andrew D. White, our Ambassador to Germany; Dr.

HAMILTON WRIGHT MABIE,
ASSOCIATE EDITOR OF THE WARNER LIBRARY.

His fine essays in literary interpretation have placed him among the foremost of American critics.

all who have had opportunity to survey its pages. Certainly there has never before been brought together such an array of famous men to do so notable a work. Charles Dudley Warner is, with Mr. Howells, the most widely and favorably known of American men of letters now living.

Associated with him in the editorial work has been Hamilton Wright Mabie, whose vivid and charming interpretations of litera-

Lyman Abbott, the successor of Beecher and our foremost theologian; Prof. Charles Eliot Norton, of Harvard; John Burroughs, President Gilman, of Johns Hopkins University, and many others equally well known; while from the other side of the water one finds an equally distinguished list.

The work not of one man, but of many, the LIBRARY is, in truth, the creation of the finest minds of two continents.

Perhaps I may best condense my impression of the work by saying that the LIBRARY commends itself to the general reader of books, and especially to those who seek a broader culture and knowledge, for ten vital and decisive reasons.

- A MEANS OF BROAD LITERARY CULTURE.
- 1. It is to me the finest LIBRARY that ever has been, or ever could be, compacted into

great authors and literatures, each written by the recognized authority upon the subject treated, provide endless delightful excursions into every field of literature, and likewise the means for the broadest culture.

3. No other work or collection of books in the English language presents so perfect and inviting a means for the study of Comparative Literature. In a broad view,

Portrait by Hollinger.

CARL SCHURZ.

For the WARNER LIBRARY, Mr. Schurz has written a brilliant study of DANIEL WEBSTER.

like compass. It includes the world's greatest writers, and, furthermore, the greatest work of the greatest writers. Of what private collection of books can this be said? It is all wheat—no tares. It represents the wealth of an unsifted ten thousand volumes; it includes all epochs, all types, all forms of the literature of the world.

2. Its hundreds of critical essays, in interpretation and exposition of the world's the LIBRARY is in itself literally a study in Comparative Literature. Through its interpretative essays and what is given as representative of the work of the authors themselves, it affords an unrivaled introduction to wider reading, so that with these aids the reader no longer explores the treasure-land of books at random, but with accurate knowledge and with the clearest possible insight.

4. The LIBRARY is a biographical history of literature such as has never been written. Everything one may wish to know of the world's immortals, their personalities and peculiarities, as well as their larger achievements, is here to be found. The deep human interterest which suffuses every section and page is, indeed, one of the most striking characteristics of the work.

### A MAGNIFICENT WORK OF REFERENCE.

5. It is the most complete and comprehen-

THE FAMOUS BOOKS OF THE WORLD.

6. The department devoted to the Famous Books of the World gives a graphic analysis, description, and digest of the greatest books in all the world's history. It is a veritable encyclopedia of literature in itself, and enables one, at a moment's notice, to refresh one's memory regarding the plot or characters of some play or romance once enjoyed, but now dimly remembered.

ANDREW D. WHITE.

Our distinguished Ambassador to Germany is one of the notable list of contributors to the WARNER LIBRARY.

sive Reference Library of literature in any language. Aside from the Library itself and the thousand introductory and biographical studies, the three final volumes contain four special departments, which are not only invaluable features, but are absolutely unique in character. They have been prepared exclusively for the Warner Library, and their like cannot be purchased elsewhere or found in any public collection of books. These are detailed below.

7. The anthology of famous single masterpieces of poetry, lyrics, hymns, and the like includes those splendid efforts of genius which have given immortality to names which would have else been long since forgotten. This department includes near a thousand of the finest lyric efforts of the human race, the greater part of which are not to be found in the largest private libraries. It sweeps the whole field, ancient and modern, not omitting many poets now living, who are

still, as it were, upon the waiting-list of the world's Academy of Immortals.

NATIONAL LEGENDS AND LITERATURES.

8. There yet remain the distinctive literatures of different ages and different countries, which are more the creation of a people or a race than of a man. These include the Vedas of the Hindoos; the Sagas of the Norse; the legends of the Argonauts and of the Knights of the Round Table; the Niebelungen Lied,

the salient facts of their lives given and their names pronounced, and accompanying this is a complete bibliography of each author. There is now no such dictionary in existence, so that this volume will be absolutely unique—a fact strikingly illustrative of the broad and at the same time minutely detailed character of this truly marvelous work.

A WONDERFUL ANALYTICAL INDEX.

0. Finally, every page and topic, every

FERDINAND BRUNETIERE.

THE EDITOR OF THE CELEBRATED "REVUE DES DEUX MONDES."

M. Brunetière, easily the greatest living critic of France, has written for the Warner Library striking studies of Taine and Renan.

and many others. All these have been treated in elaborate signed articles by scholars who are the first authorities in their several fields.

9. Then, as rounding up and completing this monumental work, we have such a dictionary of authors of the world as has never before been compiled. Between eight and ten thousand writers have here been treated,

character and subject, the name of every author or book, in the entire work, has been exhaustively indexed and cross-indexed, so as to be instantly accessible. There is no item of interest in the whole range of writing which may not here be quickly found, and even if one wishes to look up a general subject, such as Art, Adventure, Antiquity, Anecdote, Sci-

ence, the Renaissance, and the like, every appropriate reference is given.

### A LIBRARY OF REAL LITERATURE.

To sum up: It may be said briefly that it requires well-nigh a lifetime of reading and study to acquire the ability to do just what has here been accomplished—to choose the good from the bad, to know what is great. Only the highest intellect could conceive and shape

and money—these splendid volumes, gathering up as they do in one compact storehouse everything that is of value in the literature of the whole world, must be profoundly welcome.

#### THE ECONOMY OF IT.

There is yet another side to the LIBRARY which few lovers of books will fail to take into account. That is that it means a large saving

PROF. E. RAY LANKESTER, OF OXFORD.

AMONG THE MOST NOTED OF ENGLAND'S MEN OF SCIENCE.

The personal friend and associate of both DARWIN and HUXLEY, Prof. LANKESTER has written for the WARNER LIBRARY two delightful essays on these famous men.

so magnificent a design, and only the ripest scholarship and the most varied learning could suffice for its execution in so fine and faultless a way. To an age that is, so to speak, being buried alive under an avalanche of worse than worthless printed matter—worse than worthless since it consumes both the public's time

of money, as well as of time and effort. The mere fact that this monumental production, this treasury of world literature, is to be had for less than the simplest collection of books, makes it an admirable investment. Indeed, were the entire contents of the Library to be computed at current prices for books, its sell-

ing value would be easily six or eight times that for which it is now obtainable.

DR. SHAW'S VIEW.

The volumes of the LIBRARY which have been issued thus far have elicited the warmest commendations from those whose experience and culture best enables them to be judges of such a work. Of these I may quote a single letter, which will be of especial weight with

reference and for purposes of agreeable browsing to be a much more valuable home possession than I had even anticipated

"There is a great deal of indiscriminating reeding nowadays, and one of the particularly valuable things about this LIBRARY is that it helps the read-

Mr. Howells is one of three hundred of the most famous men of letters in both America and Europe who have made the Warner Library the product of the finest minds of the age.

readers of this magazine. That is from Dr. Albert Shaw, the editor of the Review. He writes:

"I am impressed, as I examine the successive volumes in the LIBRARY OF THE WORLD'S BEST LITERATURE, with the value that this series of volumes must possess as a means of literary education and culture.

"I can say for myself with all frankness that I find it—in actual frequent use, both for purposes of

er to discriminate, and furnishes a safe guide to those who would like to go outside for a more complete and extended study of the writings of this author or that."

AN EXTRAORDINARY ADVANCE SALE.

Thus received by scholars and critics, the LIBRARY could not fail of the warmest reception at the hands of the public at large. Probably no publication ever before under-

taken has had so extraordinary a success. I am told that while yet in course of publication, the advance sales have reached nearly one million volumes—an almost incredible number—the subscriptions coming not from the United States alone, but from Europe and such far-away lands as Australia and China.

Such a success, richly as it is merited, has been possible only through the broadly popular INTRODUCTORY TERMS TO BE WITHDRAWN.

This introductory offer, however, is extended only to those who order in advance of the completion of the LIBRARY, and the final volumes are now on the press. When issued, the club offer must be withdrawn and the regular subscription prices put in force.

VOL. XVII.

NEW YORK, MARCH, 1898.

No. 3.

## THE PROGRESS OF THE WORLD.

Between 9 and 10 o'clock on the The Destruction night of February 15 the United States battleship Maine, lying in the harbor of Havana, was destroyed and sunk by an explosion. The sacrifice of life was great, including a large majority of the ship's men. Some of the officers, it is said, were visiting on board another ship in the harbor, and so escaped Of the officers who were on board all injury. at the time of the explosion, including Captain Sigsbee, commanding the vessel, all were rescued but two. This is due to the fact that the officers' quarters were toward the stern, while the explosion was relatively near the bows, in the more immediate vicinity of the quarters of the crew. The number of men killed seems to have ex-

HEAR ADMIRAL MONTGOMERY SICARD, U. S. N. (In command of the American fleet.)

ceeded 250. Many of the survivors were severely injured. It is supposed that this shocking occurrence was caused by fire communicated

in some way to a carefully guarded magazine where explosives were stored. Whether the firing of the magazine was a pure accident or a fiendish plot will perhaps never be known. Our record last month announced the sailing of the Atlantic

CAPTAIN SIGSBEE, OF THE "MAINE."

squadron to the waters of the Gulf of Mexico, and the assembling at the Dry Tortugas as a rendezvous of a very formidable American fleet. Some days later, on January 25, by order of the Navy Department, the battleship Maine took leave of the rest of the fleet and proceeded to the harbor of Havana. There had been serious rioting in the

Cuban capital, and it was considered that the American consulate and the interests of the United States in general would be better safeguarded by the presence of an American manof-war. The Spanish Government had formally expressed its entire acquiescence in this plan, although the movement looked enough like the entering wedge in a policy of intervention to occasion much hostile comment on the part of the Spanish newspapers. It was at once announced that as a return courtesy the Spanish cruiser Vizcaya would at the earliest possible moment be dispatched to the United States. By a singular coincidence the Vizcaya was due to arrive off Sandy Hook at almost exactly the time when the Maine was blown up at Havana. Vizcaya is a very large, heavily armored cruiser, equipped with the largest guns used in the Spanish navy, and supplied with engines capable

THE UNITED STATES BATTLESHIP "MAINE," DESTROYED IN HAVANA HARBOR FEBRUARY 15.

of giving her a speed of twenty-one knots an hour. Her visit to New York occurred at a time when all our vessels in any manner able to cope with her were said to be a long distance away. In the case of the Maine, the loss of the ship was a trifling matter compared with the shocking loss of life. The Maine was a fine ship, but she had met with various minor mishaps in her brief history, and was regarded by naval men as unlucky. But for a change of plans at Washington she would have left Cuba a day or two previous to the explosion. A naval inquiry was duly begun

The Spanish authorities at Havana rendered every assistance in their power to the work of rescuing the sailors who had either been blown into the water or else had jumped overboard from the rapidly sinking ship. There was no general disposition in the United States to lay the disaster at the door of the Spanish Government, although it was not an uncommon opinion that some of the fanatical supporters of Spain and haters of America, who had precipitated the recent riots in Havana, might have carried their desperation far enough to perpetrate an atrocity which in its very nature could

only injure the Spanish cause. The accident occurred at a peculiarly unfortunate moment because of the somewhat strained relations between Spain and the United States due to the disclosure of a grave indiscretion on the part of the Spanish minister at Washington. Spain had accepted Señor De Lome's resignation, but had seemed very reluctant to make the frank and straightforward disavowals that the circumstances plainly The tardiness of Spain in meeting required. reasonable expectations in this matter of disavowal or apology had produced a very unpleasant impression throughout the United States, and had justified Congress in calling upon the President for a full report of the facts that show the total failure of Spain to meet her promises regarding the relief of the reconcentrados and the practical application of the autonomy scheme. The President was on the point of making the desired report to Congress when the news was received of the destruction of the Maine.

De Lome's Unlucky Letter.

The publication of an imprudent letter early in February brought to a sudden end the American residence of Señor De Lome, the minister of Spain at Washington.

The letter had been written to Señor Canalejas, a Spanish public man of high rank who had recently been in the United States and subsequently in Havana, supposedly to make observations for the Spanish Government. It is to be remembered that De Lome had been particularly attached to the fortunes of the late Prime Minister Canovas. The new prime minister, Sagasta, had thought it best not to make an immediate change at Washington in view of the intricacies of the situation. Señor Canalejas, however, belongs to Prime Minister Sagasta's party; and it may be taken for granted that he visited this country and Cuba at the instance of the new cabinet in order that he might make a confidential report. The importance of Canalejas and his quasi-official status seemed to be understood in Washington when De Lome felt obliged to use his utmost endeavor to secure for the visitor a favorable reception. Subsequently, Canalejas went to Havana; and the letter which has since made trouble for De Lome was sent to him there. It seems to have been abstracted from Canalejas' apartments by some one acting on behalf of the Cuban insurgents. The letter contained phrases concerning the President of the United States that were both disparaging and insulting. Further than that, there were other phrases which made it plain that neither De Lome nor Canalejas took the autonomy proposals seriously, but regarded them as a mere blind for the sake of gaining time for military operations while diverting public opinion in the United States. Furthermore, the letter suggested that it would be a good idea for Spain, also for purposes of effect at Washington, to enter very industriously

EX-MINISTER DUPUY DE LOME, OF SPAIN.

upon the discussion of a new commercial treaty with this country. At first De Lome denied the genuineness of the letter; but its full publication in facsimile by the New York Journal, together with the examination of the original at the State Department, made further denial impossible. De Lome, knowing the United States would

either give him his passports and order him out of the country or else demand that Spain should recall him, hastily telegraphed his resignation to Madrid. The Spanish cabinet lost no time in accepting the resignation; and so it came to pass that De Lome was already a private citizen when our minister, General Woodford, presented the request of the United States for his recall.

An Apology in Order.

Our State Department instructed General Woodford to inform the Spanish Government that this country would naturally expect to receive from the Madrid cab-

SPANISH ARMORED CRUISER "VIZCAYA," ARRIVED AT NEW YORK FEBRUARY 18.

inet an expression of regret for the incident and a disavowal of the sentiments contained in Señor De Lome's letter. The Spanish view, however, was that the letter was purely private and personal, and that the disappearance of Señor De Lome from further official life at Washington ought to suffice without further action. It seems to us that this was scarcely a tenable position, for several In the first place, an elaborate letter on current diplomatic questions of great importance, written by the Spanish minister to a prominent Spanish statesman, who at that very moment was presumably a confidential emissary of his government, was not in fact a merely personal affair. It is true that the letter was not phrased as a formal communication to the Spanish Foreign Office; nevertheless its whole object, on its very face, was serious and official, and its point of view was manifestly intended by De Lome to be presented through Canalejas to the Madrid government. Inasmuch as the Government of the United States had nothing whatever to do with the circumstances under which the letter was procured and made public, that phase of the matter has no diplomatic importance. President McKinley generously made light of the insulting language that concerned him personally. But, very properly indeed, he was disposed to regard other parts of the letter as serious and significant. Everything in the De Lome letter confirms from beginning to end the statements made in these pages last month, to the effect that the autonomy project has been hopeless from its very The vacancy created by the resignainception. tion of Señor De Lome was promptly filled for the time being by the appointment of a secretary of the Spanish legation, Señor Du Bosc, as chargé On February 15 it was announced d'affuires. that Señor Luis Polo y Bernabe had been selected as the permanent successor of De Lome. The new minister is a son of Admiral Polo, formerly minister at Washington, and has been employed in the Foreign Office at Madrid as chief of the consular and commercial department.

The De Lome incident was on many accounts an extremely irritating one. The recent Spanish minister had cut a very wide swath during the past three years. He had exploited a large corps of detectives and had spent great sums of Spanish secret service money in this country to thwart and destroy by all possible means a perfectly legitimate American traffic. For it must be remembered that although the United States Government has spent not less than two million dollars, practically under Mr. De Lome's instructions, in preventing the movement of so-called

filibustering expeditions, only a small percentage of the expeditions interfered with have in fact been of a filibustering character. It is, indeed, against the law to use American soil for the fitting out of armed expeditions to make war upon a friendly power. It is not, however, against the law to sell arms and supplies. The Cuban insurgents have not desired the equipment of armed expeditions in the United States, but have merely wished in a perfectly legitimate way to buy various munitions. It is true that they intended to smuggle these wares into Cuba; but the prevention of smuggling is a matter for the Spanish revenue service in Cuba to deal with. The United States has no more proper concern with Cuban smuggling than with Australian smuggling. There are many people who would much like to know why our Government, both under Mr. Cleveland's administration and also under Mr. McKinley's, has not drawn more sharply the line between the unlawful fitting out of military expeditions and the lawful export of supplies. It is to be hoped that Mr. De Lome's successor will not be accorded so large a freedom as the late Spanish minister enjoyed in the utilization of the official resources of this country as auxiliary to Spain's foul warfare against her Cuban subjects.

UNCLE SAM TO THE SPANISH MINISTER: "GIT!"

From the Journal (New York).

Our Atlantic seaboard cities have be-Coastwise gun to perceive that the possibility of a Defenses. bombardment from the sea is to be regarded in a practical light. The New York Chamber of Commerce recently passed resolutions calling upon the Government to increase the number of its trained artillerymen. The improvement of our coast defenses by means of great guns of modern construction has now made considerable progress; and the rapid crowding of work during the past few months will soon have resulted in the completion of a large number of these powerful fortification guns, which will be put in place at numerous points along the coast. It is obvious, however, that trained men for the manipulation of these heavy batteries are quite as requisite as the guns themselves. Even if the very imminent danger of a war with Spain should pass away, this country would have been the permanent gainer by reason of the efforts put forth in this flurry of preparation. The safety and dignity of the nation demand that its defenses be modern and ample. We have no need of a huge navy, but the cause of peace in the world requires that our navy should be manifestly efficient, and that it should be easily stronger than that of any other country excepting the two or three principal naval and colonial powers of Europe. With a navy considerably stronger than we now possess, we might have dictated peace in Cuba long ago, without the firing of a single gun, upon terms which would have been greatly to the advantage of Spain herself, and would have saved her great cost and misery. moderate but progressive increase in our military and naval strength, together with defensive preparations along the coast, will constitute our best and cheapest insurance against war, and will redound in many ways to our national advantage.

All reports concerning starvation in Starvation Cuba and the condition of the reconcentrados have of late concurred at least in admitting an extremely grave situation. plies have been forwarded in considerable quantities from this country, and Miss Clara Barton, as the leader of the Red Cross Association for America, has gone to Havana to aid in the distribution of relief. Julian Hawthorne, who went to India to study the famine last year, has now been in Cuba and reports a worse condition of starvation than he found in the Indian famine districts. On February 14 action was taken at Washington which seemed to point to the beginning of a changed policy on the part of our Gov-The Committee on Foreign Affairs of the House of Representatives made a unanimously favorable report on a resolution which

had a few days previously been referred to it, calling upon the Secretary of State for full information regarding the condition of the reconcentrados in Cuba and the progress of autonomy. A similar resolution was on the same day reported in the Senate. In both houses the vote was immediately reached, and the resolutions were adopted without a dissenting voice. It was understood, as a matter of course, that the action of the House was based upon a perfect understanding with President McKinley. The United States consuls

AND SPAIN CALLS THIS WAR! From the World (New York).

in Cuba had kept the Department of State supplied with information of the most harrowing description respecting the widespread distress throughout the island; and it now seemed advisable to the administration that Congress and the country should be put in possession of the Government's official news. The course of events seemed, as these pages were closed for the press, to be impelling this country toward some form of intervention in Cuba.

The closing days of January were occupied in Congress with a discussion which might well seem to the plain business man to have no proper right of way at a time when matters of actual current importance ought to be faced and decided. The discussion to which we refer was precipitated by Senator Teller, of Colorado, who introduced a resolution to the effect that the bonds of the United States Government are payable in silver as well as in gold, at the option of the Government. The United States Government is not at present

engaged in the business of paying off bonds; and so far as we are aware nobody in the financial world was asking Congress to explain the nature of the Government's liability for its outstanding obligations. The question is one that has been repeatedly discussed in the past, and this latest debate has thrown no new light upon it. The subject is one that naturally divides itself into two entirely distinct parts. The first part is legal and technical, and belongs, as a matter of last resort, in the domain of the judiciary. The second phase of the matter lies in the domain of public policy and involves questions of an ethical There would seem to be no doubt whatever about the legal part of the question. United States bonds, on their face, are made pay-Coined silver dollars, being full able in coin. legal tender, are legally available for the payment of the Government's bonded indebtedness. much for the technical side of the question. When it comes to the question of public policy a serious difference of opinion exists. But it is precisely the same difference that was faced at the polls in November, 1896, when the verdict of the American people was pronounced against the free coinage of silver at the ratio of 16 to 1. When the word coin was originally inserted in the bonds it was the avowed and perfectly understood intention that the creditor should be entitled to receive the best available current money. The purpose was to make it assured that the printing presses should not at some time be set to work to print irredeemable paper money to pay off public indebtedness. It has been the policy of the Government, in so far as silver dollars have been made a part of our circulating medium, to keep those dollars at par with gold. The real standard has been gold, and nothing else. If a jury of highly intelligent and absolutely impartial men could be assembled from other countries and could weigh the evidence and hear the arguments, in order to decide what were the requirements of honor and good faith, it is our opinion that they would be compelled, in view of all the facts in our financial history, to decide that the bonds of the United States Government are, as a matter of sound policy and high public morality, payable in money of as good purchasing power as our gold coins.

Ve have not the slightest desire or interests tention to impugn the integrity or good faith of the men who think otherwise. It is a well-linked and powerful chain of logic that men like Senator Teller use when they argue that our Government has a perfect right to throw open the mints to the free coinage of silver at the existing legal coinage ratio, and subsequently from time to time to use gold or silver coins indiscrim-

inately in paying off public debts which are expressly payable in coin. But nations do not rise and grow great by logic alone, nor does legal right furnish the sole guide to what is just and wise, whether in private or in public affairs. It is true that twenty years ago many of the men who are now opposing Senator Teller, including President McKinley himself, voted that the bonds were payable in silver—meaning thereby to express their views of public policy no less than

SENATOR TELLER.

their understanding of the law. But twenty years ago the market value of silver was about twice as much as it is to-day; and it was at least entirely pardonable to believe that free coinage would have so affected the current market price of bullion that it would have been a matter of practical indifference to the bondholder whether he was paid in silver or gold. The bullion value of the silver dollar was at

that time from 84 to 93 cents. At present the bullion value of the silver dollar is less than 44 cents. The monetary value of our silver dollar is of course exactly 100 cents, for the reason that the Government employs a policy which makes all parts of our circulating medium equivalent to gold. If Mr. Teller's resolution was intended to affirm that under existing conditions and policies the public debt is payable in silver, there could have been little objection to it, but it would have had no point or meaning. And certainly the resolution was meant to have If Mr. Teller had asked a deep significance. Congress to declare the public debt of the United States to be payable in Mexican dollars—that is to say, in any silver coins having as great intrinsic value as American silver dollars-its point would have been more easily grasped by the public. Twenty years ago Mexican dollars circulated to a very considerable extent in the United States at par with our own dollars. To-day Mexican dollars, containing exactly the same amount of silver, are worth in the United States 45 or 46 cents. Laying aside all illusions and estimating carefully all the factors in the case, it is well to admit that the adoption of the free-silver policy by the United States Government alone might not very greatly improve the price of silver. In that case we should have nominally a bimetallic

money, but in practice our money would have become Mexicanized. That is to say, the gold would have disappeared from circulation because of its superior intrinsic value, and the silver dollar would have become, as in Mexico, the ordinary standard coin, with a purchasing power probably not much greater than that which the Mexican dollar to-day possesses in the United States. This is the prevailing opinion.

Senator Teller and his fellow-believers Against in free coinage of silver think that the opening of the mints would of itself so greatly change the situation that the bullion market throughout the world would be radically altered—silver either at once or within a reasonable time recovering something like the relative value that belonged to it twenty years ago. burden of proof, however, rests with the advocates of free coinage; and all the more recent tendencies and indications have made their thesis more difficult and less plausible. To sum up, therefore, our comments upon the Teller resolution, we may remark that of course the proposition was intended as a serious and significant one; and that what it really involved might be better understood if it had been so worded that Congress should have been asked explicitly to declare the public debt of the United States payable in any silver dollars containing as much good silver as a dollar of the United States contains. There may be a way to avoid this conclusion, but we do not see any such way. resolution meant something or nothing; and if it had any meaning at all it meant that the government debt is payable in silver bullion. debate occupied a considerable part of the time and attention of the Senate for eight days. vote was reached on Friday, January 28, and the resolution was adopted. The division stood 47 to 32, which accounts for all the members of

the Senate except ten, who were absent and paired, making the full division 52 to 37. Senator Teller's resolution was worded in a manner that was, to say the least, ingenious; and several men who voted for it have been counted as advocates of the maintenance of the existing gold standard. But their action would seem to be accounted for only on the ground that they regarded the resolution as having no significance. The so-called "soundmoney Democrats" all voted with the silver Senators with the single exception of Senator Caffery, of Louisiana. Senator Chandler, of New Hampshire, was the only Eastern Republican who voted for the resolution. The Republican members of the other branch of Congress, however, took the Teller resolution seriously, and attached to it the only significance that it could possess if it were to be taken to mean anything at all. It was promptly decided that the best manner in which to inform the country and the world that the United States might be relied upon at whatever cost to pay its obligations in gold or its equivalent was to take up the Teller resolution promptly and vote it down. This was done accordingly on January 31, after a discussion limited to five hours; and the majority against the resolution was 50. Every Republican in the House voted against the resolution with the exception of two members from North Carolina, who, though nominally Republicans, were elected by Populist votes on the understanding that they were silver men.

Position of the Republican Party.

Republican Party.

It has taken the Republican party nearly a quarter of a century to find an agreed and unambiguous position on this extremely important question of the coinage. To-day, the unquestionable Republican doctrine is that the existing gold standard must be maintained so far as any independent action or policy of the United States is

concerned, and this sums up all that has any practical significance. It is true that it still remains a Republican tenet that international bimetallism would be desirable, and ought, if possible, to be brought about. The efforts made, however, in 1897, have quite convinced all wellinformed persons, whether gold-standard men or freesilver men, that international bimetallism cannot now nor in the immediate future be brought about any more than' European disarmament can

THE PROMPT RETURN OF THE TELLER BILL TO ITS FATHER,-Minneapolis Tribune.

be accomplished. International bimetallism may therefore be said to have disappeared wholly from the horizon of things now practicable. Furthermore, it must be frankly confessed that even as an academic proposition the once-alluring theory of bimetallism has suffered a good deal of damage in the light of recent economic tendencies. The steadfast readers of the Review need not be reminded that this remark is not due to any inveterate bias against bimetallism.

The great army of American voters The Lost who gathered about the standard of Cause of '' 16 to 1." "16 to 1" in 1896 was not composed of men inferior either in interest or intelligence. On the contrary, so far as the West and South were concerned, they were men of an uncommonly high and keen sense of justice, and with more than the average American endowment of the reasoning or logical faculties. The people who disparage them are not possessed of large breadth of view. Nevertheless these Western and Southern voters, high-minded and sincere as we believe them to have been, made the mistake of attempting to settle practical business questions by history and by logic, somewhat as the Southern people a generation ago attempted to settle a great practical controversy by an appeal to the history and the theory of the rights of the sovereign States in the Federal Union. hard thing and a bitter thing for conscientious men who have believed that great principles were at stake to abandon a cherished cause. is all the harder for the West and South to abandon the "16-to-1" contention, for the very reason that the East has never been willing to see that the silver banner has been borne in those parts of the country with a very large measure of idealism as well as gallantry—while the East has never done half justice to the strength of the logical and historical argument for the free coinage of silver at the time-honored American ratio.

But while it is true that the motives as well Face the as the arguments of the silver men have not They Are. been duly appreciated, it is none the less the duty of the West and South to look at presentday economic facts with open eyes. Chivalric as it may be to stick stubbornly to a lost cause or to support the historical claims of a dispossessed ruler, it is always bad for a country to have any large portion of its citizens blindly unwilling to accept existing facts. Irreconcilables are very much in the way of progress. When the war was over, the wise Southerner abandoned the doctrine of secession. When the republic was established, the more sensible Frenchmen declined to cooperate with the followers of the several rival monarchical claimants. Now it is a plain fact that the silver cause, so far as summed up in the old Latin Union ratio of 151 to 1 or the American ratio of 16 to 1, is a hopelessly lost cause, for the reason that economic conditions and tendencies, which the governments of the world either cannot or will not alter, have brought about a totally changed relationship between the two great money metals. The West and the South are relatively new regions, in the process of rapid economic development, with the aid of large amounts of borrowed capital. They have naturally been keenly alive to the question whether or not the general disuse of silver and the general reliance upon gold as a single money standard was not resulting in a serious appreciation of the purchasing power of money. They had a perfect right to be apprehensive on that They have, however, attached by far too much importance to very imperfect evidence. And they have not seen with sufficient clearness that the depression that has visited the West with peculiar severity in recent years has been the result of a reaction due to world-wide causes attributable rather to the organization of credit than to faults in coinage or currency systems.

For better or for worse, the great The Gold Standard commercial nations of the world a Fact to be Accepted. have concluded to transact their business and measure their exchanges in terms of the single gold standard. The people of the United States in 1896 decided that, quite apart from the theory of the question, it was expedient for this country to stand with the rest of the world in this particular matter of the measure of For all practical purposes the existing monetary standard might well be accepted as if it were a fundamental physical factor in the position of the country, like the Mississippi River or the Rocky Mountains. Tunneling, irrigation, and other works of man may gradually alter the economic significance of the Rocky Mountains; while the improvement of navigation and the regulation of overflow may also affect the relations of the Mississippi River to the welfare of the great valley that it drains. In like manner there may gradually come about important changes in so fundamental a thing as the standard by which men measure values. But great nations are likely to make such changes gradually and conservatively, and laws may be expected to follow timidly and tardily where practical business facts have led the way. Taking all things into account, it is hardly a rash or exaggerated thing to say that for the present in this country the gold standard is about as firmly established a fact as a republican form of government. We are not

discussing what ought to be or what ought not to be. But we are asking men to admit the hard facts.

In England, certainly, the gold standard Position is a much firmer fact than the Established Church, the privileges of landed property, the hereditary House of Lords, or even the institution of royalty. India's silver circulation is soon inevitably to be made subsidiary to gold as the standard Russia has now completed all her of reckoning. arrangements for the practical adoption of the gold standard. Japan has entered the list of the gold-standard nations, and nothing but the lack of a really authoritative central government in China can long prevent some important steps in that country in the same direction. Theory in these matters is one thing and practice is another. The theory of international bimetallism may continue to be cherished by a man who allows himself to perceive that for the present and near future no international coinage agreement in favor of silver can possibly be secured.

Meanwhile we have some actually desirable improvements to make in our Settled. currency system that have no bearing on the question of standards; and it is a great pity that the United States Senate, with its implacable and irreconcilable stand upon the silver question, is not willing to allow the people of the United States to simplify their paper-money issues and improve their banking laws. If banks are to be allowed to issue circulating notes at all, it ought to be easy to prove that they should be allowed to issue notes in a way that would enable them to serve the currency needs of the country as well as possible. There is no reason, for instance, why the national banking law should prevent rather than encourage the establishment of small banks or branch banks in country villages now devoid of banking facilities. Nor is there any good reason why banks which are required to deposit government bonds as a secumy for their circulation ought not to be allowed to issue notes to the full par value of those bonds. Nor would it seem to be good policy, if it is desirable that there should be a bank circulation, totax such circulation so heavily as to discourage it.

Actions In short, if the banks are to furnish the flexible element in the country's circulating medium, the banking laws ought to permit just as high a state of elasticity as is consistent with safety. Furthermore, the country has had ample and painful experience to show that it is a foolish policy to make the United States Treasury carry the gold reserve of the country without any proper means to protect that reserve. When the

Government pays out gold for greenbacks or treasury notes, those redeemed notes either ought to be canceled and destroyed, or else ought to be laid aside and held until somebody wants them and is ready to present gold in order to get them. There are other steps, and important ones, which it would be wise to take in the simplification and reform of our monetary system without affecting in any way the standard of value; and it is greatly to be regretted that reforms so reasonable and sensible in themselves—and so generally desired by the business people of the country apart from their views on questions of a political natureshould be blocked by the stubbornness of the United States Senate, whose opposition to these needed reforms rests not upon the merits of the questions directly involved, but upon the demand for something else—namely, a change in the standard of value.

In the middle of February there was Silver Men held at Minneapolis, according to the Uniting for Fall Elections. newspaper reports, a private and confidential session of the leaders of the silver men. Mr. Bryan is understood to be working for a union throughout the United States of Democrats, Populists, and free-silver Republicans for the purposes of this year's Congressional elections, with a view to capturing the next House of Representatives. He addressed an elaborate letter to the New York Journal in February, in which he maintains, without a shadow of compromise, his persistent belief in the paramount importance of the silver question and in the necessity of sticking to the old ratio of It is to be observed that Senator Wolcott, of Colorado, has lately shown a disposition to weaken by advocating the ratio of 20 Ex-Governor Boies, of Iowa, who was to 1. in fact Mr. Bryan's most formidable rival for the nomination at Chicago on the silver platform, has now completely revised his opinions and has issued a manifesto favoring a currency to be based upon deposits of gold and silver bullion, redeemable from time to time on the basis of the actual market values of the metals. Apart from the question of its practical feasibility, the essence of Governor Boies' plan is not seriously antagonistic to the position of the soundmoney men; and the underlying idea is suggestive of ex-Secretary Windom's favorite scheme.

The Issue Taking Shape. While Mr. Bryan is proclaiming the 16-1 doctrine as steadfastly as ever, and the free-silver leaders—Senator Jones for the Democrats, Senator Marion Butler for the Populists, and Mr. Towne for the silver Republicans—have been issuing union pronuncia-

mentos to their followers, the force of circumstances has made the Republican leaders in general much bolder than ever before in their acceptance of the gold standard. President McKinley recently made a speech at a great banquet of associated manufacturers in New York, and took that occasion to express himself with unwonted vigor in favor of measures for the maintenance of the existing standard and the reform of the currency and banking laws. The Secretary of the Treasury has also of late expressed himself in the most uncompromising manner. Republican sentiment throughout the country is evidently in favor of fighting the forthcoming Congressional campaign upon the money question, and Republicans are disposed to look upon the recent vote in Congress on the question of paying bonds in silver as giving them the advantage of position.

Speaker Reed's Assumption of a Protectorate. It is announced that Speaker Reed has decided that the present term of Congress is to be about the briefest in the recent history of the country, and that Senator Platt has decided that the New York Legislature, also, must reach an early adjournment. The extraordinary power exercised by these two public men rests upon leadership acquired by methods wholly dissimilar. It is perhaps true that an early adjournment, both at Albany and at Washington, would be a good thing for public interests. Nevertheless, it can hardly be agreeable at Albany to have Mr. Platt's

SPEAKER REED KNOWS HIS BUSINESS.

From the World (New York).

mastery of the Legislature so calmly taken for granted everywhere; and it is complained in many quarters that Speaker Reed's assumptions have grown rapidly in the past year. Mr. Reed, it is true, derives his authority from the House itself by virtue of a more perfect solidarity of parties than is to be found in any other great country in the world. A striking instance of this solidarity was presented, as we have already shown on a previous page, in the vote upon the Teller resolution respecting the right of the Government to pay the bonded debt in silver. Republican House caucus selects the Speaker, authorizes him to appoint all committees, and virtually puts in his hands the power to make the rules under which business shall be carried Again and again Mr. Reed has violated the parliamentary rights of individual members of the House by refusing to recognize them or to allow motions to be entertained.

Take, for example, the question of His Attitude Cuban belligerency. If any of these and Hawaii. pro-Cuban resolutions could have been brought to a vote, the affirmative would have had a large majority. But Mr. Reed has arbitrarily excluded the subject altogether. It now happens that Mr. Reed is personally opposed to the policy of President McKinley and of the great majority of the Republican party respecting the annexation of Hawaii. It has been very generally reported that in view of the probable failure of the Senate to give the needful two-thirds vote for the ratification of the Hawaiian treaty, Mr. Reed would defeat annexation by preventing a vote in the House upon a concurrent resolution. It is the judgment of a large majority of the ablest business men of the country that the House of Representatives ought by all means at this session to enact legislation on the question of Lanking and currency -more or less in the line of the plan adopted by the Indianapolis convention. But it has been understood that Mr. Reed is not personally in favor of such action, and that his proposed early adjournment has been intended not only to prevent the annexation of Hawaii and the consideration of the Cuban question, but also to rule out any serious attempt to pass a bill for banking and currency reform. Perhaps this is not true; but it is what has been commonly stated.

Strenuous efforts continue to be made by financial its sponsors to show that the Dingley tariff is about to produce an ample revenue. Impartial figures, however, make it certain enough that the current fiscal year will end with a heavy deficit. Mr. Reed could probably at this session have secured the enactment of some simple

amendment to the measure, such as a doubling of the tax on beer, for the sake of public revenue. But it is understood that he is adverse to the idea, and that he rules the Ways and Means Committee. We are not at this moment denying Mr. Reed's disinterestedness; but we are disposed, somewhat timidly, to question his infallibility. He is trying to save the country from the consequences of what he believes would be serious mistakes; and he is saving it by a resort to methods and practices wholly new on the

part of a presiding officer. When Mr. Reed began his career as a so-called "czar" he was in fact endeavoring to restore parliamentary freedom

of action by putting an end to filibustering and obstruction on the part of minorities. But he has now reached the stage in his career as a czar where filibuster-

ing and obstruction belong not so much to the tactics of the majority or of the minority as to the tactics of the Speaker himself. Mr. Reed is a very able man, and his party and the country may well be proud of him. The very fact that he holds a sway so undisputed is the best possible evidence of the confidence that the Republicans of the House feel in his patriotism and general good sense. None the less, Mr. Reed's masterfulness is at times excessive. He would find it somewhat irksome—if he should be on the floor in the next Congress, with Mr. Bailey, of Texas, in the chair—to have his own methods followed by his successor.

In the State of New York the Repub-New York lican party had been looking defeat squarely in the face because of its scandalous mismanagement of State affairs. But the vote of Mr. Murphy, New York's Democratic Senator, in favor of the Teller resolution, is expected to be of great assistance to the Republicans in a campaign that will determine the party complexion of Mr. Murphy's successor. has been decided by the New York Legislature that the recent expenditure of money in canal improvement shall be investigated, but that Governor Black shall appoint the investigators. That is to say, the very administration which is under criticism shall proceed in its own way to investigate itself. There has been much talk of an independent Republican nomination for the governorship of New York as a protest against machine domination. In the Democratic camp, moreover, ex-Senator David B. Hill is supposed to be endeavoring to organize a movement which will dispute Mr. Croker's rising authority.

Philadelphia and its Politics. In Pennsylvania, as well as in New York, there is an increasing restlessness under the rule of the political machines and bosses, and it has been proposed to put Mr. John Wanamaker in the field as an anti-machine Republican candidate for governor.

HON. DAVID B. HILL, OF NEW YORK.

The absolute domination of the city of Philadelphia by Martin and his henchmen has brought about a depraved condition of municipal politics perhaps never paralleled elsewhere in the history of the United States. The young David that has stepped into the arena to challenge this Goliath of machine misrule is known as the Municipal League. An election was held last month for fnagistrates and a tax receiver. A branch of the Republican organization had broken away from the machine and made its own nominations. This branch eventually withdrew its candidate for tax receiver and indorsed that of the Municipal League. The reformers threw them-

selves into the contest with great energy, and with hopes of success which were tempered chiefly by the knowledge that in Philadelphia the votes are not usually counted in the same way that they are cast. They elected one magistrate, and polled an impressive vote for their other candidates. Their protest was worth making. Subsequent disclosures touching the famous deal by which the municipal gas works of Philadelphia have been turned over to a private corporation do not improve the appearance of that mysterious transaction; and there are hosts of responsible men in Philadelphia who do not hesitate to say that no other such gigantic piece of corruption has ever been perpetrated in any city. further charged by these responsible citizens that there is serious danger that Philadelphia's public water supply may also be given by the existing municipal authorities to a private corporation.

Rome New Men at be congratulated upon the quality of two new Senators, one from Maryland Republicans have sent Judge Louis E.

HON. LOUIS E. M'COMAS.
(New Senator from Maryland.)

HON. THOMAS BATTLE TURLEY. (New Senator from Tennessee.)

McComas to Washington to succeed Mr Gorman, while the Democrats of Tennessee have now permanently filled the vacancy caused by the death of the venerable Senator Harris by the choice of the Hon. Thomas B. Turley, who had been temporarily appointed to the place by the gov-Another conspicuous addition to official life in Washington is the new Attorney-General, the Hon John W. Griggs, who resigned the governorship of New Jersey to enter the cabinet on the promotion of Attorney-General McKenna to the place on the Supreme bench made vacant by the retirement of Justice Field. The death of the Hon. Benjamin Butterworth made a vacancy in the office of the Commissioner of Patents, which has been filled by the appointment of Mr. Charles H. Duell, of New York, whose selection has been generally approved. The new Director of the Mint is Mr. George E. Roberts, an Iowa editor from the town of Fort Dodge, whose recent discussions of monetary questions have given him prominence in the West, and whose appointment has been received in a manner that must be highly gratifying to his friends.

THE INDIAN FAMINE—A NATIVE PRINCE SUPERINTENDING DISTRIBUTION OF GRAIN TO FAMISHED MEN.

There is never a year when the failure of food supplies in one or more large districts of our planet does not cause fearful suffering and much loss of life from famine. The chief necessity for relief work in India is now at an end, although famine conditions have not wholly disappeared. But for the relief measures instituted there, it is probable that the deaths from starvation, appallingly numerous

as they were, would have been multiplied several fold. It is now reported that famine conditions prevail again in certain interior provinces of Russia, although no relief from other countries is needed, as was the case several years ago. A small but distressing famine has been afflicting parts of Ireland this past season. An illustration published on this page shows the distribution of relief under French auspices in

DISTRIBUTION OF GRAIN ADVANCED BY THE FRENCH GOVERNMENT TO THE DESTITUTE IN TUNIS, NORTH AFRICA.

Tunis, North Africa, where serious shortage of crops has caused great suffering. Our benevolent American people are beginning to comprehend the fact that during the past year a considerable percentage of the population of Cuba has been swept away by sheer starvation under the dia-

bolical policy instituted by Weyler as governor-general. Only a small fraction of the needful supplies has yet been forwarded, but the relief movement is now gaining in volume, and it will save thousands of lives. It was greatly feared that a shortage of food supplies in the Klondike mining region might result in a frightful state of distress, but the danger would now appear to have been overestimated. The emergency relief measures undertaken by the United States Government some weeks ago have not appeared to progress very rapidily, and the schemes for importing reindeer from Lapland to carry food over the stretches of snowy waste will probably not

have materialized successfully. So far as we can learn, the population of Dawson City and vicinity has come through the winter quite comfortably, thanks to a careful husbanding of food resources, and the absence of anything like an attempt to corner provisions for starvation prices. The common, every-day bill of fare at Dawson City can hardly have been so varied and festive as

Bowman, the cartoonist of the Minneapolis Tribune, would indicate in the drawing which we reproduce herewith. Nevertheless, the Klondikers are to be congratulated that things are not worse; and everything now promises favorably for the creation of transportation facilities that will pre-

vent all possible danger in the coming season. Our Klondike article is notably instructive.

The British Parliament China and is in session again, and the statesmen of the cabinet, who had only a few days before been making very tall and warlike speeches about their determination to maintain open markets in China, have wholly subsided. In view of their explanations at Westminster, one may well wonder why they had been causing the British lion to roar so furiously. Lord Salisbury announced to the House of Lords that far from any misunderstanding with either Russia or Germany, he had been assured

in the most satisfactory manner by the German Government that Kaio-Chau should be kept open to the commerce of the world, and equally assured by the Russian Government that the occupation of Port Arthur as an outlet for the Siberian railway system was not intended to curtail the trade facilities of England or of any other nation. It is possible, however, that the peremptory manner

DR. FRANCISCO COLL Y ZAMUY. (Organizer of hospitals in Cuba.)

SOMETHING AWFUL! "STARVING IN DAWSON CITY." (From telegraphic description.)—From the Troune (Minneapolis).

of England in the early stages of the discussion had something to do with procuring these assurances from Berlin and St. Petersburg. The manufacturers and merchants of the United States are importantly concerned in the whole matter, and England's attitude has manifestly furthered the interests of this country. It is rather amusing that while the strain was most

severe, and there did seem to be some symptoms of a European coalition against England in the East, the ships of France and Russia, as well as of Germany, were constantly dependant upon English courtesy for coaling privileges and the like at one point The fact is that and another. the development of trade and of intimate relationships throughout the world is beginning to make the very idea of war seem ridiculous, because international courtesies in a hundred directions have come to be a part of everyday existence. We may take it for granted that there is now not even the slightest shadow of a war-cloud on the Chinese coast, although there will be rivalries among the nations for profitable trade in that direction. It is settled that Germany is to re-

tain Kaio Chau, with certain concessions for railroad-building in the adjacent province. Russia also is to remain at Port Arthur, while England has obtained permission to extend her railroad system from Burmah across the line into the adjoining Chinese provinces. For a while there was a good deal of stormy talk by reason of the British demand that the Chinese Government should make Talien Wan, which adjoins Port Arthur, a free port. China had certain reasons for greatly desiring not to open that port until after the completion of the Siberian Railway. Assurances all around have now been given that in due time Port Arthur and Talien Wan will be freely accessible to the commerce of the world.

The map on the following page is extremely interesting as showing the respective positions of the powers in China, and as indicating certain prospective railroad connections. It is drawn from the English point of view, and it indicates in a general way the boundaries of the great Yang-tse Kiang valley, which England declares that none of the European powers must attempt to appropriate. If not for China as a whole, at least

for its richest region, inhabited by more than two hundred million people, England has announced something like a Monroe doctrine, warning the powers of continental Europe that they must not seek to make territorial acquisitions in that vast area. This interesting map, among other things, gives some clew to the present position and strength of the fleets of the five powers

that are taking an active interest in the Chinese question. ing from present indications there is to be no attempt whatever at a partition of China, but a most energetic effort on the part of Europe to open up Chinese trade and to build railroads. due time it is hoped to add 30 or 40 per cent. to the number of people in the world who are engaged to a greater or less extent in the production and consumption of goods that enter into international commerce. Mean. while the question of a European loan to China has not been finally settled, various attempts having been made by Russia and other continental powers to outbid England and obtain the coveted privileges that will be incidental to the loan. Sir Robert Hart will remain, as for many

years past, in full control of the customs service from which China derives her principal revenue. This means much to English commerce.

SIR ROBERT HART, THE ENGLISHMAN WHO CONTROLS CHINA'S CUS-TOMS SERVICE.

The later phases of the everlasting Cre-The Cretan tan question would be highly absurd if they were not so serious for the poor Cretans themselves. The European concert has remained deadlocked on the question of a Cretan Russia last month came to the conclusion that Prince George of Greece was after all the right man, and in this selection France and England readily concurred. And yet it was only a little time ago that these great powers allowed Turkey to make war upon Greece as a punishment for having sent Prince George to Crete for the restoration of order. If only Russia and England had pursued a sensible course at that time, Crete would have been pacified and happy long ago, and the world would have been spared the hideous spectacle of a Turkish invasion of Greece through the connivance of Christian Europe. The Sultan, of course, is desperately opposed to Prince George, but his selection would be gratifying to the Cretans and appropriate on many accounts.

The Tories maintain their large working majority in Parliament, but the periodical reaction has begun to set in very plainly.

This is shown by the results of a number of elections in all parts of the United Kingdom to fill vacant seats caused by the death or retirement of members of the House of Commons. domestic policies of the Salisbury administration have not been very successful, and the colonial and foreign policies have by no means strengthened the confidence of the British public. determination to pay a subsidy to West Indian planters, to help them meet the losses due to the decline in the sugar market, does not please the average English taxpayer. Nor is the conscience of England convinced of the righteousness of the campaign against the tribes on the northwestern frontier of India—a campaign which continues to be disastrous to the British troops. There is a highly complicated series of pending African questions, several of which are proving to be thorns in the side of the Salisbury administration. England is not proud of the English record as respects the various recent phases of the Turkish question. And there is an uneasy impression in England that the Salisbury government has really, after all, been worsted by Russia and Germany in the Chinese negotiations.

The trades unionists of England have met with a heavy loss of prestige in the complete collapse of the great engineering strike. The employers were triumphant at

every point, and the men have gone back to their work with far less relative strength as against the masters' organization than they possessed before the strike was begun. The money loss to the strikers themselves has been a large sum, while Eng. lish manufactures and commerce have suffered losses

COLONEL DYER, WHO DEFEATED THE STRIKERS.

in foreign markets that it will be hard for them to make good. The contest was a disastrous mistake from every point of view, and the employers have gained a victory by far too costly.

The election of a new county council for Municipal London will take place early in March. in England. The contest involves the whole policy of London's metropolitan government for the coming three years, and is almost as important in its way as was the election of last November in the Greater New York. A victory for the Progressives will mean the energetic resumption of those hopeful lines of advance that were begun some years ago when London's new form of government was established. The success of the Moderates, on the other hand, will mean a reactionary policy, influenced by the great water companies, landlord monopolists, and other private interests. It is to be hoped that the Progressives may be successful, in order that they may bring London up to the standard of municipal administration that exists in Birmingham, Manchester, and Glasgow. It is to be remarked, by the way, that the municipal government of the great city of Manchester has decided not only to adopt the electrical system for street railroads, but to enter three years hence upon the direct municipal operation of the entire system of local transit. The municipal street-railroad system of Glasgow is now considered by English and Scotch observers to be a thoroughgoing success, and various other British towns have either already entered upon the same policy or intend to do so at an early date.

As these pages are written, the trial of The Trial M. Émile Zola in Paris is approaching its conclusion. The impression produced by the testimony, as daily reported in the cablegrams, has been upon the whole favorable to Zola's contentions, at least in part. No one can deny that Zola's attorneys have succeeded in showing that every step in the successive phases of the Dreyfus affair has been involved in mysteries of a very suspicious nature, which the high officials of the army and of the government are in league not to unravel. Dreyfus was condemned upon testimony which neither he nor his legal counsel was permitted to know anything about. Esterhazy was acquitted by secret process, and, as most people believe, without any actual trial whatever. Zola, having denounced the authorities as perjurers and challenged them to prosecute him, has in the course of his trial labored under the constant difficulty that there was no way to compel the high officials of the army or the government to testify; while the court again and again excluded, as irrelevant to the indictment, much of the most essential evidence upon which Zola had relied for his vindication and for the eventual reopening of the Dreyfus case. Every one of course is permitted to have his own

tentative theory while waiting for the time when the truth must inevitably be disclosed. Perhaps it will eventually appear that Dreyfus was guilty in the sense of having been made the unwitting tool of more designing men, who subsequently were ingenious enough to throw the guilt upon him and to make their own escape. lish elsewhere some highly interesting interviews with Drumont, Zola, and Nordau, on one phase of this unhappy situation in France, namely, its bearing upon the question of the Jews. Circumstances are easily conceivable under which the riots and mobs which have destroyed Jewish property and sacrificed Jewish life in French Algeria, and to some extent in France itself, might develop into a veritable frenzy of persecution, pillage, arson, and even massacre.

The German Reichstag is now in Germany and American Food Products. session. Europe, as well as Germany, has paid close attention to the speeches of Baron von Buelow, whose methods and policies as the minister for foreign affairs have begun to mark him as one of the strongest men that have come to the front in Germany for a long The German policy in China and elsetime. where will have succeeded, of course, in securing for the Emperor and his ministers the success of his cherished scheme for the enlargement of the The German Government is evidently supporting the policies of the landed interest the Agrarian movement as it is usually calledmore completely than ever before. The extreme leader of this party is Count von Kanitz, while the minister of the interior, Count Posadowsky, has in his recent speeches gone almost as far as von Kanitz himself. The particular feature of this policy that concerns the United States is the employment of pretended scientific and sanitary precautions in such a way as to exclude American food supplies. For example, last month a peremptory order was issued forbidding the importation of American fruit. This was directed particularly against the exceedingly large trade in American apples which had recently been developed. The excuse for the exclusion was the pretense that the admission of American apples might cause German orchards to become infected with a certain insect that has been found troublesome in California and elsewhere. Protests on the part of the United States have secured the modification of the order. Every effort has been made by the German officials to find pretexts for excluding American meat supplies and other articles of food, in deference to the demand of the German land-owners. The people of the United States are ready to concede to Germany the right to make its protective tariff as rigid as

it chooses; but we have also a good right to demand that there should be no discrimination against our products by means of unfair rulings. American fruit and meat supplies are deservedly

"SEEIN' THINGS" IN GERMANY.-From the Herald (N. Y.).

popular in England, and their arbitrary exclusion from continental countries on alleged sanitary grounds, if persisted in, must inevitably lead to a retaliatory policy against German goods at our American custom houses.

Unless one has some very particular Assassination of Barrios. reason for understanding the political movements of Central America, he will hardly find the result worth the effort. We are at least reminded, however, that assassination has not been abandoned as a political resource in that part of the world by the news of the slaying of José Barrios, the president of the republic of Guatemala. Barrios was nearing the end of his presidential term when last June he proclaimed himself dictator; in consequence of which the Congress amiably consented to extend his term of office four years. A formidable revolution resulted, however, to dispute his authority; and although Barrios crushed it, he was in constant fear of assassination, knowing that he was surrounded by plots against his life. Barrios was only thirty-nine years of age. He entered upon his stormy political career under the auspices of his uncle, Rufino Barrios, who was himself president of Guatemala and was killed in 1885. There is much uneasiness throughout Central America, and a strained state of affairs between Nicaragua and Costa Rica last month threatened to result in war.

## RECORD OF CURRENT EVENTS.

(From January 20 to February 16, 1898.)

#### PROCEEDINGS IN CONGRESS.

January 20.—In the Senate Mr. Teller's resolution providing that government bonds may be paid in either silver or gold is taken up by a vote of 41 to 25....The House passes diplomatic and consular appropriation bill.

January 21.—The Senate confirms the nomination of Attorney-General McKenna to be an Associate Justice of the Supreme Court, with but one dissenting vote.... The House sends the urgent deficiency appropriation bill to a conference committee.

January 22.—The Senate, by a vote of 83 to 15, confirms the nomination of Gen. James Longstreet to be Commissioner of Railroads....The House considers the Indian appropriation bill.

January 24.—The Senate considers the pension appropriation bill....The House debates the Indian appropriation bill.

January 25.—The Senate passes the pension appropriation bill....The House debates the Indian bill....
The Senate confirms the nomination of John W. Griggs, of New Jersey, to be Attorney-General.

HON. JOHN W. GRIGGS.
(The new Attorney-General.)

January 26.—The Teller resolution on payment of bonds in silver occupies the entire day in the Senate.... The House continues debate of the Indian bill.

January 27.—The Senate postpones final vote on the Teller silver resolution for one day....The House passes the Indian appropriation bill.

January 28.—The Senate passes the Teller resolution declaring that government bonds may be paid in silver, by a vote of 47 to 32....The House, by a vote of 188 to 67, passes a bill to pay the Book Publishing Company

PRESIDENT BARRIOS, OF GAUTEMALA. (Who was assassinated February 8, 1898.)

of the Methodist Episcopal Church South \$288,000 for damages sustained in the civil war.

January 29.—The House considers the District of Columbia appropriation bill....The fortifications bill, carrying a total of \$4,144,912, against estimates of \$13,-878,571, is reported to the House.

January 31.—The Senate passes the army and the legislative, executive, and judicial appropriation bills .... After a debate of five hours, the House defeats the Teller silver resolution by a vote of 182 to 132.

February 2.—The House passes the District of Columbia appropriation bill and begins consideration of the fortifications bill.

February 3.—The Senate passes the agricultural appropriation bill (\$3,527,202)....The House debates the fortifications bill.

February 4.—In the Senate Mr. Lindsay (Dem., Ky.) makes a reply to the resolutions of the Kentucky Legis-

lature demanding his resignation....The House discusses the sale of the Kansas Pacific Railroad.

February 5.—The House passes the fortifications appropriation bill.

February 7.—In the Senate Mr. Morgan (Dem., Ala.) introduces a resolution providing for the annexation of Hawaii....The House passes the Military Academy appropriation bill (\$453,540).

February 8.—In the Senate several Cuban resolutions are introduced....The House discusses the contested election case of Aldrich against Plowman, from the Fourth District of Alabama.

HON. CHARLES H. DUELL.
(The new Commissioner of Patents.)

February 9.—The Senate discusses intervention in Cuba....The House decides the contested election case from the Fourth Alabama District in favor of Aldrich.

February 10.—The Senate passes a bill to amend the navigation laws and considers the Indian appropriation bill.

February 11.—The Senate passes the Indian appropriation bill.

February 14.—Resolutions calling for information on Cuba are adopted in Senate and House.

February 15.—The Senate adopts a resolution of inquiry as to the sale of the Kansas Pacific Railroad....
The House passes minor bills.

February 16.—The Senate passes the fortifications appropriation bill....The House begins debate on the bankruptcy bill and adopts a resolution of sorrow for the loss of the *Maine*.

## NOMINATIONS BY THE PRESIDENT.

January 22.—Gov. John W. Griggs, of New Jersey, Attorney-General of the United States.

January 24.— George E. Roberts, of Iowa, Director of the Mint....Charles H. Duell, of New York, Commissioner of Patents.

February 1.— George M. Bowers, of West Virginia, Commissioner of Fish and Fisheries.

# POLITICS AND GOVERNMENT—AMERICAN.

January 20.— Senator Stephen M. White, of California, is chosen chairman of the Democratic Congressional Committee.

HON. GEORGE E. ROBERTS.
(The new Director of the Mint.)

January 21.—The National Primary Election League is organized at a conference in New York City held in the interest of primary election reform....The Commissioners of Accounts in New York City are instructed by Mayor Van Wyck to investigate several city departments.

January 25.—The Maryland Legislature elects Judge Louis E. McComas (Rep.) United States Senator to succeed Arthur P. Gorman (Dem.).

January 26.—In the Illinois Senate committee's investigation of police corruption in Chicago, Chief of Police Kipley admits knowledge of the existence of open gambling in the city.

January 27.—The Philadelphia Common Council defeats the bill authorizing the city to borrow \$11,200,000,

by a vote of 62 yeas to 53 nays—less than the required two-thirds majority.

February 1.— Democratic members of the Tennessee Legislature nominate Thomas B. Turley (Dem.) to fill the unexpired term of the late Senator George .... Foster M. Voorhees, president of the New Jersey Senate, becomes acting governor, succeeding John W. Griggs, who accepts the Attorney-Generalship of the United States.

THE LATE JOSEPH P. SMITH,
Director of the Bureau of American
Republics.

February 2.—A conference of about 400 Pennsylvania Republicans issues a protest against the political methods of Senator Quay, and decides to support John Wanamaker for nomination as governor....The Tennessee Legislature elects Senator Turley.

February 3.—The Canadian Parliament meets at Ottawa.

February 8.—Town elections in New York State show Democratic gains.

February 15.—The Democratic, Populist, and Silver Republican party leaders at Washington issue addresses seeking a union of voters on the money question.

#### POLITICS AND GOVERNMENT-FOREIGN.

January 20.—The Australian federation convention meets...The Prussian Diet debates an increase of the fund for settling German proprietors in Polish districts.

January 21.—The bill providing for the issue of currency notes against gold in India is adopted.

January 22.—The sitting of the French Chamber of Deputies is suspended on account of a riot growing out of the debate on the Dreyfus case.

January 24.—The French Chamber of Deputies expresses confidence in the government by a vote of 376 to 133.

January 25.—The editor of Kladderadatsch, the German comic paper, is sentenced to two months' imprison-

A RECENT SCENE OF RIOT IN THE FRENCH CHAMBER OF DEPUTIES OVER THE DREYFUS CASE.

ment for publishing a cartoon reflecting on Emperor William.

February 7.—The trial of M. Zola by the French Government begins in Paris.

February 8.—The British Parliament is opened with the reading of the speech from the throne....President

HON. MARK S. BREWER,
United States Civil Service Commissioner.

Barrios, of Gautemala, is assassinated .... The reelection of Paul Kruger as president of the South African republic is announced.

February 12.— The Norwegian ministry resigns.

February 16.— The British Liberals win a decisive victory in Pembrokeshire.

#### INTERNATION-AL RELATIONS.

January 26.— President Dole, of Hawaii, arrives in Washington as the guest of the United States.

January 27.—The United States commission on the Nicaragua Canal is received at Managua by the Nicaraguan Government.

February 1.—Germany demands from China additional indemnity for the killing of a German sentry.

February 2.—Prussia forbids the importation of American fruits, on sanitary grounds.

February 4.—The representative of the United States at St. Petersburg is raised from the grade of minister to that of ambassador.

February 8.—The publication of a letter written by Señor Dupuy de Lome, Spanish minister to the United States, speaking disparagingly of President McKinley, leads to the minister's resignation of his post.

February 9.—Japan informs China that the terms for the payment of the war indemnity cannot be extended.

February 10.—In consequence of Japan's declaration of an intention to retain the naval station of Wei-Hai-Wei permanently, the Chinese Government states that no foreign loan is required.

February 14.—Señor Luis Polo y Bernabe is appointed Spanish minister to the United States to succeed Dupuy de Lome.

February 15.—Turkey sends Edhem Pacha to inquire into the outrages of which Bulgaria complains.

## INDUSTRIAL, COMMERCIAL, AND FINANCIAL DOINGS.

January 25.—The monetary convention begins its sessions at Indianapolis.

January 26—The bituminous coal operators and miners grant an advance of 10 cents per ton for mining screened coal in Western Pennsylvania, the Hocking

Valley (Ohio), and Indiana, with a uniform day of eight hours, to take effect April 1.

January 27.—A majority of the men involved in the "engineering," or machinists, strike in England vote in favor of accepting the employers' terms, and the strike is ended.

January 31.—The International Paper Company, commonly known as "The American Paper Trust," is incorporated with a capital stock of \$45,000,000.

February 4.—The consolidation of the Lake Shore & Michigan Southern Railway with the New York Central is officially announced.

February 14.—A meeting of representatives of New England textile unions votes to recommend the calling out of all the cotton-mill operatives in New England.

February 16.—May wheat in Chicago is bid up to \$1.03\%, the highest price reached since 1891.

#### OTHER OCCURRENCES OF THE MONTH.

January 20.—The Japanese cruiser Kasagt is launched at Philadelphia.

January 21.—It is announced in the German Reichstag that women will be allowed to attend university lectures as guests.

January 22.—A total eclipse of the sun is successfully observed in India.

January 23.—Fierce anti-Jewish riots take place in Algiers.

January 24.—The celebration of the semi-centennial jubilee of the discovery of gold in California is begun .... Eight lives are lost in a fire at Spokane, Wash.

January 25.—The burning of a grain elevator at East St. Louis causes a loss estimated at \$1,500,000.

January 31.—The British mail packet Channel Queen is wrecked off the island of Guernsey and 19 persons are drowned.

February 1.—A heavy snow-fall interferes with business in and about Boston, Mass.

February 5.—The United States government expedition for the relief of prospectors in the Klondike sails from Portland, Ore.

February 6.—The Roman Catholic Cathedral of St. John the Baptist at Savannah, Ga., is burned.

February 9.—The South Atlantic and Gulf States Quarantine Convention meets in Mobile, Ala....In a warehouse fire at Pittsburg, Pa., 18 lives are lost and property valued at \$1,500,000 destroyed.

February 11.—A serious office-building fire occurs in New York City.

February 15.—The United States battleship Maine, at anchor in the harbor of Havana, is blown to pieces; two officers and more than 250 members of the crew are killed; 104 survive, most of whom are injured, some of them fatally; the ship and all her contents are totally destroyed.

February 16.—The French Line steamer Flachat is wrecked on Teneriffe, of the Canary Islands; 38 of the crew and 49 passengers are lost.

#### OBITUARY.

January 20.—Prof. Ernst Ludwig Taschenberg, entomologist, 80.

January 21.-M. Ernest Bazin, inventor of the roller

February 5.—Joseph P. Smith, director of the Bureau of American Republics, 41....Mgr. Edward McColgan, of Baltimore, 86.

February 7.—Gen. John Cochrane, New York politician, 84.

February 9.—Dr. Lucio Palido, eminent Venezuelan statesman, 74.

February 10.—Ex-Judge Jasper W. Gilbert, of New York, 86.

February 11.—Rev. Dr. William C. Cattell, ex-president of Lafayette College, 70....Ferdinand Fabre, French novelist, 68.

February 13.—Count Kalnoky, former Austro-Hungarian Minister of Foreign Affairs, 65.

February 15.—Baron Ludwig von Erlanger, head of the Erlanger bank....Capt. William B. Jones, last of the builders of the famous Baltimore clipper ships, 85. ....Rt. Rev. C. T. Quintard, Protestant Episcopal Bishop of Tennessee, 73.

## CARTOONS AND CURRENT HISTORY.

ERR TROJAN, the editor of the German paperKladderadatsch, is serving a term in prison for the offense which he committed in publishing the cartoon reproduced on this page. The German Emperor some weeks ago had made an address to certain army recruits in which he declared that only good Christians could be good soldiers, and referred to his glorious ancestors who were looking down upon them from heavenly places. The cartoonist of Kladderadatsch proceeded to satirize the Emperor's remarks by a drawing in which Alexander the Great, Napoleon I., and Leonidas are represented as reading a newspaper account of the Emperor William's speech with considerable merriment; while the Emperor's illustrious ancestor, the infidel Frederick the Great, in the background, looks up from his newspaper with a disgusted expression, his boon friend Voltaire meanwhile hovering in the air above. Satan below is indulging in characteristic comments. All Europe has been ridiculing the Emperor William and the German judiciary for taking serious note of this bit of pleasantry. In Italy it is permissible to caricature the Pope; and the German and French papers are constantly distorting the features of his holiness of the Vatican. The only personage in Europe to-day who is too sacred to be dealt with directly or indirectly by cartoonists is the young German Emperor.

DON QUIXOTE KAISER AND THE PUPPETS.

The German Kaiser objects to be caricatured, and Kladderadatsch, which is the German Punch, has lately got into rouble over a cartoon satirizing the Emperor's recent speech the recruits, in which he described his "glorious forefathers ing down upon them from the heavens."—From the Westter Budget.

FROM THE CAMP OF THE ARMIES OF HEAVEN.

SATAN: "At last I know what the knot means that I made in my tail: I wanted to fetch the Old Fritz, for 'he who is no brave Christian is no brave man, and no brave Prussian soldier either, and can under no circumstances fulfill the duty required of a soldier in the Prussian army." Nay, perhaps I may succeed, on a final revision, in recovering lost ground and in freeing the armies of heaven from the hal Christians and bad soldiers."

It is said that Mr. Richard Croker and Mr. Thomas Platt, of New York, one of whom rules the metropolitan city and the other the Empire State, have a kindred feding with the German Emperor, and are disposed to suppress Mr. Bush, of the World, Mr. Davenport, of the Journal, Mr. Nelan, of the Herald, Mr. Atwood, of Life, and the other audacious cartoonists who have been guilty of less majeste in their treatment of these two political magnates. President McKinley is not known to object to being caricatured, and Mr. Hanna has borne much without intimating any intention to favor laws for the extermination of cartoonists.

THE MODERN ST. GEORGE AND THE DRAGON.

From the World (New York).

DANGER OF ASPHYXIATION. From the *Herald* (New York).

Mr. Davenport, of the Journal, was subjected to a severe reprimand last month from the Pennsylvania judge who has been conducting the trial of Sheriff Martin and his députies for the slaughter of striking coal-miners at Latimer some months ago. We reproduce on this page the particular cartoon which excited the wrath of the judge. Its impropriety must be acknowledged; for it dealt prejudicially with a matter then undergoing a judicial inquiry.

Mr. Bush represents the cartoonist as the modern St. George who rides the steed Publicity, and with his pencil as a weapon stabs the dragon of political and social injustice and wrong. Mr. Nelan suggests to Platt and Croker the serious danger that might follow the extinguishment of the light of the press.

PLATT AND CHOKER WON'T BE HAPPY TILL THEY GET THE CENSORSHIP.—From the World (New York).

THE MODERN EXPONENT OF AMERICAN LIBERTY.

Davenport's cartoon which roused the ire of the Wilkesbarre judge.—From the Journal (New York).

THROWING LIGHT ON THE SUBJECT.

UNCLE SAM (to old soldier): "I'm not after you. I'm after the rascals behind you."—From Judge (New York).

A MASTERLY POSITION.

Strongly recommended by Senator Morgan, Cabot Lodge, and other great etgenen who do not agree with the founders of the republic.—From Life (New

Mr. Attwood, in Life, represents Uncle Sam as put in an awkward position by the Hawaiian annexationists; and invokes the founders of the republic against anything of that sort. We have not discovered, however, that the founders of the republic ever supposed for a moment that the people who would be on earth after a lapse of a hundred years in the United States would not have some questions of their own to decide, on the strength of their own judgment.

EVICTED.-From the World (New York).

The four cartoons on this page deal in a lively fashion with matters of recent international interest. Two of them are by Bush, of New York, and the other two by Sir John Tenniel, of London. Mr. Bush very cleverly characterizes Minister de Lome's self-caused eviction from the United States; and he minimizes the German exclusion of American products by comparing it with

IT MAKES A DIFFERENCE WHOSE OX IS GORED. From the World (New York).

the Dingley tariff wall which shuts out almost everything of European production. Sir John Tenniel represents the Russian and German sailors as under the necessity of stopping from point to point on their way to China to get their coal from English stations. In his second cartoon he represents Joseph Chamberlain, with his subsidy policy, as encouraging the cane-planters of Jamaica to bear up a little longer under the knockdown blows of the European beet-grower, who has waxed strong and hearty on government bounties.

ON THE "QUAY VIVE!"

JOHN BULL: "What, mates! Want some of my coal to get to China? Right you are!" (To himself:) "I can always stop the supplies!"—From Punch (London).

KEEPING HIM GOING.

COLONIAL JOE: "Hold out to the end of the round! I've got something that'll put the life into you!" ("The chancellor of the exchequer has consented to propose at the meeting of Parliament a very large grant in aid of the West Indies." Vide report of Mr. Chamberlain's speech at Liverpool, Times, January 19.)—From Punch (London).

GERMAN MILITARY OBSERVER: "So deeply bemired in the swamp of corruption is the grand army of France that it seems wholly unable to get upon solid ground."—From Ulk (Berlin).

A C C UST

ZOLA AS A MODERN VOLTAIRE.—From the Critic (London).

The military scandals in France, apropos of the Dreyfus incident and its long train of sensational consequences, have not found the German cartoonists neighborly or merciful by any means. The cartoon which we reproduce on this page represents a German scout, safe on firm ground, looking down upon the French army struggling hopelessly in a slough of corruption, and vainly striving to reach a solid footing.

The English cartoon on this page represents French justice in control of the mob, while the man in the uniform arrests Zola, the modern advocate of liberty and fair play. A French cartoon, drawn in the interest of the army and against the friends of Dreyfus, represents the German Emperor as reading the French newspapers and turning to congratulate his allies, the Emperor of Austria and the King of Italy, upon the fact that in France at present they are engaged in disparaging and insulting their own army-a state of affairs, evidently, that might seem to make for the interest of France's enemies.

The Zola trial has been provocative of a vast number of caricatures, some of which it will doubtless be in order for us to reproduce next month, when the episode will have been ended in one way or another.

GERMAN EMPEROR TO HIS ALLIES, THE EMPEROR OF AUSTRIA AND THE KING OF ITALY: "We can congratulate ourselves upon the fact that in France just now they are busy insulting and slandering their own army."—From Pilori (Paris).

## CARTOONS AND CURRENT HISTORY.

THE SITUATION IN THE ORIENT.

Are they game?—From the Tribune (Minneapolis).

THE RACE FOR THE UPPER NILE.

JOHN BULL: "Hurry up, Mon Ami, or I shall beat you after all!"—From Moonshine.

Every one wishes to help the poor sufferer, but he will not have peace until the last tooth is pulled out.—From Kladderadatsch (Berlin).

THE CONCERT OF EUROPE.

A monument erected in remembrance of the saving of Crete by the powers.—From Der Nebelspalter (Zürich).

SEE-SAWING. (Apropos of the Chinese loan.)—From the Herald (New York).

SEALS ARE CHEAP TO-DAY.

A fancy portrait of Sir Wilfrid Laurier in the Canadian Store. (As the first fruits of Sir Wilfrid Laurier's policy, it is stated that the Canadian Government "has taken premises in the city, shortly to be opened as a store for the sale of general Canadian products."—Daily Chromicle.)—From Punch (London).

Kipling's rhymes and Sambourne's cartoons were not so insistent upon representing Canada as "Our Lady of the Snows." For although the Klondike gold-fields are in Canada, the Klondike temperature is by no means uniform throughout the Dominion. The toboggan suit answers well enough for winter rhymes and winter cartoons. But Miss Canada does not wear blankets the whole year through.

Punch, in the past few months, has given a good deal of attention to Canadian matters, as the cartoons on this page might fairly indicate. The first one represents Sir Wilfrid Laurier, the energetic prime minister, as personally carrying out one of his projects, namely, the establishment in London of a store for the disposal and sale of Canadian products, with a view to promoting the English consumption of Dominion goods. The other two drawings are reproduced from the preface prepared for the new bound volume of Punch. This volume is dedicated in a graceful way to Sir Wilfrid Laurier. Mr. Punch ventures upon the ice to make his bow to the stalwart premier. The corner design represents Mistress Canada as tobogganing on the one hundred hirteenth volume of Punch.

MR. PUNCH'S COMPLIMENTS TO SIR WILFRID LAURIER.

## THE RUSH TO THE KLONDIKE.

# ALASKA'S NEW GOLD-FIELDS—THEIR PRESENT OUTPUT AND FUTURE PROMISE.

## BY SAM STONE BUSH.

## I.—THE EXODUS.

I T took two and a half years from the first discovery of gold in California for the population of that territory to increase from 15,000 to 92,000. At least 100,000 prospectors will advance upon Dawson City and its vicinity in the first six or seven months of 1898—less than a year from the time when the world first heard of the new gold sensation. The days of '49 and the great Ballarat rush two years later were peaceful compared to this. Another dramatic fact—this army of gold-hunters will expend for transportation and supplies before the end of the year fully \$60,000,000—four times as much as the probable total output of Klondike gold!

In 1897, between July 17 and September 1, 8,886 passengers and 36,000 tons of freight were carried north from Puget Sound and British Columbia ports. Of this traffic the steamers bound for St. Michael took 1,248 persons and 12,000 tons of freight, while nearly all the balance went

number going through the Chilkoot; the rest—gamblers, tradesmen, and those who failed to get through—are living this winter at the pass towns. These figures were nearly doubled before January 1, but all the late departures went to Dyea and Skaguay, and on account of

THE EMBARKATION OF THE ARGONAUTS, AUGUST 17, 1897.
(Showing the type of steamship used in transporting prospectors to Alaska.)

the late season halted for the winter at these places, both of which are growing with wonderful rapidity and fast becoming important towns. Dyea has passed Skaguay in inhabitants and promises to be the metropolis of Alaska. The travel since January 1 has been the capacity of the ships, rates on them have advanced, and a further advance will likely be made as the crowds become greater on the approach of the "open season." Trade and transportation on the Pacific coast are convulsed; excepting in time of war, the century has seen no other such physical happening.

SCENE ON THE SEATTLE WHARVES AT A VESSEL'S DEPARTURE WITH PROSPECTORS.

to Dyea and Skaguay, a part branching off to Juneau and Wrangell. About 3,600 got over the passes in this time, at least 3,000 of the

## WHAT THE YEAR PROMISES IN DEVELOPMENT.

No statistics can be made of the 1898 exodus with any degree of accuracy, but from estimating the movement already well in motion, nearly, if not quite, 100,000 will try to get to the gold.

A majority of the photographs used in illustrating this article—fourteen by the author and six by Mr. J. F. Pratt—have not been published before.

fields. It is doubtful—if my computations on the capacities of the vessels in the Alaskan trade are correct, and they are made from close inquiry whether the transportation companies can carry so many and their supplies. This capacity shows 75,000 passengers from January to July, with two tons of freight to the passenger, when he will probably require only about one-half ton; and assuming that one-half of the freight will not go inland, but be used at Dyea and other coast points for building operations and transient consumption, would leave a supply tonnage sufficient for an additional 75,000 prospectors. reduction of rates on the transcontinental roads. such as is threatened, will increase the number

wanting to go, in which case the steamship people will manage it somehow, if tardily, even if it is necessary to continue sending steamers from the Atlantic.

This contem-

SKAGUAY TOWN, FIVE WEEKS OLD.

plates the situation to July. After that it is believed by those who have looked ahead that a second and greater exodus will begin, for it is pretty certain that the first ships returning from the Yukon in July, and weekly thereafter for a time, will bring such stores of gold, such tales of individual fortunes, and such picturesque details that the larger army, waiting, will break their bonds of indecision. By that time there will be more ships and also better facilities for crossing the passes, and it is probable that these swarming emigrants (of whom three-fourths will go from the United States, about an eighth from Canada, and the rest from the British Isles) will be able to get through to the gold bottom creeks without serious delay, although they will, of course, be too late to do any prospecting till next year.

More ships are needed in the Alaskan trade; more boats on the Yukon and Stickeen rivers, overhead and surface roads on the short passes—these are the things needed now, the things to be done at any cost, so they are done quickly, and the future will take care of the construction of more permanent lines and better

facilities.

## WHAT THIS STAMPEDE MEANS TO TRADE.

What does an exodus of 100,000 to the Klondike mean to the business of the country? 1

have figured it out on the basis of cost and proportion as ascertained, and it is this: That each man of them would average first and last an expenditure of \$600, making a grand total of \$60.

THE OLD PRESBYTERIAN CHURCH AT JUNEAU.

000,000. The United States railroads would get \$5,000,000 of this; Seattle merchants and hotel keepers, for outfits and transient guests, \$25,000,000; the prospector's home town and towns en route to Seattle and

other Pacific

coast points, \$5,000,000; ship companies, for transportation to Alaska, \$10,000,000; and for the transportation of freight over passes and in Alaska, \$15,000,000. This would represent only the actual needs of this many prospectors, and would cause a large increase in other business directly connected with it.

## THE PROBABLE OUTPUT OF 1898.

Up to the time of the Klondike discovery the Yukon placer output as tabulated by the national authorities was, in grand total, \$3,310,500. Almost the whole of this amount resulted from the work of the years 1886 and 1896. The output from 1880 to 1886 was comparatively insignificant.

The predictions for the receipts from the Upper Yukon in 1898 are guesswork, although the latest returned miners make it appear that it will be over

DYEA IN SEPTEMBER, 1897-NOW A TOWN OF ABOUT 5,000.

\$20,000,000. But if it is \$12,000,000, the most conservative estimate now offered, it will be wonderful, and will mean that with all the willing hands now there and the hundred thousand or more who get through in 1898 the yield for 1899 will

approximate \$50,000,000. After that it depends on transportation facilities to get people and machinery into the country to multiply the placer yields, and a few years more will probably see on the Yukon ranges the steady crunching of ore by stamp mills to add to the world's gold supply.

## IS THERE STILL ROOM FOR PROSPECTORS?

The report from Captain Ray, United States army, from the interior, stating that no new placers have been discovered for eight months, is doubtless true, but it is misleading. An explanation should go with

it, and if entirely fair it would say that all those on the Yukon last summer were occupied, not with prospecting for new discoveries, but to take

PROSPECTORS MOVING BOAT TIMBERS OVER CHILKOOT TRAIL.

up claims on the creeks known to be rich or prospecting creeks in the same locality, which no doubt Captain Ray classes as the old discovery.

Those who got to the Upper Yukon in the fall did so too late for prospecting, as elsewhere explained. If Captain Ray felt that the food situation demanded a warning to check the senseless ones going in unprepared, he was probably justified.

SKAGUAY TOWN, FROM THE HEAD OF THE LYNN CANAL, SHOWING THE WHITE PASS IN OCTOBER, 1897.

The impatient intending prospector, however, who fears that the lands of gold will all be occupied unless he hastens, at the sacrifice of reason, to the gold creeks, should take a glance at a map of North America. Alaska embraces more square miles than twenty-one States of the Union, including the area from North Carolina northwest, taking in Illinois, and thence with the lakes to the North Atlantic coast of Maine. all the rivers in these twenty-one States and of all the creeks that flow into all these rivers, of the branches that feed the creeks, and you have a placer area for prospecting to hide a half million men from one another by a distance to make each feel lonesome. And in the Klondike district there is the land, mainly mountains, feeding the streams, where years hence will be found rich quartz ledges that will again awaken the world to the sight of a new Havilah.

To digress here in order to make this point clear. I met a miner last summer on a steamer who was returning from the Klondike, and studying the map we had laid before us, I asked what there was of water in that half inch of space between the mouth of the Klondike and Stewart rivers, as gold was plenty on both. He said: "Oh, eight or ten pretty big streams; you might call 'em rivers." Now, here was prospecting ground to employ and lose all the people who got through in 1897. They will not crowd, and the exodus

THE KLONDIKE REGION AND THE ROUTES
TO DAWSON CITY.

of 1898 will only go before to point the way to creeks that are liable to pay, even if they do not call for that joke of the miner's—"where the gold is so thick that you have to mix sand in to sluice it."

## A COAST-LINE GREATER THAN THE CIRCUMFERENCE OF THE EARTH.

There are 11,000 islands along the coast included in this Alaskan area, and with the numerous inlets they give a coast-line 11,000 miles longer than the coast-line—Atlantic, Pacific, and Gulf-of the United States, or greater than the circumference of the earth. And consider the western limit of these possessions—there is the island of Attou, the farthest of the Aleutian group; its longitude is as far west of Seattle as Portland, Maine, is east of Seattle. No matter what reports may be spread on this subject, those who are contemplating a hazard of new fortunes along the mighty Yukon need not be deterred by a fear of crowding or richness of prospecting ground, as those who have a right to know express unbounded confidence in the richness of the placers, and with the exodus of 1897 lending willing hands with the pick, it may be that the results of 1898 will turn the world Klondike-mad and pale the memory of "Kaffirs" in Europe. Indeed, just as this is going to press there are reports from experts who have been over the ground thoroughly which make it quite within the things to be expected that there will soon be even richer "finds" than those already made—and it is not unlikely that these may be in Alaska proper. There can be no doubt that this northwestern portion of our continent is destined to undergo a remarkable development in the next few

There is serious work to be done in Alaska and the Northwest Territory—the making of a new There are many dissenters from this opinion, but their dissent will only serve the purpose of making all effort more effective, with more forethought and more care. It was much the same when the East first heard of the finding of gold on Captain Sutter's farm in California in Evidence was produced of the "finds." and the plains and Rockies were cut into wagon roads, while the Indian lurked along the way and took a scalp now and then. This color of danger gave the Eastern press a chance to write lurid pictures of massacres and bloodshed and to place the price of a placer at death, but the "movers" wagons continued to turn their wheels toward the setting sun, and to-day the fruit of that movement makes the writer of a recent article point with much reason to our Pacific coast as the changing front of the world. In point of fact, many of the men who have made the longest stays in that region are the hardiest-looking and finest physical specimens one could well find.

One argonaut after another has testified to the tremendous muscular exhibaration experienced in crossing the Chilkoot even with the thermometer at all sorts of numbers below zero. And this is simply natural. The freezing purifies the air

thev breathe. the cold stirs the blood and muscles to action, the fare is plain but wholesome, and there is that great solitude to feed the soul and that feeling of comradeship -truth to your fellow - man all of which give health to the body and There mind.

A PICTURESQUE HABITATION ON CHIL-KOOT TRAIL-WAITING FOR SPRING TO PROCEED NORTH.

has been an honesty remarked in these first dwellers in the Yukon basin and in the travelers over the passes, and it is due to the absolute dependence of every man on the other for pro-It was the same in the early days of ('alifornia, and changed and was lawless in the extreme while the Government was learning how to make the law effective, and it will be the same way on the Yukon, no doubt.

## HARDSHIPS AWAITING THE GOLD-SEEKER.

Let no one start out, though, without clearly realizing that the Yukon country is still far from a pleasure resort. The camp life and work of the miner on the Klondike is one of great hardships, the climate and the long winter nights hedging it in with ever-present and harsh limitations. It is a routine of sleep until you wake and work, build fires and cook the brief fare until The thermometer goes down to forty or fifty degrees below in January, and sometimes . lower, while in the summer time it will go to one hundred degrees above, and when the mercury is highest the mosquitoes will be the densest. The latter are one of the greatest trials that the pioneer has to encounter, and the most hardened emigrant from the Jersey flats will be surprised at the vicious onslaughts of these little plagues, who have actually been known to drive the deer and bear into the water for shelter.

The wise prospector will pay especial attention to the matter of reaching his destination in time to get comfortably settled and build his house before the long winter sets in. Tents are used for camping until a permanent location is made,

and then a "shack," or log hut, generally of one room, is erected. A dirt floor usually answers, and the roof is thatched with boughs, on which is piled mud a foot or two thick; this soon freezes, making a very warm house if the sides are also banked with mud and the logs chinked in the same way.

#### HOW THE MINERS LIVE.

The best fire is one built on a square piece of masonry two feet high, much like a blacksmith's forge, and the smoke from this feeds through a pipe, like an inverted funnel, which hangs from the center of the roof, and is fixed to be raised About this fire the miners sit in or lowered. their idle hours, often the meals are eaten off its edge, and many a game of "California Jack" is played across its corners. This open fire in the center of the room is an idea probably copied The latter not being so sensifrom the natives. tive to smoke let it escape through an opening left in the roof, like their tepee, or cone-shaped tent of poles and mud, being constructed with the apex of the cone left open for the smoke. The supplies, or sacks of flour, meal, bacon, beans, coffee, salt, and the few luxuries, are stored in the same room and jealously guarded. shrinking bulk is watched with fear, while the miners declare that the gold is most carelessly

THE CHILKOOT SUMMIT IN WINTER.

hung in bags on pegs behind the door, tied up in the arm of a worn-out shirt, or perhaps filled in the foot of a rubber boot.

Few books reach these camps, and fewer newspapers, as neither government carries anything but "first-class mail matter." But I noticed on the passes last summer that nearly everv man had a

THE INDIAN PACKER AND HIS PONY.

Bible with him, and I saw a number of copies of Shakespeare. And to the man of thoughtful mind I should think that a few good books, hard to exhaust, would be a food needed as much as bacon and beans. Nansen while on the *Fram* got better work from his men because he gave them the diversion of books and music.

Some of these miners build their cabins with a "lean-to" which covers the shaft and protects the partner at the windlass as he draws up the buckets of frozen dirt. The plan of working these placers is for two men to work together, one down in the drift, who, by keeping a fire going while he sleeps, thaws enough ground to pick it out and load it in the bucket when awake, while his partner draws the bucket up the shaft with a windlass, made like the old-fashioned well. This

dirt he piles outside, and there it stays until spring, except for an occasional "panning" to see how rich the dirt is running.

When the springs thaw and begin to trickle down the mountain the miner builds his sluice-box, and turning the wa-

DIVERSION OF CAMP LIFE.

ter into its head, incomes it for just the necessary current, and then feeds the box at its upper end with this dump pile. The water continues what nature began, and the gold in the sand sinks against cleats on the bottom, while the dirt passes away. The "rocker" is also used, and every miner has his little preferences as to details

of method, but as yet on the Yukon they as primitive indeed.

In the towns, particularly at Dawson, Dye and Skaguay, everything is "wide open"—drink ing, gambling, and the mad dance of the miner and their women are almost a "continuous per formance" through the winter. Of course the crowd of miners change, but the women don't The men come into town from the mines at in tervals for a diversion from their monotonous life. This monotony is liable to make the settle ments of the Yukon the most wicked in the history of camp towns, for human nature will "even up" things.

It was never my belief that there would be a serious famine at Dawson or on the Klondike this winter. Food might go to very high prices and men might have to economize in its use, but with the personal knowledge I had that three-

THE ARGONAUT'S CAMP ON CHILKOOT
TRAIL

fourths of those who got through the passes last year went with a year's supply. made me feel sure that this, with the tonnage that got up the Yukon. made a gross supply which would keep the wolf away from the "shack" if men remained together. A

miner in that country will charge you the highest market prices for food if you have the money to pay or the strength to work, but be you penniless and with no work to do, it is his spirit to divide his last crust with you, and with good grace.

The very best advice that can be given on "outfitting" for a year or two in that land of the long nights, without particularizing, is to take only what is absolutely needed, and be sure that it is of the very highest quality. A good sleeping-bag is worth a dozen a little cheaper; one well-made coat is worth many inferior ones; and so on through the list of clothing, tools, and food. If you do decide to cut on quantity, let it be on the clothes.

## II.—HOW TO GET TO DAWSON CITY.

The most vital question that these gold-seekers are asking is, What is the best route? Having kept in close touch with the man who is going to the Yukon, I have concluded that he will have

his destination the tributaries of that river between the mouth of the Hootalinqua and Dawson City, possibly going further down to Circle City or Forty Mile, and I will give my conclusions as answering to this destination.

### THE ALL-WATER ROUTE.

There is one all-water route, by steamship to St. Michael, 3,000 miles from Puget Sound and

4.000 from San Francisco. thence up the Yukon River 1.880 miles to Dawson City. This route is the easiest and at. the same time the one entailing more uncertainties, more loss of time, money, and opportunithan any heretofore taken; but on account of its being possible

AN ENGINEER SIGHTING THE SUMMIT. (This was the last photograph taken on the Chilkoot in the winter of 1897-98, by Arthur Cobb, C.E.)

during a very brief season to ship from Puget Sound and be unloaded with your belongings at Dawson City, right in the heart of the first great discoveries appeals strongly to the average man. It would take all the ships on the Pacific coast, however, to move the gold-seekers over this route during the short season it is open. ships going via St. Michael in 1898 are scheduled to leave Puget Sound about June 10, but it is not likely that the complementary boats to take the cargoes will be able to start up the Yukon until nearly a month later, because the mouth of the Yukon is not free of ice for four or five weeks after it breaks up at its sources at Lake Lindemann or Lake Teslin-about the last of May. This upper ice flows north, cuts under the ice where it has not yet thawed, or piles on it, and freezing again forms a great icy mass; this again breaks and flows farther down stream, ending in a grand gorge about the mouth. At the mouth the volume of water flowing into Bering Sea is so great that it is fresh ten miles out, which also freezes and aids in locking this entrance. At many points on the trip up to Dawson the river changes its channel each season, and new bars are formed, often necessitating dredging to enable the boats to find a channel.

The traveler should reach Dawson City by the first of August, provided he got started up

the river on one of the first boats, and if he expects to labor for others at a per-diem wage this trip is the easiest; but it will cost as much in ready money as going by either the White or Chilkoot passes (leaving Puget Sound May 20), and it will cost in food as much more and in time one year more if the gold-seeker expects to make and work his own location.

## THE BRIEF PROSPECTING SEASON.

This is predicated on the shortness of the prospecting season, which in many creeks is confined to June and July, because from October to June the weather is too severe. Men say they will prospect in the winter-time, but the Yukon miner tells me that they don't; that they must get their shaft down in the open season, so their work will be underground when winter closes in. The months of August and September, too, are not profitable for prospecting, since the melting of the snow and glaciers on the mountains fills and overflows the creek bottoms. Should the gold-seeker have as his destination some of the streams farther up than Dawson, it will require additional time for the much slower progress, for it is up a swift current in an open boat instead of down stream, as from the overland passes. one's destination is Stewart River, it is better to be at Lake Lindemann or Lake Teslin at a given time than at Dawson City. One can't be at Dawson City by the all-water route until at least two months later than he can reach these head-

NEAR THE SUMMIT OF CHILKOOT, FOURTEEN DAYS' WORK FROM DYEA, EIGHTEEN MILES BEHIND.

waters. So the water route loses practically all the prospecting season, while the short passes save six or seven weeks of it.

I know the actual hardships on the easier trails from "packing" across the White and Chilkoot passes, and have intimate knowledge from people on whom one should rely as to the other routes. However, aside from all this the question of climate fixes the question of date when you can get into the country, and the

question of date fixes the value of the first year's results.

THE OVERLAND TRAIL TO LAKE TESLIN.

What is known as the Teslin route via Wrangell and the Stickeen River to Telegraph Creek, thence by overland trail 154

AN INDIAN PACKER IN HIS PICTUR-ESQUE GARB AT CRATER LAKE.

miles to Lake Teslin, also has its advocates. They point to the fact that after getting to Lake Teslin all the rest of the trip is down stream, avoiding dangerous rapids and troublesome portages. This is undoubtedly true; but what of that 154 miles of land? It would be nothing to balk an earnest man if he was going to trudge it with his lunch-basket and a good stout staff; but where is the year's supply of outfit—the thousand pounds? How long will it take him to lug that over on his back, making at the most ten miles a day for each hundred pounds? Or, if he has money to buy two horses and feed and shoe them, and each carries 250 pounds and makes 20 miles a day, what will it cost?

Suppose there is money to buy and ship these horses to Telegraph Creek and to buy their feed: allowing a reasonable time for accidents and for moving the feed for the horses, it is plain that it will take at least a month for this land trip, and the cost will be double that of the White, Chilkoot, or St. Michael trips. However, if cost or hardship cuts no figure and the traveler starts early over the frozen snow so as to be at Lake Teslin by the latter part of May, he will be in an excellent position to reach the gold district early in the prospecting season.

## THE DALTON ROUTE.

The Dalton trail, from near the mouth of the Chilkat River overland to Fort Selkirk, 260 miles, is purely a cattle trail. It is good for pack animals and particularly suited to them in the "open season," because along its way are meadows to feed them; but it is only profitable to pack over this route where the animals are to be sold down below, and it will not be used much by the pros-

pectors until a surface railroad is built over it an improvement likely to come within the next few years.

The Canadian routes are out of the question for present needs, on account of the distance of overland journeys.

The Taku route, leading out from Juneau, is quite similar to the Teslin route from Wrangell. only not so good for pedestrians, but better for railroad-building.

## THE MOST FEASIBLE ROUTE VIA CHILKOOT PASS.

This narrows down the route question to the Chilkoot and White passes. Going by the White there is forty-five miles of land from ship navigation to canoe navigation. The Chilkoot trail is one half this distance. The gradients on the White are less as an average profile, the summit of the White being 2,500 feet above sea-level and the Chilkoot 3,600 feet; but there are more ups and downs and more bogs on the White, and altogether, mile for mile, the Chilkoot is very much the easier proposition.

It starts out from the town of Dyea, up a sandy and bowlder-strewn valley for eight miles to the mouth of the canyon—a point where the valley narrows in an easterly deflection—and from here it is four miles of very hard travel to Sheep Camp. It leads out up the mountain side and is ever up and down, over the spurs and across the bogs and streams; one minute you are exerting yourself to the utmost to pull your boot out

HOW STREAMS ARE CROSSED—THE AUTHOR WADING TAIYA RIVER.

of the mucky black stuff, and the next are pulling yourself up a rise by holding to the roots of a tree: then comes a slide down a grimy stone, and if you light squarely must balance yourself well over the log across the stream; and again up and down, until you wonder if the

pack on your back is petrified into a lead-bearing stone. From Sheep Camp the ascent becomes greater as you go up the canyon, and two hours will put you in sight of the famous pass, that forbidding door to Eldorado. From this point it does not look far to the sheer granite wall with the two little depressions in the top. The one to the left, and the higher one, is the trail, and from this first view, three miles away, you can see a thread-like path wind up to it. Moreover, by careful scrutiny, if your eyes are good, you can perceive little specks moving over and up the granite clouds "—they seem the atoms of hope.

## THE FAMOUS SUMMIT.

A little farther, at Last Camp, horses are usualiv unpacked. The climb from here to the top is like a great pair of steps, uneven and each step growing larger as you get nearer to it, but patience and frequent rests will get you finally to The scene about you becomes indescribably grand as you toil up this ascent, the valleys lying below like strips of green, with a stripe of silver where the little Taiya River shows; above, all space seems to be frozen and locked with glaciers; the birds are singing down there where vou were an hour ago, and the poppy is gorgeous and indolently sways in the summer air; but up here it is perpetual winter, and when you gain the top of the summit the winds give you an icy kiss like death.

## LAKE LINDEMANN AND THE BOATS.

A quarter of a mile beyond and five hundred feet below is Crater Lake, and the trail twists to the right of it, on past Long Lake to Deep Lake, and at last to the head of navigation, Lake Lindemann. From the summit to Lindemann it is rocks and bogs and some easy going, the distance being less than eight miles. Here is where boats are built for the river journey, and it is necessary to get timber from the forests two

miles away—perhaps much further by this summer, as suitable timber is scarce and fast being cut. There is a small sawmill at this place and

LOOKING NORTH FROM SUMMIT OF CHILKOOT PASS, SHOWING CRATER LAKE, .

some boats are being built this winter, but they will be exhausted with the first movement north, and again plain batteaus will go to prohibitive prices, just as during the past season, when they actually sold a boat to hold two men and a ton of supplies for \$575. It takes two men ten days of hard work to construct one of these boats out of the forest wood. The tree is found, felled, and the whipsaw makes the boards; then it is a question of shaping and putting together, calking and launching.

By courtesy of McClure's Magazine.

CARRYING-BOATS ON THE YUKON.

## DOWN THE RIVER.

From this point to Dawson is plain sailing down stream, except a few short portages, one a quarter of a mile, another below Lindemann a mile and a quarter, and not forgetting to except several rapids, the most dangerous of which is the White Horse. The channel through these rough waters is better known now than when they caused serious consequences to men and supplies early last summer, and it is understood that there are men making a regular business of

SLUICING ON BONANZA CREEK.

Redrawn from photograph.

taking boats through for a few dollars—a very trifle compared with the former dangers. One poor fellow was in the van of the rush early last season, and after many hardships reached this place, shot at the rapids, struck the rocks, and lost boat and supplies. It is related that being washed against the lower shore and realizing his helpless condition (his entire possessions being reduced to a single can of a famous baking powder), he shot himself, and a board now marks the place where he was buried by those who came after.

## THE QUESTION OF TEMPERAMENT.

I have given a description of the Chilkoot Pass as I know it, to show the character of this sort of travel and to say this is the very best route to the gold district. It is not an engaging picture, but it is true that what a man really thinks of such a rough adventure depends largely on his nature. Two men go in and live through all the sensations and return to tell their story: one is a harrowing, tearful tale, the other rough and hard, but with lots of fun for all that; and there you are. It is often the case that one man will weight down a whole party. He may be a good fellow, too, in a way, but his disposition hangs

heavy, while another will lift a crowd through all manner of hardships by his elasticity of spirits and courage to do, like Kipling's "Eathen:" "And he lifts 'em, lifts 'em, lifts 'em thro' the charge that wins the day."

## AN INCIDENT OF THE TRAIL.

I saw this effect of man on man strangely exemplified on the Chilkoot trail at a place they call Pleasant Valley. A big fellow whose clothes and white collar seemed strangely out of place in the pushing horde was under a tree, reclining and at ease, absorbed in a big book that lay open on the ground before him. My curiosity was aroused, and approaching nearer I made out the title of the volume which held him enthralled; it was Nansen's "Farthest North." Now, there was no doubt but that superb story of adventure carried many a pound for the big man, and compensated for so strange a thing as "toting" two such heavy volumes on so arduous a trip, where all is considered worthless that you cannot eat or wear.

#### COMING TRANSPORTATION FACILITIES.

The advice given as to route is from the standpoint of existing conditions, or rather the conditions as they existed last year, and does not take into account the aids to transportation over the land routes now under construction or proposed. The physical conditions of the routes other than by way of the Chilkoot or White passes forbid the possibility of any transportation means to handle supplies or passengers this year, except by slow and primitive methods, such as ox or horse pack trains; and no matter how well the promoters of any surface roads on such routes may use the brush of the imagination, their schemes cannot be carried through in 1898. It is doubtful, indeed, even assuming that money in abundance is available for such construction, whether even next year will see any such line in operation over the Stickeen, Taku, Edmonton, or Dalton routes. There will undoubtedly be a narrow-gauge or other surface railroad built over one of these routes, but it is a fair conclusion to say that it will take millions of money and three more years to accomplish it, although within that time part of this distance may be operated to help out on a portion of the trip. I make these broad assertions from my knowledge of the diffculties to be met.

## OBSTACLES IN THE WAY OF ROAD BUILDERS.

On account of the great rainfall near the coast, where such routes begin, it will be necessary to build well up on the spurs or foothills, requiring almost a continuous construction of trestles, fills,

or cuts—the cuts.too, through granite formations. When once across the mountain range, paralleling the coast, the rains or freshets are not so great, but the snows fall steadily and do not melt until June, the winds blow, and snow-drifts of great depth accumulate at all low grades, necessitating the same construction as on the coast side, but with the addition of almost continuous snow-sheds. It is easy to calculate such construction at the cost of \$15,000 or \$20,000 a mile, but it is another matter actually to do it at twice these figures.

## THE SKAGUAY WAGON ROAD.

Over the Skaguay trail or White Pass route there is going on a sensible construction for temporary assistance in the shape of a wagon road, over which, if it is ever completed in a satisfactory condition, much freight can be handled by teams. At this writing some seven or eight miles of this road have been built out from Skaguay. It is still in very rough condition, but perhaps with a little more work when the season moderates it will answer the purpose very well. The company proposes to continue this to a point beyond the summit by May or June, but it is known now that operations have been temporarily suspended. This route does not follow the old trail, but keeps up the Skaguay River to the real

THE DWELLING OF THE CHILF OF THE CHILKOOTS, AT CHILKOOT VILLAGE.

Photo by J. F. Pratt.

White Pass, a route encountering two or three box canyons closing it in to the width of the stream with sheer cliffs. These places are to be crossed on steel bridges, one of which has been shipped to Alaska. Granting, however, that this difficult enterprise is carried to a successful conclusion, it leaves the traveler at the summit, or twenty miles from canoe navigation at Lake Bennett; and as a land trip, no matter what the topography, is still a land trip, requiring packing,

and the question of transportation of supplies is only slightly assisted. To be sure, the argonaut will give thanks for any relief from the present difficulties, but no real solution of the problem can be expected this year from Skaguay.

## THE CHILKOOT TRAMWAY.

On the Chilkoot route transportation enterprises appear to have taken a more definite shape, and

A CHILKOOT GRAVE.

Photo by J. F. Pratt.

from the means employed it is reasonable to expect quicker and more certain results. means is the overhead cable construction, known as the aërial tramway, which from its airy name does not appeal very strongly to the practical mind not acquainted with the system, but which is known to mining engineers as a simple and comparatively inexpensive method of handling supplies destined to go over such a short land trip as offered by the Chilkoot. It is extensively used in very many mining sections to carry ore from quarry to smelter, and one is already in operation at the quartz mines near Juneau, Alaska. It claims as a basis for perfection in this case that it is not dependent on surface conditions; that it is not subject to disturbance from glaciers, landslides, or snow-drifts; that the grades are no barrier to successful operation (as the supports for the cable track and traction cable are built on the points of the profile of the route); and that the tonnage capacity is very elastic.

The stations, or supports, are built on the high points of the route. These consist of large poles, 12 or 14 inches in diameter at the large end and varying from 18 to 30 feet in length; they average about 400 feet apart, but this space can be increased to 1,500 feet without in any way affecting successful operation. These poles have a two-inch iron pin in their bottom which is fitted into a hole drilled in the granite; for further support the base of the pole is held in place by a

cast-iron shoe also fitted to the rock, and it is then held rigidly in place by small cable guys running from its top to the four corners of a square, the guys being kept taut by a simple device of turnbuckles. Crossing the pole at the top are arms, much like those on a telegraph pole, only stronger, and at the extreme of the top up by the cables passing through the freight house, hooking themselves on automatically at such distances as the operator prefers, and taken off the cables by a similar device at destination, where the emptied carriers are again hooked on the return cable and sent to the starting-point. One company already reports four or five miles of

this construction in operation over the steepest grades on the Chilkoot route, and promises to shortly have another four miles in operation, which may reasonably be expected by the middle of May. Another company, with much more extensive plans, has just gotten started on the construction of one of these lines to run from its own dock, built two miles out from Dyea, through to Lake Lindemann, thus covering the whole of the land trip. They propose to carry articles up to 500 pounds in weight as well as "knockdown " boats.

It is believed that the completion of these plans to convey supplies over the

Chilkoot and White Passes in eight hours, instead of five or six weeks, will bring the rate down from forty cents a pound to about ten cents. All the real efforts to handle freight overland are going on at Dyea and Skaguay, and these places are only separated by a neck of land at the head of the arm of the sea known as the Lynn Canal.

## LOCATING A CLAIM.

The laws governing the location of claims vary on either side of the boundary line, the limit on the Klondike or British side having been reduced since last August from 500 feet in length, running with the stream, and extending from bench to bench to 100 feet in length running with the stream measured from high-water mark outward, or to the bench if it be further. This is the creek or river claim. "Bar diggings" are a strip of land 100 feet wide at high-water mark and extending into the stream to its lowest water-level. "Dry diggings" are simply 100 feet square.

The Klondike and its affluents were staked and are held by the miners under the old law, and any application attempted by Canada of the new law, affecting these miners, is liable to meet with

A CHILEOOT INDIAN CANOE ON THE CHILEOOT RIVER—THE CANOE DUG OUT OF A SINGLE LOG OF COTTONWOOD.

Photo by J. F. Pratt.

arms is the stationary or track cable, made of plow steel one inch in diameter and of great tensile strength. Two feet below the top arm is a second one, carrying on sheaves at its extremities the traction cable of five-eighths inch diameter. This cable is endless and is driven by steam power from a plant located conveniently on the line. The car, or carrier, is suspended on a hanger which rests with two small wheels on the upper cable, and as the hook grips the lower moving cable the car is propelled forward at the rate of 250 feet per minute, making the through trip from Dyea to Lindemann in eight hours. An ingenious construction of the hanger enables the cars to pass the supports.

It is feasible to handle with perfect success this endless cable system for a distance of no more than five miles; consequently the Chilkoot route, which is about twenty-five miles, will require six sections with three power plants, each driving a section in either direction. At the ends of these sections there is an automatic release of the hanger from the cables; it is carried by gravity on a switch of similar construction to the next station, rehooks itself, and the cars continue to destination without rehandling. At the starting-point the loaded waterproof carriers are taken

a stubborn resistance from them, as is also the 10 per cent. proposed as royalty to be put on the output of these older locations. But the Dominion of Canada will probably deal with the problem in a broad and liberal way, as the case would seem to demand. The prospectors were induced under different laws to hunt for gold in its frozen domains, and a law that would be retroactive would simply be bad faith. The new Canadian law also reserves every alternate ten claims for the crown. This reduced-claim area is calculated to dampen the ardor of the argonaut, for at best it reduces his prospects to one-fifth of what was allowed the pioneers. While the American side has not been proven nearly so rich, vet our Government permits the taking up of an equivalent to about twenty acres, or fifteen times as much as on the British side.

## CANADA'S EQUIVALENT FOR HER EXACTIONS.

Canada also proposes to levy a duty on miners' supplies brought into the Northwest Territory, but the exact amount has not yet been determined from knowledge of the application. For the greater tribute it is true that Canada gives the better service. A claim on that side the boundary can be perfected with more dispatch than on the American side, and she lends assistance readily to open trails to new camps of any considerable size, connecting them with supply points; she has, moreover, a police system and mail service superior to that of Alaska proper.

The miners' meeting is the only government in the interior of Alaska, but it appears nearly to have outlived its usefulness, and with the growth of the country and the introduction of a class of

CACHES TO PRESERVE WINTER PROVISIONS. Redraum from photograph.

non-producing adventurers, attracted by the hopes of making their fortunes at the expense of the producers, it is fast becoming a mockery.

The powers of the miners' meeting are three-

fold—legislative, judicial, and executive. No provision is made for a governing officer, the whole fabric resting on the great American principle, "majority rules." Universal suffrage is given and all have an equal vote. The method of proceedings is as follows: If a man has a grievance he posts a notice to that effect and calls a meeting for a certain date. At the appointed time the miners of that locality assemble, generally in the open air, and a moderator from their number is appointed. Then the prosecutor presents his case; the defendant answers. Crossquestioning speeches pro and con are made, and

NATIVE-BUILT FISH-TRAPS IN THE CHILKOOT RIVER. Photo by J. F. Pratt.

in the end some one puts a motion, which is either carried or defeated. If carried, the penalty is imposed without delay.

## III.—HOW AND WHERE THE GOLD WAS FOUND.

For half a century the existence of gold in Alaska has been known. It was reported by Tebenkof in 1848 and again by the engineer Deroschin in 1851, and from 1848 to 1855 the Russian-American Company spent a large amount of money in active mining operations. of forty miners under Lieutenant Deroschin was kept continually at work at the head of the inlet on Kaknoo River and in the Kenai and Prince William mountains. They found gold, but in such small quantities that their enthusiasm gradually waned, and the diggings had been deserted for fifteen or twenty years when the country passed into the hands of the United States. years later Choquette and Carpenter found traces of the precious metal on the Stickeen River, and Prof. W. P. Blake verified this discovery in 1863. In 1873 there was some excitement over a discovery in Southeastern Alaska, but the real

history of mining does not begin until 1880, when Joseph Juneau achieved fame in the annals of the country by the first important "find" near the town which now bears his name—as late as 1886 still "a little village of rough cabins."

## THE GREAT TREADWELL STAMP MILL.

When the excitement over this discovery was at its height, a miner who went by the name of "French Pete" staked a claim on the top of a mountain on Douglas Island. John Treadwell bought the claim for \$400 and built a five-stamp mill, which he later increased to 120 stamps and seven years after the discovery enlarged it to 240 stamps, making the Treadwell the largest mill in the world. The ore is low grade, running about \$3 to the ton and costing about \$1.08 per ton

A CHILKOOT VILLAGE.

Photo by J. F. Pratt.

to extract the bullion, which to-day makes an output of \$1,000,000 a year.

At Sum Dum a ten-stamp mill is at work, and the ore is rated at something like \$100 to the ton.

Just below Juneau, at Sheep Creek, is the Silver Queen Mine, running a ten-stamp mill, and altogether within four miles of Juneau, including the Treadwell, there are nine mills in operation.

Sixty miles above Juneau, toward Lynn ('anal, is the Berner's Bay Mine, and there are rich ledges reported on Admiralty Island. These deposits require expensive machinery to even test them properly, and when it extends beyond the prospecting stage is work for large capital only.

R. E. Preston, the Director of the United States Mint, says of the output of gold from Alaska before the Klondike discovery: "The gold product of Alaska thus far has been remarkable rather for its regularity than its amount, and more favorable to the permanency of development of the mineral resources than if it were subject to violent fluctuations."

## ALONG THE YUKON.

For sixty-four years the great Yukon River. "the Mississippi of the North" (which is declared by both Professor Elliott and Mr. Ivan Petroff to discharge "as much if not a third more" water into Bering Sea than the Father of Waters does into the Gulf of Mexico), has been explored by one traveler after another, yet the first signs of gold in the Yukon basin were not brought to light until 1881. These indications on the bars of the Big Salmon River were followed by similar manifestations on the Pelly, Hootalingua, and Stewart rivers, and gradually placer mines were developed on Forty Mile, Sixty Mile, and Birch creeks, and on Koyukuk River. In 1883, however, the total white population amounted to only fourteen persons, and there is still extant a photograph of thirteen of these forerunners of the present horde. In 1886 Forty Mile Creek was the storm center, an honor wrested from it in 1893 by Birch ('reek and the neighboring streams. The following year Circle City, the pioneer of the Yukon mining towns, was founded and became the headquarters for all the miners of the region.

#### KLONDIKE AND BONANZA CREEK.

Early in August, 1896, a California miner named J. F. Butler drifted into the little trading post of Dawson, where some rich strikes had been made on the east bank of the river. He tried the western bank without success, and hearing rumors of great luck on his neighbors' part (they had, in fact, taken out \$40,000 in coarse gold), he crossed the river and began to work up the Klondike, a small tributary stream which the knowing ones had passed by as offering no chances whatever. The latter afterward declared, with all the scorn of the initiated, that it was chee chacoe (tenderfoot) luck; but however that may be, Butler took out \$10,000 in ten days from his first prospect hole four miles above Dawson. Almost simultaneously came the Bonanza Creek "strike" by George W. Cormack on August 12. Cormack had an Indian wife, and it is said that his attention was called to this locality by his Indian friends. His first work on the Klondikea corruption of the Indian word Thron-diuck, meaning "fishing grounds"—was primitive, he having to carry the gravel for some distance to water to pan it; but as he, with two other men, washed out \$1,200 in eight days in this fashion. he saw the value of the "find," and returning to Circle City for food, spread the report which left the other Yukon towns deserted. This was in August, 1896, but it was nearly a year before the world heard of the discovery and had the proof brought to it on the Excelsior and Portland, although William Ogilvie, government surveyor, had made reports to Canada, and rumors were The Excelsior brought down from St. broadcast. Michael \$500,000 worth of gold, most of it from Forty Mile Creek. A little later the Portland sailed into Seattle with \$700,000 of Klondike gold and six of the lucky pioneers on board. Seattle was stirred to its very depths. Five thousand people crowded around the dock, and as the gold came down the gang-plank packed in "blankets, tin cans, canvas sacks, even in the legs of old trousers," the onlookers went wild with enthusiastic excitement. An eve-witness reported that one weather-beaten old fellow was so overcome by this ovation and by the actuality of his good fortune which it impressed upon him that he proceeded to shower among the crowd a handful of nuggets worth some \$300.

The news ran along the western coast like wild-fire. The north pole changed its location to the spot where the one hundred and forty-first meridian crosses the arctic circle for all adventurous spirits—a golden pole toward which every compass pointed. From that day to this the excitement has been increasing, despite the

swarm of daunting and contradictory reports which have been floated to meet the public demand for news. Since this time the gold that has reached the United States from the Yukon foots up about **\$**6,000,000. The gold brought out of the Yukon be-

THE GRACEFUL CHILKAT DUGOUT IN TAIYA BAY.

fore the arrival of the Excelsior was not considerable, authority giving the output of the Yukon basin for the ten years preceding the Klondike discovery at about \$3,000,000, while within two months after the discovery \$5,000,000 were taken out. It must be said, though, that this "two months" is hardly a fair statement. True, it was washed out in that time, but the result also represented much time and labor during the previous eight or ten months in accumulating part of the sands sluiced in that two months. It is interesting to know that it took the first eight months of mining in California to get out that amount, underinfinitely more favorable climatic conditions.

## THE GREAT GOLD BELT.

The highest authority on Alaska, Dr. W. H. Dall, of the Smithsonian Institution at Washington, a geologist of note, says: "The gold-bearing belt of Northwestern America contains all the gold-fields extending into British Columbia and what is known as the Northwestern Territory of Alaska. The Yukon really runs along in that belt for five or six hundred miles. The

LOOKING UP THE TLEHINI VALLEY. Photo by J. F. Pratt.

bed of the main river is in the valley. yellow metal is not found in paying quantities in the main river, but in the small streams which cut through the mountains on either side. Mud and mineral matter are carried into the main river. while the gold is left on the rough bottom of these side streams. In most cases the gold lies at the bottom of thick gravel deposits. The gold is covered with frozen gravel in the winter. During the summer, until the snow is all melted, the surface is covered with muddy torrents. When the summer is over and the springs begin to freeze the streams dry up. At the approach of winter, in order to get at the gold the miners find it necessary to dig into the gravel formation." This is definite and authentic testimony, but the Klondike miners have given me this more intimate explanation of how the gold placers are found and worked.

## LOCATION OF THE PRECIOUS METAL.

Their experience has taught them this simple rule of nature, that the disintegrations of gold-bearing quartz veins are washed down the steeper declivities, and where the streams assume a more horizontal current form a bed of the small particles of stone and mud and gold (flour, sand, and nuggets). The constant action of the water moves the lighter of these substances first, with the heavier—the gold—always tending, on account of its weight, to settle deeper and deeper. With this con-

THE "EAGLE'S NRST" ON THE LEWIS RIVER BELOW THE LITTLE SALMON.
(Photo by W. Ogivie.) By courtery of the Canadian Magazine.

stant action for ages, it sinks to "bed rock" and lies there in the hollows and against the rough edges, and with its own weight collects and forms the "pay streak." Time has lodged this streak thickest in the concavities of the "bed rock," and the value of a placer is largely dependent on these concavities in the area of a claim; and as this condition is liable to vary with each square yard, it lends the element of chance.

This is what makes it possible—and it is alluring to the gold-hunters—to find a "bed-rock" formation where fissures or a cross-ribbed fault may have served nature as bars, acting just as cleats in a sluice-box. Here the thickness of the "pay streak" may be unusual, and when this condition exists at a point in the stream where the swift current is above and a stagnant current below, it adds to the settlement of gold in these concavities. The reason that the gold seeks the lowest level makes the center of the "bed rock," or the lowest part of the crescent, the receptacle for the most valuable deposits.

## THE BLIND CHANCES OF PROSPECTING.

But there is another element of chance where the stream may generally be known as rich: The most valuable of these "pay-streak" deposits is on the "bed rock" of the older or more permanent course of the stream, which has in many cases been changed by a landslide or a depression; and it is the "bed rock" of the older course which holds the cups of gold. For this reason two miners of adjoining claims will often find their fortunes vary, and as there are no sure surface indications "bed rock" must be reached. the "pay streak" disclosed, and its course and limits drifted out. And it is for this reason that often the bench claims, away off to the side of the valley, will show upon digging the shaft that the bed of the older stream lay there.

The general rule is that a locality rich in placer gold is rich in quartz veins, and this will probably be found true in the mountain ranges that feed the Klondike, Indian, and Stewart rivers; but there have been frequent instances where such was not the case, due to a greater erosion, or a detritus formation feeding the streams, or a more constant milling or sluicing by that greatest of all miners, nature. Professor Wright, of Oberlin College, says on this point: "The amount of gold found in the placer mines is evidence not so much perhaps of a very rich vein as of the disintegration of a very large vein."

## IV.—ALASKA'S HISTORY AND RE-SOURCES.

The Klondike River is in the Northwest Territory of British Columbia of the Dominion of Canada, but this Northwest Territory got its birth from Alaska and its history grows out of

Alaska. This name, Suggested by Charles Sumner, is from the aboriginal word Al-ak-shak, and means "a great country." There are clouded records of the discovery of this land by navigators before the time of Vitus Bering, but to

him is accorded the first actual explo ration and occupation in 1741 when at the head of an expedition sent out by Queen Catherine of Russia, which the ambitious Peter the Great had forwarded with the prime motives of aggrandizement and extending the limits of trade. The country was explored after that along its coast by numerous navigators, but generally with the trading intent, until in 1799 Emperor Paul VIII. of Russia granted a charter to the Russo-American Fur Company to trade with the natives and uses to which much of this vast area may be put. A. P. Swineford, who was Governor of Alaska in 1886, gives evidence in regard to this as follows: "Nowhere in my home travels, from Lake Superior to the Gulf of Mexico. from

TAGISH LAKE AT 4:15 A.M. IN SUMMER.

(Photo by W. Ogilvie.) By courtesy of the Canadian Magazine.

drive bargains to suit themselves—a privilege renewed in 1839. The trade was in furs and ivory and speedily assumed important proportions. New Archangel, now known as Sitka, was the principal settlement of this company, although they established forty stations at other points on the coast and inland during the sixty-four years of their occupation.

It is said that in 1867 some men who thought they saw profit to themselves in the purchase of these frozen lands approached Secretary William H. Seward with a view to securing his cooperation in making the purchase from Russia; but on investigation Mr. Seward became convinced of the value of the lands to his Government, and opened negotiations with Russia which quickly resulted in the fixing of a price of \$7,200,000 and in the signing of a treaty on March 30, 1867. This treaty was proclaimed June 20, and actual possession taken by the United States, through Gen. Lovell H. Rousseau, United States army, on October 18, 1867.

THE RESOURCES OF THE GREAT NORTHWEST.

Aside from the mineral possibilities in gold, copper, and coal, there are doubtless many other

Washington to Sitka, have I seen more luxuriant vegetation than in Southeastern Alaska. I find the hardier vegetables all growing to maturity and enormous size." The miners from about Dawson City will tell you (the miners who know more things than gold) that gardens will be raised on the arctic circle which, if limited in variety, will yet produce the vegetable needs of the mining population when once intelligent effort is directed to them.

William H. Seward while on his travels around the world wrote from Berlin as follows: "We have seen of Germany enough to show that its climate is neiter so genial, nor its soil so fertile, nor its resources of forests and mines so rich as those of Southern Alaska." Miner W. Bruce, long a resident of these coast lands, says: "The great precipitation and humidity of the atmosphere in Southern Alaska cause the entire coast region to be clothed in a mantle of perennial green. Vegetation is dense and forests magnificent. The soil is rich, though in the heavily timbered section it is shallow; and from the most eastern point of the Territory to Kadiak root crops are easily grown. Radishes, lettuce, carrots, onions, cauliflower, peas, turnips, cabbage.

beets, celery, and potatoes yield prolifically. On one-sixth of an acre at Sitka eighty bushels of potatoes have been raised. It was, however, a plot of ground that had been formerly used by the Russians as a garden and was carefully prepared. Strawberries grow with the greatest spontaneity, and have a flavor equal to those of

ing business, while prosecuted north of Bering Strait, is extensive, there being 75 vessels en gaged in the capture and traffic.

## THE SUPPLY OF GAME.

The game of the country is limited, and will rapidly disappear with the army of Win-

chesters being taken there. Mountain sheep can be killed occasionally after hard hunting, and less often a moose or a bear: on the southern coast there are some deer and elk. The white rabbits are scarce and hard to find. There is also a small gray squirrel found in great numbers. I have seen them crossing a wooded valley in such numbers that I have amused myself by hitting at them with sticks as they scampered about the underbrush. apparently amused

## INDIAN FISHERMEN.

He is a rare fisherman, though, one of the most adroit I have ever seen. His method is this: He cuts a stick two inches in diameter and about twelve feet long, to an end of which he attaches, with sinews, a double-pronged hook about three inches across the bend; and for his sport he selects a place in the creek between the

LOOKING DOWN TAIYA INLET (LYNN CANAL.)

(Photo by W. Ogilvie.) By courtesy of the Canadian Magazine.

southern latitudes. Some extensive fields of strawberries are found under the very shadow of the glaciers, both at Glacier Bay and at Yakutat."

The prevailing varieties of timber in South-eastern Alaska are spruce, hemlock, red and yellow cedar. The spruce and hemlock grow to very large size, frequently being found 100 feet high and 6 to 8 feet in diameter. The yellow cedar is a beautiful wood, takes a high polish, and makes an admirable substitute for mahogany.

There are between thirty and forty salmon canneries in Alaska, representing an investment of more than \$4,000,000. They employ 5,000 or 6,000 people and pack from 600,000 to 800,000 cases a year. This is the greatest industry of the country (excepting the sealing) and is rapidly increasing. The Chinese furnish the best labor in the canneries, for the Tlingit Indian, while industrious to a degree, cannot be depended upon; he is too apt to start off without notice on a prolonged "potlatch" or go berrying or fishing in the height of the salmon run. The whal-

pool and the riffles. Wading in nearly to his hips, he will reach the pole to the bottom just below the riffles and feel about. Presently you will see him give a deft jerk, with a twist to it, and he lifts out of the water one of those red speckled beauties weighing five or six pounds.

I stood one day on the Taiya River and saw a young buck catch over twenty trout in this fashion in less than an hour, and while I heard anglers say it was an unsportsmanlike proceeding, it impressed me, and I am sure it was the perfection of sportsmanship, for it required a sense of feeling and deft movement of the wrist that comes only from an innate love of capture and long practice. I tried it for an hour and I bruised but one trout and killed him with gashes; the Indian smiled at the pale-face, while looking at his own pile, each one hooked squarely through the center of the body, sideways, with but a little red spot, looking much like its specks, to show where the sharp point had entered and passed through.

## THE ALASKA INDIANS.

The Indian from the Pacific coast of Lower California to north of St. Michael gradually changes from a lithe, copper-colored warrior to the stockier and lighter-colored man of the Puget Sound coast. He becomes a little shorter and stouter of stature and more placid of temper as you go up the Lynn Canal, while on the Bering Sea coast he is more nearly

an Esquimo; on the north coast he is a real Esquimo. Between the two there is still a distinct line. but each has lent his blood to the other as well as his thought and mode of life. These southeast coast people are puzzles to the ethnologists, so many curious distinctions occur between different tribes. The Indians along the southern coast-the Tlingits -are an intelligent. peaceful, and for Indians a thrifty race. especially those who have come in contact with the white man. From Wrangell, Juneau, and Sitka some of the boys have been sent to the Indian schools in the United States, but they invariably return to their tribes and take up the old life of hunting the moose and bear and fishing and paddling those gondola-like canoes that so gracefully stretch their necks to show their beautiful swaying reflection in the still waters.

I was at Crater Lake last summer—that desert spot across the famous Chilkoot summit—and was discussing with several young men football as played in the Eastern colleges; two in the party had been well-known college players. I noticed that a young Indian "packer" who sat by was listening intently to the talk. At last Voorhees, a half-back from H----, began to tell of a game with the Carlisle Indians, when this young Chilkat said modestly that he had played in that game and had given Voorhees an injury that he had What a small world! There up just described. under the arctic circle these two men of different races met again, but under such different conditions.

#### CHARACTERISTICS OF THE TLINGITS.

These Tlingits are a picturesque people, but it is a wild beauty they put into their dress and into their blankets and boats and baskets. The colors are very rich, the reds and blacks predominating—evidently a tribute from Japan—and the designs are mostly bold stripes. The totem-poles are their chief accomplishments in art, and suggest another borrowing from the Mon-

LAKE LINDEMANN.
(Photo by W. Ogilvie.) By courtesy of the Canadian Magazine.

golian in their grotesque hideousness of expression; but it all takes hold of you as the orgie of a confined but luxurious embodiment of a real art instinct—a desire to express a religious idea, be it ever so fraught with devils. The totem is the "family tree" or genealogy, be-

THE CARIBOO ROAD, NEAR CRAPMAN'S BAR, UPPER FRASER BIVER.

ing a combination of the different tribal insignias. This picturing with the brush or the knife lends itself to every article of use; the horn spoons have a symbol carved on their handles, the pipes take crude shapes of animals and birds that have a religious significance, while conventional forms of horned monsters are woven into their blankets and cut into the medicine man's charms, which are made of human bones, and serpents are painted on the faces of the Indian girls.

The most beautiful creature of a native race I have ever seen was one of these Tlingit girls. She was not more than seventeen, tall enough and lithe enough, with a complexion that was like one of those brown and transparent shadows in a Jonett portrait; wound about her shoulders was a blanket of colors that robbed the deepest tones from the grass and the sunset and it fell gracefully in tassels about her limbs; a skirt of royal red hung above bead-wrought moccasins that

seemed to touch the ground only for graceful poise; in her ears dangled half moons of brass; her eyes were as black as her hair, which copied the Madonnas in its parting. It was Sunday afternoon: church bells were ringing and under her arm was a Bible. She was moving along the path that skirts the coast at Wrangell, and rows of tall totem-poles were grinning down at her; her destination was the quiet of that house of God, and its quiet was in her eyes. When I noticed her weighted lids and detected a devout clutching of the little Bible, I thought of the traditions of her race and wondered how she reconciled the two, for her very garb carried designs of the inherited religion.

## THE NOBLE SCENERY.

There has long been a tourist trip to Alaska from San Francisco or Seattle, to Victoria, Wrangell, Juneau, Glacier Bay—where is seen the wonderful Muir Glacier—and returning by Sitka. It has been pronounced one of the most interesting summer voyages that can be made in any seas, but the accommodations have been poor, and there has never been enough business to stimulate the ship companies to make this trip better known to the world.

It is all in quiet waters, except two or three bays which are quickly crossed; thousands of islands lock the coast and much of the trip is in narrow straits glassy with calm. Many places on the route are so narrow that it is like a journey by river, only the current is lacking. description covers the whole picture, but it is like a great canvas on which one never tires looking, finding always a new beauty in the detail. vertical sweep of the eve shows below the waters are at the mercy of gentle airs; their robin'segg blue blends into shadows of green where the rank undergrowth of vine and wild flowers grows to its edge; above is a forest of firs, up, up until a clean line of bare granite begins. like a velvet haze and on it hang glaciers, feeding rivulets that dance down from ledge to ledge, making white spots where they show through the green, and all the while singing a joyous song to drown the full-throated birds. And away above and back beyond, until they are lost in the clouds, are mountains and peaks of snow, illimitable and inspiring.

But just now, of all times, the human interest is in the remarkable exodus of the gold-seekers. It has many points of view, and for those to whom the luxuries of a Cunarder are not a necessity, a journey hence during the coming summer will lodge a memory in the mind that will remain forever from its pure novelty.

## ZOLA, THE DREYFUS CASE, AND THE ANTI-JEWISH CRUSADE IN FRANCE.

## I.—THREATS OF A NEW ST. BARTHOLOMEW IN FRANCE.

IN correspondence cabled from Paris to New York, Count Esterhazy is quoted as having said to an interviewer on February 14:

"If Dreyfus were ever to set foot in France again there would be one hundred thousand corpses of Jews on the soil. If Zola is acquitted there will be a revolution in Paris. The people will put me at their head in a massacre of the Jews."

Unquestionably Major Esterhazy has been the hero of the mob since his acquittal by the military court that was charged with investigating the grave accusation that he was the real culprit in the matters which have been laid at the door of Dreyfus. And in spite of his boastful exaggeration, Esterhazy is probably right in his assertion that the vindication of Dreyfus by Zola would be the signal for a fearful outbreak against the Jews.

On August 24, 1572, on the ringing of the tocsin in the tower of the Church of St. Germain l'Auxerrois in Paris, began a massacre of Protestants which has left a permanent bloodstain on French history. Before the slaughter had ceased a multitude, variously estimated at 30,000 and 100,000, had been massacred. From that day St. Bartholomew has become synonymous with cold-blooded widespread conspiracy to massacre. Lest the world should forget its significance, the Supreme Pontiff struck a medal in honor of the extermination of the heretics, sang a Te Drum in praise of the massacre, and proclaimed a year of jubilee.

And now it appears, upon the testimony of the leaders of the opposing camps in France, the world is once more threatened with a St. Bartholomew massacre. The victims this time will be the Jews, not the Huguenots. That is a detail. Huguenot and Jew alike are human.

"Twere long and needless here to tell" how the immediate cause of the prevalent irritation came to threaten civilization with so prodigious a crime. A moment's reflection, aided by the events of the last fortnight, serves to show that the Drevfus case is but a triviality compared with the prodigious tumult of passion and prejudice that rages throughout the republic.

The Dreyfus case is but as a dead dog tossed hither and thither by the surging billows of a great ground-swell arising no one exactly knows how, or whence, or why. The dead dog did not and could not rouse so great a commotion.

A few words will suffice to dispose of this dead dog. Alfred Dreyfus, an Alsatian Jew holding a commission in the French army and having access to the secrets of a somewhat leaky War Office, was suspected of having communicated information to a foreign power. arrested and tried by a court-martial sitting in secret, found guilty, and sentenced to degrada-He is now a tion and penal servitude for life. close prisoner in an iron cage on the Devil's Isle, in the French colony of Cayenne. His wife, with influential friends who believe in his innocence, have never ceased to agitate for a revision They secured considerable supof his sentence. The agitation, gaining strength from the absence of any authentic record of the evidence on which the court-martial had acted, succeeded at last in convincing M. Scheurer-Kestner, a Vice-President of the Senate, that Dreyfus had been wrongfully convicted. Then the matter was brought forward in the Chamber. Members refused to reopen the case. Repeated demands for a retrial were countered by a declaration that the matter was judicially decided, and that a regard for the honor of the army rendered it impossible to discuss the matter on its merits.

By way of vindicating Dreyfus, a charge was brought against another officer, one Esterhazy, which was promptly disposed of as baseless by a military tribunal. Popular excitement grew day by day as the struggle went on. The fact that Drevfus was a Jew afforded the anti-Semitic leaders an opportunity of inflaming popular passion against the Jews, who were represented as attacking the honor of the army in the interest of a Jewish traitor. So successful were they in their campaign that in a few weeks they have brought everything into question. Scenes of outrageous violence disgraced the tribune of the Chamber, where deputies bespattered with blood and ink showed that the temperature had risen to a point far beyond relief by mere articulate utterance. In Paris the troops were called out to maintain order in the streets at the point of the bayonet. In the provinces and in Algeria order was not maintained. Sav-

M. DRUMONT.

age attacks upon the persons and property of the Jews occurred in various places—which were hailed with savage glee as a foretaste of the things to come. The question of the guilt or innocence of a single Jew is becoming merged in the problem of the fate of the race and of the republic.

In France it is always the unexpected which happens. Therefore those who shrug their

shoulders and ridicule the absurdity of the notion that France, France of the Third Republic, could possibly reproduce the sanguinary horrors of St. Bartholomew a century after the French Revolution, will do well not to be too cock-sure. Meanwhile, let them listen for a moment to the voice—the potent voice—of M. Drumont, whose paper day by day sounds like a tocsin peal, the summons to the new St. Bartholomew.

## II.—M. DRUMONT, WHO RINGS THE TOCSIN.

## AN INTERVIEW BY VALERIAN GRIBAYEDOFF.

[In order to obtain an authentic word and pen picture of the leader of the anti-Semites, Mr. Gribayedoff, whose work has long been familiar to the readers of this REVIEW, was commissioned to wait upon Mr. Drumont and obtain from him a direct and authentic statement of his views as to the present position and future prospects of the anti-Semitic movement in France. The date of the interview was January 23.]

BY this time it must have become clear, even to the least observant or the most skeptical that the Dreyfus-Esterhazy affair was but an acute symptom of a condition in France which has been a long while assuming form and con-The hasty and evidently ill-founded accusation brought against Major Walsin-Esterhazy, Catholic, by Matthien Dreyfus, Jew, has acted as a spark applied to a powder train, causing an explosion of anti-Semitic feeling all over the country as well as in Algeria. As I pen these lines I hear the cries out in the streets of: "A bas les Juifs! A bas les Juifs!" broken now and again by the clatter of the cavalry horses' hoofs on the asphalt, and the measured tread of the Municipal Guards on their way from one post of duty to the other. Thus it has been going on from day to day. Dreyfus is forgotten, Esterhazy is forgotten, Scheurer-Kestner is forgotten, even Zola, the most aggressive of the socalled "Dreyfusards," is little mentioned for the The one cry which resounds from north to south and from east to west, the rallying cry of thousands and hundreds of thousands of French citizens, is "A bas les Juifs!"

## THE CRIME OF THE JEW.

This cry sums up the situation. Rightly or wrongly, the question of opposing "Israel's encroachments" has become the one burning issue. Upon the anti-Semitic platform stand the most diversified elements — Ultramontanes, Freethinkers, Radicals, even, as it now proves, a considerable fraction of the Protestant population. They may be totally at variance with one another in matters of religion, politics, and economics,

but they are firmly of a mind on one proposition, and that is that "the Jew must go!" Numerically the Jew forms one-five-hundredth part of the population of France. By fair or foul means, more particularly by the latter, say the anti-Semites, he has secured possession of a quarter of the personal property of the country—twenty milliards of francs out of eighty. (The figures are taken from the Philo-Semitic Matin.) He controls the markets, and owns the executive, the legislature, and the judiciary. He would like to secure control of the army, but this will prove the rock against which his ambitions will be dashed to pieces! So sayeth the anti-Semite!

### THE ANTI-SEMITE LEADER.

To the average Anglo-Saxon mind anti-Semitism is of course incomprehensible, as a psychological condition or phenomenon out of keeping with the spirit of the age and of modern institu-Nevertheless, the question in general has become so hopelessly confused in certain English and American periodicals with the judicial intricacies of the Dreyfus case, that it seems next to impossible for the reader to separate the one subject from the other. As a step in this direction it may be appropriate to present the anti-Semitic version of the case in the words of the man who is universally credited with having created this peculiar sentiment among his fellowcountrymen, but who is satisfied with the honor, as he often says himself, of having crystallized it and given it its present direction, the sentiment itself being the natural outcome of the prevailing conditions. I refer of course to Edouard Drumont, author of "La France Juive" and editor of La Libre Parole.

Edouard Drumont lives in a quaint out of theway corner of Paris, a narrow thoroughfare that runs into the Rue de l'Université, a few minutes' walk from the Eiffel Tower. The stranger might fancy himself here in one of the side streets of some sleepy provincial town were it not for the distant hum of the city's traffic. There is such a forlorn and abandoned look about the whole place. A white-haired woman opens the front door of the musty and rather uninviting edifice in answer to my bell, and ushers me into a conventional French parlor. M. Drumont is at home. though all Paris is in a ferment this gray Sunday afternoon, although infantry and cavalry occupy the leading thoroughfares, and the garden of the Tuilleries has been turned into a military encampment prepared for every emergency, Drumont sits at home, engrossed in the preparation of the next day's editorial, not a soul in the place but himself and the aged housekeeper. A curious contrast, indeed, the calm, the almost death-like stillness of this household, and the turmoil and excitement its occupant's vigorous pen has created at this moment within the bosom of the huge Awaiting the "master's" appearmetropolis. ance. I had a chance to glance at the paintings on the walls. Drumont is evidently something of an art connoisseur and a lover of the antique. He has three fine specimens of the religious art of the Italian school, which recall some of the masterpieces in the Louvre. There are also numerous bibelots of undoubted antiquity and value on the cabinets and small tables around. There is a fine life-sized painting of himself, the work of the lamented painter, Dupuy, killed some vears back in a duel.

## THE FIN-DE-SIÈCLE PETER THE HERMIT.

Presently the door opens and Drumont enters. The great high-priest of anti-Semitism looks his part to a T-which is that of a fin-de-siècle Peter the Hermit. Instead of the frock and cowl he wears a black velvet coat and a loose black necktie, and instead of the tonsure a shock of raven black hair that falls down to a level with his collar and gives his head an almost leonine appear-Despite a slight stoop—due no doubt to sedentary occupations and the consumption of midnight oil—the first characteristic that impresses the observer is the man's superlative strength, both physical and intellectual. The short neck and broad shoulders can only belong to a Hercules, the keen penetrating eye, the aquiline nose, the heavy jaw, partly hidden by a scrubby beard, and the firm mouth are indications of an iron will and of superior intellectual force, without which qualities no apostle can stamp his views upon a community, be his mission good

or bad. But if there is much in the man's personality to bring to mind the crusader of old, there remains quite enough of the fin-de-siècle pamphleteer to explain why he has rallied around him not alone the Catholic element, but so many among the most radical and advanced thinkers of modern Paris. He possesses to an unusual degree that gift for polemics, the delight of every true Parisian newspaper reader, combined with rare power of analysis and a remarkable clearness' of expression. He is a fluent and vigorous speaker, He emphasizes his remarks with fremoreover. quent gestures, ofttimes raising his hands above his head like a diver, and bringing them down with one sweep to a level with his knees. first remark after I had explained the object of my visit was as follows:

## ENGLAND AND HER JEWS.

" Mon Dieu, Monsieur, What use is there of my saying anything for the benefit of the English speaking peoples? As far as I can judge from the English press, the Jewish side of the story is the only one that seems to pass current on the other side of the channel. The Jews must be influential enough over there also, since they are able to control all the channels of news and of publicity, and to impose their way of thinking on the public. Yet even England has little reason to congratulate herself on her alliance The Jew Disraeli renwith the race of Shem. dered her a poor service when he left her the legacy of Russia's hatred and suspicion. Nor has she profited very much by the Jameson raid organized by the Jews, Lionel Phillips, Alfred Beit, Joel, Barnato, and the rest of them, when as usual the Aryan acted as the Semite's catspaw and received cold lead for his pains."

## NO EXIT BUT BY REVOLUTION.

"But to come to France," I remarked. "How do you think this trouble is going to end?"

"Ah," came the reply, with a shrug of the shoulders, "what shall I answer? It seems a serious statement to make, but to tell the truth, as things are, I see no way out of the present awful situation excepting by a general revolution, which will sweep away our present masters and replace them with some form of one-man power—not necessarily an emperor or a king, but some kind of dictator, a strong, patriotic man who will put an end to Jewish supremacy and clean out our Augean stables of vice and corruption!"

Having got this far, the speaker's heavy frame leaned over, and swaying his arms in characteristic fashion, he plunged earnestly into the subject, scarcely stopping for breath.

## THE JEW BEFORE 1789 AND SINCE 1870.

.. Que voulez vous, Monsieur? When a malady is as far advanced as ours, heroic remedies alone avail. Let us glance back a little. Before 1789 there was no need of anti-Semitism, and none existed. Why? Because at that period France possessed a stable, well-organized government. The Jew was properly considered an enemy of Aryan and Christian society, and without being abused or ill-treated he was kept in his place, and was subjected to certain necessary restrictions which rendered him harmless. Whatever its faults may have been, the ancien régime had at least the economic interests of the masses at heart and protected them against encroachments. Public thieves and plunderers invariably received The finances of the government were their due. well administered. But with the revolution of 1789 everything changed. From a regularly constituted homogeneous society, France, as one writer has expressed it, broke up into a heterogeneous mass of atoms. With the shattering of the old idols, with the repudiation of the old ideals, with the disappearance of the traditions, French society lost all cohesion; and when the lew came upon the scene, les mains libres, entranchised, untrammeled by restrictive legislation—the Jew, with his marvelous cohesion, his thorough organization, his racial solidarity—the Jew. with his mind disciplined, his wits sharpened by ages of battling against mankind—the Jew, I sav, was bound to become the master.

"And he has become so with a vengeance. Look at the situation at present. Does he not control everything in France? We French had a few breathing spells from his exactions at various intervals earlier in the century. Things were not quite so bad while some of the monarchs reigned over us, but since 1870 we have been absolutely at the mercy of the Jews. The fall of the empire was the signal for immediate operations on their part. They did not even have the decency to wait until peace had been concluded, but then and there, while France was struggling in the throes of a cruel war, the Jew Cremreux and his clique rushed through a law conferring the franchise, not on the brave Arab population of Algeria that had sent its sons to defend this country's soil side by side with its own children, but on the Algerian Jew—that vilest of beings, usurer, middleman, parasite, the object of undying contempt and loathing on the part of his Mohammedan neighbor and former master. Naturally the consequences of this monstrous act were easy to foresee. The Arabs resented the indigmiy of being discriminated against in this flagrant manner by rising in revolt, and the troops we

might otherwise have used against the Prussian invader had to be employed in crushing the Algerian rebellion. Even Anatole Leroy-Beaulieu, Philo-Semite though he be, is forced to admit that Cremreux's act was that of a Jew, not of a French patriot. I say it was treason against the French nation, worse treason than Dreyfus' crime. Do you wonder that we have never had pear in Algeria since—especially when you know to what extent the Jew has taken advantage of his political privileges to despoil and impoverish French colonist and native Arab alike?"

## THE DOOM OF THE JEWISH MONEY-KINGS.

The speaker having paused for breath, I ventured to suggest that a rigid and impartial application of existing laws against usury, monopoly, disloyal competition, and the other misdeeds laid to the door of Israel might suffice to eliminate abuses and evils of which the anti-Semites complain.

"No, a thousand times no," returned M. Drumont with energy. "The existing laws would never meet the requirements of the situation. What we demand is special legislation, such as existed to some extent before 1789, that will make it impossible for the Jew to despoil us further. The Jewish money-kings who rule this country must be rendered harmless, their shameless financial maneuvers, their monopoly of the country's wealth must end, the tentacles of the monster must be severed. If their immoral sources of revenue are cut off the Jews may begin to listen to Dr. Herzl's sensible advice, and decide to return to Palestine en masse."

## AN UPRISING OF THE PEOPLE.

- "Do you anticipate any legislation of the kind in the near future?"
- "I certainly expect nothing from the present government. As I said at first, there seems no salvation for France excepting in an uprising of the people. Remember that with all their acumen and judgment in financial and business matters. with all their foresight in everything appertaining to the accumulation of wealth, the Jews are singularly blind to the realities of their own social and political situation. They have ever been thus from the commencement of their history - an obstinate, stiff-necked people, who would never yield unlesss compelled to by the most bitter experience. Never was this mental blindness more apparent than it is to-day. Half the Jews you meet will tell you even at this hour that anti-Semitism is a transitory mania, confined to a weak but loud-mouthed minority. They have been beaten all along the line in this Dreyfus

case; their methods and maneuvers to saddle the crime on an innocent man have been exposed and held up to public reprobation, and yet they are working away as hard as ever to attain their damnable purposes. They are buying up newspapers and disseminating lying statements all over the country. They are hiring anarchists to break up our meetings and assault the partici-Nothing seems to open their eyes to the danger threatening their own race. It has grown to be a veritable mania with them, this determination to ride rough-shod over the feelings, desires, and convictions of the Arvan community, justifying but once more the ancient saying that whom the gods destroy they first make mad.

## PROSCRIPTION OR MASSACRE!

"It is this blindness which would cause them to fight tooth and nail any attempt to introduce the special legislation I alluded to just now, even though their only hope of salvation lies therein. For, after all, it is better to have one's wings clipped than to be killed outright—which is the fate that awaits a large number on the great day of reckoning-la grande lessive! For my own part, as a humanitarian, I would much rather this day never came, and that, instead, our evils were abolished by an evolutionary process. That is why I am really acting as a friend to the Jews when I advocate the introduction of laws placing them on a different footing from the rest of us and withdrawing from them certain rights of citizenship. They never should have been admitted into the great French family anyhow. They are as different from us as night is from Their ideals, their methods of thought, their whole mental make-up, are different from They have formed part of the body politic for over a hundred years, and yet they have never understood us-they have never succeeded in comprehending the national genius of France, they have never desired to become assimilated with us. On the contrary, they have done everything in their power to lower our standards and degrade our civilization. present condition of decadence, with its filth, its vice, its pornography, can be traced directly to Jewish sources. Not content with robbing us of our worldly goods, they have attacked the ramparts of our virtues, our morality, and our religion. But the day of reckoning will come!"

This was said with much warmth and energy and in a tone of unmistakable conviction.

## THE ANGLO-SAXON A MATCH FOR THE JEW.

·· But, M. Drumont," I remarked, "there are Jews enough in England, and a million of them in the United States, and yet in neither country

can it be said that anti-Semitism exists in the same way that it does in France?"

"Ah, that is altogether a different proposition," answered the speaker, raising his eyebrows and throwing his head back. "That is a different proposition. But you must not compare our people with the Anglo-Saxons. The Englishman, for example is fitted much better by nature to cope with the Jew than the Frenchman. He is cold-blooded, prudent, long-sighted and a born 'shopkeeper'—I use the word in the less offensive sense, of course. But what renders him unassailable even more than this are his admirable political institutions, the slow and solid work of successive ages. England has for centuries enjoyed a degree of liberty unknown to us in France. Her citizens are adults, politically speaking, while ours are the veriest children. That is why the English can hold their own against the onset of the Jewish hordes, while our people succumb. See how quickly the people of the United States disposed of the Chinese question. It did not need a bloody revolution to The Jew would fare the same way settle that. both in the United States and in England if he proved too dangerous. He knows it himself, and not having been blinded over there by a hundred years of battening on the public wealth, as in France, he is comparatively innocuous. not in the temperament of the French to resist encroachments and oppression by soher systematic action. You could not even organize a successful boycott against the Jews here. The Frenchman will mildly stand every form of injustice and tyranny up to a certain point, but once beyond that, he will suddenly arise and sweep everything before him. French history is full of these examples. The Jews are preparing things for just such another; they are sowing the wind and will reap the whirlwind."

M. Drumont talked on for a while in this strain, until I asked the concluding question on my list, which was whether he had any reply to make to the charge that his opposition to the Jews was based on religious grounds, and that his campaign was backed by the Ultramontanes, the Jesuits, and certain dignitaries of the Roman Catholic Church.

## THE CATHOLIC CHURCH AND ANTI-SEMITISM.

"Take this down word for word," he exclaimed, drawing himself up at full height "These statements are pure inventions on the part of the Jews. I am a Christian and a Catholic, it is true. It is in my blood to be so, for I was born a Catholic and am descendant from Catholic stock. But what can this have to do with my anti-Semitic sentiments, I ask you?

Anti-Semitism is an economic, not a religious war. In our ranks you will find men of every religious belief, also atheists and agnostics. As to the Church dignitaries or the Jesuits being interested in our movement, I know absolutely nothing about that. I have no personal acquaintanceship, no relations with any cardinal, bishop, or Jesuit. I never see any, and, in fact, the higher clergy are rather inimical toward the movement. They are the servants of the Jews as much as our magistrates and politicians. If we have any friends among the hierarchy it is in the lower ranks. The poor village curé—who receives a miserable pittance from the govern-

ment and is treated like a lackey in return—being in touch with the masses and understanding their needs and their troubles, naturally wishes us success. No, we are not clericals: and for my own part I would even hail the separation of Church and State as a salutary reform."

Thus ended the interview. M. Drumont accompanied me to the door, and as a parting admonition added earnestly: "Whatever you say, do not forget to lay stress on the blindness of the Jews in this crisis—that is the most dramatic element of the situation—it is almost pathetic!"

PARIS, January 24, 1898.

## III.—DR. NORDAU ON THE JEWS AND THEIR FEARS.

## AN INTERVIEW BY ROBERT H. SHERARD.

[No Parisian Jew is so famous as Dr. Max Nordau. His books have made the tour of the world, and he has last year added to his other achievements the exploit of acting as Aaron to Dr. Herzl's Moses in that Zionist movement which has cheered Europe with the vision of a new Exodus. In order to obtain from so influential and well-known a leader of the Semites a calm judgment upon the question as to the peril with which his race is threatened, the Review commissioned Mr. R. H. Sherard to procure from Dr. Nordau a statement of his views on the subject.]

BY no one in Paris is a more alarmist view of the present anti-Semitic agitation in France taken than by Dr. Max Nordau. Received by him in the little study of his modest apartment in the Avenue de Villiers, he said, in answer to my inquiry whether anything was to be feared from the present state of things: "We are quite simply marching in France toward a new St. Bartholomew s Eve, to a massacre which will only be limited by the number of Jews whom the Catholics can find to knock on the head. I believe, and most emphatically, that the slightest relaxation in the present display of force on the part of the government would lead to a general slaughter of the Jews throughout the country. This massacre would only be limited by this: that it is not in France, as in other Latin or Ligurian countries, an easy matter, as it is in the Slavonic and Teutonic countries, to distinguish the Jew from the Christian. For instance, the type of the southern Frenchman is most pronouncedly a Jewish one. So that the rioters might hesitate in striking down as a Jew a man who might be only a southern Frenchman."

## A BLOODY RECORD.

"But have not the Jews, on the whole, been favored in France?"

"Certainly not! In France, as in every other country, the history of the Jews is a record of

blood and of suffering. At the time of the Crusades, the gallant knights, sallying forth for the Holy Land, practiced their swords and killing powers on the Jews, and wherever Peter of Amiens preached, he left behind him the germs of a massacre of the Jews. In 1306 there were massacres of the Jews all over France. Then followed their expulsion en masse by Philippe le Bel. For centuries afterward they were not allowed to live in any other part of France but the Ghetto of Bordeaux."

## THE JEWS AT THE REVOLUTION.

"But the Revolution emancipated your race?" "Yes, after a hard struggle on the part of Abbé Gregoire against the uncompromising resistance of such grands seigneurs as Rohan and La Rochefoucauld. But how could the Revolution refuse this emancipation, under the implacable logic of the declaration of the rights of man? Were not the Jews men? Were they not, as such, entitled to the rights of man? Napoleon I.: 'tis true that he favored the Jews. He was a man of great imagination, who would have been a great novelist if he had not been a great conqueror, and the spectacle of this ancient race scattered over the face of the earth fascinated his imagination. Then he had dreams like those of Alexander the Great, dreams of Oriental conquest, the dominion of the East, where, as

M. MAX NORDAU.

part of his policy, would be the reconstitution of the kingdom of Judah, just as it was one of his favorite political dreams with regard to Europe to reconstitute the kingdom of Poland. leon was indeed a friend of the Jews. He admitted them to officers' rank in the army; he allowed them to participate in the benefits of the Legion of Honor while refusing permission to any Jews to settle in the Eastern provinces of the French empire. Since then the Jews have enjoyed in France the equal rights to citizenship to which they are entitled as men. It remained for the Catholic Church at the end of the nineteenth century to direct the reaction against us to incite the mob to rid the face of the earth of our accursed race by violence and slaughter."

## ANTI-SEMITISM PROMPTED FROM ROME.

"Do you seriously charge the Catholic Church with being at the bottom of this anti-Semitic agitation?"

"Most seriously. God forbid that I, who in my person and in my family have suffered persecution all my life, should wish in my turn to persecute any one by directing against him false accusations, but I can come to no other conclusion in face of the evidence than that all this outburst was prompted and is being fomented by Rome. . . . I do not believe that the Pope in person has had anything to do with it. To begin with, the Pope is eighty-six, a very old man. Then, again, as the Latin proverb has it. Manima non curat prætor, and so small is the number of Jews in France—we do not exceed seventy thousand professing Jews all told-that he must look upon us with the disdain that small matters inspire the priest. But that the Church is the guilty factor is shown by the two recent articles which have appeared in the official organ of the Vatican, L'Osservatore Romano. first of these articles, which may be said to have given the signal of the outburst of anti-Semitic fury in France, was published about a fortnight ago.

## ROME AND ZIONISM.

This first article was directed against Zionism, and the argument of it was that the Jews must always be outcasts—a scattered and homeless race, so that the prophecy may be verified, and that we may forever bear this curse for that we crucified Christ. The second article appeared about five days ago. Its argument was that we Jews have no right to complain of the outburst of hatred and violence everywhere against us, for it is our fault and our fault alone. We have corrupted Christianity, it said. Breaking forth

from our ghettos, we have spread hateful doctrines of liberalism, and have spread the pestilential paradoxes of free thought. As long as we remained in our ghettos the Church protected us -by burning us in auto-da-fés," added Dr. Nordau, with a bitter laugh. "We have burst open our ghettos and we must take the consequences. See what the consequences have been already. The massacre of Algiers, the violence in every corner of France. You may say that so far only very few Jews have been attacked. many as could be found have been attacked, nor was it any different during the night of St. Bartholomew. The murderers could not kill more Protestants than they could find. have said, our protection will be mainly in the fact that as we cannot be forced to wear a distinctive sign to mark us out of the mob, and that as the facial type of southern Frenchmen is almost identical with our own, the murderers will hesitate to strike for fear of killing a brother. the meanwhile the energetic attitude of the government inspires us with some confidence. the extermination of the Jews has already begun and the Church can wait patiens qua æterna, until the wicked work of which she gave the signal has accomplished itself."

## THE INNOCENCE OF DREYFUS.

Dr. Nordau was not less emphatic in his declaration of the absolute innocence of Alfred Dreyfus. "It is mathematically proved," he said, and added: "It has never been pretended that Dreyfus acted as a traitor toward any other country but Germany. That is well understood. From the very beginning of the affaire Drevfus the German Government published in the semiofficial organs of the empire denials that the empire had had dealings with Dreyfus. It repeated this statement in a more explicit and official manner five months ago by publishing in the Koelnische Zeitung and next in the Nord Deutsche Allgemeine Zeitung, which is the official journal of Berlin, the most categorical denial that Germany had had any dealings whatsoever with Drevfus. Then came Von Bülow's declaration on his word of honor as a gentleman, made on the 24th of this month before the committee of ways and means of the German Reichstag, that neither directly nor indirectly had Germany had any traffickings of any nature whatever with Dreyfus. Is not that mathematical proof? I may add of my own knowledge that the proofs of Dreyfus' innocence in the form of irrefutable documents are in the possession of one of the highest officials in the French republic, who will produce them when the time comes."

## IV.—M. ZOLA ON FRENCH ANTI-SEMITISM.

## AN INTERVIEW BY ROBERT H. SHERARD.

[During these past weeks of M. Zola's prominence in connection with the Dreyfus case, no journalist has been in closer relations with the great novelist than Mr. Robert H. Sherard. The interview with Zola secured by Mr. Sherard for this number of the Review of Reviews does not take so serious a view of the anti-Semitic movement as other observers have expressed. This interview of course occurred before M. Zola appeared in court kinself on trial for the position he had taken in the Dreyfus matter.]

I T has fallen to me twice within the last two months to discuss with my old friend, Emile Zola, the burning question of anti-Semitism in France. The report of our first conversation, which I contributed to the *Humanitarian*, was taken at a time when the agitation, though violent, had not outstepped the limits of newspaper polemics. At that time Zola was still speaking of it as the "imbecile anti-Semitism" with much contempt in his voice.

"I cannot believe," he said, "that France, the great, generous, enlightened nation, will tolerate a movement which, springing into being a century after the French Revolution and the declaration of the rights of man, throws us back into the dark night of the Middle Ages. The movement is an idiotic one, fostered by certain men who wish to derive from their connection with it a notoriety which they could not obtain in any other way. Formerly it was usual to direct the fury of the mob against the Church. The proletariat was invited every morning in those days—I am speaking of ten or twelve years ago—to breakfast off a The present plat du jour is a Jew, as fat and prosperous a Jew as the pamphleteers can Yet, with all their shouting, these men dish up. cannot stir the people of France, with their love of justice and their good common sense, to do a single act which shows that all these pernicious teachings have had any effect upon them what-It must be rather disheartening to Drumont and all the rest of his school to see that after all their efforts to incite the mob against the Jews not a single pane of glass in the windows of any Jew in France has been broken. why I speak of this anti-Semitic movement in France as an imbecile one, imbecile because impotent."

## A HYPOCRITICAL FORM OF SOCIALISM.

This conversation took place, it must be observed, before any attacks had actually been made upon the Jews. The agitation had even then attained sufficient dimensions to fill M. Zola with alarm. He said:

·· I have to admit regretfully that the movement has taken a great hold in France, but I do not admit that the people really understand its significance. It is merely accepted by the mass of the people as the newest form of socialism.

The Jews have been made to represent in the eves of the ignorant the have-alls, the capitalists, against whom the demagogues have always directed the furies of the proletariat. Instead of crying as they used to cry ten years ago, Down with the capitalists,' the people are now taught to cry, 'Down with the Jews,' the leaders of the anti-Semitic campaign acting largely in the interests of the Catholic party, having induced them into the belief that all the capitalists are Jews, that it is the Jewish money which employs all the labor of France, that the whole nation is a vassal to the purse of the Rothschilds, and suchlike absurdities. Absurdities, yes; which, however, the people have come to believe. So that the cry of 'Down with the Jews' from the mass of the French people means nothing but down with the capitalists. Anti-Semitism as it exists to-day in France is a hypocritical form of social-It is a lie, of course, that all Jews are capitalists, that all Jews have no love for anything but the acquisition of wealth by the labor of others, and nobody knows this better than the leaders of this campaign. And nobody better than the leaders of this campaign know that if the Jews do show wonderful superiority in the matter of money getting, it is because we trained them to this in an apprenticeship of eighteen hundred vears."

## THE WORK OF A HANDFUL OF MADMEN.

At the time of his first talk he was much inclined to plume himself upon the fact that in the whole of France the campaign had only resulted in calumny. The attacks in the press had not resulted in any actual violence; nevertheless, he saw that it was thitherward tending:

development that it is taking. Surprised, indeed. The very initiation of the movement stupefied me—that there should be a return to fanaticism, an attempt to light up a religious war in this epoch of ours, one hundred years after the revolution, in the heart of our great Paris, in the days of democracy, of universal toleration, at the very time when there is an immense movement being made everywhere toward equality, justice, and fraternity. A handful of madmen, cunning or idiotic, come and shout in our ears every morning, \*Let us kills.

the Jews. Let us devour the Jews. Let us massacre them. Let us exterminate them. Let us get back to the days of the gibbet and stake.' Is it not inconceivable? Could anything be more foolish? Could anything be more abominable?"

### THE ALLEGED SYNDICATE.

Questioned about the popular report as to the syndicate of Jews alleged to have been

M. ZOLA IN WORKING ATTIRE.

formed for the purpose of saving Dreyfus from the penalty which he had incurred, Zola asserted that the syndicate was a myth:

"There is no syndicate of Jews to free Dreyfus. There is no syndicate of Jews, the world over, for any purpose. That they are helpful to each other, that among members of no other religious faith is there such great solidarity, that a Jew can always count on the assistance of his fellows, is a fact, and the primary cause of this, as I have just pointed out, is that they were bound together by centuries of common suffering. Their solidarity, their helpfulness to each other, are very fine traits in their character. They have realized a kind of universal free-masonry which others might do well to imitate. Who can make a grievance of that against them? Naturally, these attacks on the race, if I may use that expression, will only serve to bind them more closely together."

## JEALOUSY.

The origin of the whole business was jealousy, and M. Zola regretfully compared the different methods in which the Jews were treated in England and in France:

"In the world of business, the Jews are disliked because they are, for the reason I have indicated, much more skillful in matters of finance than the Christians. When I was writing my book 'L'Argent,' I used to go to the bourse every day to try and get some comprehension of that part of society, and I remember being told by a Catholic banker that the Christians could not compete with the Jews in money matters. 'Ah! Monsieur,' he said, 'they are much stronger than we are. They will always get the better of us.' If that were true it would be very humili-But I don't believe ating for the Christians. that it is true. I believe that with work and intelligence our bankers could do just as well as the Jewish bankers. Indeed, I know many bankers who are not Jews who are fully as successful in their undertakings, and who show as much acumen and judgment in their enterprises as their Jewish rivals."

The second occasion on which I saw Monsieur Zola in this connection was on the day before the list of the witnesses to be called in his defense was published. He was in a state of great mental agitation, and the impression that his manner produced upon me, who have so long regarded him with sincere admiration and affection, was decidedly a painful one. He was almost hysterical in his affirmations of Dreyfus' innocence, in his protestations that the government well knew that he was innocent and had been wrongfully convicted.

### ZOLA HYSTERICAL.

There was a pathetic ring about the cries of "C'est monstreux!" with which he qualified their action in detaining in prison a man whom "everybody, everybody, I tell you, knows to be innocent." He had tears in his eyes as he read out to me a passage from Renan's "Life of Christ," which, he said, had been sent him by an anonymous friend "for Maitre Labori," and so exactly described what the gov-

ernment had done with reference to Dreyfus, and what were likely to be the consequences entailed upon it by its malfeasance, that one might think that Renan had written in a prophetic spirit. Then there was wild laughing, and altogether the effect produced upon me was that the strain of all these events, the magnitude of the struggle in which he had embarked, perhaps without well weighing the consequences, had been too much for him, and that he was suffering from a nervous collapse, which might account for the extreme violence and what may, perhaps, be described as the want of logic in the letter of accusation on which his prosecution is being based. I was much distressed and disturbed until, two days later, calling on him again I found him calm, composed, cold, the old Zola whom I had known for so many years, a hard-headed, level, logical man, in whom watchful and affectionate eyes could not detect a single trace of the nervous collapse which had frightened me on the previous occasion.

## ZOLA HIMSELF AGAIN.

"The explanation of recent outbreaks and acts of violence against the Jews is a very simple one," he said. "I told you when we spoke on this subject some weeks ago that the leaders of the movement with very wicked hypocrisy and deception have induced the people, the Have-Nots, to believe that the word Jew is synonymous with capitalist, and are directing the discontent of the poor against the Jews as representing the moneyed classes. Jew now means to the unthinking proletariat, capitalist, monopolist, sweater, bloodsucker, and what we see to-day is about another phase of the struggle which has gone on ever since. Property was between those who have and those who have not. The people believe that all the Jews are rich, and rich by evil practices, and instead of shouting as they used to do, 'Down with capital!' they shout, 'Down with the Jews!' It is idiotic! It is wicked! I have, however, absolute confidence in the common sense of the French nation. It will open its eyes sooner or later and see through the fraud that has been imposed upon it. It will see that it is false that all the Jews are rich, that the word Jew means capitalist; it will see that there are poor Jews, hardworking Jews, whose struggle for their daily bread is as keen as that of the poorest among them."

## HIS SKEPTICISM.

Even now that Jewish blood has been shed, Emile Zola continues to speak with contempt of the movement, and he smiled with real amusement when I related to him the substance of the conversation I had had that afternoon with Max Nordau. He certainly did not share the doctor's

gloomy anticipations. "Not that there can be any doubt," he remarked, "that at the bottom of the present agitation the Catholic clubs, joining themselves for the nonce to the professional agitators of anti-Semitism, are doing all they can to foster the agitation, and that a due share of the responsibility for what has occurred or may occur rests upon them. But the fact remains that the people are only acting as at present because they have been duped in the way I have This is not an attack on the Jews as a race or as members of another religion. French people are far too sensible, even in their lowest strata, to listen to any such war-cry. The Droits de l'Homme is a universally accepted creed. The outbreak is only, so far as the people are concerned, an outbreak of the poor against the rich. That is the only explanation of it. And I repeat, as soon as the people understand that they have been duped, all this will subside.

## M. ZOLA ON HIS TRIAL.

With regard to his present position Zola is supremely confident. "I had to act as I have done, otherwise matters might have been allowed to drop, and that was what, as a firm believer in the innocence of Dreyfus, I could not allow. Later on people will say, 'The government meant to grant a fresh trial, and there was no need for Zola to be so violent.' That is what Louis XVI. said when the Revolution broke out —that there had been no need for the people to act with violence, that he had intended all along to grant them the liberties they desired. If I had done nothing people would have said, 'Now the affair is finished; Esterhazy has been acquitted. Let us say nothing more about it.' I had to keep the agitation going, because nobody with any sense of justice and of humanity can rest until this fearful error has been rectified. As to the consequences to myself, in the first place, je m'en moque, and, secondly, they cannot be very seri-With regard to the criminal prosecution. the penalties imposed by the law are not very heavy, and as to the other suits that are brought against me, I know that it is not the wish of the government to drive me to extremes. pecuniary point of view I am indifferent to consequences, and supposing that an attempt to ruin me were successful, which can hardly be, I have had offers of support from numerous friends, and did this week receive such an offer from a correspondent in Switzerland. I have no knowledge and no care what effect my act will have on the sale of my books. I have never in my books sought after anything but the truth. shall be as my books, an ardent quest for truth and for justice."

## THE PREVENTION OF LYNCH-LAW EPIDEMICS.

## BY EDWARD LEIGH PELL.

N the phrase of the physicians, lynch law may be either sporadic or epidemic. In its sporadic or isolated form it is not confined to any particular locality; as an epidemic it is still peculiar to In the former type the trouble is in the South. the mob; in the latter it is in the air as well as in the mob. In the former the matter for consideration is the spirit of lawlessness dominating the lynchers; in the latter this spirit of lawlessness must be considered along with the ever-present Whatever may be the remedy for provocation. isolated outbreaks, lynch law as an epidemic will never be suppressed by ignoring the conditions which keep the atmosphere infected with the germs of the lynching fever.

Briefly stated these conditions are (1) the prevalence of crime among the blacks and (2) the prevalence of race prejudice among the whites. A serious difficulty which has confronted the student of the problem from the beginning is the popular disposition to ignore either one or the other of these conditions. For a long while the friends of the negro at the North saw nothing to account for the infected state of the atmosphere but race prejudice, while the average Southerner could see nothing but negro crime. In answer to the charge of race prejudice the Southerner would point to the statistics, which showed that nearly one-fifth of the victims of lynch law were whites. In answer to the oft-repeated statement that lynch law was inspired by negro crime of a peculiarly revolting character, the friend of the negro pointed with equal confidence to the same statistics, which showed that for a considerable period hardly one-third of the victims of the mob were charged with the crime against female virtue, while not a few were lynched for comparatively trivial offenses. Lately, however, there has been a marked improvement in the spirit of both parties to the controversy, and there is among the more intelligent a growing disposition to face the conditions as they actually exist. It is not now an uncommon thing to meet a Southerner who fully realizes how small a matter in the eyes of the masses is the life of a negro, and only those who are less interested in making the South than in making apologies for it will deny that a colored skin often acts as a red flag to the fury of the mob. Nor is it uncommon to meet Northern visitors in the South who have awakened to the fact that the crime against female virtue has a

prominence in a lynching epidemic that it does not have in the published statistics. noticed that while a Southerner of the better class. living in a community comparatively free from outrages against women, utterly abhors lynching, one of the same class, in a community where such outrages have been frequent, often finds it necessary to prod his conscience to keep awake to the evil of mob violence, while his lips must be carefully guarded lest he should let fall some word that might give encouragement to the lawless; and they have been led by such facts to the conclusion that while other crimes may renew the lynching fever in the lawless, it is the crime against female virtue that spreads the fever among those who have never had it, thereby not only feeding the ranks of the lynchers, but weakening the spirit of many who remain on the side of law and order so that their denunciation of lawlessness encourages the mob by its feebleness.

This recent manifestation of a disposition on both sides of the line to face the problem in the only righteous way offers, it would seem, a favorable opportunity to inquire what can be done to eradicate or diminish the lynching evil. the problem is an exceedingly grave one is apparent when it is remembered that within the past fifteen years nearly 2,500 persons have been lynched in the United States, and that during this period there has been little practical change in the general situation. There has been improvement in two or three States-notably in Virginia—and there are indications that in several other States public sentiment has begun to crystallize against the evil; but these changes have not yet materially affected the grand total in the annual statistics of lynching.\*

<sup>\*</sup>According to the statistics prepared by the Chicago Tribune and recently given wide publicity, 166 persons (122) negroes, 39 whites, and 5 Indians) were lynched in the United States last year-20 in the North and 146 in the South. These statistics may be easily shown to be unreliable, yet it seems impossible to get at the exact figures. The authorities in communities where lynchings occur are not always careful to report the facts to the chief executive, and the chief executive sometimes grows weary trying to keep up with the press reporter. It is perhaps safe to say that the State authorities are not in possession of all the facts, but it is hardly worth while to look for more reliable information from any other source. In the Tribune's statistics for 1897 Alabama is credited with 19 lynchings. These figures were accepted without investigation and commented upon by leading Alabama dailies, and yet, according to the best information that could be obtained by the executive depart-

In the following pages I wish to indicate as briefly as I may be able what students who live on the field have thought through to daylight on this matter, and what practical proposals have been made and ought to be made toward the solution of the problem.

To begin with, few thoughtful Southerners now attach any importance to the suggestion that there is need for substantial changes in the law. Some legislation may be needed to secure the enforcement of laws already in existence, but the cry for better laws has been discounted by the fact that it has been too often accompanied by the cry to set aside the law. Too often it is a mere sub-For instance, it is frequently demanded that the law shall be so changed that the virtuous and modest victim of outrage shall be relieved of the terrible ordeal of cross-examination in court; but every one has noticed that the class of men who resort to mob violence, instead of demanding for the victim the protection which the law does allow her in court, and insisting that the judge shall clear the court-room of spectators, and that the cross-examination shall be conducted with the utmost delicacy, are the very men who are most insistent upon crowding into court on every such occasion, to leer upon the victim and to devour every unclean suggestion that comes in the way. Again, it is demanded that the law shall be so changed as to secure prompt trials; but experience has shown that where the people of a community have displayed as much earnestness in demanding prompt trials as the mob shows in taking the law into their own hands, there has been little occasion to complain of the law's delay. The real trouble is not in the What the average community needs is not better laws, but better officers of the law-officers that will not only be prompt in looking after the man who is accused of a crime that may lead to lynching, but who will be just as prompt in looking after the mob that would lynch him. significant fact that the community that enjoys comparative immunity from lynch law is usually a community that enjoys comparative immunity from demagogue officials.

The recent administration of Governor O'Ferrall, of Virginia, may be cited as an illustration in point. During the fourteen years immediately preceding Mr. O'Ferrall's inauguration there were 62 lynchings within the bounds of the State; during the last four years there have been but 3,

and in neither case was the chief executive in a position either to prevent the crime or punish the The keynote was struck at the beoffenders. ginning of the administration. The solemn declaration of a Confederate veteran whose bravery is a proverb among his people that mob violence in Virginia must cease, at once awoke a large part of the lawless element to its senses. and the law-abiding element, led by the better part of the press of the State, rallied at once to the man who had given such unmistakable utterance to their sentiment. The victory was not won without a blow. There were times when the air smelled of war. There were times when the soldier-boys went scurrying across the country as if a rebellion had broken out somewhere. There were times when these brave boys reached the county jail just ahead of the mob, and a shudder passed over the commonwealth when it was found that the prisoners whose lives had been barely saved were innocent of the crimes of which they were charged. And there was a time when a captain who wired the governor that it would be impossible to get his company to gether in time to go to the rescue of a prisoner threatened with mob violence, got an answer back with a startling military ring: "Nothing should be impossible to a soldier; you must go. There is nothing of which Virginia is proude: to-day—and surely Virginia knows how to be proud—than her record on this question for the past four years. Let me outline a single chapter.

A few months ago a negro was arrested in the city of Richmond on the "usual" charge. case was peculiarly exasperating, and in most communities lynching would have followed as a matter of course. But the city papers—for the most part remarkable specimens of high-toned journalism, by the way—in giving the news carefully avoided the more inflammatory details, and the officers of the law, with a like regard for the public peace, did their work so quietly that the accused was in safe keeping before the public had time to realize what had happened. the case was called in court the judge gave notice that while the accused should have every opportunity for a fair trial, the court would not tolerate any unnecessary delay; and when the principal witness was placed on the stand the court-room was cleared of spectators, and the counsel for the defense distinguished himself by conducting the cross-examination with such delicacy as to satisfy the friends of the victim, and yet with such thoroughness as to satisfy the friends of the accused. In less than forty days from the time of the assault the criminal was executed (after having made a full confession), and although at times the tide of public feeling ran high, the only

ment of that State, the estimate is too large by 14. The same statistics credit Virginia with 5 lynchings and Florida with 12; but the chief executive of Florida has information of only 6, and I am sure that in Virginia there have been but 3 in the past four years. There is no reason to suppose, however, that the total lynchings for the year 1897 fell much below the average.

demonstration made during the entire period was in the form of a tirade of abuse which an aged negress heaped upon the officer in charge of the prisoner.

But while the election of brave men to executive positions practically insures the execution of the law where there is an enlightened public sentiment, it does not insure the execution of the law in a community where the majority of the people are unenlightened, whether they are ordinarily a law-abiding people or not. As a rule, no governor can suppress lynching among a people whose minds, as Ruskin has said, catch a thought as one catches a cold, and who lack that self-control which belongs to a higher civiliza-And this is especially true in the case of such people who live in communities out of reach of the telegraph and surrounded by hordes of negroes of the lowest type. It is this aspect of the problem that has awakened the more thoughtful class of Southerners to the gravity of the situation, and has inspired nearly all the proposals that have thus far been made toward the prevention of the lynching evil.

Two years ago the South Carolina Legislature enacted a law making the county in which a lynching occurs liable in exemplary damages of not less than \$2,000, to be recovered by the legal representatives of the person lynched, and authorizing the county against which a judgment has been obtained for damages in any case of lynching to recover the amount of said judgment from the parties engaged in the lynching.\* About the same time Governor O'Ferrall, in his message to the Virginia Legislature, recommended that the county in which a lynching occurs be required to pay into the State treasury a sum not exceeding \$10,000 for the benefit of the public-Recommendations of a similar school fund. character were subsequently made by the governors of Maryland and Georgia. It was believed by the more enthusiastic advocates of these measures that a pecuniary penalty placed upon an entire county would result in eventually bringing the most unenlightened community to its senses; but as mob leaders are not ordinarily taxpayers, and as they are not apt to be influenced by exhortations to righteousness from tax-paying neighbors who cannot be moved to exhort except by threats aimed at their pockets, it is not likely that any great good would come of it. The practical value of the South Carolina law has not yet been established.

Along with the law designed to reach the senses of the people in lynch-law communities

through their pockets, the South Carolina Legislature enacted another law designed to reach the senses of the officers of such counties through the same channel. This law provides that if an officer, through negligence, allows a prisoner to be taken from him by a mob and injured or put to death, he shall be deemed guilty of a misdemeanor, and upon true bill shall be deposed from his office pending trial, and upon conviction shall forfeit his office, and shall, unless pardoned by the governor, be ineligible to hold any office of trust or profit within the State. It is believed that this law has stimulated many officials to greater faithfulness, though it is evident that the stimulus it provides is not equal to great emer-A similar law has been enacted by the Legislature of Texas and recommended by the governors of Florida, Virginia, and Georgia. Governor Atkinson, of Georgia, added to his recommendation the unique suggestion that if the officer in charge of a prisoner is not required to protect his charge at the hazard of his own life, he should be required to unshackle the prisoner, arm him, and give him an opportunity to defend himself. This recommendation may not be practical (it is certain that no white officer would arm a negro against a white mob), but the governor's earnestness in the matter cannot but be appreciated by every one who has recalled the fact that one never hears of an officer losing his life while defending a prisoner from the mob.

Repeated but usually unsuccessful efforts have been made in nearly all the Southern States to secure legislation that would provide quicker trials, especially in such cases as inspire lynch law. still contended in many sections that the law's delay is the principal cause of lynching, and as acute an observer as Governor Atkinson, of West Virginia, has intimated that the rare occurrence of lynch law in his State is due in part to the fact that the courts, as a rule, enforce the law with great promptness and vigor. The Republican governor of North Carolina, in his inaugural address a year ago, declared that the "only reasonable excuse" that could be offered for lynchings in that State was the "failure or delay of the law," and he insisted that the executive should have power "to call a court instanter," and in case of appeal to convene the Appellate Court at the earliest possible moment. Governor Johnston, of Alabama, has also urged that the executive be given authority to call a special term of court whenever a crime has been committed "calculated to arouse great public indignation." Governor Bloxham, of Florida, wants the Constitution amended so that a circuit judge can be appointed for the State at large; and Governor Atkinson, of Georgia, while insisting that the

<sup>&#</sup>x27;A statute having the same design, but less direct in its provisions, had been previously enacted by the North Carolina General Assembly.

law's delay is an excuse rather than a reason for the existence of lynch law, recommends the enactment of a law leaving to the trial judge the sole power to pass upon motions to continue, and "denying the Supreme Court the power to grant a new trial on account of alleged error in so doing."

Perhaps the most effective law yet enacted with a view to the prevention of lynching is a Virginia statute making the crime of assault with attempt to commit rape punishable with death or imprisonment, at the discretion of the jury. The object of the law is not to secure the extreme penalty for an attempt to commit outrage, but rather to provide against failure to convict and to lessen in some degree the terrible ordeal which the victim of the outrage must undergo in court. That the juries of the State have not abused the power thus placed in their hands is evident from the fact that while 95 convictions were secured for the crime of assault during the past four years, only eight persons suffered the death-penalty.

Taking in the entire field at a glance, one cannot but be struck with the fact that the laws proposed outnumber the laws enacted by a distressingly large majority. And one will suspect what is plain to every observer on the field—that the politicians are fighting shy of the problem. It is true that not a few law makers of the better class would gladly promote any legislation which, in their opinion, would reach the trouble, but it is an open secret that the average politician would greatly prefer to put an anti-lynching plank in the party platform as a sop to the better element—as the Georgia Democrats did in the last campaign—and refrain from going on record on either side in a representative capacity.

That nothing has yet been done to secure the conviction of lynchers is the most discouraging fact connected with the problem. It is, in the nature of things, impossible to secure a jury in a community where lynch law is epidemic that will bring in an indictment against their law-breaking neighbors for taking the life of a criminal. they are not in sympathy with the lynchers they are afraid of them, and either sympathy or fear is sufficient to blind them to the facts. It is becoming more and more apparent that there is no short method of reaching lynchers in an unenlightened community under a democratic form of govern-If lawlessness is to cease in such communities it must cease through the personal efforts of the few intelligent citizens who live in them. There is no community in the South without its intelligent citizen, and there is no intelligent citizen upon whom does not rest the responsibility for the prevalence of lax views of law among his less enlightened neighbors.

But right here one touches what the South-

erner calls the weak spot in his make-up. does not, as a rule, feel deeply the responsibilities of citizenship. The Northerner is impressed with the idea of the common good. The Southerner is impressed with the idea of attending to his own business and letting other people's alone. Northerner is a Roman, ready to sink individuality out of sight for the state; the Southerner is a Greek, whose highest ideal is not a perfect state. but a perfect man. The intelligent Southerner sits under his own vine and fig-tree and does not presume to teach his neighbor anything. are hundreds of well-to-do farmers, college-bred men of unmistakable talent, living in out-of-theway communities of the South, who have never moved a thumb to exert either an intellectual or a moral influence upon the ignorant masses around them. It is not selfishness—no people ever opened their granaries wider to the poor or enjoyed social intercourse more; it is individualism—the natural product of long years of independent agricultural life in thinly settled communities.

Another need which appears equally clear to

the Southern mind, though it may not be as readily recognized by the observer from without, is a trumpet-blast from the Northern press on the subject of negro crime—a blast that will be heard by every negro who has the interest of his race at heart. It is time for Northern philanthropy to suggest to negro educators that future help will depend in some degree upon the earnestness which they shall manifest in trying to secure better behavior among their people. There are worthy leaders of the race who need no exhortation on the subject, but there are thousands of intelligent negroes who are more interested in negro mentality than in negro morality. Thus far the main object of the friends of the negro in the North has been to stir up the better element in the South to take some action for the protection of the blacks against mob violence. Naturally, with such an object in view the stress has been placed upon the crime of lynching, while negro crime which so often leads to lynching has received little serious notice. It does not seem to have occurred to Northern editors that their utterances on the subject of lynching are promptly echoed by the negro pulpits of the South, and that to the mind of the average negro the comparative silence of his friends in the North on the subject of his crime leaves him free to do as he pleases; white such statements as that made by a New England paper that the prevailing epidemic of assault is a divine judgment sent upon the whites of the South relieves him of all responsibility in

the premises. If the Northern editor imagines

that negroes as a race realize the enormity of

their crimes, and especially of the crime of assault

and do not need to be reminded of it, let him recall the negro's past—the years of slavery here and the centuries of savagery across the sea: surely these did not teach him virtue or regard for the honor of woman. We have wronged the negro in many things, but in nothing more cruelly than in assuming that there is a nineteenth-century Anglo-Saxon beneath his colored skin.

And that sentence brings me to a matter which has been too often overlooked in discussions of this sort. We are demanding of the negro a harvest where we have not sown.

When the war ended, the extravagant conceit that education is the remedy for all human ills was still in the air, and naturally it was determined that the emancipated race should be given the full benefit of the newly discovered blessing. What has been the result? To-day fully ninetenths of the men who are best qualified to lead the race are teaching school. What does this mean? Simply that the men who have been qualified for leadership (with a few notable exceptions) are not leading the race. They are not leading it for the reason that the center of influence in the negro world is not the school-room, but the pulpit. (It seems not to have occurred to the early educators of the colored people that the pulpit was the oracle and motor of the race and would continue so to be while the negro retained his religious nature.) And so it has come to pass that while there has been gratifying progress along intellectual lines, the material advancement of the negro has been seriously hindered by his lack of opportunity for moral progress. after all that has been said of the noble men who adorn the negro pulpit, the fact remains that the great majority of colored preachers are wholly unfit for the places of influence which they occupy, and that the kind of moral teaching the masses of the people get continues to be the greatest obstacle to the development of family life—the greatest need of the race. No one who is familiar with the condition of the average negro home expects negro crime to materially decrease until the pulpit—the moral fountain of the race—is cleansed; and there is little hope for the improvement of the pulpit so long as the best-equipped young negroes are urged to enter other callings.

The indifferent attitude of white people toward the young negro is another serious hindrance to his moral progress. Southerners are not indifferent to the "old-time darky"—a type now nearly extinct—but they feel no interest in the new negro. They pay their taxes to send him to school, but they pay them for conscience sake and not with any lively interest in his future. The fact is, the majority of them believe that there is no future in him. This is a more serious

matter than one who is unfamiliar with the negro character would imagine. It is often said that the new negroes are not drawn to the white people as their fathers were; but while they stand aloof there is nothing which an aspiring youth of the better type desires so much as the good opinion of white people. It is nothing to him to be honored by his own race if the superior race refuses to see any difference between him and the low mass from which he has risen. That is all he is complaining of—that we insist on counting him in the unclean mass. We do not encourage him to lead a virtuous life. He no longer asks for social equality—he no longer wants it; but what he does want and what he has the right to ask is a recognition of the lines which his own strivings and the strivings of others of his sort are making in the race. He wants to be distinguished from those who do not strive. To adopt his own phrase, he wants to be distinguished from a "nigger." It is time for the people of the South (and the people of the North, for that matter) to accord to him this right. It is time we were putting a premium upon virtue for the young negro, employing virtuous negroes preferably to others, and in every way possible showing the new generation that the colored youth who strives to rise is held in honor by the white race.

To sum up: Not to mention the special legislation that may be needed in some of the States to secure a better enforcement of the laws in existence, these six things ought to be done for the prevention of lynch-law epidemics: 1. Executive officials should be chosen with regard for their personal courage. It is not enough to know how the candidate stands on the law: the question is whether he can be depended upon to stand by the law. 2. The intelligent citizens of the South should individually undertake to awaken in their neighbors a higher regard for law. The papers of the two sections should exchange texts, and the Northern press should preach against negro crime and the Southern press should preach against lawlessness and race preju-The good that has been already accomplished by the few papers that have made this exchange ought to encourage the rest to follow their example. 4. Southern newspapers should omit from their news columns the suggestive details of lynchings as well as the inflammatory details of assaults. 5. The higher education of negroes should be pushed with a view to supplying the demand for capable teachers of righteousness for the race. 6. The South should take the worthy young negro by the hand as earnestly as the mob has taken the unworthy negro by the neck, and encourage him in all high endeavor, that the race may not be without salt to save it.

# THE ST. LOUIS ELECTION SCHOOLS.

# A SUCCESSFUL POLITICAL EXPERIMENT IN THE WEST.

# BY WILLIAM FLEWELLYN SAUNDERS.

(Commissioner and Secretary of the Board of Election Commissioners of St. Louis, Mo.)

HE State of Missouri is to put a new ballot law into execution at the election for Congressmen and State officers this fall, and in St. Louis the board of election commissioners is planning to teach by a novel method the election officers and voters of the city how to handle the ballot quickly and accurately. Schools of instruction are being established in the various wards. They will be in charge of the commissioners and their assistants, and election officers, political workers, and citizens generally will be asked to attend them and inform themselves as to the new law, which will be explained with the aid of blackboards and ballot charts. This plan was employed by the commissioners of St. Louis during the summer and fall preceding the last Presidential election with excellent results.

#### ELECTION OFFICERS GENERALLY UNTAUGHT.

Generally election officers in large cities get no drill when new ballot laws are to be enforced. They get from the election boards copies of the election laws and sometimes circulars of instruction, which they seldom read and hardly ever understand when they do read them. The voter gets not even this information, and relies on his intelligence and the newspapers for the information that will enable him to cast a ballot that will not be void through faulty preparation. The consequence of this is that the officials in the polls quarrel, voters get confused, legal ballots in large numbers are thrown out in the counts, and a law is credited with being ineffective when, in truth, its enforcement is inefficient. The worst of this unintelligent canvass of the vote, too, is that the ballots that are hard to understand and are rejected by the counting officers are the split tickets, those cast by the independent voter. Straight party tickets cause no dispute and are counted. I know that in New York, Brooklyn, and Chicago the officers of election are not properly informed as to their duties, and I have no reason to believe, with all the information I can get, that it is otherwise in Baltimore, in Philadelphia, and in San Francisco, or even in Boston, where I have found in most respects the most careful and modern system of election machinery in the United States. I have spent some time looking into the election systems of the three cities just named. by correspondence and by talking with the election officers as to their duties, and last November I went to a score of the polls in New York and Brooklyn to watch the conduct of the election officers and talk with them. In these two places a much better class of men has been got since the system of examinations was adopted, the year before the last Presidential election, but this plan is not thorough and does not teach as it is intended No man of ordinary intelligence who has had no experience as a ballot officer can read an election manual and from it learn to register voters and receive and count ballots. It goes without saying that this lack of careful training of election officers is equally conspicuous in smaller places.

#### MISSOURI'S BALLOT REFORM.

In the summer of 1895 the Legislature of Missouri abolished the whole system of ballot laws that had governed elections in St. Louis, and adopted one radically different, modeled upon the laws of New York and Illinois. Under the old laws, elections in St. Louis were managed by a recorder of voters, appointed by the governor: and as the State has been Democratic ever since the days of reconstruction, this official was always a partisan Democrat. He supervised the regular and primary elections and appointed the counting and returning officers, registration being managed by his clerks. He was vested with great powers, very dangerous ones, and grave election scandals grew out of the system. The new law replaced the recorder of voters by a board of election commissioners, two Democrats and one Republican, giving the Republican the right to appoint three of the six officers in each precinct; and these six officers had to register the voters of the precinct as well as receive and count their votes afterward, registration and election being conducted in the same place for each precinct. law further ordered the commissioners to efface even the remnants of the old election system by dividing the city into smaller precincts and making an entirely new registration of the voters.

#### AROUSING NEGLIGENT VOTERS.

The commissioners began this work by making a census of the voters of the city. Thirty active and experienced men were employed, and an inquiry from house to house was made—on foot in the thickly settled parts of the city and by bicycle and buggy and on horseback in the outlving wards, daily reports being made by each canvasser to the commissioners. When the new law was made there were only 82,929 voters registered in the 189 precincts. The canvass, which took six months, gave the election commissioners a map showing the number of males of voting age in each block of the city, numbering in all 148,769. Thousands of these men had never voted nor registered and many of them owned property. Most of these told the canvassers that they had not registered because it took too much time and trouble to go to the central office for the purpose, but it was not uncommon for them to say that they had no interest in politics and did not want to invite annoyance from political agents by registering. The canvass showed the politicians that their work in the past toward getting out the vote of the city had been of the most superficial kind and that their campaign plans under the new law would have to differ from those on which they had been depending.

The election commissioners, dividing the city into precincts, each with fewer than 400 voters,

had maps printed, showing the number of voters on each block, and distributed them to party committees, ward clubs, and independent civic associations, all of which went at once to canvassing for their respective objects. The voters of the city had never been so stirred, and it was apparent that an enormous vote would be polled at the Presidential election.

#### INTRODUCING ELECTION SCHOOLS.

At this point of the campaign the commissioners began to realize that they would have to adopt unusual means of explaining the new law to the election officers and the public, and they decided to go out in the wards and lecture. They knew it would be entirely useless to try by circulars or by any system of examinations to teach the 2,600 poll officers who were to be appointed how to pass on the qualifications of an applicant for registration and to do the accurate clerical work and precinct canvassing insisted on by the law. Moreover, recent decisions of the court had increased the difficulty of correctly voting the quasi Australian ballot that has been used in Missouri since 1889, by forbidding the election officers to count the ballots in accordance with the intention of the voter, no matter how clear it seemed, and defining a legal ballot rigidly; and it seemed absolutely necessary that officers should be taught plainly what a legal ballot was. Of course the ideal plan would have been to make these talks

from a non-partisan standpoint, but the commissioners doubted the wisdom of bringing large parties of men of opposite politics together in a heated campaign, and carried on their schools at different places. It must not be inferred from this, however, that the commissioners and assistants who did the teaching disagreed in their interpretation of the law or taught different things. At intervals during the school season the commissioners and the assistants who did the teaching met and exchanged ideas and agreed upon certain constructions to be placed on ambiguities of the law.

# NO TRUANT OFFICERS NEEDED.

From the beginning the schools of instruction succeeded in their object. The equipment of the school was

A CROWDED SCHOOL

The lecturer carried in one bundle a cloth prepared for chalk, like a blackboard, about 20 feet long and 5 feet wide, ruled and lettered in white to represent a page of the registration book which the election officers had

TEACHING A FEW NEGROES.

to use, and in another parcel several large sheets of tough paper showing by broad charcoal strokes a legal ballot and every variation from it that a voter might make. A package of block maps of the ward, a number of copies of the law, a hammer, big-headed tacks, and chalk in coat pockets. a clear head and nerves in good condition, and the lecturer was ready. When he got to the hall he tacked up his blackboard and ballots, put his maps and laws on a table, and announced that he wanted some man in the hall to stand up and be registered. Ten minutes of registering those who stood up, and he went to the ballots, which he talked about for a few minutes more. he would say: "Is there anything about the ballot or registration that you do not understand?"

The next hour or two hours was a great strain on the teacher. The men who came to these meetings were keen, anxious to know, and practical to the last degree. They asked questions that had to be answered quickly and authoritatively, and that answer became to them a rule by which a voter would be registered or not or a ballot would be counted or not. I have left a meeting, in a hall where the temperature was only fifty degrees, wet with perspiration and drained of vi-

tality. I had studied the whole detail of the new law closely with the board's lawyer before I undertook a school, and after the first one I informed myself thoroughly upon the naturalization laws also, finding that the questions bore on them

> also. I feel mildly proud to think that in all the talks I made, about fifty, I was only twice unequal to a question. Once a young man asked:

> "If a boy comes to the United States with his father and is a minor when his father is naturalized, does that make him a citizen?"

"Yes," I said.

"Well, if the father dies without being naturalized and the mother marries a man who is a citizen, does that make a citizen of the boy?'

Congress has never provided for a case of this kind. I had to say I did not know what the position of this boy was, and advised the youth to take out minor papers. At another time a man asked me:

"What is the difference between a householder and a freeholder?"

"None," I said, and was promptly corrected by a lawyer among those present.

No call was neglected. Whenever a ward club or any organization asked for a lecturer a commissioner or an

assistant went. One night I took my packages and went to a hall on the outskirts of the city, where I expected to meet the negro voters of the ward. The president of the club which had asked me to come, an old man who to Stephen Foster would have suggested instantly some plaintive melody, met me with the grateful remark:

"I'm mighty glad you're come, Mr. Commis-I tell you, suh, this is another star in sioner. my crown of glory."

The hall was small and badly lighted with We waited an hour, while now and then a man dropped in. I put up my blackboard and charts and began talking when there were fewer than a score of men in the hall, four of them on the platform. A few more dropped in during the evening. The president beamed delight, but asked no questions, nor did any of the others. It afterward appeared that the enemies of the president, conspiring to dim the brilliancy of his crown, had busied themselves to keep people away from the meeting and had got up a rival one with beer and sandwiches in abundance.

On the other hand, several of the ward meetings had to be held in theaters to accommodate the people who applied for admission. The ordinary meeting was one of 200 or 300 men, held in a hall belonging to some fraternal society.

#### VALUE OF THE DRILL.

The election officers were appointed two months before the election. They were not the selections of political committees, although these committees were asked to send in lists and did so. Recommendations were got, besides, from civic organizations and from other sources, until the commissioners had at least three times as many Then these men names as men were wanted. were summoned to the office and examined ward by ward and night after night, all of them seated They had to answer in writing a number of personal and political questions that tested only their general intelligence and not at all their understanding of the new election law. number summoned was not enough. It was not often that three entirely competent men were got from ten summoned. After the appointments had been made they were confirmed by nine judges of the Circuit Court, sitting in banc, a check feature of the St. Louis law that is admirable and works to prevent the appointment as election officers of men known to be dishonest.

Then the commissioners devoted the schools to close drill of these officers, excluding the public, but admitting the men who were to be watchers

TYPES OF SCHOLARS.

and challengers. The lecturer would then take to each meeting all the blanks that were to be used in the registration and election, select six men, and seating them at a table, direct them in doing the work they were to do on registration and election days. This familiarized them with the blanks and the actual clerical work. Finally the commissioners assembled in two large meetings the officers of the two parties and went over the whole law closely again.

The management of the registration and the voting in the precincts by these election officers clearly showed the value of the schools. changes in the list of officers were made between the times the schools were opened and the day of election, but in every precinct there were at least four men who had been taught how to register and count. The task proved to be as hard a one as the commissioners had anticipated. The registration of 82,929 ran up to 131,362—20 per cent. of the population of the city. This percentage was exceeded at the Presidential election by only one of the large cities, Chicago, whose registration was 22 per cent. of its population, and was equaled by only one, Philadelphia. Boston's registration was 19 per cent. of its population, Baltimore's 19 per cent., and New York City's 17 per cent. Greater New York, by the way, did not do so well, its registration last November being only 16 per cent. of its population. It is certain that had the St. Louis commissioners not made the canvass for males of voting age and followed it with the ward schools, both things in the highest degree a stimulant to the registration, the percentage would have been not more than 15.

#### ABOLISHING THE SECRET BALLOT.

Many thousand men voted at this election who had never seen a ballot until they entered the poll, and they voted the sheet ballot in many unique ways, of course. The judges followed the directions of the election commissioners closely, and 8,000 illegal ballots were thrown out of the count in a total vote of 125,000. The number would have been twice as many but for the schools. Nevertheless an outcry against the sheet ballot followed, and the Legislature, coming shortly afterward, did a curious thing. It should either have changed the ballot so as to make it approach more nearly the true Australian ballot, on which the candidates are grouped by offices instead of parties, or it should have so defined a legal ballot that the counting officers could take cognizance of the intention of the voter. But instead of these things a law was passed substituting for the sheet ballot a hybrid ballot that will be hard to handle for election officers and voters and will

encourage straight party voting. The new ballot is composed of several separate tickets, one for each party. There will be five or six tickets in the field this fall, and when the voter goes to the poll an officer will hand him all the tickets, pasted together at the top and perforated below, to tear. He must take the whole package to the booth, tear off the ticket he wants to vote, fold it up, fold up the ones he rejects, and bring both packages back to the judges. One judge drops the selected ballot into one box and another judge, taking the rejected ballots, counts them and drops them into another box.

This system will make it harder to preserve the secrecy of the ballot in this State than it has The laws in Missouri are framed with the intention of protecting the voter, but the Constitution of the State obliges the judges to put a number on the ballot that corresponds with the number opposite the name of the voter on the poll book, and this identification is accessible to six election officers and four watchers in each poll and to all attorneys and clerks when a recount of the ballots in a contest is made. new ballot will be identified like the old one and will be handled more openly by election officers. Besides, with the sheet or blanket ballot every voter had to use a pencil; while under the new law a party voter needs none, and the noise of a tap or a scratch of a pencil or the unconscious groping of the hand of a voter for a pencil in the pocket will show something to the keen eyes in the poll.

The election commissioners, when they begin to instruct the election officers this fall, will have to enjoin upon them the most careful handling of the ballot to prevent its exposure. Over half of the officers who served in 1896 will be appointed again this fall, and one or two lectures in each ward with booths, ballots, and boxes will prob-

ably suffice to teach them the new law. Voters will be asked to come to these meetings as usual.

#### A HEALTHY CIVIC SPIRIT.

Except this doubtful change of the ballot, the situation in St. Louis gratifies the friends of good The city has a primary law civic government. that puts primary elections under State laws with adequate penalties. It could be improved in detail. For one thing, it requires the commissioners to appoint as ballot officers men recommended by the delegations and candidates, who, of course, are more interested in securing the success of their friends than in enforcing the law. If the commissioners were allowed to appoint the primary officers from the regular election officers who serve for two years, and if the law were then as strictly enforced as the regular election laws, there would be little left to improve. A new school-board system is in control of the public schools, a system less than a year old, but already showing much merit. It is the result of a civicfederation movement, and its essence is the election of school directors by the city at large instead of by wards as formerly. This first board under the new law is composed of men representing both parties and pledged to keep politics out of the management of the schools. So far this promise has been kept. More noteworthy still is a test now being made of an excellent corrupt practices law which was passed several years ago, but has never been seriously regarded by poli-A judge of the St. Louis Court of Appeals, lately elected, is charged with using money to secure the withdrawal of a dangerous candidate on an opposing ticket, and the Supreme Court of the State is trying the case. If the allegation is proven the judge will lose his office, which will go to the defeated candidate.

# LEADING ARTICLES OF THE MONTH.

#### NINE ROUTES TO THE KLONDIKE.

THE March McClure's contains an article by Hamlin Garland, under the caption, "Ho, for the Klondike!" It is taken up almost entirely with a description of the various routes into the new mining country.

#### THE OVERLAND ROUTES.

Mr. Garland begins with the Edmonton and Peace River route, one of the three overland It begins at Edmonton, a small town reached by a northern spur of the Canadian Pacific, and proceeds by way of Little Slave Lake and Peace River, thence across the divide into the valley of the Stickeen River to Telegraph Creek and Teslin Lake, which is the headwaters of the Yukon. Mr. Garland says: "This route is a very long one, and little information is obtainable concerning it. It is undoubtedly practicable, and will be largely traveled by those not in breathless haste to get to Dawson City." every one is in breathless haste, however, we doubt Mr. Garland's conclusion. It is a pleasant way of getting to the far Northwest, but takes about sixty days between Edmonton and Teslin Lake, nor can it be used before the middle of May.

The second overland route is that known as the Old Telegraph Trail; it begins at Ashcroft, a village on the Canadian Pacific, and follows the Fraser River by Quesnelle to Fort Fraser, a Hudson Bay post, and thence over many creeks and rivers, which are fordable, to Hazleton. From Hazleton the trail will be over the Stickeen route, now being opened by the Canadian Government. But this route, too, requires fifty days from Ashcroft.

The third overland route starts from Kamloops, the next town east of Ashcroft. It goes to Quesnelle, also, passes up the North Thompson River and follows the Fraser River to Fort George, rejoining the Ashcroft trail at the headwaters of the Bulkley River. This road is not yet opened. The cost of traversing either of these last overland routes is estimated by Mr. Garland at \$200, though he advises no one to undertake the journey with less than \$500 in hand.

#### THE SEAPORT ROUTES.

There are six water routes to the Klondike region; one by way of St. Michael, three by way of the Lynn Canal, one by way of the Stickeen River, and one by way of Taku Inlet. The usual route, the longest and the safest, is

that by way of St. Michael, which has been described so much in the periodicals of this country. It is by steamer from San Francisco, Portland, Tacoma, Seattle, or Victoria, to the mouth of the Yukon, and thence by river steamer direct to Dawson City and the gold-fields. There are regular and established fares and comfortable accommodations on this route, but it is 4,000 miles from Dawson to Seattle, and the river travel cannot be undertaken until June.

#### THE FAVORITE "PASS" ROUTES.

"Lynn Canal is a long, narrow arm of the sea which runs deep into the high mountains of the Alaskan coast, not far from the town of Juneau. It is, in fact, a deep, narrow chasm or canyon between the mountains, into which the Chilkat and Chilkoot rivers empty. At this point the tidewaters and the headwaters of the Yukon are but twenty-five or thirty miles apart, and because of that fact three trails already lead across the divide." This is the best-known entrance point, where the town of Skaguay is situated, and where the Chilkoot Pass, White Pass, and Dalton trails make their start. These are thoroughly described in Mr. Bush's thorough article on the Klondike among the features of this number of the REVIEW.

#### THE ALL-CANADIAN ROUTE.

The road about which least is known as yet in the United States, relatively, but which promises to become one of the best, is that which proceeds from the northwestern cities by steamer to Wrangell, about three days' sail up the coast; from there by river boats up the Stickeen River to Glenora, a distance of 150 miles; from Glenora by pack to the headwaters of Teslin Lake; thence via the Teslin River to Lewis River, and down it to the Yukon. This trail is, according to the Canadian officials, about 175 miles long, but, as Mr. Garland says, and he has obtained his information from the advance sheets of a special report to the Dominion Government, "It is comparatively easy, and will be shortened considerably as soon as spring opens. The journey across the country by trail can be made as comfortable as any travel of the kind, and there are no dangerous features. The ground, both in the open and timber district, is covered to a depth of about two feet with moss. But during the open season, between May and the middle of October, sufficient grass for two or three hundred animals can be obtained all along the route. It will not be practicable to travel over this trail before May 1, as snow is likely to be on the ground in many places, and the grass is not far enough advanced to meet the requirements of pack animals. There are no settlements on the route.

"Teslin Lake opens about the middle of May and closes about October 26. Last year it was open until the middle of October, and there was no indication of its closing immediately. slopes and benches along Teslin Lake are fairly timbered with a growth of spruce and black pine, the average size of this timber being about ten inches, and sufficient for scantling, flooring, and sheeting for house purposes and for boat-building. The machinery for a sawmill is now being transported across the portage from Telegraph Creek to Teslin Lake; the same company intend to place a steamboat on Teslin Lake and river on the opening of navigation, and skiffs, scow boats, etc., suitable for navigating the Yukon waters are to be kept for sale.

#### 1TS SUPPOSED ADVANTAGES.

"With proper roads or railroad facilities from the Stickeen to Teslin Lake, no better route could be found for getting into the Yukon country from the Pacific seaboard. The region about Teslin Lake, including the rivers flowing into it from the east, is considered very good prospecting country, and it is likely that the coming season will find a large number of miners engaged in that vicinity. Rich strikes have been reported from there quite recently; and Teslin Lake is likely to have 'the call' next season. nadian Pacific Railway officials announce that the journey from Victoria to Telegraph Creek can be made comfortably in six days, and that several large new steamers have been put into service from Victoria. This route has two marked advantages: First, if the miner should outfit in Winnipeg, Victoria, or any other Canadian town, he will be able to go into the gold region without paying duty, a saving of from 15 to 35 per cent.; and, second, as soon as he passes Telegraph Creek he will be in the heart of a gold country, and can at once begin to prospect.

"It is probable that stopping-places will be established along the route, so that a man can go in light at a considerable saving of time. This route and the Dalton trail will undoubtedly be the ones advocated by the Canadian Interior Department, and steps will be taken before March 1 to furnish means of transportation. It would be possible for the miner to send his outfit through to Glenora in bond without the payment of duties. Whether the difference in price between American towns and Canadian towns will offset any of these duties or not can only be determined by the pur-

chaser on the ground."

#### SHALL WE ANNEX LEPROSY?

N the March Cosmopolitan there is a rather Cassandra-like contribution from "A Hawaiian Government School-Teacher," who hints at some very dark consequences of closer relations between the United States and Hawaii. As is generally known, the Hawaiian lepers are supposed to be isolated on the island of Molokai, where fourteen hundred diseased people live and have their own community, with their own marriage laws and with courts, stores, hospitals, and schools, all officered by lepers. It is a curious thing, incidentally, that there were forty children of leper parents born on this island who have not inherited the slightest traces of the disease. this teacher estimates that about 5 per cent. of all the inhabitants of the Hawaiian Islands are The teachers wear gloves in the schoolroom and use many precautions against contact with the children, and there is here a detailed account of discovering leprosy in a child the writer had taught for many months, who gives in addition many facts of anything but a pleasant nature in regard to the prevalence and dissemination of leprosy through the islands, and the horrible customs of the natives in their attempts to "A physician of large experience informed me that there is scarcely a city in the United States without some lepers, and that he has reason to believe that these islands contribute a majority of them all

#### FEAR DISAPPEARS.

"When a case of leprosy develops among the foreigners, it causes a short-lived stir, or is more often secretly sent to the States; but so long as it is confined to the natives—well, 'it is only a native.' 'He will be as well off on Molokai, where he will probably meet friends.' He will scarcely have a second thought from the foreigners; but what must he feel who knows that the curse is laid upon him or his loved ones!

"People in general think of leprosy as something vague and far away. They have read of it in the Scriptures or elsewhere, but they scarcely comprehend that it is an awful reality to-day. Even here, surrounded by it as we are and witnessing the misery it causes, we seldom think of fearing personal injury. It is not strange that people lose their fear of leprosy. Do not thousands of Americans degrade themselves and their families and die miserably every year from the effect of alcohol? And yet if you should warn a man to beware of it and point to thousands of ruined lives to prove the justness of your warning, nine times out of ten you would be laughed at for your pains."

#### GERMAN AMBITIONS OVER SEAS.

THE Nineteenth Century has two papers dealing with the prospects of Germany over seas. Mr. Henry Birchenough, vice-president of the Macclesfield Chamber of Commerce, writes on "The Expansion of Germany."

#### COLONIAL.

He sees that the present colonial ambitions of the German people are a natural sequel to the successful struggle for national unification and for commercial success. But he says:

"The real drawback to the realization of these hopes and dreams of Germany and her ruler is that they have come too late. . . . The opportunity for creating a true 'Greater Germany beyond the seas' has gone by. Germany's commercial future may be very bright; she may—nay, will—continue to play in the world a high and important rôle, but the question of her becoming one of the great world-states and of her people being numbered among the governing peoples of the earth is, I believe, already decided, and decided against her."

Only in Africa did there seem any chance. But England and France between them have so extended their African possessions or protectorates as to exclude the possibility of a German Africa of any magnitude, and still more of an African home for the overflow of German population. Of the future of French expansion this writer says:

"As one who has had opportunities of watching closely the intellectual, moral, and material changes which have taken place in France during the last twenty-five years, I should be the last to say the next century will not see a striking physical revival in her population, which may restore to her just what she wants to make her again a great colonizing power."

#### COMMERCIAL.

The writer recognizes that the phenomenal national and commercial progress of Germany during recent years makes a "forward policy" inevitable. His point is that this should take an industrial and commercial direction, "that the opportunities time has in store for her are not opportunities of empire-making, and that her future career is more likely to be the career of a commercial than of a governing people. If this be so, her true policy is not an ostentatious policy of promiscuous annexation here, there, and everywhere, but a sober policy directed toward the extension of her commerce and the protection of her interests in every part of the world. policy would of course include the gradual and

progressive strengthening of her navy to meet the increasing duties laid upon it, and it would not preclude the acquisition of such strategic positions as may still be obtainable, whenever she considers them necessary for the defense of the vital interests of her trade."

A generous tribute is paid to "the thoroughness with which Germany has prepared herself for her industrial career, and the boldness and persistence with which she is assaulting every market in the world."

# Adaptability the German Ideal.

In the Edinburgh Review there is a summary of the views of Signor Ferrero on the comparative abilities of the German and the Englishman as agents of civilization. Signor Ferrero recognizes frankly and without reserve the certainty of the domination of the Teutonic race. Germans and English appear to him to be destined to submerge the world. He says: "It is the Germans who are to be the great civilizing agency of the future, the cement of new societies, because the German is of all men the most adaptable."

#### GERMAN TRADE SUCCESSES IN THE FAR EAST.

A N interesting account, from an Englishman's point of view, of German commercial success is given by Mr. Clavell Tripp in his Nineteenth Century paper on "German Versus British Trade in the East." Mr. Tripp speaks after "long residence in Sumatra," and he puts the problem thus:

"That the German flag has, within the last decade, been more in evidence on the Eastern seas, and that German-made goods have partially or entirely taken possession of markets which were but recently innocent of their existence, are facts admitting of no denial. There are, however, two kinds of trade—the one vigorous, self supporting, yielding a fair profit to capital, a decent wage to labor, and satisfaction to the consumer; the other spurious, bounty-fed, and existing only by subsidies and the sweat of mankind. The one has the qualities of endurance; the other the symptoms of decay."

# HOW EXPLAINED.

This is how in the end he sums up the results of his experience:

"The expansion of German trade is due to the adaptability of German wares to certain cheap and inferior markets in which it would be unwise for British manufacturers with any regard for their reputation to attempt to compete; to the employment of methods so at variance with all sound commercial principles that it would be inadvisable to adopt them; and to the superior dili

gence and knowledge of their commercial classes, in which respect we may one day hope to be at all events their equals. Therefore, as far as my experience goes, we need have no fear with regard to retaining our commercial supremacy, as the causes which to-day appear to retard our progress and advance our rivals are either temporary or removable."

#### TEMPORARY RESULT OF CHEAP SILVER.

The one fault found with British goods is, they are "too good." "Germany makes tools to last one year; Birmingham makes tools to last several years." The silver crisis in the East has made people demand cheapness at the expense of quality. A Penang merchant confessed "the Europeans can no longer afford to pay for English goods, so we give them German, which cost half the price." Mr. Tripp observes:

"And so it would appear that the introduction of German goods into these Eastern markets, which in former times would have none of them, is a temporary expedient only to relieve the necessities of a great monetary crisis; and it may confidently be anticipated that a return of prosperity to those Eastern lands will bring with it a revival of wholesome tastes, whose cravings can only be satisfied by sound, honest British goods."

#### THE ENGLISH CRAZE FOR SPORT.

He complains that "the dignity of commerce suffers at the hands of Germans. They are shopkeepers always; merchants never." But he is cheerily confident that, "given equal conditions, the British trader can beat his German rival anywhere." Yet even this valiant advocate of British superiority is bound to admit the better education and—a still more serious admission—the closer application of the Germans:

"It must be conceded that in one respect the Germans are superior to the British, and that is in the way they train their youths who are destined for a commercial career. I must regretfully confess that in the average young Englishman who is sent abroad nowadays to assist in conducting the nation's commerce, I have failed to observe that diligence and attention to business which is so noticeable in the sons of Germany. Sports and pastimes engage far too much of an Englishman's time and attention. Time and conversation which should be devoted to business are taken up by reference to some horse-race or some past or impending cricket-match. If the instructors of our British youths do not watch it, they will one day awake and find that German zeal, industry, and discipline are more calculated to win the great race of life than any amount of British pluck and muscle."

# THE FUTURE OF GERMANY, AUSTRIA, AND TURKEY.

THE March Harper's contains several articles of importance, among them one entitled "The Traditional Policy of Germany in Respect to Austria and Turkey," by "An Eastern Diplomat." The writer begins his discussion of the Eastern question with the war between Russia and Turkey in 1787, and shows himself extremely well versed in the inner history of the diplomatic events of that war and the subsequent century as far as the relations of Austria, Turkey, Russia, and Prussia were concerned. The prominent idea in his theory of the present situation is that the empire of Austria is in a position of equilibrium quite as unstable as that of Turkey, and that she may find herself at any moment in a situation very analagous to that of Poland on the eve of its dismemberment. The troubles which have lately been published to the world through the dramatic controversies of the Austrian Reichsrath have, says this writer, been common report for a long time with those who understood the Eastern situation. He says the German Emperor conciliates the Magyar element in the Austrian empire merely to render the twelve millions of Germans in the Austrian empire more dissatisfied, and to prod them into looking to Germany for their future.

The only present obstacle to the disruption of Austria as a state is the life of the Emperor Francis Joseph. On his death the fate of Austria and Turkey will become problematical. "The stake of Germany in the circumstances which must then ensue is not merely that of a great power. It is that of a great nation which still strives after the attainment of its natural and legitimate aspirations—its complete unification."

#### ON TO THE ADRIATIC.

"Moreover, Germany will never rest until she succeeds in debouching on the Adriatic. Both in a strategic and in a commercial point of view her position will continue to be one of danger and difficulty so long as she is not firmly established in Trieste; and the Germans have never considered Trieste as anything but a German When, on one of their periodic outbursts, the Italian Irredentists made themselves conspicuous in that city, Prince Bismarck's organ in the press warned them that the point of Germany's sword extended to Trieste. And later, a German publicist related how the Iron Chancellor, at the conclusion of an interview he had accorded to him, laid down on the open map before him his pencil, which, by a curious coincidence, exactly reached from Berlin to Trieste."

# THE GERMANS ARE THE FOREMOST CONTINENTAL RACE.

"But there are more convincing grounds for the belief that such is the extent of the ultimate aspirations of Germany. Let us not forget that in point of numbers, culture, and enterprise the Germans are the foremost race on the continent; that the entire nation is imbued with eagerness and the ambitions of the youth. In commercial activity Germany is second only to England, while in ratio of trade progress she exceeds all Frugal, industrious, highly educompetitors. cated, the Germans develop into keen men of business, who gradually displace in all parts of the world old-established concerns. Their very militarism instills into them habits of obedience, endurance, and exactitude, which, with their talent for organization and method, go to form good manufacturers and successful traders. These endowments and their pushful instincts give them a foremost place in that fierce trade competition around which centers the policy of states These are facts that cannot be overnowadays. looked; they speak of forces which, by the laws of nature, are irresistible. In the far East and in the Mediterranean German commerce is making gigantic strides, and it is not likely that the Germans will long rest content with the circuitous route by way of the North Sea and the Baltic. The eventful absorption of twelve millions of Austrian Germans will render an outlet to the Adriatic an imperative necessity."

#### THE KAISER CONTROLS THE TURKISH ARMY.

"In the days of their youthful friendship the present German Emperor said to the Austrian Crown Prince, 'I mean to follow the programme of Frederick the Great.' To which the ill-fated Archduke Rudolph resignedly replied, 'That programme implies the destruction of Austria.' That programme is being followed steadfastly, and the destruction of Austria seems to be her only manifest destiny. And since on its debris, as well as those of Turkey, which must needs crumble at the same time, only some kind of mixed state or confederacy can arise, of which Hungary most likely would assume the hegemony, German policy aims at securing both a predominant influence at Pesth and the control of the military forces of the Sultan. This control is now complete and unshakable, and the disposal of some three hundred thousand Turkish troops, led by German officers, may decide the fortunes of a European war. With the two moribund empires practically subservient to her policy, with their presumptive heir eager to profit by that policy, Germany will have little difficulty in striking an advantageous bargain with Russia. It is not with Russia that Germany will ever quarrel. These two have had a long practice in settling their differences at the expense of neighbors; and it may prove next to impossible to oppose a combination which, in all probability, holds in reserve offers capable of satisfying the cravings of France also."

#### DECENTRALIZATION IN FRANCE.

RANCE is generally regarded as a conspicuous instance of political centralization, but rarely have the causes and counteracting tendencies of this arrangement been so concisely stated as in Mr. J. T. Young's paper in the Annals of the American Academy on "Administrative Centralization and Decentralization in France." He explodes the common notion that the existing centralization dates from Napoleon. It came over from the ancient régime, and the first wild efforts of the Constituent Assembly in 1789 to set up local independence only strengthened by reaction the old central control.

This centralism, which enables a man or a few men at the center to seize the administrative machine, is, according to Mr. Young, the real explanation of "much in French national life that has been ascribed to the fickle and volatile character of the people." Mr. Young makes clear what is often overlooked, that France has not tamely acquiesced in this unhappy survival of feudal absolutism, but has, on the contrary, been struggling for almost a century to shake it off. The effort has been interrupted by successive revolutions, but has been ever and again resumed. Its influence is apparent in the report of the commission appointed in 1895.

"The crucial point in the entire question of decentralization" is, according to the writer, the organization of the commune or of the adminis-

trative unit which shall supplant it.

"The French commune of to-day is too small, it is not capable of an independent organization and existence. It therefore appears that if France is to secure a decentralized organization, there must first be formed some larger administrative unit which will also be distinctly local in character. For this reason it has been proposed to revive the canton, which includes several communes, but which at the present time is only used as an electoral and military recruiting district and as the territory of the justice of the peace."

#### HISTORIC CAUSES AND MODERN CONDITIONS.

Mr. Young concludes his paper with this masterly summary of causes and present issues:

"If the entire trend of this development were to be summed up in a few words, it might be said that the question of administrative centralization is largely coincident with French history. The minute division of the empire subsequent to Charlemagne's death had destroyed the imperial This tendency to disintegration was first seriously combated by Philippe Auguste and his successors, and the long conflict which then ensued gradually turned in favor of the King. The various stages of this victory were not the causes, but rather the results, of corresponding steps in the centralization of the administrative organization. The royal power was extended by reducing the local administrative bodies to mere agents of the royal will. National unity was the consequence of the absolute monarchy, but absolutism was only established and maintained by means of centralization. National unity once securely established, however, the necessity for a highly concentrated administrative organization had ceased, while the transformation from a monarchical to a republican form of government made it imperative that the people should enjoy the opportunity for more frequent and continuous political training and activity. A carefully devised system of local self-government was, then, a necessity. But this was neglected, and as a consequence the existing local bodies are now found to be on the one hand too small in size to perform properly the important functions which in other countries are assigned to them, while, on the other, they are superintended to death by the constant surveillance and interference of The French agents of the central government. people are thus left without interesting or adequate opportunities of political education. main question whose solution is now being attempted in France is therefore an exceedingly simple one, but none the less difficult. sists, first, in preserving the moderate central control which has been found so necessary even in England, and, second, in restoring the local organization to that position of strength and vigor which is so necessary to the political health of a great republic."

#### THE DWINDLING POPULATION OF FRANCE.

"THE Depopulation of France" is the title of a paper which Adolph Jensen contributes to the Swedish magazine Tilskueren. It was Jacques Bertillon, the statistician, who prophesied darkly that in half a century the nation would be dead, and though a statistician's province is the province of facts and not of hypotheses, yet the situation, says Herr Jansen, tempts the mind to question what the future consequence will be, and the answer can only paint it in the darkest colors. One may preach early and late, found societies, make laws to promote the increase of the nation, but it will be long

before the end is attained. The "system" has struck too deep a root, and generations will live and die before the nation will have regained what it has for centuries been losing in moral and physical power. Briefly, while European Russia will need only forty five years or so, Germany about sixty five years, Austria-Hungary seventy years, England eighty years, Italy one hundred and ten years, it will take France over eight hundred and sixty years to double its population! What signifies the loss of Alsace-Lorraine's 1,500,000 souls compared with the loss France In the last five years suffers every day? the German population has increased by 3,000. 000, who are every one fully German; France meanwhile has only increased her people by 175,000, who are not even of French nationality. The increase of a nation is of the utmost importance to the success of its country. It has meant much in the nineteenth century; it will mean more in the twentieth. England, Germany, av. even Italy, have millions of representatives on foreign soil; France has none, or too few to The Gallic race has felt it, and will in signify. the future learn more bitterly still the truth of the proverb, "The absent are ever in the wrong."

# THE ASCENDENCY OF RUSSIA. Her Position in the Far East.

"BLACKWOOD'S MAGAZINE" for February publishes a long and very well-informed article on the crisis in the far East, the writer of which brings into strong relief the ascendency of Russia both in Europe and Asia. It is interesting to note that Blackwood's recognizes that the recent development of Russian predominance in the far East was gained by no intrigue. but by the adoption of a perfectly straightforward policy.

She warned Japan, before a shot was fired, of the policy which she intended to pursue. Blackwood's says:

"Russia is the one power which has been at once clear and consistent, and which comes out of the imbroglio with honor."

At the same time Russia, having her hand forced by the Japanese treaty of peace, did not shrink from making ready to fight. and on one occasion came very near actual hostilities. Blackwood's says:

"There was a critical moment in May, 1895, when the Russian Pacific squadron lay cleared for action, all its combustible gear put ashore, on one side of the Gulf of Pecheli, while the Japanese squadron lay on the other, with only seventy miles of salt water between them. Both, it ap-

peared, were ready for the signal, the issue depending on the ratification of the treaty of Shimonoseki, which was delayed by the Chinese Government until the last hour of the last day of grace. The German and French squadrons, the former with alacrity, the latter with reluctance, only overcome by peremptory injunctions from St. Petersburg, had taken up their appointed stations, under the orders of the Russian admiral."

The Japanese, however, gave in without fighting, and abandoned their conquests on the mainland.

#### RUSSIA AS PARAMOUNT POWER.

The result of this is stated as follows by Blackwood's:

- "1. By that one act, more than by any speech or writing or apocryphal testament that has gone before, a final and indelible stamp was given, not to Russian 'policy'—that is far too limited an expression—but to Russian evolution in Asia. It is a datum from which Russian policy might be calculated with the certainty of an eclipse, if only the perturbations of other bodies could be reduced to a similar fixed law.
- 2. It set up Russia, visibly and in fact, what he already was in effect, the paramount power in Europe, a position from which she can afford to grant every reasonable indulgence to her satellites. (We mean no disrespect by this term, but know no more accurate one.)
- "3. It also established Russia as the protector of China and Korea and the secular foe of Japan.
- "In these three points may be found the germ of all that has happened since, is happening now, and will happen in the future."

# RUSSIA'S GOOD FAITH IN KOREA.

Incidentally Blackwood's takes occasion to repel the repeated charge brought against Russia of having acted with bad faith to England by her action in Korea. Blackwood's says:

"Here we may venture to deprecate the practice, which never does any good, of making charges of bad faith against Russia. It is censtantly asserted—two days rarely pass without a fresh reiteration of it in some of the gravest of our newspapers—that Russia has broken the solemn pledge she gave never to interfere with Korea, on the faith of which Great Britain evacuated Port Hamilton in 1886. Port Hamilton was a Korean harbor; China was the suzerain of Korea recognized by both Russia and England. The two powers were jealous of each other's aggressions; Great Britain was the first and, up to that time, the only aggressor. Russia intimated to China that if Great Britain retained the

position, she must get level with her by taking some other. China deprecated this beginning of a scramble, and an arrangement was made whereby Great Britain restored Port Hamilton, not to Korea, but to China, on her giving an assurance that no other power would step in. China obtained a satisfactory verbal assurance from the Russian charge d'affaires, and communicated the substance of it in (Chinese) writing to her majesty's minister. The Chinese version stated that Russia would not occupy Korean territory 'under any circumstances whatever.' What the phrase so translated may have been in the oral Russian we do not know, but these words are always quoted and underlined as evidence of bad faith. The charge is puerile. The sense and purpose of the undertaking was perfectly well understood by all the parties concerned. It was that Russia and Great Britain separately agreed with China to respect the status quo in Korea. But two important events occurred beyond the control of all three, which completely upset the status quo. Japan invaded Korea and captured the King, which ipso facto annulled engagements based on a contrary state of things. And at the same time China's suzerainty over Korea ceased, when engagements made with her in that capacity necessarily lapsed. China was the injured party, not Great Britain. Our grievance, if we have any, lies in any case against China and not Russia, with whom we had no dealing in the matter."

# THE NEW RUSSIAN MINISTER OF WAR.

MR. E. C. RINGLER THOMSON, late assistant agent to the Governor-General of India and Vice-Consul for Khorasan, writes in the National Review on "The Russian Advance on India." Mr. Thomson has traveled in Russia and is familiar with Central Asia. His forecast of the way in which the Russians will advance in case England comes to loggerheads with them at any point in Europe or Asia is interesting. Mr. Thomson is a strong man, who has seen much and does not shrink from recommending general massacre as a legitimate method of pacifying savage countries. He maintains that if the Russians found themselves threatened with any resistance after they got to Cabul they would order a general massacre, which he maintains would not be half so cruel in the end as the timid, vacillating policy which England follows.

#### THE RUSSIAN SOLDIER IN ASIA.

Mr. Thomson says he once held the Russians in supreme contempt, but after seeing them and watching them in Central Asia, he has come to the conclusion that they are in every respect equal to the English and in some respects are much better. They are tougher, cheaper, and do their own work without servants to wait upon them. The result is that they can maintain five men where England can maintain only one. Mr. Thomson has very little sympathy with the British "forward" school, although he himself advocates a policy much more "forward" than anything that they have ventured to propose. He says:

"I do not wonder in the least that the forward policy has of late been so hotly denounced. During the last twenty years we have lavished, I suppose, over fifty millions in attempting to keep the Russians back, and we have only succeeded in preparing the way for their advance in the exact manner they desire."

#### GENERAL KUROPATKIN.

He knew General Kuropatkin well, and as this officer has just been appointed the Russian Minister of War, the following extract will be read with interest:

"He is still in the prime of life, not yet fifty years of age, has served from the commencement of his career in Central Asia, has taken a leading part in its conquest, and has made some important contributions toward its literature. He thoroughly knows the various countries and thoroughly understands the people inhabiting them and their modes of diplomacy and warfare. He was chief of the staff to the great Skobeleff during the Russo-Turkish war, and greatly distinguished himself in it. Indeed, there is little doubt that some of Skobeleff's laurels were won by him. Skobeleff was the dashing, impetuous, reckless leader; Kuropatkin the cool, patient, calculating

rrective who restrained him. He is a man of indomitable will, of untiring industry, master of his profession as a soldier, a great civil administrator, deliberate of speech, exceedingly gentle and modest in manner, and with a temper always under control. He wears the first class of the Order of St. George (equivalent to our Victoria Cross), and his courage is of the type which does not comprehend fear. He is the strictest of disciplinarians, but beloved and respected by all, and his own good qualities are perforce in a great measure reflected in those serving under him. He is, indeed, the equal in every respect of any commander we could place in the field to oppose General Kuropatkin has brought Transcaspia in all matters, both civil and military, to a high state of perfection. He works from sunrise until late into the night, inquires personally into the minutest details, and finds time to be constantly making long and fatiguing journeys of inspection throughout his extensive command. This man, if he took the field against us, would be hard to beat. He has told me more than once that he has seen too much of war not to hate it, that neither he nor his government have the least desire to fight us, and to suggest that they wish to invade India is absurd. I believe him. But all the same, he is a Russian of Russians, and if he thought there was just cause for it, would delight in trying conclusions with us. In diplomacy, of course, General Kuropatkin is a thoroughbred Russian."

# "ENGLAND'S ECONOMIC AND POLITICAL CRISIS."

MR. J. N. LARNED, writing in the March Atlantic Monthly under this caption, be-"Historic England (inclusive of all Britgins: ain) is easily the first among the great nations that have yet arisen. It is above ancient Greece both in character and in solidity of genius; it has surpassed Rome in dominion, and even in the impression of its influence on the world." But, asks Mr. Larned, do the English uphold the greatness of their heritage? Do they keep their nation to the level of its old renown? This writer sees many reasons to be dubious over an answer to these questions. He examines into the stupendous political change from an aristocratic to a democratic constitution which has been accomplished in three great leaps within sixtyfive years, with the new conditions resulting; into the small amount of money, relatively, devoted to education, and into their grasp on economic supremacy, and is inclined to the opinion that there are serious signs of deficiency.

#### ALLEGED DETERIORATION.

"Three causes, then, I conclude, have been operating together to diminish, relatively at least, and in their own country, the economic capability that originally secured for the English people their supremacy in production and trade, namely: (1) The dulling of inventive faculties by excessive confidence and contentment; (2) the crusting of the commercial mind by that same influence with a disposition that resists teaching; (3) the drafting of practical talent away from the mother country into every quarter of the globe, by increasing attractions and demands. None of these causes can be easily overcome; and if, as appears certain, they have already begun, in a serious way, the yielding of ground to foreign competition in British fields of trade, one cannot see where or how the backward movement will be For several centuries, notably Germany and the United States have been assiduously in training for the competition and are entering it well prepared.

"As the whole fabric of British power is susained by the national wealth, it looks more insecure than it has looked before since the American colonies were lost. Yet the architects of the empire continue to build upon it more ambitiously than ever. They suffer no year to pass without stretching the bounds of the sovereignty of their queen and heaping new responsibilities Lord Rosebery, speaking in 1896, reckoned the additions of territory that had been made to the British empire within twelve previous years at two million six hundred thousand square miles, or twenty-two times the area of the British Isles. That averages the acquisition every year of a province greater than France. October, Mr. Broderick, Under Secretary of State for War, quoted the ex-premier's estimate with assent, which makes it doubly authoritative. And the taking in of barbaric regions, which British armies must guard, British fleets keep in touch with, British administrators control, British statesmen be responsible for, goes on continually.

#### PERILS FROM WITHOUT.

"To what end? If it be true that England is losing ground in her older markets, can she save herself commercially by political possession of new ones? The eighteenth century might have said yes, but no doctrine in our day will justify that line of a national policy. To the impartial looker-on there seems to be a strain in it that must have its inevitable breaking-point not indefinitely far away. If all the jealous and envious rivalries provoked had stayed at the relative weakness which they showed even thirty years ago—if Germany, Russia, France, stood no stronger than they were when the third Napoleon fell, Great Britain might still regard them with small anxiety; but the substance of power, which is organized resource, has been growing on the continent during these thirty years much faster than it has been growing in England. powers in Europe now that only need combination to put England in fearful peril. And there is no friendliness to restrain them. They are all hungry for the territorial plunder of Africa and the Asiatic East, and resentful of the huge share that the British have grasped. Only one strong nation in the world can be named that would not go eagerly into a fight with Great Britain for the dividing of her possessions if opportunity favored. That one is the United States, which does not covet territory and has no ambitions to be satisfied by aggressive war. Were it not for a single black memory, there might be between the kinsfolk of England and America a closeness of friendship that all Europe would not dare challenge."

# "EUROPE AT WAR WITH ENGLAND."

THE Nineteenth Century has a characteristically vigorous article by Mr. Fred. Greenwood, entitled "England at War." He traces England's present isolation, with all its perils, to the time, three years ago, when Russia invited England to join her in her China-Japanese intervention, and England refused. The choice lay between a better footing with Russia and her friendly new Emperor and alliance with Japan. "Government decided upon saying 'No' to the Czar and shaking hands with the Yellow Specter."

#### THE "COMBINE" AGAINST BRITAIN.

This decision has changed the "concert of Europe" into a "combine" against England. "The concert treatment of the Armenian question, the Cretan question, the Turko-Greek difficulty, was less remarkable for its results to Armenians. Cretans, or even Greeks of the kingdom, than for a prolonged and malicious display of how ineffective England's authority had become."

Mr. Greenwood is careful to say that "nothing even now justifies apprehension of actual assault upon the British empire" or of clear provocation to war. Nevertheless, "the truth is—and to understand it and its bearings is of the highest importance—that an actual state of war against England began some time ago. War has long been organized and in progress upon military lines."

#### WHAT "HUNGER FOR FACTORY PROFITS" HAS LED TO.

The fancy which Mr. Spencer advances of the essential antagonism of militarism and industrialism is laughed to scorn. "The one is the mailed fist of the other." The "hunger for factory profits" which has seized on all the nations has created conditions beyond the control of any government:

"These conditions are such that most of the European states are under the strongest compulsion—social, political, economic, even dynastic to enter upon wars of industry, not unlikely to prove as sweeping as the old wars of religion. Militarism calls upon industry to supply its enormous needs; industry, believing that trade follows the flag, calls upon government to find or make new markets; socialism sounds a constant waining that unless the factories are filled down all government will go. But while these demands are pressed for immediate execution the finding and the making of markets is a most tedious business, and it is doubtful if all that is left to the rest of the world by the Englishspeaking races can provide for its ever-growing wants. In such a state of things it would be strange if the governments of 'awakened' Europe had not a socialist dream of their own, figuring forth, as the only or short way to prosperity in peace, a more reasonable distribution of the whole bulk of trade, its strongholds and opportunities. It is, in fact, no dream, but a purpose already afoot and in action."

# A WAR, BLOODLESS PERHAPS!

A great "trade-war against England" began long since, over and above the tariff war, which may or may not end in bloodshed:

"The object of the war is conquest, and conquest is fulfilled by surrender. The most splendid operation of war is a disposition of forces so effective as to compel submission without a stroke. It is warfare of this kind that is and has been going on against England; and as long as the allies of Russia can be properly restrained by Russian wisdom, it is unlikely to change its character."

The other nations of Europe feel that England has enough, and mean to secure for themselves what remains, peacefully if possible, but "if England springs in with armed interference, the state of war described above will probably change at once into something sharper and noisier; the ultimate purpose of that long Russian march to the Indian frontier will then find its hour."

#### WHAT MAY FIRE THE MINE.

Possibly such a test is supplied by the Chinese loan:

"By the terms of the loan our government revealed its consciousness of what the continental brotherhood was about in China, and as plainly declared its desire, if not its determination, to put a stop to it."

England's confidently counting on a Japanese naval alliance shocks Mr. Greenwood. "There was never greater folly in the world." He indorses the judgment that "any European power which allied itself in arms with the yellow peoples against another European nation would play traitor to the welfare of the whole human race."

#### AN ANGLO-JAPANESE ALLIANCE? NEVER!

England's looking that way three years ago brought on her "the hostile partnership at Constantinople and the far East." "Russia has France at her back... and the German Emperor has shown, by a certain famous picture, what he thinks of a flourishing and conquering Japan."

"For Russia Japan is unendurable as enemy and competitor in those seas. Nothing is more fixed in her policy than that conviction, and we may expect it to be acted on inveterately. As an enemy and competitor Japan will not be suffered to live if Russian arms and Russian alliances can put her in a different position—which different position will be her fate almost certainly, and perhaps soon."

The "terms of the loan" are a challenge, which must therefore be resented by the head of combination which to England is all but irresistible. A British policy of "no alliances" would be "ridiculous and even scandalous if it ended in an anti-European alliance with the Japanese." Mr. Greenwood is kind enough not to leave his English readers in utter despair. Among his last words are these:

"Does it follow that we are quite done? Not at all. With patience, watchfulness, courage, we may yet be redeemed from isolation—the one thing to look to."

#### THE LONDON COUNTY COUNCIL.

London County Council has called out a reply from that dignified and conservative organ of English public opinion, the Quarterly Review. While criticising some of the work and methods of the Council and proposing certain changes, the Quarterly expresses its sense of the great excellence and usefulness of the body:

"If we have found something to criticise unfavorably in the proceedings of the London County Council in the past, we should be the last to deny that it has placed to its credit a vast amount of useful work, that its administration has on the whole been animated by honesty and public-spirited zeal, and that its members have devoted themselves to their duties with an industry and thoroughness which are in the highest degree praiseworthy. The personnel of the Council has been kept at a creditably high level. The County Council must remain large enough. in all senses, to attract the interest of the electors and the services of good men. To turn it back into a sort of superior Metropolitan Board of Works, with its hole-and-corner methods and its absolutely undistinguished membership, would be an inexcusable blunder. Whatever it ought to have been at first, it has now come to play a part in London life which cannot be spared.'

#### What the Council Has Done.

Mr. H. L. W. Lawson, writing in the Fortnightly Review on the County Council, pleads vigorously on behalf of the progressives. He takes up his parable against Lord Salisbury, with his scheme of tenification, which he regards as fatal to any hope of progress in London:

"'Tenification' means a recognition of local facts, perhaps, but more than any other the disastrous and deplorable fact that the poor are to live in one district and the well-to-do in another, without mutual dependence or mutual assistance."

The following is Mr. Lawson's summary of some of the things which the London County Council has done:

"It has obtained, by private act of Parliament, the power to do away with sky-signs, the last of which disappeared at the beginning of 1898, in themselves one of the many curses of American cities. Commencing in 1890, it has gradually obtained leave to abolish the gates and bars which were in so many quarters an obsolete and purposeless hindrance to free traffic and communication, without appreciable cost to the rate-payer; to obtain true weight and good value for the consumer, and to render impossible the tricks and frauds of the dishonest tradesman through special and appropriate remedies in the Weights and Measures act of 1889. In order to prevent inestimable damage to the welfare of the community by petty filching of space and air, it obtained the Building act of 1891. To better the housing of the people, by obtaining such peculiar powers as were necessitated by the peculiar conditions of London life, it suggested and improved much of the amendment of the law In the case of the southern apmade in 1891. proach to the Tower Bridge, and more recently in the authorized plan of Strand widening, it has induced both houses to approve and embody in their practice the principle of betterment, with its correlative of worsement, and has thus paved the way for a great series of street improvements without the heavy incidental cost that the recoupment scheme of the Metropolitan Board of Works involved. It has taken over the tramways at cost price, the different properties coming into hand as the varying terms of twenty-one years fixed by Parliament for the time limit of the companies' possession severally expire; and although the gain to the public might have been greater, both in relief of rates and in increase of convenience, there is much to the common good on the transaction. After long and patient inquiry authorized by Parliament, bills have been introduced and almost passed into law for the purchase of the existing water companies on the fair terms embodied in what is known as the 'Plunket clause' of the water bill of 1895, and the consequent consolidation of management and means would have done much to help the consumer and prevent the scandals of recurring water famine.

"To split up the metropolis into 'water-tight

compartments' would make this persistent seeking after legislative reform impossible in the future, for no single municipality would have the means or the courage and no union of municipalities the unity or the purpose to introduce and carry such a book of statutes through Parliament."

#### CO-OPERATIVE CREDIT FOR SMALL FARMERS.

A SUGGESTIVE account of the cooperative credit associations so common in rural Germany is contributed to the *North American Review* for February by Mr. A. F. Weber, of Cornell University.

The oldest of these associations of borrowers are the Prussian *Landschaften*, or provincial societies, which Mr. Weber describes as follows:

"They consist of the landowners of a single county or province associated for the purpose of borrowing money on their collective credit. When a member declares his wish to borrow a sum of money, the association issues its bonds (Pfandbriefe) for a certain percentage (usually one-half) of the valuation of the borrower's property, sells the bonds to investors, and advances the money to the petitioner, taking as its security a martgage on the property. The idea of thus substituting the joint guarantee of all the proprietors for that of individuals, and establishing a book in which this land stock should be registered and be transferable, and the dividends paid exactly in the same way as the public funds, originated with Büring, a Berlin merchant, and was put into effect by Frederick the Great by the foundation of the Silesian Landschaft in 1770 (Macleod). Since then a Landschaft has been established in nearly every other province of Prussia and in several other German states as well. the system has spread to other countries like Austria, Denmark, Russia (Poland), etc., and, as we have already seen, the fundamental idea was embodied in the Crédit Foncier by Napoleon III. and Wolowski, both of whom had studied the German Landschaften.

"The advantages of this system of agricultural credit must be obvious on the slightest reflection. It unites the security of a mortgage with the advantages of negotiable paper. It is the only system that identifies in one person both creditor and debtor. As a borrower the individual member secures the advantages of low rates of interest, long terms, and sinking fund contribution mentioned in a preceding paragraph. But as a member of a company of lenders, the same individual will exercise the strictest caution in evaluating the property which a fellow-member offers as a security for a loan. The smaller the association the better acquaintance will each member have

with the value of other members' property. On the other hand, a small association will be less able to withstand unforeseen financial trouble, and its bonds will be held in less esteem on the great exchanges. But by a union of several small associations the advantages of perfect security on the one side and of financial strength and independence on the other will be secured."

The land-credit bonds have always maintained a wonderful steadiness of value in times of panic. In 1848, when all public securities fell, these bonds kept their value better than anything else. When Prussian funds fell to 69, the land-credit bonds in Silesia and Pomerania stood at 93, in West Prussia at 83, and in East Prussia at 96.

#### FARMERS' COÖPERATIVE BANKS.

To still further facilitate small loans on farm security the German coöperative societies of half a century ago, which have since spread all over Europe, were organized.

"These loan associations are of two kinds, the Kreditgenossenschaften, founded by Schulze-Delitzsch, and the Darlehnskassenvereine, by Raffeisen. The fundamental idea of both is that of the Landschaften-namely, that a 'body of men, many of whom expect to become borrowers, should furnish the capital and regulate the conditions of its lending and repayment.' Small farmers find it difficult to obtain money advances, because they seek small amounts and cannot furnish the usual security. But while a single farmer finds it impossible to secure a loan of \$100, ten farmers can' without trouble secure \$1,000, provided each pledges his property for all and all stand together for each. Cooperative banking has been called the democratizing of credit; it aims to make every man capable of securing credit who is worthy of credit. In 1850, when the first of these societies was organized at Delitzsch, it had to charge its members 141 per cent. on loans, which was a low rate in comparison with that which they had been paying. To-day the average rate of interest in the societies is 51 per cent.

"Although the main object of both the Schulze and the Raffeisen associations is the same—namely, by collecting a small capital to secure credit with investors and then make loans to members after a direct personal examination of the circumstances of the borrower—there are certain differences in management, method of making loans, etc., that call for attention.

"The cooperative loan associations founded by Schulze, of Delitzsch, in 1850, are composed of workers in all professions and occupations, industry as well as agriculture. And this feature is regarded by the advocates of the system as one essential to its strength. At one time money will

be abundant in one industry and 'tight' in another, and a general association equalizes the supply. If the association were composed of farmers alone, it is said that they would all need credit at the same season, and many would have to be disappointed. In the second place, the loans of the Schulze societies are for a short period only, being as a rule for three months. Thirdly, the Schulze system lays stress on regular contributions and the acquirement of shares, much as do the building and loan associations of this country. Both are also alike in distributing profits among the members, or shareholders. Fourthly, the Schulze societies are more or less centralized and are managed by salaried officials."

# COÖPERATION, WITH FEWER BANKING FEATURES.

Thus it appears that the Schulze associations are practically banking concerns; they make loans on personal security, discount bills, and keep accounts current. They differ from banks only in the proportion of borrowers among their own shareholders. The Raffeisen associations, on the other hand, emphasize an ethical as well as a commercial purpose.

"Not only do they furnish credit to their members, but they encourage the organization of auxiliary cooperative societies for the purchase of fertilizers, tools, cattle. and means of subsistence, for the common use of expensive machinery, and for the sale of farm products. not make loans to every one who can furnish security unless they find him morally and intellectually worthy of help. Members must borrow only for a specific purpose, and as they are under the eyes of their colleagues, if the money is misapplied it can be promptly called in. So close an acquaintance with borrowers and so strict a control over the use made of loans, it is asserted, cannot be accomplished with the large, varied, and fluctuating membership of the Schulze associa-Hence the first principle laid down by Raffeisen was that the membership must be limited to men following a single pursuit and restricted to as narrow an area as possible. One society to a district containing an average population of 1,500 should be the ideal. bers must as far as possible be persons living under similar conditions, animated by a common spirit in both industrial and social relations, and capable of a fellow-feeling with each other's necessities."

With the exception of an accountant, who examines the books every four years, the officials of the Raffeisen all serve without salary. The management is comparatively simple. Dividends are prohibited, all surplus being added to the reserve fund. Each member has a single share only, so

that the shares constitute but a small proportion of the total capital. These provisions tend to remove all danger of transformation into banks.

Mr. Weber finds in this experience of Germany and other European countries an important object-lesson for our farmers in the West and South, where banking facilities are often inadequate. To the cotton-growers of the South, whose only form of short-term credit at present seems to be the system of "crop liens" to local merchants, these cooperative credit associations offer a tempting promise of relief.

# THE SOCIAL PROBLEM IN GERMANY AND RUSSIA.

A Italian Sociologist in Northern Countries" is the title given to Mr. B. W. Henderson's very interesting account in the Economic Review of Professor Ferrero's "L'Europa Giorane." The Italian finds Germany dominated by two hostile powers, both alien to the innate temper of the German people, but therefore exercising over it a strange if only temporary fascination—Bismarckism and socialism.

#### HOW GERMAN SOCIALISM SUCCEEDS.

He regards socialism, as the reaction from militarism, doomed to perish with it. Meantime it is lively enough:

"German socialism is a veritable state in itself, with great ministers and huge budgets.'
... The chief ministry ... is that of public instruction—i.e., the organization of the propaganda by means of the socialist press. In 1894 the party was represented by 37 daily papers and 37 others appearing at intervals varying from once a month to three times a week.
... There were also 53 trade journals professing the socialist creed. . . .

All the officers of the party are paid by the party, 'if not richly, at least decently.' The greatest payment seems that made to the editor of the Vorwārts, who receives 7,200 marks a year. The socialist deputies in the Reichstag, about fifty in number, cost their party annually over 18,000 marks. These are naturally the most important posts open to members of the party, but very many others there are of every grade of importance. Every socialist paper, for instance, provides employment to socialist workmen. From the lower grades the more able and ambitious can rise to only a campaign: it is a means of livelihood, a career.'

#### WORKMAN-MONASTERIES IN RUSSIA.

But the most striking facts Professor Ferrero advances relate to Russia. He declares Moscow

to be the one holy city still left in Europe—"a vast oratory," where every act is accompanied by some religious ceremony, yet the center of a unique industrial system. There prevails "what may be called the monastic system of industrial life," which is thus described:

"I visited," says Ferrero, "a silk manufactory, employing from 4,000 to 5,000 hands. The employer lodges and feeds them. He provides for them dormitories and refectories. A strange sight are the dormitories, each of which contains from 200 to 300 beds, arranged in two rows, as in a hospital, with a broad gangway between. There are dormitories for men and others for women. In each the walls above the bed-heads are studded with sacred images. To a given number of beds one table is assigned, and on every table is a great samovar, for making tea. Besides these dormitories for the unmarried of both sexes, for families there exist great barracklike buildings, each with rooms for 120 families, and a common kitchen . . . The single workers eat their meals together, and these are supplied them by their employer—soup in the morning, soup and meat at mid-day and at evening, black bread at 4 o'clock. The whole of a worker's life is regulated by the sound of the bell—when to rise, when to work, when to eat, when to sleep. A manufactory resembles a college, a barracks, a convent. The uniformity and mechanical regularity of life, which will, according to some, be the curse of the collectivism of the future, exist to-day in the full glare of capitalism among the Russian artisans."

"Certainly," Ferrero continues with emphasis, "these workman monasteries form one of the most accursed inventions of the oppressive spirit of man."

#### THE "ARTEL."

Side by side with this strange "house of bondage" is found the "artel," or voluntary cooperative association, with common purse and common table:
